sonnel enough men of parts and distinction to make their proceedings interesting. The Sixty-fifth Congress did not, tho it shall be remembered as the Congress of the Honorable Jeff McLeMORE, statesman "at large"; the Honorable Claude Kitchin, financier; the Honorable Jeanette Rankin, first American Senator of her sex (and, to the unholy joy of male scoffers, unable to make up her mind how to vote); and the Honorable William Joel Stone, pacifist, in command of the Foreign Relations Committee.

For another circumstance also the Sixty-fifth Congress will be remembered. President Wilson, breaker of precedents and of conventions, dominated it as no Congress in our history has ever been dominated before, and to a degree that parliamentary bodies like the House of Commons have seldom been dominated by a Prime Minister. It had no constructive policy and no organized collective will of its own.

The Sixty-sixth Congress is not, to present appearance, more promising, except that it will probably have a competent Speaker and a competent Chairman of the Committee on Ways and Means; but in the Senate the Honorable

James A. Reed will continue to denounce the wickedness and the folly of entangling alliances. He will keep green the memory of our Monroe Doctrine and warn us against the attempt of Mr. Wilson and Mr. Taft to extend its benefits to the world by means of a League of Nations.

The motto *Glück auf* (Good luck!), which used to stand above the entrance to the Columbia School of Mines, has been neatly chiseled off, and Deutsches Haus has changed its name to Columbia House. But the Stanford motto *Die Luft der Freiheit Weht* (the wind of freedom blows) is still retained and is to be found upon the service flag of that institution. Yet Stanford was in the war long before our Government with such men as Hoover, Kellogg and Wilbur hard at work. It was the first—possibly the only—university to offer all of its faculty and facilities to the Government without charge. Apparently there are other tests of patriotism than aversion to the German language.

Now isn't it funny that all races should have a say on the question of what shall be done with Africa except the negroes? The French Government refuses passports to colored Americans who want to go to Paris for a Pan African Congress.

Sixteen to one seems to be the ratio of the silver to the gold chevrons.

# I HAVE COME BACK TO REPORT PROGRESS

## And I Do Not Believe That the Progress Is Going to Stop Short of the Goal

PRESIDENT WILSON'S SPEECH IN BOSTON ON FEBRUARY 24

I wonder if you are half as glad to see me as I am to see you. It warms my heart to see a great body of my fellow-citizens again, because, in some respects, during the recent months I have been very lonely indeed without your comradeship and counsel; and I tried at every step of the work which fell to me to recall what I was sure would be your counsel with regard to the great matters which were under consideration.

I do not want you to think that I have not been appreciative of the extraordinarily generous reception which was given to me on the other side in saying that it makes me very happy to get home again. I do not mean to say that I was not very deeply touched by the cries that came from the great crowds on the other side. But I want to say to you in all honesty that I felt them to be a call of greeting to you rather than to me.

I did not feel that the greeting was personal. I had in my heart the over-crowning pride of being your representative and of receiving the plaudits of men everywhere who felt that your hearts beat with theirs in the cause of liberty. There was no mistaking the tone in the voices of those great crowds. It was not a tone of mere greeting, it was not a tone of mere generous welcome; it was the calling of comrade to comrade, the cries that come from men who say, "We have waited for this day, when the friends of liberty should come across the sea and shake hands with us, to see that a new world was constructed upon a new basis and foundation of justice and right."

### THE PRODEST THING

I can't tell you the inspiration that came from the sentiments that came out of those simple voices of the crowd. And the proudest thing I have to report to you is that this great country of ours is trusted throughout the world.

I have not come to report the proceedings or the results of the proceedings of the Peace Conference; that would be premature. I can say that I have received very happy impressions from this conference; the impressions that, while there are many differences of judgment, while there are some divergencies of object, there is, nevertheless, a common spirit and a common realization of the necessity of setting up new standards of right to the world.

Because the men who are in conference in Paris realize as keenly as any American can realize that they are not the masters of their people; that they are the servants of their people, and that the spirit of their people has awakened to a new purpose and a new conception of their power to realize that purpose, and that no man dare go home from that conference and report anything less noble than was expected of it.

The conference seems to you to go slowly; from day to day in Paris it seems to go slowly; but I wonder if you realize the complexity of the task which it has undertaken. It seems as if the settlements of this war affect, and affect directly, every great, and I sometimes think every small, nation in the world, and no

one decision can prudently be made which is not properly linked in with the great series of other decisions which must accompany it, and it must be reckoned in with the final result if the real quality and character of that result is to be properly judged.

What we are doing is to hear the whole case; hear it from the mouths of the men most interested; hear it from those who are officially commissioned to state it; hear the rival claims; hear the claims that affect new nationalities, that affect new areas of the world, that affect new commercial and economic connections that have been established by the great world war thru which we have gone. And I have been struck by the moderateness of those who have represented national claims. I can testify that I have nowhere seen the gleam of passion. I have seen earnestness, I have seen tears come to the eyes of men who plead for downtrodden people whom they were privileged to speak for; but they were not the tears of anguish, but the tears of ardent hope.

And I don't see how any man can fail to have been subdued by these pleas, subdued to this feeling, that he was not there to assert an individual judgment of his own but to try to assist the cause of humanity.

### EVERY NATION BELIEVES IN US

And, in the midst of it all, every interest seeks out, first of all, when it reaches Paris, the representatives of the United States. Why? Because—and I think I am stating the most wonderful fact in history—because there is no nation in Europe that suspects the motives of the United States.

Was there ever so wonderful a thing seen before? Was there ever so moving a thing? Was there ever any fact that so bound the nation that had won that esteem forever to deserve it?

I would not have you understand that the great men who represent the other nations there in conference are disesteemed by those who know them. Quite the contrary. But you understand that the nations of Europe have again and again clashed with one another in competitive interest. It is impossible for men to forget those sharp issues that were drawn between them in times past. It is impossible for men to believe that all ambitions have all of a sudden been foregone. They remember territory that was coveted; they remember rights that it was attempted to extort, they remember political ambitions which it was attempted to realize, and, while they believe that men have come into a different temper, they cannot forget these things, and so they do not resort to one another for a dispassionate view of the matters in controversy. They resort to that nation which has won the enviable distinction of being regarded as the friend of mankind.

Whenever it is desired to send a small force of soldiers to occupy a piece of territory where it is thought nobody else will be welcome, they ask for American soldiers. And where other soldiers would be looked upon with suspicion and perhaps met with resistance, the American soldier is welcomed with acclaim,

I have been searching for the fundamental fact that converted Europe to believe in us. Before this war, Europe did not believe in us as we are now. She did not believe in us through the first three years of the war. She seems really to have believed that we were holding off to see we thought we could make more by staying out than by going in. And all of a sudden, in a short eighteen months, the whole verdict is reversed. There can be but one explanation for it. They are quit we did—that, without making a single claim, we put all our men and all our means at the disposal of those who were fighting for their homes, in the first instance, but for a cause, the cause of human rights and justice, and that we went in not to support their national claims, but to support the great cause which they held in common. And when they saw that America not only held ideals, but acted ideals, they were converted to America and became firm partisans of those ideals.

#### SOMETHING THAT MADE DANGER WORTH WHILE

I met a group of scholars when I was in Paris—some gentlemen from one of the Greek universities who had come to see me, and in whose presence, or rather in the presence of whose traditions of learning I felt very young indeed. I told them that I had one of the delightful revenges that sometimes come to a man. All my life I had heard men speak with a sort of condescension of ideals and of idealists, and particularly those separated, enclôstered persons whom they choose to term academic, who were in the habit of uttering ideals in the free atmosphere, when they clash with nobody in particular.

And I said I have had this sweet revenge: speaking with perfect frankness, in the name of the people of the United States, I have uttered as the objects of this great war ideals, and nothing but ideals, and the war has been won by that inspiration. Men were fighting with tense muscles and lowered head until they came to realize those things, feeling they were fighting for their lives and their country, and when these accents of what it was all about reached them from America, they lifted their heads, they raised their eyes to heaven, when they saw men in khaki coming across the sea in the spirit of crusaders, and they found that these were strange men, reckless of danger not only, but reckless because they seemed to see something that made that danger worth while. Men have testified to me in Europe that our men were possessed by something that they could only call a religious fervor. They were not like any of the other soldiers. They had a vision, they had a dream, and they were fighting in the dream, and, fighting in the dream, they turned the whole tide of battle, and it never came back.

#### A EUROPE OF SETTLED PEACE

And now do you realize that this confidence we have established thruout the world imposes a burden upon us, if you choose to call it a burden. It is one of those burdens which any nation ought to be proud to carry. Any man who resists the present tides that run in the world will find himself thrown upon a shore so high and barren that it will seem as if he had been separated from his human kind forever.

The Europe that I left the other day was full of something that it had never felt fill its heart so full before. It was full of hope. The Europe of the second year of the war, the Europe of the third year of the war, was sinking to a sort of stubborn desperation. They did not see any great thing to be achieved, even when the war should be won. They hoped there would be some salvage; they hoped that they could clear their territories of invading armies; they hoped they could set up their homes and start their industries afresh. But they thought it would simply be the resumption of the old life that Europe had led—led in fear, led in anxiety, led in constant suspicious watchfulness. They never dreamed that it would be a Europe of settled peace and of justified hope.

And now these ideals have wrought this new magic, that all the peoples of Europe are buoyed up and confident in the spirit of hope, because they believe that we are at the eve of a new age in the world, when nations will understand one another, when nations will support one another in every just cause, when nations will unite every moral and every physical strength to see that the right shall prevail.

#### IF WE WERE TO FAIL

If America were at this juncture to fail the world, what would come of it? I do not mean any disrespect to any other great people when I say that America is the hope of the world; and if she does not justify that hope, the results are unthinkable. Men will be thrown back upon the bitterness of disappointment not only, but the bitterness of despair. All nations will be set up as hostile camps again; the men at the Peace Conference will go home with their heads upon their breasts, knowing that they have failed—for they were bidden not to come home from there until they did something more than sign a treaty of peace.

Suppose we sign the treaty of peace and that it is the most satisfactory treaty of peace that the confusing elements of the modern world will afford, and go home and think about our labors, we will know that we have left written upon the historic table at Versailles, upon which Vergennes and Benjamin Frank-

lin wrote their names, nothing but a modern scrap of paper; no nations united to defend it, no great forces combined to make it good, no assurance given to the downtrodden and fearful people of the world that they shall be safe.

Any man who thinks that America will take part in giving the world any such rebuff and disappointment as that does not know America. I invite him to test the sentiments of the nation. We set this nation up to make men free, and we did not confine our conception and purpose to America, and now we will make men free. If we did not do that, the fame of America would be gone and all her powers would be dissipated. She then would have to keep her power for those narrow, selfish, provincial purposes which seem so dear to some minds that have no sweep beyond the nearest horizon.

I should welcome no sweeter challenge than that. I have fighting blood in me, and it is sometimes a delight to let it have scope, but if it is a challenge on this occasion it will be an indulgence. Think of the picture, think of the utter blackness that would fall on the world. America has failed! America made a little essay at generosity, and then withdrew. America said, "We are your friends," but it was only for today, not for tomorrow. America said, "Here is our power to vindicate right," and then the next day said, "Let right take care of itself, and we will take care of ourselves." America said, "We set up a light to lead men along the paths of liberty, but we have lowered it; it is intended only to light our own paths." We set up a great ideal of liberty, and then we said: "Liberty is a thing that you must win for yourself. Do not call upon us."

And think of the world that we would leave. Do you realize how many new nations are going to be set up in the presence of old and powerful nations in Europe, and left there, if left by us without a disinterested friend?

Do you believe in the Polish cause, as I do? Are you going to set up Poland, immature, inexperienced, as yet unorganized, and leave her with a circle of armies around her? Do you believe in the aspiration of the Czecho-Slovaks and the Jugoslavs, as I do? Do you know how many powers would be quick to pounce upon them if there were not the guarantees of the world behind their liberty?

Have you thought of the sufferings of Armenia? You poured out your money to help succor the Armenians after they suffered; now set your strength so that they shall never suffer again.

The arrangements of the present peace cannot stand a generation unless they are guaranteed by the united forces of the civilized world. And, if we do not guarantee them can you not see the picture? Your hearts have instructed you where the burden of this war fell. It did not fall upon the national treasuries, it did not fall upon the instruments of administration, it did not fall upon the resources of the nation. It fell upon the victims' homes everywhere—where women were toiling in the hope that their men would come back.

When I think of the homes upon which dull despair would settle were this great hope disappointed, I should wish for my part never to have had America play any part whatever in this attempt to emancipate the world. But I talk as if there were any question. I have no more doubt of the verdict of America in this matter than I have doubt of the blood that is in me.

#### THE PEOPLE ARE IN POWER

And so, my fellow-citizens, I have come back to report progress, and I do not believe that the progress is going to stop short of the goal. The nations of the world have set their heads now to do a great thing and they are not going to slacken their purpose. And when I speak of the nations of the world I do not speak of the governments of the world. I speak of the peoples who constitute the nations of the world. They are in the saddle and they are going to see to it that, if their present governments do not do their will, some other governments shall. And the secret is out and the present governments know it.

There is a great deal of harmony to be got out of common knowledge. There is a great deal of sympathy to be got out of living in the same atmosphere; and, except for the differences of languages, which puzzled my American ear very sadly, I could have believed I was at home, in France, or in Italy, or in England, when I was on the streets, when I was in the presence of the crowds, when I was in great halls where men were gathered together irrespective of class. I did not feel quite as much at home there as I do here, but I felt that, now, at any rate, after this storm of war had cleared the air, men were seeing eye to eye everywhere and that these were the kind of folks who would understand what the kind of folks at home would understand and that they were thinking the same things.

When I sample myself, I think I find that I am a typical American, and, if I sample deep enough and get down to what is probably the true stuff of a man, then I have hope that it is part of the stuff that is like the other fellow's at home. And, therefore, probing deep in my heart and trying to see the things that are right, without regard to the things that may be debated as expedient, I feel that I am interpreting the purpose and the thought of America; and in loving America I find I have joined the great majority of my fellow men thruout the world.

# THE STORY OF THE WEEK

**The President's Homecoming** President Wilson did not seek the easiest way in when he chose Boston as the port of debarkation on his return from the Peace Conference. Boston is proverbially unenthusiastic, Boston is habitually Republican, Boston is anything but grateful to the Wilson administration. But the reception that met the President as he came ashore from the "George Washington" drowned all these factors in a genuine welcome that voiced the people's support of the leader of the League of Nations. As one Boston paper, the *Christian Science Monitor*, described it—

President Wilson, promoter and defender of a new standard of justice for the world, stepped ashore at Boston on Monday en route from Paris to Washington. From the time of the presidential salute of twenty-one guns, when the President debarked from the "George Washington," until he waved farewell from his special car five hours later, he found encouragement in the enthusiastic attitude of the people. When he challenged the critics of the League of Nations he was cheered, and when he pictured the hope of smaller nations centered in this covenant, he was cheered. When he said that the application of the democratic standards of this new "Magna Charta" will unite the whole civilized world, he was cheered to the echo.

The President was met in Boston harbor by a convoy of destroyers and of aeroplanes, given a salute of navy guns, and welcomed by waving flags on ships and buildings and in the crowd of 200,000 people that cheered him as he drove from the pier to Copley Square.

At Mechanics' Hall President Wilson made his first speech on the results of the Peace Conference, a speech in which he set forth in inspiring fashion

## THE GREAT WAR

*February 20*—American troops enter Berlin to guard food. Habibullah, Afghan Ameer, murdered.

*February 21*—Kurt Eisner, Bavarian Premier, murdered. Civil war in Bavaria. Clemenceau out of danger.

*February 22*—Revolt at Budapest. Allies advance in northern Russia. Peace Congress votes to hasten work.

*February 23*—Soviet dictatorship attempted at Munich. Bela Kun, Communist leader, killed at Budapest.

*February 24*—Prince Leopold of Bavaria arrested for treason. Lloyd George introduces bill to head off strikes.

*February 25*—Widespread disorders in Germany. Truce between Ukrainians and Poles.

*February 26*—Communists arrested at Budapest confess being financed from Russian sources against Hungarian republic.

his challenge to America to support the League of Nations. Most of the speech is published on pages 321 and 322 of this issue. There were several points, however, at which the reaction of his audience was significant, as in the cheer that greeted one of his opening statements, "The proudest thing I have to report to you is that this great country of ours is trusted thruout the world." Another great cheer came when the President presented the cause of the small nations:

The arrangements of the present peace cannot stand a generation unless they are guaranteed by the united forces of the civilized world. . . . I have no more doubt of the verdict of America in this matter than I have of the blood that is in me.

But the crowd proclaimed its loudest enthusiasm when President Wilson announced his own fighting stand:

We set this nation up to make men free and we did not confine our conception and purpose to America and now we will make men free. If we did not do that all the fame of America would be gone and all her power would be dissipated. She would then have to keep her honor for those narrow, selfish, provincial purposes which seem so dear to some minds that have no sweep beyond the nearest horizon. I should welcome no sweeter challenge than that. I have fighting blood in me and it is sometimes a delight to let it have scope, but if it is a challenge on this occasion it will be an indulgence.

**President Wilson Explains the League** "What will it do to the Monroe Doctrine?" was the first question put to President Wilson in his informal discussion of the League of Nations with members of the Senate and House committees on Foreign Affairs. The President's answer denied that the League would in any way abrogate the Monroe Doctrine. Rather, he pointed out, it extends the principle of the Monroe Doctrine to the entire world. In answer to Senator Brandegee's suggestion that an amendment be made to the covenant of the League specifically recognizing the Monroe Doctrine, President Wilson said that it was already thoroly recognized by the European nations but that it could not well be written into the League constitution. That constitution will probably be ratified by the Peace Conference, said the President, precisely as it stands and was agreed to by representatives of fourteen nations.

## THE LABOR STRIKES IN ENGLAND

made by the President in replying to questions were:

1. The United States, if directed to be the mandatory power to enforce the League's orders in any country, has the right to decline to act.

2. Immigration restrictions by the United States will be no concern of the League. He regards immigration legislation as entirely outside the purview of the League.

3. The League or executive council will have no power to compel obedience to its dictates as to the size of the army or navy of any country. After a recommendation as to size of armament, the countries involved must themselves act according to the convictions of their own governments. He made no suggestion as to what would

happen if some nation should persistently refuse to abide by the executive council's ideas as to the proper size of the armament for that particular country.

4. Action on any important question by the executive council must virtually be unanimous. Hence it would be unlikely that any such possibility as Japan being the mandatory power in Mexico or Great Britain in Venezuela could arise.

5. Any nation which joins the League can withdraw at any time by taking the proper steps to abrogate the treaties under which that nation joined the League. In this connection the President said he found himself, a Southerner who had rather approved secession, virtually the only one who

London Opinion

THE SPOILT CHILD

advocated some restraint on withdrawals from the League.

6. The English colonies—Canada, New Zealand, South Africa and Australia—are regarded so nearly independent as to be considered as separate members of the League.

7. The five major powers in the League would decide not only the personnel of the other four members of the executive council, but the length of their service on it.

8. The constitution for the League will be an integral part of the peace treaty.

9. The League will not absolutely prevent war. It is only an approach to an understanding between nations looking in that direction.

10. Joining the League is recognized as a certain surrender of sovereignty. "Every treaty," the President said, "is to a certain extent a surrender of sovereignty."

11. The whole success of the League rests, in the President's opinion, on the good will and good faith of the nations.

At the White House Again Two important announcements were made by President Wilson during the first day in Washington after his trip to Europe: first, his decision that no extra session of Congress will be called before his return from his second visit to the Peace Conference; second, an invitation to the governors of all the states and the mayors of more than one hundred cities to a conference in Washington to consider reconstruction plans.

Twenty-eight measures already passed by Congress were given the President's signature, chief among them being the bill appropriating \$100,000,000 for food to relieve famine conditions in Europe.

The 1919 social season for the American soldiers in Coblenz opened with this costume dance, attended by a thousand or more men in fancy dress and a few American women canteen workers. The dance was given in the big municipal theater

#### Spending the People's Money

The last days of the present Congress are crowded with important legislation. The \$400,000,000 Post Office bill was finally enacted on February 25. The \$1,215,000,000 Army Appropriation bill and the \$7,000,000,000 Victory Loan bill were both passed by the House and sent on to the Senate.

The \$720,000,000 Naval Appropriation bill is also ready for the Senate, together with the measure authorizing \$750,000,000 additional for the railroad administration.

The House adopted the conference report on the Rivers and Harbors bill, carrying \$33,000,000. The House also adopted the conference report on the bill permitting soldiers, sailors and marines to retain their uniforms when discharged and allowing them 5 cents

a mile for traveling expenses home. The measure has been sent to the President.

#### Progress of the Peace Congress

Following the adoption of the tentative draft of the Constitution of the League of Nations and the departure of President Wilson, the Peace Congress turned its attention zealously to other topics, and on February 22 the Supreme Council resolved to "accelerate as much as possible the labors of the Conference," in the hope of having the preliminary peace treaty drafted for consideration by the time of the President's return to Paris about the middle of March, and of having the definitive treaty signed by all parties by June 1. It was also ordered that the various commissions appointed by the Congress should submit complete re-

ports to the Supreme Council not later than March 8. The most important of these commissions are those on responsibility for the war, on reparation, on boundaries, on the military status of Germany, and on the economic relations of the Allies with Germany. All further consideration of the League of Nations was deferred until the return of the President.

The Supreme Council on February 21 gave formal recognition to the Polish national government, of which Ignace J. Paderewski is Premier; listened to a delegation from Denmark on the Schleswig-Holstein question, and considered the creation of a neutral zone between the Rumanians and Bulgarians in Transylvania. It also completed the draft of a military treaty which is to be presented by Marshal Foch to Germany, the effect of which

#### BOLSHEVISM IN GERMANY

will be to disarm and demobilize the German army with the exception of a small police force. On February 24 Sean O'Cealligh presented himself to the Congress as the "accredited envoy of the Provisional Government of the Irish Republic," and was received in a noncommittal manner.

**The Question of Reparation** Andre Tardieu, one of the French Peace Commissioners, on February 20 declared that the Allies had agreed that Germany should be required to pay not merely for wanton damage done but also the costs of the war to the Allied nations, at least to the fullest extent of her ability. Other delegates to the Congress confirmed this statement. Captain Tardieu also stated that France alone would present a bill for 450,000 houses destroyed, beside factories and other buildings. Herbert Gibbs, a well-known banker of London, estimated as a result of special study that Germany could easily pay indemnity at the rate of \$3,000,000,000 a year, the chief burden of which would fall not on the common people but on those who were chiefly responsible for the war.

**Civil War in Bavaria** An outbreak amounting to civil war began in Munich, Bavaria, on the morning of February 21, when Kurt Eisner, the Socialist Prime Minister, who had distinguished himself by his opposition to Prussian influences, was shot dead on the street by Count Arco Valley, a member of the old nobility and a former officer of the Prussian Guards, who cried as he fired the fatal shot, "Down with the revolution! Long live the Kaiser!" A sailor standing near at once shot the assassin, who was quickly dispatched by a mob. It was believed that Eisner was killed because of his speech at the Berne Socialist conference, blaming Germany and Austria for the war.

A little later that day Herr Auer, the Bavarian Minister of the Interior, was shot while he was speaking in the Landtag about the killing of Eisner; Herr Osel, a deputy, was killed, and two other officials were badly wounded. Murderous attacks were made upon Herren Timm, Unterleitner and Rosshaupter, respectively Ministers of Justice, Social Affairs and War. The Government at once took vigorous measures against what it believed to be a monarchist conspiracy, and arrested Prince Joachim, sixth son of the former Kaiser, who had been in Munich under an assumed name, and Prince Leopold of Bavaria, who was formerly commander-in-chief of the German armies on the eastern front. The former Crown Prince of Bavaria, Rupprecht, was also sought by the police. Many other aristocrats were also arrested. Several of the ministers hastily departed, and the Cabinet was reorganized on February 25, with Herr Scheid as Prime Minister and Herr Segitz, a Majority Socialist, as Minister of the Interior. It was reported on February 26 that Dr. William Muelhon, the former director of Krupp's,

*Humour in Brooklyn Daily Eagle*

#### A FOREIGN GROWTH

who wrote a book scathingly condemning Germany for her guilt in the war, had been asked to be Minister for Foreign Affairs in the new Government.

Meantime the local Council of Workmen's and Soldiers' Deputies proclaimed a Soviet Republic at Munich, the Government proclaimed a state of siege, and the Spartacans proclaimed a general strike and began a campaign of violence. There was much rioting and plundering, with some loss of life in street fighting. At Augsburg, Nuremberg and elsewhere there were Spartacan outbreaks.

**Other Troubles in Germany** Serious troubles occurred elsewhere in Germany on February 23 and 24. At Duesseldorf the Spartacans tried to prevent or to break up the municipal elections, destroying polling booths and throwing polling lists and ballot boxes into the Rhine. At Mannheim they seized and plundered automobile factories. At Oberhausen, near Essen, they seized bank deposits and extinguished factory fires. At Wattenscheid, in Westphalia, a state of siege was proclaimed. Spartacans and Radical Socialists began a violent attempt to overthrow the government of Saxony on February 25, the day on which the newly elected Diet assembled.

In the Berlin elections on February 23 the Majority Socialists won by a large plurality.

Serious dissensions in the German Cabinet were reported on February 24, due to disagreement between Count von Brockdorff, the Foreign Minister, and Mathias Erzberger, Minister without portfolio and head of the Armistice Commission. The former has expressed himself as much dissatisfied not only with the terms of the armistice but also with the proposed League of Nations, which he describes as "good enough for the Allies but not good enough for Germany." President Ebert was reported on February 25 as favoring the creation of a National Workers' Soviet as the lower legislative

branch of the Government, as the only solution of the political and economic situation.

**Seeking Relief for Germany** The disturbances in Germany have given new emphasis to the pleas for a raising of the blockade so that food supplies can be obtained and commerce restored. Many German scientists and physicians joined on February 24 in a petition to President Wilson, asking the appointment of a commission from neutral states to study and report upon Germany's need of food, in order to save the country from starvation.

The Allied Economic Council at Paris on February 21 opened to commerce, under certain restrictions, the Rhine provinces of Germany which are occupied by Allied and American troops, and three days later the French Government authorized its Foreign Minister to grant French dealers permission to trade with Germans under certain conditions—when demanded by public interest.

The Allied and German commissions met during the week at Spa, in an effort to arrange for payment for food from America for Germany, and it was expected that in the near future a satisfactory scheme to that effect would be perfected.

**The German Constitution** Concurrently with the meetings of the German National Assembly at Weimar several committees have been drafting a permanent constitution for the former empire. As thus far formulated this instrument provides for the retention of the former German states, presumably without change, and the addition of other states which may by plebiscite signify their desire for annexation. The flag of the republic is to be black, red and yellow. National legislation, superseding state laws, is to be largely socialistic in scope. The President is to be elected for a term of seven years, and may be removed by popular vote.

As if in disregard of the French occupation of those provinces a bill was introduced at Weimar on February 26 authorizing the German Government to promulgate decrees having the force of law for the government of Alsace-Lorraine.

**The Battle of Jutland** Official German reports of the Battle of Jutland, on May 31, 1916, have just been secured. They show that the German losses were: Officers killed or missing, 172; wounded, 41; others killed or missing, 2,414; wounded, 440; total, 3076.

A complete record of the British forces engaged in the battle shows twenty-four dreadnoughts, eight battle cruisers, eighteen cruisers, eighteen light cruisers, and seventy-eight destroyers. The German force included twenty-one battleships, sixteen cruisers, and seventy-seven destroyers. It is clearly established, however, that of the ships which actually came into action the preponderance of force was held by the Germans.

**Troubles in Hungary** Grave disturbances began at Budapest on February 20, under the leadership of German and Russian agitators. Martial law was at once proclaimed by the Government and efforts were made to suppress the insurrection. Much street fighting ensued, with loss of life. On February 23 the Communist leader, Bela Kun, of Budapest, was put to death by a mob which had been organized against the insurgents, and two days later the former Prime Minister, Dr. Wekerle, and several members of his Cabinet were arrested for complicity in treasonable plots. The Government demanded extradition from Switzerland of Prince Windischgraetz, under charges of defrauding the state of large sums, and also of the former military commander of Budapest, who was said to have ordered wholesale massacres of soldiers. On February 26 some seventy-six Communists were arrested on charge of rebellion. It was said that on examination they confest that the movement, intended to overthrow the Hungarian republic and to establish Bolshevism, was liberally financed from Russia.

**Affairs in Russia** Allied troops in northern Russia made an advance of thirty-five miles along the Murmansk railway on February 19 and 20, thus gaining much strategic advantage over the Bolsheviks. The announcement that the American troops were to be withdrawn from Russia as soon as possible in the spring was received with joy by the troops themselves, but Russians at Archangel expressed some anxiety to know whether other troops would be sent to replace them or the whole northern front would be abandoned. Determination of this question was understood to await the action of the Peace Congress at Paris.

It was reported on February 24 that almost incredible distress prevailed in Moscow, wheat flour being practically unobtainable at 50 roubles a pound and sugar commanding the same price. The strained relations long existing between Russia and Switzerland led on February 25 to the departure of the Swiss legation from Petrograd.

**British Civil Strife Feared** Efforts to avert extensive strikes among coal miners and others in Great Britain have thus far been ineffective, and much anxiety prevails in official circles over the outlook. The Prime Minister, Mr. Lloyd George, on February 24 introduced a bill for the appointment of a committee to inquire into the conditions prevailing in the coal mining industry, declaring as he did so that the United Kingdom was confronted with the danger of civil strife at a time when peace had not yet been made with a formidable foreign enemy.

**Organization of Poland** At the second meeting of the new Polish Parliament, on February 20, General Joseph Pilsudski formally resigned his authority as dictator. The Parliament thereupon reinvested him with his powers, and requested him to exercise them until the constitutional government was fully established. Ignace J. Paderewski, the Prime Minister, then asked for a vote of confidence. A protracted debate ensued, in the course of which, on February 23, Mr. Paderewski offered his resignation to General Pilsudski, who declined to receive it.

The Polish Government sent a message to the Bolshevik Government at Petrograd, expressing a desire to enter into negotiations for the cessation of strife between the two countries. In reply the Bolshevik Foreign Minis-

ter expressed willingness to negotiate, but called attention to the fact that Polish troops were fighting against Soviet forces in northern Russia and Siberia, and asked the Polish Government to stop such proceedings.

Czecho-Slovak troops, at the instance of the Inter-Allied Commission to Poland, on February 25 began evacuating the valuable mining district of Teschen, which is claimed by both the Czechs and the Poles, and withdrawing to the line fixed by the Paris Peace Congress on February 3.

**Ukrainian Disturbances** Members of the Inter-Allied Commission on Poland were fired upon by Ukrainian soldiers on February 20 while traveling from Cracow to Lemberg on a Polish armored train, probably under the presumption that the train was a Polish military expedition. The next day the Ukrainians renewed their attacks upon Lemberg, apparently with the purpose of capturing the place before the arrival of the Inter-Allied Commission.

Greek, French and Rumanian troops were reported on February 25 to have advanced north of Odessa, driving Bolshevik forces before them along the Dneister River, and occupying the fortified town of Tiraspol.

**More Trouble in Portugal** Reports reached Madrid on February 25 that for several days Lisbon, the Portuguese capital, had been under the control of Bolshevik insurgents, the censorship preventing the news from getting out more promptly.

**The Victory Tax** Even before he reached Washington President Wilson signed the revenue bill which is to collect \$6,000,000,000 in taxes in 1919. Taxes which become operative at

once include those on liquor, tobacco, soft drinks, so called luxuries such as automobiles, pianos, candy, chewing gum, sporting goods and slot machines, capital stock of corporations, brokers, amusement places, taxicabs, and other special businesses.

The Revenue Bureau's machinery already had been put into operation in preparation for the filing of returns on March 15 on incomes, excess profits and war profits, and the collection of the first 25 per cent instalment payment on that date. In view of the short time allowed for the compilation of income tax statements, the Commissioner of Internal Revenue has arranged what practically amounts to a time extension of a month and a half:

Corporations and, in urgent cases, individuals who are unable to complete their returns and file them by March 15 will be permitted to file with collectors of internal revenue not later than March 15, an estimate of the tax due for the year, with remittance of one-fourth of such estimated tax. Upon compliance with this requirement the collector of internal revenue is authorized to agree to accept from the taxpayer at any time within forty-five days after March 15 the complete tax return.

This plan has the obvious advantages of giving the taxpayer time to make out accurate returns, giving the Government immediate payment of the first instalment of revenue, distributing the receipt and examination of the returns over a longer period than the bill provides.

On April 1 new taxes on railroad and steamship tickets, pipe lines, insurance, theater admission and club dues, and a variety of stamp taxes become effective. The soda fountain tax becomes effective May 1. Taxes on products of child labor will be imposed in sixty days.

A joint resolution was introduced in both House and Senate on February

27 providing for a repeal of the semi-luxury taxes, which levy 10 per cent on a wide variety of wearing apparel and household materials costing more than a stipulated amount.

#### Our Investments in Mexico

An international committee of twenty bankers—ten Americans, five from France and five from Great Britain—has been formed for the purpose of protecting holders of Mexican securities of all kinds. J. P. Morgan will act as chairman of the committee pending the arrival here of T. W. Lamont, who is in Paris representing the Treasury Department as financial adviser of the American Peace Commission.

The committee announces itself as constituted for the purpose of protecting the holders of securities of the Mexican Republic, and of the various railway systems of Mexico, and, generally, of such other enterprises as have their field of action in Mexico. The committee will be prepared to take such further steps as may seem wise in order to afford counsel and aid to investors who hold interests in Mexico.

Nine of the ten American members of the committee have been appointed:

J. P. Morgan (chairman), of J. P. Morgan & Co.

John J. Mitchell, president Illinois Trust and Savings Bank, Chicago.

Walter T. Rosen, of Ladenburg, Thalmann & Co.

Charles H. Sabin, president Guaranty Trust Company, New York.

Mortimer L. Schiff, of Kuhn, Loeb & Co.

James A. Stillman, chairman of the board, National City Bank, New York.

James N. Wallace, president Central Union Trust Company, New York.

Albert H. Wiggin, chairman of the board, Chase National Bank, New York.

Robert Winsor, of Kidder, Peabody & Co., Boston.

The formation of such a committee with international representation has

been considered for some time, it is said, and may have been brought to a head now by the Mexican Government's plans for rehabilitating the finances of the country. The Mexican debt is about \$350,000,000 and no interest has been paid on it for several years. The Mexican Minister of Finance, Rafaelo Nieto, held several conferences recently with New York bankers concerning plans for refunding of the Mexican debt and supplying capital for new developments.

#### Two Strikes Compromised

The carpenters' strike that took 125,000 men from work and threatened to tie up building trades thruout the United States was called off on February 24 by an agreement reached between the New York Carpenters' Union and the Building Trade Employers' Association. All grievances are to be submitted to arbitration, with Justice P. H. Dugro, of the Supreme Court of New York, sitting as umpire. The employers concede the right of the carpenters to higher wages, and the union agrees that all carpenters and allied tradesmen shall return to work pending Justice Dugro's award.

The wage question is substantially the only one in dispute. The men demand \$6.50 for the eight-hour day, while the employers at a meeting in November last fixed the scale for 1919 at \$5.50, the old rate. The employers are, it is understood, now prepared to concede \$6 a day.

The agreement to call the strike off followed a conference at the War Department among representatives of the employers, the carpenters' unions, the building trades' department of the American Federation of Labor, and Secretaries Baker and Wilson.

In the case of another strike that centered in New York compromise was urged last week when the National War Labor Board announced its findings on the demands of the Marine Workers' Affiliation. About 40 per cent of the 16,000 men affected are to be given immediately the eight-hour day they asked for. All men employed on army and navy floating equipment get the eight-hour basic day and overtime pay at once. So also do those employed on railroad tugs, floats, barges and lighters, except where the equipment is operated by a single crew.

So far as private operators, who operate 60 per cent of the boats, are concerned, with the exception of the Red Star Towing Company, which agreed to abide by the decision of the War Board, the findings are only recommendatory.

The marine workers' demand for a wage increase was definitely refused. Mr. V. Everitt Macy, who headed the arbitration, pointed out that no convincing proof had been shown justifying the desired increase.

The workers express their dissatisfaction at the refusal of an increase in wages by threatening to strike again and the matter was referred back to the six marine unions for a vote.

# THE WORKMAN SPEAKS FOR HIMSELF

## An Antidote to the Dog-Eat-Dog Attitude of Capital and Labor

BY WILLIAM LEAVITT STODDARD

SOMETHING very like a "movement," to use a loose phrase of the day, is on in industrial United States to reform if not to remake relations between employer and employee thru the establishment of shop committee systems. This movement is already a fact of considerable importance, but as yet it is little known to the American public, even to that large section of it which is enormously interested in understanding the changes in social and economic relations which are going on beneath our not too keen eyes.

"Works committees" is the term employed to describe the similar phenomenon in industrial England, but essentially that which is happening here and that which is happening in our brother country where trades unionism and coöperation have long since been accepted as part of the order of things, are the same. Here, however, is one fundamental difference which affects rather the rapidity of the growth of the movement than its nature: namely, that on the part of certain elements among employers there is frank suspicion of anything that looks like dealing with labor collectively, while on the part of certain elements among the employee class, there is suspicion of anything that any employer advocates as industrially advantageous to employees.

Nevertheless, the truth seems to be that the body of experience with this new and spreading phase of collective bargaining is demonstrating that by creating the right kind of machinery within an industry for the adjustment of internal difficulties, the same kind of common benefit is derived as that which comes from the creation of courts of law and arbitration, whether for local, national or international objects.

Up to the time of the entrance of this nation into the war, the Mackenzie King Rockefeller plan of employee representation was the classic landmark in this movement. But ever since the National War Labor Board took over the function of maintaining industrial peace in certain industries for the purpose of maintaining maximum production, a fresh impetus has been given to the idea of employee representation, new methods have been worked out in the practical laboratory of the factory, new results have been obtained. In award after award of this board, shop committee systems have been ordered, and with the guiding hand of the board to help shape them, such systems have been installed in many of the most

important industrial centers of the United States—Bridgeport, Bethlehem, Lynn, to mention but a few. The movement is spreading not only from these centers: it is spreading because it apparently is wanted, if not required as a kind of bridge over one of the gulches separating capital and labor.

The heart of the shop committee system is this: it is a system of government set up by mutual consent and after common study on the part of employer and employed, the main object of which is to bring about well ordered personal and official relations between truly representative representatives of employees—not of the unions—and the management of a given plant. In developing a typical or ideal shop committee system, a joint committee of men and management district the plant, dividing it into convenient administrative units whose size may vary from fifty employees to two or three hundred; provide for the secret, uninfluenced election by the employees alone of representative committees for these units; provide for appeals or general committees; agree on rules and procedure for the working of the system; and devise—tho this is commonly the duty of the management alone—for an appointive representation of the management to meet jointly with representatives and committees of the men for the settlement of ordinary and extraordinary grievances, often including the general revision of the wage scale. Without the element of mutuality and joint planning, a system tends to be one-sided and therefore to break down as a permanent mechanism.

To illustrate by a concrete example, in the Lynn, Massachusetts, plant of the General Electric Company, there has recently been introduced a shop committee system. This system was worked out in common counsel between men and management and an examiner of the War Labor Board. The plant was divided into some sixty sections, varying from seventy-five to 350 employees. While necessarily the boundaries of each section included men and women working at more than one kind of operation, nevertheless the occupations within a section were largely similar. The sections were then grouped, two to five at a time, into "shops," these shops representing similar or allied manufacture and having in addition a geographical reason for their existence. Each section elected two representatives; each group of sections or shop was entitled to a shop committee of three, chosen by and from among the representatives of the a-

*Underwood & Underwood*

One of the nation's workmen, "Big Tom" Horn, who sunk 6075 rivets in eight hours, breaking the world's record for shipbuilders

tions which composed it; all the representatives, meeting and voting in a convention elected the employees' half of two general joint committees—one on adjustment, another on routine, procedure and elections.

On the part of the management, designated foremen or leading hands meet with the representatives and employee originating a "grievance," serving as a committee on fair dealing. Similarly, three appointed men from the management meet with the three elected members of a shop committee, and so on till the two halves are completed and functioning in proper relation. Reports of the operation of this system, severely tried in the fire of a threatened general strike affecting all the plants of the General Electric Company, demonstrate that even under adverse conditions it tends to maintain industrial peace by the simple device of ventilating rather than stopping up causes of complaint of every variety and nature.

Of course there is nothing new in the idea or in the practise of collective bargaining: those familiar with the labor problems that have arisen and are arising in the clothing trades, to mention but one example, know this full well. The new thing in the shop committee movement is two things, first, the practical recognition of the fact that the business of handling human and economic relations between employer and employee can not be carried on without order and system; second, the practical recognition of the fact that many of the problems arising in, let us say a single factory, should be settled by those whose daily work takes them {Continued on page 346

How the Samoan Islands were divided between the United States and Germany. New Zealand now holds the German islands

# THE BATTLE THAT NEVER WAS FOUGHT

## The Conflict of Germany and the United States Over Samoa

BY EDWIN E. SLOSSON

IT is not often that the American press gets left on the news. So it is worthy of note that on March 2, 1889, the *Kieler Zeitung* and on March 7 the *Breslau Schlesische Zeitung* scored a clean scoop by the prior and exclusive publication of a report of a battle between the American and German fleets in Apia harbor of the Samoan Islands:

The German corvette "Olga" has bombarded Mataafa's camp. The captain of the American man-of-war protested but, seeing his protest disregarded, he opened fire on the "Olga." The shell burst between decks, doing much damage. The "Olga" then directed a torpedo at the American ship, blowing her up with all hands.

There was just one thing wrong about this news item; the "Olga" did not shell the camp of the Samoan chieftain. If she had the rest would probably have followed. The American man-of-war "Nipsic" would certainly have opened fire on the "Olga" and would doubtless have been torpedoed, for the German vessel was provided with torpedoes and the American was not. This, however, would not have been the end of it, but the beginning, and what Germany wanted to know was what would happen next, that is to say, what America would do about it.

How the rumor of this fictitious engagement originated has been a mystery, but Dr. Talcott Williams informs me that he was told by the chief of the Information Bureau of the Navy Department that a German launch from Samoa came to Auckland, New Zealand, and the crew was kept on

German gunboats riding at anchor in the harbor of Apia

board for twenty-four hours until cipher cables had been exchanged with Berlin. Then the German sailors were given shore leave and spread the report of the German victory over the Yankees. It was surmized at the time that the story was set afloat as a feeler. Bismarck was given to using "the reptile press" this way. He often let the cat out of the bag—but, as in this case, it was often the wrong cat. If his purpose was to test American temper the scheme was successful, for the response of America was unmistakable. Admiral Porter in the *New York World* of March 17, 1889, said:

I have carefully investigated the stories of the "Nipsic." It looks as if they were put out at the instigation of Bismarck to test the sentiment of his own and our people. He has never been a friend of the United States. He will find out very promptly the temper of the American people. No one supposes that the American people would give up the contest until Germany had received a sound drubbing. If for the time being Germany should try to blockade our ports in less than sixty days we would find an English fleet on our coasts involved in protecting her own trade with the United States. France would also have an interest.

Captain Meade, who had visited Samoa with the "Narragansett" in 1872 and on his own responsibility negotiated a protectorate and the lease of Pango-

Pango harbor with four chiefs, said in 1889:

German Consul Webber threw every obstacle in my path and threatened to have the German corvette "Nymphenburg" train her guns on the "Narragansett." My answer to Mr. Webber was to the effect that I would like nothing better. Even at that date Ger-

many was endeavoring to secure a foothold there and pursued then the same tactics that she is using now. It was to stir up strife between the different islands, have them make war on each other and then sell them arms. They received their pay in the lands of the poor natives. In other words they wished for war with these people to acquire their territory while I wanted it done peacefully.

It is about time some notice was taken of the Bully of Europe. We could whip the German navy in time.

The American navy then was insignificant, mostly old wooden ships left over from the Civil War, but the location of the six hundred German steamers afloat was known and our Government hoped speedily to capture or drive them off the seas by means of privateers commissioned for the purpose. The German-Americans at that time rallied to the support of the United States and denounced the Vaterland.

It was Cleveland's policy to restrict the United States to her continental confines. He tried to disown Hawaii and restore the Queen, but fortunately he failed. He wanted to withdraw from Samoa and leave the islands to Germany and England, but Congress refused to support him in this. He did withdraw the American warships, thus depriving the natives of the protection that had been promised them. But the

*King Malietoa, deposed by the Germans*

brutal attacks of the Germans on the Samoan people aroused the sympathy of the American people and he was obliged to send the "Nipsic," "Trenton" and "Vandalia" back to Apia. The Senate voted unanimously to place at his disposal \$500,000 "to execute the obligations and protect the interests of the United States" in Samoa, and \$100,000 for the fortification of Pango-Pango harbor. Senator Cullom declared that Americans would not permit themselves to be "brick-batted" off the islands by Bismarck. Turning to the files in our office for the year 1889 I find that *Harper's Weekly* is filled with pictures of Samoan scenes, some of which are here reproduced. The Independent of February 7 says:

It is a case in which the Germans are wholly in the wrong and it is monstrous that they should shed innocent blood. We sincerely hope the brave Samoans will not be punished for defending their king, their country and their property. Never! No, never!!

In the previous December the Germans had landed a force of marines who had met with defeat. The Samoans secured twenty-two German heads as trophies. During this fighting American citizens were taken prisoner by the Germans and American buildings destroyed. The tattered remnants of an

American flag, pictured in the papers, added to the popular indignation. One of the German raids was headed off by Captain Leary of the "Adams," who brought his ship alongside the German "Adler" and sent a message to her captain that "if the 'Adler' fired one shot at one of the natives she would never get back to the Fatherland unless the German Government sent a wrecking company and had her picked up from the bottom of the ocean." The "Adler" at this gentle warning withdrew from the harbor without firing a shot.

The Germans openly threatened war. Herbert Bismarck's instructions to the German Admiralty were:

Germany is not at war with Samoa but she regards Tamasese as the rightful ruler and Mataafa as a rebel against whom and his followers retaliation must be enforced. Any one standing by them is a promoter of a conflict between them and the Germans and must take the consequences.

The British Government was ostensibly neutral, but really so anxious to placate Germany to meet the growing menace of the Franco-Russian alliance that she played into Germany's hands. Since the revelation of the secret treaties by the Bolsheviks we know that the Dual Alliance was formed because France and Russia feared that England would join hands with the Triple Alliance of Germany, Austria and Italy against them. At the Washington Conference on Samoan affairs in 1887 the British Minister, Sir Lionel West, voted steadily with the German Minister against the American Secretary of State, Mr. Bayard. Germany wished to annex Samoa, but the United States refused to allow it. But during a recess of the conference the German fleet went and took possession, "undoubtedly," said Senator Frye, "with the consent of Great Britain and with full understanding in advance of Great Britain." Five German warships steamed in state into Apia harbor and demanded of the Samoan chief \$12,000 damages, of which \$10,000 was for a German nose broken in a street squabble and \$2,000 for stolen fruit, a high price for both commodities. King Malietoa, not having that amount of cash in his pocket, nor any pocket, took to the woods but was later enticed on

*King Tamasese, supported by the Germans*

board a German warship and carried off to the Kameruns. A fisherman named Tamasese was set up as a rival pretender.

The pro-German attitude of England at that time caused great anxiety not only to America but to the Pacific dominions. United States Commissioner Bates, after investigating the Samoan situation, came to the conclusion that Salisbury had sold out Samoa in exchange for Bismarck's support against France in Egypt. This was the opinion in Australia and New Zealand, as the following from the *Auckland Herald* of February 21, 1889, shows:

It is quite apparent to us now or at least it is universally believed that England basely bartered Samoa and other Pacific interests for the favor of Prince Bismarck as that might be made to bear on British interests in the great European intrigue and the duplicity with which America was treated by the two European conspirators has come out. By the firm action taken by our great relations of the Anglo-Saxon race, the American nation is compelling Germany to recede from the position which she had so insolently taken by virtue of an unholy right. The abdication of King Malietoa was an outrage on justice and humanity but the violent action of the German forces toward Mataafa, the instigation to bloodshed and the encouragement of the pitiless mutual (Continued on page 350)

# WHY I LIKE ARMY NURSING

BY KATHARINE TIGHE

she would really be a sympathetic army nurse.

November 14, 1918.

Joseph Salivinski (or some other ski), so silent in everyday life, today reveals himself. He is, to put it mildly, garrulous. He talks and sings and ceases not to swear. He is coming out of ether and I am balancing between him and Sheeley and the last beds, which haven't yet been scrubbed. Sheeley is at the far end of the ward, but he is behaving very well, sleeping it off so nicely. Which is fortunate, considering Joseph (we have abandoned the last name as without the realms of the possible). I regret that I cannot appreciate the humor of the militaristic swearing. I understand not more than every eleventh word, but the men are sitting up in bed, their faces broad grins, cheering him on with howls of mirth and leading questions. I take it that it is address to a Boche.

Suddenly there is a silence. He turns and eyes me, standing at the head of the bed. Finally, gravely, "Jesus Christ is a good man." I agree as best I may among the shouts of the men.

There follows a long fight, over the top, cursing of Boches, a very sore leg. Then almost plaintively, "I think Jesus Christ not here." Alas, more pain, more groans, much beating about the bed. The wardman comes to help me hold him.

And then a cry—"Oh mama, mama"—that did not stop.

Wherein lies the religious history of many a—so-called—wiser man.

November 17, 1918.

Ether has its charms. Witness James just back from the operating room murmuring beatifically to a delighted attendant, "Pretty nurse, pretty nurse." And witness a sudden coming out, an opening of eyes, a long groan. "Good Lord, is *this* the pretty nurse?"

Let me dream again.

November 21, 1918.

I have discovered why they call it "Sunny Italy." No one could see Abatacola's shining face and hear his "Gooda da morning" as he limps into the diet kitchen to help wipe the breakfast dishes, or "Gooda da evening" at supper time, or "Gotta da mail?" and not know. And you look thru the letters on the desk hoping so that there will be one for him, and there isn't, and you say *no* reluctantly, and then you meet that smile, "Perhaps tomorrow." If they are all like this it must be sunny Italy.

November 23, 1918.

Farr, quite quiet on his bed, hidden behind a book, continually murmuring, "Oof, oof." The fifth time I pass him I facetiously ask him if he's playing dog. The answer is quelling. "That's all you know about it, nurse. I'm studying French. *Oof* is *egg*."

Vive la France!

November 27, 1918.

Must a policeman have straight legs? Pritchley's go all ways. He belongs on the corner of Thirty-fourth Street and Fifth Avenue. He says that he came into the army with straight ones and that he is going out with the same, but I hope that his job doesn't hang on legs. He walks quite well with a cane, or with an arm around a waist. See him grab the head nurse and escort her the length of [Continued on page 348]

BY DONALD WILHELM

Congress did its best. But, tho lawyers give, and lawyers take away, not even Congress, in all its wisdom, could give to this hurly-burly wartime nation a quite perfect creature. To illustrate, it could not easily apprehend that in the very first 187,000 records furnished the Bureau by soldiers, sailors, marines and members of the coast guard, there were sixty-two John O'Briens, seven of whom had wives named Mary. In that was an element of surprise. It was indeed as if a hotel page had stepped into the lobby and called "Mr. O'Brien," and up rose sixty-two Mr. O'Briens—present for a family reunion, no doubt. In fairness to Congress and the Bureau, it should be added that other extensive families also ran.

And, further, it should be added that a much larger proportion of our American population is illiterate than we like to think—10 per cent of our rural population is illiterate, to illustrate; that Form I-B was put thru its paces in some of the camps at the rate of two or three thousand a day, with frightened typewriters dodging at the names of frightened alloters who didn't always spell their names or the names of their wives the same twice in succession. To illustrate and to stoop from the realm of generalization to a specific instance—there is the case of Willie Conley with name duly inscribed above "his mark," who changed his locality, regiment and company and consistently changed his name to William Connelley, and inasmuch as he was a colored boy, optimistically trusted to Providence the sending of his mother's check. In a word, we can go forward at once from the Congressional birth of the Bureau to one of its malfunctions, which leads one to a confounding black-magic box which cannot be described but can be conjectured—a box of mixt-up names. This, in turn, leads to the question of identification, and, by inference, to a lot of other attendant difficulties considering how many families were looking for monthly checks. And, at once, it is only fair to say, it was not until months later that the War Department took cognizance of our American choice of names and allotted serial numbers, made of metal, and duly affixed to, and recorded as of, each American exhibit.

**T**HEN—Factor No. 11 in the Situation—the law itself was, tho not unduly complex, still so very complex that before the Bureau was even on its feet more than two thousand letters requesting interpretation were impatiently awaiting it at the post office. It provided, first, that the director should receive the salary of \$5000 a year, about the simplest of its provisions. It provided "moneys," etc., and appointments to be determined by the Secretary of the Treasury, who selected as

first director, William C. DeLanoy, who had been an insurance broker in New York City, and then had made good with the Secretary as the head of the Marine and Seamen's Insurance section established after the war began, in the Treasury; who was later succeeded by Herbert D. Brown, head of the Bureau of Efficiency, who, in turn, gave way to Colonel Henry D. Lindsley, who was in charge of the analogous field of the A. E. F. and who is now bringing order out of the unfortunate battle ground.

**T**HE law has, since adoption, been amended so that, in one instance, "the amount of each monthly allotment and allowance shall be determined according to the family conditions existing on the first day of the month" instead of reading as "then existing," which involved calculations for fractions of a month. Likewise it was made to define more exactly and simply, the sum to be taken from the soldier's or the sailor's pay, upon his written order, and to be sent, with the allowance, varied in accordance with different classifications, by the Government, which "total monthly allowance to beneficiaries of Class B added to the enlisted man's monthly allowance to them shall not exceed the average sum habitually contributed by him to their support monthly during the period of dependency but not exceeding a year immediately preceding his enlistment or the enactment of this amendatory Act." Which last provision of the law, incidentally, led a good many supposedly contented wives, and others, to aver, to the end that their men should be drafted, that they never contributed "anything" and later, when the men were in France, to aver, on oath, that the men had contributed more or less—usually more!

For want of space to analyze the law sufficiently to enlighten millions of persons, in the army and navy and out, who do not understand it even now, it must be sufficient to say that there are some phases of it which, in Washington, are being debated to this day. But the point here is that the business of interpreting the law was another important factor in the situation to millions of persons who were impotently groping for relief, another black-magic box.

And there were other black boxes, which, accumulating rapidly, decreased the efficiency of the Bureau in geometrical progression. Figuratively speaking, in short, the Bureau was not only born late, so that its eight or nine thousand workers, besides the several thousand other part-time workers, tho working like beavers for many months, seemed to be trying to dam a stream that was running torrential, but—properly mixing metaphors to the end that our incoherence shall properly suggest conditions exactly—when the Bureau did get started, it found it had

**T**HE seeds of death were in the Bureau of War Risk at its birth. Everybody—which means he with the most words to his tongue, as a rule—admits that. The fact was—not is—that you could say anything you wanted to about the War Risk Bureau and "get away with it."

You could say, in general, as thousands did in letters to soldiers abroad, and sometimes in words too thick for mere fluid ink, that the Bureau, far from being the vast and glorious improvement on the Civil War pension system, which Mr. McAdoo, in the midst of his many activities, said it was *about to be*, is, or was, an execration unto the Lord. And the youngest reporter can go out and adduce a "sob story" that will make the Heavens weep—the story of one, merely, of any number of families of soldiers sufficing for all purposes of generalization! You can say that in the National Museum where, by the way, are fossils and other remains of dying ages, that at one time the Bureau had 200,000 letters from parents, wives, all manner of Americans, piled, unopened, like cord-wood. But officials of the Bureau, officials of the original Bureau, of course, deny that, insisting that at no time were there quite 150,000 such letters. And then they explain that such vast numbers as did accumulate, accumulated because all the machinery of the Bureau was busy night and day getting out checks—which checks, by the way, in goodly numbers were sent to addresses ordered changed in the aforesaid unopened letters.

**B**UT let us begin chronologically: The whole allotment, allowance, insurance and compensation program was conceived beautifully, tho only in lesser part by Mr. McAdoo, who got the credit, skilfully, and must accept the responsibility, loyally, therefor. Then Congress put the creature together, exacting from it, doubtless, every reasonable promise of good behavior. It was then born. It was born late; that is, it was made retroactive in two ways—in its compensation and insurance provisions—to the 6th of April, altho it was not passed until the 6th of October. These factors lent embarrassment, but, withal, can, relatively at least, be dismissed, since the allotment and allowance business of the Bureau has caused most of the trouble.

more inept legs than a centipede, and those legs not only were continuously getting tangled in some of the black boxes aforesaid, but they were situate, as real estate men say, thousands of miles apart. Distance, in short, to suggest one difficulty, does not lend enchantment in such matters as relief to families in need. It takes, normally, five days for a letter to cross the continent, and during the war it sometimes took two days to get a letter, by mail, from one part of Washington to another part. If you multiply this condition by thousands, you do get some aggregate delay! The Bureau had to use inexperienced and untrained workers. These workers had to function in primary fashion—that is, they met the letters and documents at the threshold of the Bureau. But of course all the departments in Washington also had to use in large numbers inexperienced and untrained and, very often, inefficient workers. Office equipment in Washington was likewise scarce and variable, and inadequate. The telephone service between the fourteen, or sixteen—there are now sixteen—agencies of the Bureau in Washington, was for a long period deplorably bad. Add to this condition as many as 60,000 letters a day, each requiring careful and precise handling, and you get, as a result, such events as a soldier's family, in Oregon, say, receiving a check too large and very late, only to return that precious check, promptly get another, larger still, then, for months, get no letter at all. Add all conceivable variations, and some to boot; multiply the result by all sorts of family woes and letters to congressmen and newspapers; add the fact that about three-fourths of the troubles of the Home Service Section of the Red Cross were traceable to cables and letters from men among the 5,000,000 soldiers, sailors, marines and members of the coast guard complaining that their families were in need; and add that in innumerable cases its general Washington clearing house for those letters and cables could not even get "yes" or "no" from the Bureau, and you do have just cause of general complaint. To be sure, in not all cases was the Bureau to be blamed. To illustrate, the law specifically lays down the processes of the allotment and the allowance, and obviously the Bureau could not send out checks unless the other parties to the situation had done its part by signing and sending properly made out documents. In short, the personal equation, magnified by millions, with attendant attempts, many successful, at fraud, entered in. Then

remember, too, that, as usual, the numerous other Washington bureaus requisite to properly coördinated work were frequently tardy; that War Department and other records, and data, were frequently belated, and you begin to discover that, after all, human judgment and human patience had some cause, on all sides—to mix metaphors again—to get legs almost irretrievably tangled. Much evidence can be adduced, now, by way of "I told you so." For instance, one great insurance company states that 70 per cent of its policyholders change their addresses every year, and there are many individuals

Colonel Henry D. Lindsley, a retired business man who went into Government service when the United States entered the war. He is the present head of the War Risk Bureau of the Treasury

who freely aver that not only might the officials of the War Risk Bureau have apprehended that so huge a correspondence business could not be handled without decentralization, but that, moreover, to handle it, or to attempt to handle it, from a central headquarters in Washington was inconceivable. Not only was the job too big—a hundred times too big—but Washington has a knack of starting out like a winner and ending up—like Washington.

But why should the problem have been decentralized?

Because it could not be handled otherwise. The fact that now it is rapidly "catching up" when nearly all the factors in the situation, with the armistice and demobilization, are changed does not prove that there are not loads too big for any camel's back. To be sure, before the Federal Reserve problem was decentralized, vast study had been given to the situation. To be sure, speed, generally, is enhanced by centralization, if centralization is practicable. To be sure, the Red Cross Home Service Section, with all its farflung

and effective service, could not, without discounting the effectiveness of its own ministrations, take over the task of the War Risk allotment and allowance work, for the reason that it is only quasi-governmental in its functions. But, on the other hand, not only did the Federal Reserve system succeed because, not in spite of, its decentralization; not only did the Food Administration decentralize its work all it possibly could, and successfully, too; not only did the Council of National Defense do likewise; not only is the Federal Board of Vocational Education performing its functions thru fourteen decentralized offices, and not only was the draft, the greatest achievement of its kind, achieved by decentralization, but, not long ago, General Crowder, whose mind seems to refuse to entertain error, stated that in ninety-nine of a hundred cases the information in the possession of the draft boards would have been quite sufficient to confirm or to correct the allotment and allowance blanks later to be made out by soldiers and others at the camps. And then he points out, in a circular letter to the local boards, that all but two of the items required in the processes preceding War Risk payments, can be supplied from the answers of the draft questionnaire, and that those two apply in a very few cases! In the space of a few minutes, he concludes, all the necessary information, which was procured, if at all, by the War Risk Bureau principally by mail, could have been supplied by the draft boards—all supplied on a single blank which might, automatically, be forwarded to the War Risk Bureau.

But now the hurly-burly is done, and the efficiency lesson is fairly clear. Tho it seems probable that all the aspects of our governmental regime which have to do with the welfare of the disabled soldier and of his family, such, for instance, as those of the Federal Board of Vocational Guidance, and those of the War Risk Bureau, including insurance and compensation, should be handled from a central administrative office, and be coördinated there, in such wise that the excellent work of such organizations as the Red Cross could still retain their spirit and identity, all those who have insurance and other dealings with the War Risk Bureau need not lose faith in it, for the evidence is in that the whole vast scheme has come in for a new lease of life. Just preceding his retirement Secretary McAdoo, noting that the A. E. F. seemed able to do anything, wellnigh, called in Colonel Lindsley, who was in charge of the [Continued on page 347]

**I**N the beginning there was just one woman, no doubt a plain little thing with coarse hair and a vacuous expression, because we know that patrician features and beauty of form are developed by a long line of carefully selected ancestors. Eve had no ancestors, literally nothing to go on, but one virtue, curiosity, and there was nothing to learn about Adam, nor from Adam. From all accounts he was a very dull and unenterprising person when she came into his life.

So the Lord in his great wisdom arranged conditions in that garden with reference to Eve, and her one virtue, curiosity; not Adam, who was evidently devoid of even this most primitive animation of the human intelligence. He knew that you cannot thrust knowledge nor ambition upon man, that he must choose to know and achieve. Seeing that Adam would prove stupidly obedient and never earn his own salvation, he put Eve in there with him, and forbade them to eat of the fruit of the tree of knowledge because he knew that only by this means could he stimulate the normal desire, not for disobedience, but for knowledge and personal independence.

The serpent was only the stick she used to frail off the apple which she shared with Adam. She would have had it if every bough had been guarded by cherubim, because the first woman was the first exponent of higher education in this world.

She had the burning instinct for knowledge and no one has ever heard her complain of the consequences. It is always the Adams who rail at that first woman for bringing sin into the world. They forget that she also brought joy and love and women's rights, and men's opportunity to distinguish themselves from innocuous desuetude with glories and honors and every power they have to think, choose, win and achieve. It was Eve who started things going the way the Lord intended them to go.

And if she had not performed this great service Adam would have lived and died in that beautiful kindergarden of the human race. But if the Lord had

# WAS EVE A FEMINIST?

BY CORRA HARRIS

*If there is anybody who knows most about women folks, from Eve down, it is probably the author of "A Circuit Rider's Wife," "Co-Citizens," "Eve's Second Husband," "The Recording Angel"—all stories that tell you more about feminine psychology than you will learn in years of first-hand study. The photograph below shows Mrs. Harris (center) talking with one of her Valley neighbors, Mrs. Felton, the original of Susan Welton, a character in "Co-Citizens"*

not turned them out of that place at once she would have been leading Adam around the walls of it forever looking for a way of escape.

She had discovered something, love, the great miracle which is the beginning and end and purpose of all things. The least that it has done is to people the earth with nations. These are merely the mediums thru which love works to accomplish nothing else but righteousness. Every vice, every failure, all forms of cupidity and hatred are merely transient errors like mistakes students make in their effort to discover the sum total in great calculations, to be discarded presently for the right theorem.

But when the whole thing is finished into a working principle, it will be discovered that Love is equal to everything, and everything equals only Love. It creates all civilizations and tears them down when they fall short of just love. It guards every doorstep and every frontier, or that house and that frontier are wiped out. It lays every stone and earns all things that keep, and is the invincible destroyer of everything that ought not to last.

Now, given the Scriptures, which are the best records we have and the only ones that stand the tests put upon them by the hearts of men, Eve discovered Love, the one law of life without which nothing else, from religion and poetry to the institutions which make civilizations, could have existed.

ventures of men. They are revolting against the ill health of mind and body incident to their condition. They are becoming ashamed of their own faults and vices, the sense of helplessness and of irresponsibility which belittles them. They know things. They are learning more every day, and they want to work it off, this energy of knowledge. The merely idle woman was easily assimilated, but this nation must awaken to a realization of the fact that the most dangerous thing on this earth is a highly trained intelligent woman who has nothing to do. They are already a trifle unbalanced, nervously insane, which shows in some of the methods they are using to achieve their ends, like the neurasthenias they have exhibited for more than a year around the White House at Washington. Those poor women are not the leaders of the great exodus of women toward life and health and liberty. They are the casualties.

But all this hysteria will pass when they get out into the open and become normally absorbed in the right order of things. The transition period will be difficult and dangerous, but not nearly so critical as the present situation for women, which is not a situation at all but a miasma arising from the decay of old and unbearable conditions.

The war is finished now with its great emergencies which afforded them so many almost violent opportunities for service. Something must be done and done quick- [Continued on page 347]

And yet the only interpretations, pictures or statues of this remarkable woman are fanciful, sentimental, designed lightly, suggestive of mere tradition. Nothing is recorded on the pedestal which places her properly in history as literally the first great discoverer and benefactor of mankind.

The one incontestable evidence that the Eve scriptures were founded upon truth if not literally upon facts is that women retain to this day the same persistent, perverse determination Eve had not to stay put. They were never so resolved as at the present time from Pekin to Washington to get out of confinement, however comfortable, and share the duties, responsibilities and ad-

## Clemenceau's Warning

THE name of Georges Clemenceau is so much a part of the history of the last four and a half years that one can prophesy with Sibylline certainty that if for no other reason his articles and speeches translated by Ernest Hunter Wright will be of great historic value. Moreover, they reveal M. Clemenceau, his fiery enthusiasm, his frankness, his unyielding fixity of purpose, those qualities which as Theodore Roosevelt said "instilled into his countrymen the qualities which during the last forty-eight months have made France the wonder of the world," and they show France speaking thru one of her greatest statesmen.

*France Facing Germany*, the title under which his articles and speeches appear, is not only a "contrast of these two 'moral' forces with each other—assuming that such a term could at this moment be applied to Teutonism, but a judgment as well" in spite of the fact that they were written when the very honor and life of France was at stake. If they were only a collection of expressions of vituperation against the people with whom France was at war their interest and value would soon pass, but rather are they the comments of a "citizen of humanity." As M. Clemenceau says in his introduction, "I am and whatever comes I shall remain a humanitarian—because I am a Frenchman." It is from that point of view he seeks to show the roles that have been played by France and Germany in this great struggle of Armageddon.

The speeches cover a period of eight years, from 1908 when the war cloud loomed black, to the attack on Verdun in May, 1916. From the beginning his voice rang out against pacifism, against that organization

which "would not permit a pacifist." In his speech on the Franco-German agreement in 1911, that thorn in the flesh of the French, thru the debate on the three year law up to the very eve of hostilities he sounded the warning that events have proved only too needed; and after the war began his call is ever for courage, sacrifice, devotion. The tribute that he pays to the French poilu, "ill clad, ill kempt, sparing of words, but with a very happy smile which tells of his exaltation in being where he is, in behalf of a great cause, to the height of which he rose at the first bound," is a tribute which the world gratefully echoes. The words he spoke were for a particular time, but like all great speeches they are applicable to many times. Particularly applicable today are the words he spoke just as the desperate offenses on Verdun were expiring:

Every people worthy of a future is preparing for a new kind of life. We have taken no little lead, in having been able to gain an increase of glory in spite of mistakes which might possibly have proved irreparable if our cause had not lifted us to an effort of higher understanding for an exertion of will which may permit us magnificently to achieve our highest work, toward which the French Revolution itself was only the first, halting step. That is our duty, the last, perhaps the easiest, coming as it does after so many marvelous achievements of our glorious children on the battlefield. The hour is on us when we can no longer be content to keep saying, "That will be for tomorrow." Our sons and brothers were not, they are not heroes of some tomorrow. In whatever form it may be, when the clock shall strike the prophetic strokes, shame to the man who has refused to open his eyes to the real necessities for final victory. For on that day, to the call of civic service as well as military duty, the true patriot must be able to say: "I am here."

*France Facing Germany*, by Georges Clemenceau, translated by Ernest Hunter Wright. E. P. Dutton & Co. \$2.

## America at the Front

THREE war correspondents give us, each from his own angle, the story of the American Army in France, and the story of its achievement. Much of the material has been published in the newspapers and is now collected in book form as permanent, important and authentic documents. As no two persons will describe the same thing in the same manner, no matter how simple, these three accounts of our part in the war are vastly different, tho complete in their individual treatment.

Major Frederick Palmer, the correspondent representing the whole American press, has accomplished a brilliant piece of writing in his *America in France*, which is the most comprehensive account of America's part in the war yet published. Major Palmer was attached to General Pershing's staff and had an unequalled opportunity to observe and report what he saw and heard, and to write a real history of what American boys did. By his graphic accounts of what was done, not by individual men, but by individual divisions, we get the complete story of the army under fire, a fascinating story in non-technical language. Without breaking off his narrative of what is happening in France, he turns his attention for a while to this side of the Atlantic to recount briefly what the stay-at-homes did with as much enthusiasm as the boys at the front tackled their job. We stay-at-homes know what we did, but what we want to know is the effect of our work on the men in khaki. And that is what we get

—the army's reactions to America, to Italy, France and England. Here is Major Palmer's account of the first Americans going into battle:

There was nothing downhearted about their mood, as you saw by their faces. They were worried, as were their officers, lest they should make some mistake and not remember all their training in case of a crisis. It did not matter so much to them that they might be killed as that they might be killed in a manner that was contrary to instructions. If they had been told to charge machine guns then and there, I think that they would have let out the cry of hounds off the leash.

They turned off from the roads and were lost in the curtain of night as they followed the paths to the trenches, whither no detached officer was allowed to follow them. They took the place of the French and found the operation was precisely like the rehearsals that they had been thru. The novices had at least shown that they could "take over" without a torchlight procession and a brass band. Tho the Germans may have known that a relief was in progress, they did not know that Americans had made it. . . . The French command was gleeful over having introduced us into war society without one untoward incident. American officers could point out where a shell nearly got a rolling kitchen as a proof that we were actually in the line; young lieutenants and the men themselves considered that the show was not up to the advertisements.

Floyd Gibbons and Irvin Cobb give at the same time a more personal and more general account, drawing a picture to be taken as a whole, not studied in detail. They write of their own experiences and speak of the American Army as a unit. They analyze the doughboy's reactions to his surroundings, and warm the American heart with the report of the enthusiasm

Premier Georges Clemenceau of France

and gratitude of the French when the first men in khaki reached their shores.

Mr. Gidness had the opportunity to mingle with the enlisted men, and he describes them in every phase of their life in France from the time they landed there until shortly before the armistice was signed. It is a life-like picture that he draws. Too even in most situations and unfamiliar surroundings they are conscious the Yankee, enjoy his humor and appreciate his ingenuity. Mr. Gidness has shared the soldier's experiences so that the story he gives us is in the language of the American soldier who just talks his way thru "And They Thought We Wouldn't Fight."

Personal experiences, too, we get from Irvin Cobb in *The Glory of the Country*, but such theme he has selected as a character subject is a vital part of the composite picture of the American Army abroad. Do not wonder what it feels like to be bottled up, or what an officer thinks about when he is scuffling over the muddy trenches? What did Paris do the first day Big Bertha moved her on the city from a place seventy miles away? These are just a few of the things we are made to understand. His narrative is a story of the war that holds our interest, and for the time being you are living in France. It is dramatic, but it abounds in Irvin Cobb's humor.

*And They Thought We Wouldn't Fight*, by Major Frederick Palmer. Putnam & Co. \$1.75. *And They Thought We Wouldn't Fight*, by Irvin Cobb. George H. Doran Co. \$2. *The Glory of the Country*, by Irvin Cobb. George H. Doran Co. \$1.75.

## Can Grande's Castle

TO travel from Britain to Byzantium, from New York to Nippon in the pages of one small book, is to take a long journey. To watch a triumph in ancient Rome, a sea fight under the command of Nelson, a carnival in Venice and "hari-kari" in Japan, is to have many adventures. A share in these and other adventurous journeyings is for all who will read *Can Grande's Castle*, by Amy Lowell.

Four poems fill the book. The first, "Sea-Blue and Blood-Red," is a narrative of the tragic love of Lady Hamilton and Admiral Nelson, of their love-making in Naples and of his death "off Cape Trafalgar." The second, "Guns as Keys; and the Great Gate Swings," tells how Commodore Perry opened the ports of Japan to the trade of the United States. The third poem, "Hulks," is a picture and a prophecy; a

Samuel Merwin, who created "Henry"

picture of England in the days of mail coaches, a prophecy of England in the future, "flinging her hedges out and asunder to embrace the world." The fourth poem, "The Bronze Horses," is finely conceived and brilliantly executed and tells the story of the four great bronze horses that have been a prize of conquest for centuries, in the ancient, medieval and modern world.

All of the poems are written in that richly rhymed, swiftly moving, polyphonic prose which Miss Lowell has introduced into our literature. People who insist that poetry must always be lyrical may be dissatisfied with these poems, for the effect of polyphonic prose is not lyrical. But these are narrative poems and the effect of polyphonic prose is admirably dramatic. By her use of it Miss Lowell is enabled to present her pictures of scenes, persons and events with unusual grace, freedom and vividness.

But no matter what form she uses Miss Lowell's imagination is her great gift. It is the vitality of her poetry. And in these poems she enables us to share the very savor and scent of distant cities and times.

*Can Grande's Castle*, by Amy Lowell. Macmillan Co. \$1.50.

## Henry Is Twenty

"HENRY is twenty!" Only those who watched Henry Calverly struggle with Life in "Temperamental Henry" can grasp the significance of this announcement. To those who have not met, known, laughed at, blushed for, sympathized with, almost wept over, and certainly felt like kicking him, Henry at twenty may suggest nothing. But if they will recall the life-battles Billie Baxter fought at seventeen, then add to them the unescapable fact that Henry is a genius (no one ever accused Billie Baxter of this), a square peg in a round hole by reason of his extraordinary talents as well as by his youthful arrogance and intolerance, they will have a faint glimmer of the rich fields of delicate humor that lie in this second phase of Henry's biography. The life-problems Billie Baxter struggled with were simple sums, however, compared with the complex ones that Henry writhed over, for Henry's blazing genius blinded him. And so while "Seventeen" is rollickingly funny, *Henry Is Twenty* is much more sully humorous.

Henry Calverly, 3d, finds himself on the verge of twenty-one alone in the world, trying to support himself by working on *The Weekly Voice* for 88 a week (this was in the middle nineties!) in the hostile town of Sunbury. Henry is looking forward to the freedom and dignity of twenty-one; meanwhile youth and genius

are making things hard for him. Also girls—Henry falls in and out of love with the landing qualities of a cat.

Somehow you have to confess that if you had met Henry in the flesh that you might have harbored the unkind feelings with which Sunbury regarded him. Like these country people, you would never have been able to see beyond the absurd little mustache, the bamboo cane, and the eyeglasses with their conspicuous black silk cord, and you thank Mr. Merwin for unceremoniously letting you in by the back door, so to speak, so that you come to understand the intricate workings of Henry's dynamic young brain. Mr. Merwin has made an exceedingly fine analysis of the psychology of boyhood.

*Henry Is Twenty*, by Samuel Merwin. Bobbs-Merrill Co. \$1.50.

## Bennett's Foursome

THE famous Five Towns trilogy has grown into a tetralogy. When at the end of 700 pages of the early life of Edwin Clayhanger the author announced that next year he was going to tell the same story over again from the woman's point of view the critics—who had been telling their readers that the age of the long novel was over—pointed out with candor that Arnold Bennett's conceit had led him to absurdity. Who, they asked, would read a story when he knew how it would come out? Which is much the same as saying, who could enjoy a walk if he knew where he was going?

But Mr. Bennett showed us that the same incidents and dialog appeared differently to Hilda Lessways than they had to Edwin Clayhanger. In this volume, published the following year, the author made good use of the insight into feminine psychology that he had gained when as editor of a woman's magazine he had read thousands of letters in which his subscribers had revealed their hearts and sought his counsel.

Then Mr. Bennett put the devotion of his followers to a more severe test. It's thought hard nowadays to wait a week or a month for the next instalment of a continued story in a magazine but our author, who had cut off "Hilda Lessways" as he had "Clayhanger" at the most exciting point, kept his readers waiting four years for the third volume, "These Twain," in which he told of their married life to-

Amy Lowell writes "polyphonic prose"

Arnold Bennett, author of "The Road to Nowhere"

gether, their persistent disagreement and their constant affection, their clashes and reconciliations.

But this was not the end of the story. There was a child, Hilda's but not Edwin's. And now he has grown up and has a story of his own, *The Roll-Call*. The new volume ends as abruptly as the others at the outbreak of the war and this gives us hope of a sequel for which there is already an eventful four-year period. Altogether there must be about a dozen volumes dealing with these Five Towns folks, each readable by itself, but doubly interesting to those who have become previously acquainted with the place and some of the people. The population of the city is larger than we thought when we first heard of it. It has already made a place for itself in fictional geography and the indefatigable commentator is drawing up maps, keys and genealogical tables as he has done for the novels of Balzac, Zola, Scott and Dickens.

The secret of Arnold Bennett's success is that he writes from the inside. He secures the effect of an autobiography without its cumbrous machinery, a diary or letters or soliloquies or reminiscences. We look at the world thru the eyes of the character he is concerned with. His people strike us as peculiarly self-centered until it finally occurs to us that this peculiarity is the common trait of human beings in general, not excepting ourselves. He holds the mirror up to nature in a way impossible to the old objective form of fiction. In the works of the romantic school the fascination lay in the fact that every girl reader felt herself a Cinderella, neglected and misunderstood but awaiting a fairy prince, and every boy reader felt himself a prince in disguise, cast temporarily in humble circumstances but soon to appear in full glory. But the naturalistic school shows us our identity of feeling, not with impossible heroes and heroines but with certain ordinary people picked at random from the Five Towns or any other. It is a much more difficult task than that of the romantics for it is not aided by our own desires and all the greater triumph for a man like Bennett who irresistibly achieves it.

The curious thing about *The Roll Call* is that George, the young architect, is strikingly like his stepfather, Clayhanger, when he was young, and bears no visible resemblance to Cannon, his real father. But Cannon we never got inside of as we did of Edwin and Hilda so we really do not know much about him. Perhaps there was more to him than we thought. But we knew Edwin as a slim, awkward and self-conscious youth, hence it gives us a shock to see him now thru the eyes of George as "Alderman Clayhanger, undeniably stout, with gray hair and beard and of peculiar appearance." It makes us feel old. But we are glad to see our Five Town friends are getting ahead generation by generation and now hold their own in London and Paris society.

*The Roll-Call*, by Arnold Bennett. George H. Doran Co. \$1.50.

### Another Sheaf

**G**ALSWORTHY has above most essayists the rare combination of honest conviction and literary charm. Wherein, perhaps, lies the widely felt appeal of his philosophy.

In his first book since the war, *Another Sheaf*, Mr. Galsworthy has included a dozen essays all looking forward toward some phase of reconstruction, trying, as he puts it, "to conjure the truth out of the darkness of the future." It is in the matter of labor problems that the darkness seems

# He Shot the Gun

## And Found That He Had the Greatest Wheat Food in Existence

Prof. A. P. Anderson knew that each wheat kernel contained some 125 million food cells.

He knew that each cell contained a trifle of moisture.

So he said, "I will turn that moisture to steam, then explode it. Thus I will burst every food cell so digestion can instantly act."

### It Took Years

### But He Did It

He finally solved the problem by sealing the grains in huge guns. Then he revolved the guns for one hour in 550 degrees of heat.

When he shot the guns every food cell exploded. About 125 million steam explosions occurred in every kernel.

### Airy, Flaky Bubbles

The grains came out shaped as they grew, but puffed to bubbles, eight times normal size.

The fearful heat created a toasted nut flavor.

The explosions created flimsy morsels, which melted away at a touch.

He had what is recognized everywhere now as the most delicious wheat food in the world.

But above all it was a whole grain made wholly digestible. Every food cell was broken, and that never before was done.

He applied the same method to rice. Then to pellets of hominy, and created Corn Puffs.

Now there are three Puffed Grains, each with its own delights. And happy children are now getting about two million dishes daily.

Don't let your children miss their share.

Keep all three kinds on hand.

most deep. Mr. Galsworthy explores it fearlessly, admitting first that "one can but marshal some of the more obvious and general liabilities and assets, and try to strike a balance. The whole thing is in flux." But he sees in the reconstruction of relations between capital and labor a period of peril.

A situation agitated, cross-currented, bewildering, but busy, and by no means economically tight at first, slowly becoming less bewildering, gradually growing less and less busy, till it reaches ultimately a bad era of unemployment and social struggle. When the pinch begins to come, it will encounter the quicker, more resentful blood of men who in the constant facing of great danger have left behind them all fear of consequences; of men who in the survival of one great dislocation to their lives, have lost the dread of other dislocations. The war will have implanted a curious deep restlessness in the great majority of soldier souls. Can the workmen of the future possibly be as patient and law-abiding as they were before the war, in the face of what seems to them injustice? I don't think so. . . . The self-control and self-respect which military service under war conditions will have brought to the soldier-workman will be an added force in civil life; but it is a fallacy, I think, to suppose, as some do, that it will be a force on the side of established order. It is all a question of allegiance, and the allegiance of the workman in time of peace is not rendered to the state, but to himself and his own class. To the service of that class and the defense of its "rights" this new force will be given.

Mr. Galsworthy is in the United States now, accomplishing by his lectures the reconstruction indicated in another of these essays of his "American and Briton."

If thruout Western civilization we can secure the single democratic principle of government, its single level of state morality in thought and action, we shall be well on our way to unanimity thruout the world; for even in China and Japan the democratic virus is at work.

But even if we do secure a single plane for Western civilization and ultimately for the world, there will be but slow and difficult progress in the lot of mankind. And unless we secure it, there will be only a march backwards.

For this advance to a uniform civilization the solidarity of the English-speaking races is vital. Without that there will be no bottom on which to build.

It is difficult to stop quoting from *Another Sheaf*, for all of it challenges attention and provokes sober second thought.

*Another Sheaf*, by John Galsworthy. Charles Scribner's Sons. \$1.50.

## The Sea in War Time

ALFRED NOYES has written some charming stories, yes, stories, not verse

Of those who fought and died,  
Unreckoned, undescribed.

Told with the lightness of touch, keen character drawing, and humor so characteristic of his verse, they show him as complete a master of the technique of the short story as he is past master of verse forms. So successful is the little volume of "sea tales and others," as he calls them, that all story-lovers will be glad he has added this to his achievements.

His title, *Walking Shadows*, is whimsical enough, one might think ghostly if he were unfamiliar with his favorite thesis—echoes of "Old Japan"—"that the kingdom of dreams is the sole reality worth living and dying for." He best expresses it in his prelude—a way he has of doing:

Shadows, but ah, they know  
That history's pomp and show  
Are shadows of a shadow, gilt and painted.  
They see the accepted lie  
In robes of state go by,  
They see the prophet stoned, the trickster  
sainted.  
And so my shadows turn  
To truths that they discern  
Beyond the ordered "facts" that fame would  
cherish.  
They walk awhile with dreams,  
They follow flying gleams,  
And lonely lights at sea that pass and perish.

It is this which puts such a wide gulf between his volume and the "war stories" of which there are legion. They are not

stories of the war but stories of the individual into whose life this new element, war, with all its power to exalt or condemn has come. Then, too, they are not land stories, but stories of the sea in war time, a sea invested with submarines and patrolled by trawlers. Mr. Noyes has a knack of striking the fundamental human chord. His pages abound in heroism, pathos, mystery, romance which alone promises popularity. And moreover, his characters are "people we might have known."

*Walking Shadows*, by Alfred Noyes. Frederick A. Stokes Co. \$1.50.

### Four Plays by Barrie

A new book of Barrie plays has the same effect upon the reading and theater going public as the announcement that a new Barrie play has been put on the boards. It is received with the same enthusiasm, delight and gratitude as the actual performance of the play, for Barrie has that most fortunate attribute of the playwright that his plays lose none of their charm when merely read instead of seen.

It is a common tribute to Sir Barrie that he is whimsical. We might repeat that tribute when speaking of his latest volume, *Echoes of the War*, but hasten to add that this time it is not the same kind as that which delights us so in "A Kiss for Cinderella" or "Peter Pan." There is less froth and more substance, tho this does not imply by any means that the lightness of touch is not there. The four one act plays contained in this new book are of the war, but not about the war, for their interest centers not in those who go, but in those whose dear ones go. Mingled with the khaki that flits thru the pages is the black of mourning, and once we catch the sheen of a wedding dress. And there are gray hairs and worn faces that contrast with the eager-eyed, newly-commissioned young second lieutenant, and grave voices as well as gay.

With two of the plays, "The New Word" and "The Old Lady Shows Her Medals," the public is already familiar. The others, "A Well-Remembered Voice" and "Barbara's Wedding," have not yet been presented. In plot the plays are distinct and individual, but this they have in common, that they are Barrie at his best.

*Echoes of the War*, by James M. Barrie. Charles Scribner's Sons \$1.50

### Re-Educating the Soldier

DOUGLAS C. McMURTRIE, director of the Red Cross Institute for Crippled and Disabled Men, president of the Federation of Associations for Cripples, and editor of the *American Journal of Care for Cripples*, is especially well qualified by experience and training to write about the disabled soldier. For eight years he has devoted a large part of his time and effort to study the obstacles and prejudices that confront the crippled man, and the means of overcoming them. His book, *The Disabled Soldier*, is a sympathetic, interesting and profusely illustrated description of the modern principle of rehabilitating disabled soldiers, so that they attain self support once more and keep their self respect, in spite of injuries which in pre-war times would have rendered them useless and mendicant. Mr. McMurtie's main topics are: the neglect of the disabled men in the past; a description of the pioneer school for industrial cripples at Charkbrook, Belgium; why the disabled soldier must not be allowed to rest on his laurels; how the work of rehabilitation is begun when the man is still an invalid in the hospital; the

# Let Your Own Teeth Decide This

*All Statements Approved by High Dental Authorities*

## Note the Film There Now

Feel your teeth with your tongue and you note a slimy film. There lies the reason why teeth cleaning methods have proved inadequate.

Millions find that brushed teeth still discolor and decay. Tartar accumulates. Pyorrhea has become alarmingly common. Statistics show that tooth troubles have constantly increased.

Every authority knows that the reason lies in that slimy film. It clings to the teeth. It gets into crevices, hardens and stays. And most tooth troubles are caused by it.

That film is what discolors—not the

teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

Old methods of teeth cleaning do not end it, as everybody knows. But dental science has for years sought a way to do it. Now that way is found. Clinical tests have proved this to dentists, and now we are urging everyone to prove it. The method is embodied in a dentifrice called Pepsodent, and we send an ample test to anyone who asks.

## Watch It For Ten Days

We urge you to ask for a 10-Day Tube. It is free. Then let your own teeth decide its action on the film.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly combat it.

Pepsin long seemed impossible, because it must be activated. The usual method is an acid, harmful to the teeth. But science has discovered a harmless activating method. Five governments have already granted patents. And that invention has made pepsin possible.

Pepsodent was submitted to many clinical tests before it was offered to

users. Able authorities proved its results beyond question. Leading dentists all over America are now urging its adoption. Now it is felt that everyone should know it, and at once; so we publish this trial offer.

Send this coupon for a 10-Day Tube. Use it like any tooth paste. Note how clean the teeth feel after using. Mark the absence of the slimy film. See how the teeth whiten as the fixed film disappears.

Judge it by what it does. Prove it for your own sake and your children's sake. When you see these results you will not again try to clean teeth without it. Cut out the coupon now.

## Even better than money— “A. B. A.” American Bankers Association Cheques

“A. B. A.” Cheques are better than actual money for the traveler for several reasons: They are more convenient to carry—less bulky. They are *safer*. They do not have to be changed into another kind of money when you go from one country into another. They are like dollars in the United States and Canada; like pounds, shillings and pence in the United Kingdom and the British Colonies; like francs in France, lire in Italy, and so on. In other words they are accepted internationally for payment of goods and services—  
“The safest, handiest travel funds.”

Get them at your bank, or write Bankers Trust Company, New York, for booklet and information as to where they may be had in your vicinity.

new intensive methods of education; how the disabled man is placed in a job; detailed discussions of the different kinds of vocational reeducation for the respective kinds of cripples, and descriptions of the leading institutions in France, Belgium, Italy, Great Britain, Germany, Austria and America.

But the complete success of the work rests with the people of the United States—upon whether we sympathetically grasp and effectively express in our relations with the graduates of re-education the new spirit of dealing with the disabled upon whether we sense the glory of restoring the ex-soldier's ability to earn his own living, or whether we continue the old temporary hero-worship and permanent pauperization. The self-respect of self-support or the ignominy of dependence—which shall the future hold for our disabled soldiers? The credit or the blame for the decision will largely rest with the American public.

Another book of this subject is *The Vocational Reeducation of Maimed Soldiers*, by Leon De Pauw, inspector general of primary education in Belgium and pedagogic inspector in the schools for wards of the army, in the institutes for vocational reeducation of wounded soldiers, and in the institutions for war orphans. M. De Pauw is one of the foremost workers in the great work of physical reconstruction of disabled soldiers and rehabilitation of wounded men, a problem which Belgium was first to face and first to recognize the paramount importance of. The book recounts what Belgium has done and is doing to reeducate her maimed soldiers, beginning with a discussion of the advantages of obligatory vocational reeducation, going into detailed explanations of the different methods followed, and culminating in full descriptions of the various institutions for rehabilitation.

*The Disabled Soldier*, by Douglas C. McMurtrie. Macmillan Co. \$2. *The Vocational Reeducation of Maimed Soldiers*, by Leon De Pauw. Princeton University Press. \$1.50.

### Anglo-American Relations

ANGLO-AMERICAN relations, one of the most important questions of the day, are discussed in *Explaining the Britishers*, by Frederick William Wile. Mr. Wile was representative in Germany and England for the *Chicago Daily News* and correspondent in Germany for thirteen years for the *London Daily Mail* so that he not only became thoroly familiar with the British temperament but was in a position to appreciate the stupendousness of the struggle whose brunt England bore so bravely and so modestly. His book is a story of “Britain's mighty effort in liberty's cause, as seen by an American,” but it is intended to be more of an interpretation than a narration; an explanation of the British character to the American public, written in the hope that it might help dispel misunderstanding between the two great English-speaking countries. Admiral Sims says in his foreword:

This book was written by an American who lived in England before and thruout the war. His purpose is to explain exactly what sort of a chap the Britisher is and what the army, navy and the people of Great Britain and her colonies have done in freedom's cause. Mr. Wile shows how the Britishers bore the brunt of the onslaught of an enemy which had been preparing for this war for nearly half a century.

Another book on this same topic is *America and Britain*, by Andrew C. McLaughlin, LL.D., head of the department of history, Chicago University. Professor McLaughlin takes the other side of the question—explaining the Americans to the Britishers. The book is really a series of lectures given by the author before representative British audiences during the war to bring about a better understanding between the two nations and strengthen the good feeling toward each other. Like Mr. Wile, Mr. McLaughlin has a great admira-

tion for Great Britain. And just because of this deep-rooted esteem for Britain of today, Mr. McLaughlin does not hesitate to express his opinion of her behavior toward America in the distant past, so that no one could accuse him of avoiding disagreeable truths in his praise of the British. But having broached the subject of our historical connections, Professor McLaughlin proceeds to clear the air of any feeling of hostility and then paves the way toward a mutual toleration and comprehension.

Charles Hanson Towne was a member of the group of American editors who went abroad in the summer of 1918 for the purpose of "shaking hands" with England and strengthening the bond between the mother country and her one-time colonies. In his book, *Shaking Hands with England*, Mr. Towne says that he only attempts to give a "general impression" of what he saw in England. These impressions, however, are colored by a deep reverence for "England the Magnificent," as he calls her, and a thoro appreciation of what she did to save the world and America. We would like to quote Mr. Towne's description of the spirit of London in wartime, symbolized by the women who put on their prettiest gowns and their brightest smiles and dined out with their men folks on leave tho their hearts were already breaking with the loss of some one near and dear to them, but we must confine ourselves to a less poetic and touching paragraph at the end of the book, which might well be taken to heart by the American public at this particular time.

We have beaten the Hun. Let us not slip back to complacency and ease, for his propaganda will go forth in defeat as well as in victory, spreading its lies thruout the world. There are stern days yet to be faced; but with an Anglo-American Alliance an accomplished fact, we have little to fear. That alliance must come about. It is up to every American and every Britisher to see to it, to do his personal share in bringing about a closer relation between England and America.

Two briefer volumes dealing with the Anglo-American question are *British American Discords and Concords*, compiled by the History Circle, and *America and Britain*, by H. H. Powers. Both these books present the important facts in the history of each of these nations, that bear on that of the other. The causes and settlements of disputes of the last three centuries are set forth impartially from both the American and English point of view in a brief, comprehensive survey.

*Explaining the Britishers*, by Frederick William Wile. George H. Doran Co. \$1. *America and Britain*, by Andrew G. McLaughlin. E. P. Dutton & Co. \$2. *Shaking Hands with England*, by Charles Hanson Towne. George H. Doran Co. \$1. *British-American Discords and Concords*, compiled by the History Circle. G. P. Putnam's Sons. 75 cents. *America and Britain*, by H. H. Powers. Macmillan Co. 40 cents.

## Books of the War

WOODROW WILSON'S SELECTED ADDRESSES AND PUBLIC PAPERS, edited with an introduction by Albert Bushnell Hart. (The Modern Library. Bant & Lippincott, 50 cents.) The most important public communications of the President of the United States, from the time of his inaugural address in 1913 until he went to France.

GUARANTY OF PEACE, by Woodrow Wilson. (Harper & Bros., \$1.) President Wilson's messages and addresses to the Congress and the people during 1918, together with the peace notes to Germany and Austria and the corrected text of the armistice.

MY COMRADE, by Captain Carroll J. Swan. (E. P. Dutton, \$1.50.) A chronicle of life among engineers at the front, including the first all-American story of the Great Victory Drive.

THE RIGHT TO FIGHT, by Sherwood Eddy. (Association Press, 60 cents.) Attempt to find the moral grounds of war by an honest seeker for some reconciliation between Christian ethics and the defense of a state by force, with the conclusion that war is at times inevitable.

FROM "PONY" TO "YANK," by William Yorke Stevenson. (Houghton, Mifflin Co., \$1.50.) Diary of an American lieutenant covering the period

# McCutcheon's Specials in Handkerchiefs

Reg. Trade Mark

## Ladies' Handkerchiefs

### LIVING BAYONETS

A Record of the Last Push

By ERIC P. DAWSON

*Author of "The Iron Division," "The Iron Division," "The Iron Division," etc.*

This volume, which takes as its title, "Living Bayonets," is the first time the story of the Iron Division of the Americans on the Western Front is told in the French and British (London) Press. It is the first time the story of the Iron Division of the Americans on the Western Front is told in the French and British (London) Press. It is the first time the story of the Iron Division of the Americans on the Western Front is told in the French and British (London) Press.

The Epic of the Poilu

### THE "CHARMED AMERICAN"

A Story of the Iron Division of France

By GEORGES LEWIS

Frontispiece. Cloth, \$1.50 net

Marshal Peten made his triumphal entry into Metz recently at the head of the famous Iron Division (the battering ram of the French Army). This book recounts the experiences of a French-American soldier who fought with this famous Division for thirty-two months and is the sole survivor of his original company comprising 250 or more men. It is the most forceful and vivid book on the Great War yet published.

A New Canadian Humorist

### THE RED COW AND HER FRIENDS

By PETER MCARTHUR

*Author of "In Pastures Green," etc. With Decorative Illustrations.*

Cloth, \$1.50 net

Mr. McArthur has made himself famous through the length and breadth of Canada by telling people in a humorous-serious strain of the simple charms of rural life. This is the theme of "The Red Cow," which will appeal to all lovers of farm and country life.

## March Books

Leacock Solves the Kaiser Problem!

### THE HOHENZOLLERNS IN AMERICA

And Other Impossibilities

By STEPHEN LEACOCK

*Author of "Nonsense Novels," "Literary Lapses," "Frenzied Fiction," etc.*

Cloth, \$1.25 net

The proper punishment for the Hohenzollerns and the Hapsburgs, says Mr. Leacock, is that they should be made to work. In his new book he depicts the whole lot of them—including Uncle William, Cousin Ferdinand, Willie, Lizzie and all the rest—coming to America as humble immigrants unknown to the world. Then they work out their destiny.

A Frenchman's View of

### PRESIDENT WILSON

By DANIEL HALEVY

Cloth, \$1.50 net

Within the limits of a volume inevitably destined for an immediate interpretation of Mr. Wilson to the people of France, Mr. Halévy has produced what is little less, in its way, than a masterpiece.

JOHN LANE CO.

NEW YORK

of the reorganization of the American Ambulance Field Service into the American Transport Service.

AMERICA AT THE FRONT, by Fullerton L. Woods (E. P. Dutton & Co., \$2.) Condenses into one volume a host of war stories told from a soldier's rather than an individual angle.

WHAT IS THE GERMAN NATION DYING FOR? by Karl Ludwig Kraus (Horn & Lippincott, \$1.50.) A prophetic cry of national shame by a German who saw at the beginning of the war that Germany's defeat was as essential to her own salvation as to the world.

BEHIND THE WHEEL OF AN AMBULANCE, by Robert Whitney Imbrie (Robert M. McBride & Co., \$1.50.) Personal experiences of the recent American Vice-Consul at Petrograd, when he served as ambulance driver in France and in the Balkans.

THE AMERICAN SPIRIT, by Brice Kilburn Adams (The Atlantic Monthly Press, \$1.50.) Real letters reflecting the charm and sensitiveness of the young aviator and making one feel what it must be like to fly.

REMOVER OSWALD, by J. Thorne Smith, Jr. (Frederick A. Stokes Co., 75 cents.) Amusing diary of a hapless recruit at Pelham Bay Naval Training Station, similar to the "Dere Mable" letters of the rookie.

THE DOCTOR IN WAR, by Woods Hutchinson. (Houghton Mifflin Co., \$2.50.) A vivid but non-technical account of the progress of medicine during the war and the care given to our wounded. Vigorous and cheering.

SECRETARY BAKER AT THE FRONT, by Ralph A. Hayes. (Century Co., \$1.) Account of our War Secretary's trip to England, France and Italy, written by his private secretary and illustrated with photographs.

THE BLOT ON THE KAISER'S ESCUTCHEON, by Newell Dwight Hillis. (Fleming H. Revell Co., \$1.) An indictment of German intrigue and brutality, written by a pastor who has seen for himself the work of the Huns in France.

SOLDIER SILHOUETTES ON OUR FRONT, by William L. Stidger. (Scribner's Sons, \$1.25.) Personal descriptions of a Y. M. C. A. worker's experiences and impressions at the front. Written with graphic vigor and simplicity.

THE ROMANCE OF THE RED TRIANGLE, by Sir Arthur K. Yapp. (George H. Doran Co., \$1.) Story of the organization of the red triangle and an account of its coming and achievement in No Man's Land and in the East.

FRAGMENTS FROM FRANCE, by Captain Bruce Bairnsfather. (G. P. Putnam's Sons, 50 cents.) Part VI of the dramatic and humorous cartoons portraying the experiences of the boys at the front, and introducing for the first time, the Yankee and the Italian.

PUSHING WATER, by Eric P. Dawson. (John Lane Co., \$1.) Life aboard a "Mory" and some of the experiences of the British Motor Boat Patrol, popularly known as the "Mosquito Fleet."

A CAPTIVE ON A GERMAN RAIDER, by F. G. Traas. (Robert M. McBride & Co., \$1.25.) The author's experiences after the steamship "Hutchin Maru," on which he is sailing, is captured by the German raider, "Wolf."

A POET OF THE AIR, by Jack Wright. (Houghton Mifflin Co., \$1.50.) The letters home of an eighteen-year-old aviator; an Andover graduate who made the supreme sacrifice.

HOSPITAL HEROES, by Elizabeth Walker Black. (Charles Scribner's Sons, \$1.35.) A tribute to the gay heroism of the French wounded by an American "nurse's" aid in a front line hospital during the winter and spring of 1918.

## Education of the Child

GIRLS' CLUBS—THEIR ORGANIZATION AND MANAGEMENT, by Helen J. Ferris (E. P. Dutton & Co., \$2.) Solid, practical advice on how to form girls' clubs and get the best results from them. Miss Ferris writes from her own successful experience.

TEACHING THE CHILD PATRIOTISM, by Kate Upson Clark. (L. C. Page Co., \$1.) Easy to read, informative, well presented. It carries the incidental lesson that it's up to parents to teach by example as well as by direction.

THE KINGDOM OF THE CHILD, by Alice Minnie Herts Heniger. (Dutton & Co., \$1.50.) An interesting and authoritative description of children's theaters as an educational force, with illustrations of their successful use.

THE PLAY-WORK BOOK, by Ann Macbeth. (Robert McBride & Co., \$1.) A helpful manual for mothers and teachers, giving illustrations and directions for making simple things for use and play.

CHILDREN'S CATALOG SUPPLEMENT, 1918, by Corinne Bacon. (H. W. Wilson Co., 50 cents.) A list of 450 books published chiefly between June 1, 1916, and January 1, 1918. A dependable guide to the best reading for boys and girls.

THE SECOND LINE OF DEFENSE, by Margaret Slattery. (Revell's, \$1.) A stirring plea for the conservation of our boys and girls of today, who must not be sacrificed even to our front line defense.

CHILD WELFARE IN NORTH CAROLINA. (National Child Labor Committee, New York, \$1.) A survey by the National Child Labor Committee covering questions of dependency, delinquency, child-caring institutions, child labor, etc. Conditions in North Carolina may well form a basis for coordination and improvement in the various state laws relating to children.

## THE WORKMAN SPEAKS FOR HIMSELF

(Continued from page 329)

to that factory. These two facts are not the only new facts or circumstances created by the shop committee movement, but is probable that they are the father and mother, so to speak, of most of the developments of this movement. Let us look at them further.

Number one is newer in practise than it is in theory. Ways and means of translating the theory into practise, said to number more than a hundred, are still in process of evolution. The active minds of leaders in industry, labor, and in government offices are studying and writing and rewriting this subject of industrial government. Whereas a year ago there were but a handful of men familiar with the shop committee idea and perhaps less than a dozen plans in operation, today there are scores, if not hundreds.

Number two is the perilous fact, the fact upon which, if at all, the movement will split. "Many of the problems arising in a single factory should be settled by those whose daily work takes them to that factory," and by no one else. What does this mean? Self-determination, local self-government. All right and all to the good, "but," declares organized labor, which is vitally interested at this point, "doesn't this begin to look like the closed shop; doesn't this begin to develop plant managers who will shut the door more quickly than before to the labor union official who wants to help

straighten out a difference, or submit demands?"

To a certain extent, yes. But the closed shop is a fact which will stand or fall as labor and capital are wise or unwise and work out their problems together instead of in dog-eat-dog manner. And it is also true that the shop committee theory will take away from some union officials some little business. But the great question is, does not the shop committee theory as it is being worked out in manufacturing centers of the nation today, give to labor something which labor ought to have, wholly aside from the contentions pro and con trades union organization? Doesn't it help to teach the value of orderly, reasonable action, and doesn't it help to relieve the many petty tyrannies which grow up in the best managed plants between petty bosses and employees? Doesn't it mark a distinct step in advance of the old-fashioned welfare work, paternalistic and obnoxious to the employee? Doesn't it, in short, afford means for taking up the slack, gathering up the loose ends which get in the way of both sides? Not a panacea, but a clearing away of unconsidered trifles—trifles which, uncleared away, might be fearfully dangerous to life and limb.

This movement began in and as a result of the war. It seems to be adapted to reconstruction and the period which we vaguely call "after the war." I think that this means that it has come to stay.

## WAS EVE A FEMINIST?

(Continued from page 338)

ly to keep them honorably employed. No man is a good father who is not also a good citizen. He may provide everything for his family and still vote against his wife and children.

No woman can be a good mother who is not also a good citizen. She may accomplish every sacrifice and still be unable to protect her children against conditions outside the home.

They are bound to blunder, but they are determined to risk their own blunders, and this nation may as well let them out, otherwise there will be no Gardens of Eden left anywhere.

We may use the forces of nature. We have done that until the earth, sky and sea are geared together in a myriad forms of power to accomplish our purposes. But you cannot obstruct any force in nature without suffering disastrous consequences. Therefore the stupid effort to close up the women will prove ineffective and even more disastrous in the future than it has been in the past because they are no longer a merely sentimental influence but a force strengthened by a rapidly developing intelligence and a growing desperation to try Eve's fate with Adam in the open, where the worst curse imposed was the blessing of being obliged to earn their bread by the sweat of their brows.

The feminine brow in this country is much too dry. It is feverish. And the time has passed to send for the doctor. They have discovered that the doctor is another hoax, a nostrum, not a cure.

## WHY YOUR ALLOTMENT DOESN'T COME

(Continued from page 337)

War Risk problems abroad. Colonel Lindsey was given free hand and responsibility. To a group of the ablest experts procurable, now working with him, or giving their aid and coöperation, he said, the other day:

"I have a free hand. I've asked for the worst. I know the worst."

He added that it were a deplorable thing if the twenty odd billions of insurance policies written by the Bureau should in any way suffer. He promised that they should not suffer from inefficiency, or anything else, and then he went on:

I am endeavoring to bring in, as executives, the best talent, in America. I can now say, as a result, that there is not a department of the bureau that is not very rapidly increasing its efficiency, and that in a reasonably short time there will not be any department of this bureau which is behind at all.

Checks for every month's allotment and allowance and insurance will go out after the first of the month, during the succeeding month until we can so perfect our machinery that they will go out, without fail, in the days immediately succeeding the first.

Last month there were mailed out of the bureau 2,575,000 checks, which included all the payments due for the month of December and some have monthly due. Some of these checks will not promptly be received because of incorrect address, but measures are being perfected so that improper addresses will be reduced to a minimum.

With the entrance of the bureau into its new quarters with 400,000 feet of floor space, there will be, for the first time, proper opportunity for contact between its departments and such coöperation and coordination as has never existed in it before.

When the bureau is housed entirely in its new building, and normal conditions prevail, there should not only not be any past cause of complaint from any one in the United States (as to any of its work, but it should be developed, and can be developed, during the year 1919 into an efficient organization of the Government as exists.

# Doran Books of The Day

## TEN YEARS NEAR THE GERMAN FRONTIER

A decade of fascinating experiences in "the listening gallery of Europe," the Copenhagen Court. A notable contribution to the history of international relations. Illustrated. 12mo. Net, \$3.00

**Maurice Francis Egan**

Former U. S. Minister to the Court of Denmark

## "AND THEY THOUGHT WE WOULDN'T FIGHT"

"It makes the flaming front so real that while you read it you forget that it is no longer alight."—Boston Post. Third Printing. Illus. 8vo. Net, \$2.00

Official Correspondent of the Chicago Tribune Accredited to the American Expeditionary Force

## JOYCE KILMER: POEMS, ESSAYS AND LETTERS

"Beautiful in appearance, illustrated with portraits, altogether a credit to editor and publisher."—New York Times. Third Printing. Two vols. 8vo. Net, \$5.00

Edited and with a memoir by Robert Cortes Holliday, Literary Executor of Joyce Kilmer

## THE BOOK OF LINCOLN

"Whatever other books one may or may not have about the 'First American,' he should surely have this."—New York Tribune. Illus. 8vo. Net, \$2.50

Compiled by Mary Wright-Davis

PUBLISHERS IN AMERICA FOR HODDER & STOUGHTON

## Do You KNOW About Your Government?

Now is the time for every American to learn all there is to know about his country. How the Government at Washington works. The Wonderful Operation of all the Great Departments and Bureaus etc. etc. The life and scenes of our National Capital, including every Historical, Executive, Administrative, Departmental, Artistic and Social Feature, are fully told about in the great, big, finely bound 770 page handsomely illustrated book entitled

## Our National Government

By Mrs. General John A. Logan

With 80 full page illustrations, including photographs of all the Presidents and reigning women of the White House. Every citizen, every soldier, every sailor, every man intending to become a citizen, every woman who desires to vote, should read this book. It will show you why, after the Great War, the Washington Government will be at the "Center of the World." It includes sketches of the Presidents and the White House families from Washington to Wilson, including many incidents in Roosevelt's reign in the White House. A book you will read from cover to cover.

Shipped to you FREE. Not a cent to pay until you see it—and examine it. And no obligation to buy unless you are fully satisfied with it.

Cut out and send us this coupon now—today—while you think of it. Tomorrow will be yesterday before you realize it.

### FREE EXAMINATION REQUEST

Send No Money F. P. DICKERSON CO.

## WHY I LIKE ARMY NURSING

(Continued from page 332)

the ward while the men sit up in bed to sing the wedding march. He can even dance. Almost any time he catches you from a refractory bottom sheet to do a round of Virginia reeling. He lures you onto the porch for a photograph, surrounded by every patient who has heard the word and can possibly manage to get himself into the camera's eye. (They hold carnations and assume attitudes. The lens can't possibly catch them all.) He leads hands on the sun porch, rendering effectively

"We don't want the bacon,  
We don't want the bacon,  
All we want is a piece of the Rhine."

Surely his legs aren't so important, and that day will come when Fifth Avenue busses and millionaires' motors shall stand at attention while Pritchley puts his arm around my waist and leads me in state and safety across the perilous way.

November 30, 1918.

Kelley on his back with legs full of Dakin tubes, is surprised at my astonishment when, at the bath this morning I find his arm a mass of scars. "But how many wounds did you have, Kelley?" Some twenty-two. He used to be a miner, he tells me, and when it's "Where do you come from, Kelley?" the answer is unhesitating. "Ireland." I tried to be gentle with the scars and then he smiled. "They look like butterflies," he said. They do, of course, but—well, Masfield could have done no better.

December 2, 1918.

Heavens! Miss Weeks has come into her own. A great warning against unpopularity with patients has just been issued. The dangerous creatures in Ward 8 neatly injected an alluring chocolate candy with two CC pills and presented it with touching formality to their head nurse. She, tho slightly startled by such an unwonted attention (she must guess that she is popularly voted the hospital crab), gratefully devoured it. The end is not yet.

December 5, 1918.

I doubt the old saying—*You are as old as you feel*. Certainly war veterans must have a comfortable feeling of maturity and full years. Yet behold, our veteran Johnson this morning again refused some clothes by an uncomprehending Receiving Ward, donning his campaign hat and tipping it cockily over one eye, pinning a red, red rose on an imagined lapel, irrespective of clay-colored pajamas, anemic bathrobe and wibegone hospital slippers underneath. Behold him laying hold of a large cane and jauntily promenading the ward. Surely he is as old as he looks—which is some twelve years.

And Allington wheeling himself off with a pile of Victrola records on his knees—he'd get us some good ones. This afternoon he returns with another pile, having successfully succeeded in trading away anything since "School Days" that our unlucky ward chanced to possess, and bringing in their place a lot that makes "Home, Sweet Home" appear a newborn babe. And so pleased with himself. I can't remember exactly when the trading age comes on—isn't it around fourteen?

So all the rest of the day we have been exploring the musical taste of the ancients while the Sore-arms clog and the Sore-legs bounce up and down on the beds—down at the other end of the ward near the sunporch—away from Hempel, who is always asleep, and Coleman, whose leg is bad today, and the new man with the tubercular spine.

## The League of Nations

Whether you favor a league or not you want to know what has been said, recently, for or against it.

No one book, no one magazine, can give as comprehensive a view of the problems and difficulties incident to the formation of such a league as the Handbook, A LEAGUE OF NATIONS.

Into its 350 pages, Miss Phelps has collected 70 of the most important speeches and writings which appeared in books, magazines and newspapers and has grouped them under the plan they advocate or condemn. The third edition (just off the press) includes the twenty-six articles of the proposed Constitution and President Wilson's explanation of them.

The Handbook, A LEAGUE OF NATIONS, is priced at \$1.50 so that every good American can own a copy.

Other Titles in Handbook Series:

# Why Some Foods Explode in the Stomach

And How 48 Hours Makes New Stomachs from Old

By R. S. THOMPSON

**A** MAN'S success in life depends more on the co-operation of his stomach than on any other factor. Just as an "army moves on its stomach" so does the individual. Scientists tell us that 90% of all sickness is traceable to the digestive tract. Yet in a surprisingly large number of cases even chronic stomach trouble can be remedied in from 48 to 72 hours.

Physical efficiency is the back-bone of mental efficiency. Unless our stomachs are effectively performing their functions in the way Nature intended, we can't be physically fit. And unless we're physically fit, we can't be thoroughly successful.

As Dr. Orison Swett Marden, the noted writer, says, "the brain gets an immense amount of credit which really should go to the stomach." And it's true—keep the digestive system in shape and brain vitality is assured.

Of course, there are successful men who have weak digestions, but they are exceptions to the rule. They succeeded *in spite* of their physical condition. Ten times the success would undoubtedly be theirs if they had the backing of a strong physique and a perfect stomach. There are a thousand men who owe their success in life to a good digestion to every one who succeeded in spite of a poor digestion and the many ills it leads to.

The cause of practically all stomach disorders—and remember, stomach disorders lead to 90% of all sickness—is wrong eating.

Food is the fuel of the human system, yet some of the combinations of food we put into our systems are as dangerous as dynamite, soggy wood and a little coal would be in a furnace—and just about as effective. Is it any wonder that the average life of man today is but 39 years—and that diseases of the stomach, liver, and kidneys have increased 103% during the past few years?

The trouble is that no one has, until recently, given any study to the question of food and its relation to the human body. Very often one good harmless food when eaten in combination with other harmless foods creates a chemical reaction in the stomach and literally explodes, giving off dangerous toxics which enter the blood and slowly poison our entire system, sapping our vitality and depleting our efficiency in the meantime.

And yet, just as wrong food selections and combinations will destroy our health and efficiency, so will the right foods create and maintain bodily vigor and mental energy. And by right foods we do not mean freak foods—just good, every day foods properly combined. In fact, to follow *Corrective Eating* it isn't even necessary to upset your table.

Not long ago I had a talk with Eugene Christian, the noted food scientist, and he told me some of his experiences in the treatment of disease through food. Inci-

dentally Eugene Christian has personally treated over 23,000 people for almost every non-organic ailment known, with almost unvaried success. An enviable record when one considers that people nearly always go to him after every other known method has failed. And the remarkable part of it all is that Eugene Christian's methods often remedy chronic cases of stomach trouble in 48 hours.

One case which interested me greatly was that of a young business man whose efficiency had been practically wrecked through stomach acidity, fermentation and constipation, resulting in physical sluggishness which was naturally reflected in his ability to use his mind. He was twenty pounds under weight when he first went to see Christian and was so nervous he couldn't sleep. Stomach and intestinal gases were so severe that they caused irregular heart action and often fits of great mental depression. As Christian describes it, he was not 50 per cent efficient either mentally or physically. Yet in a few days, by following Christian's suggestions as to food, his constipation had completely gone, although he had formerly been in the habit of taking large daily doses of a strong cathartic. In five weeks every abnormal symptom had disappeared—his weight having increased six pounds. In addition to this, he acquired a store of physical and mental energy so great in comparison with his former self as to almost belie the fact that it was the same man.

Another instance of what proper food combinations can do was that of a man one hundred pounds overweight whose only other discomfort was rheumatism. This man's greatest pleasure in life was eating. Though convinced of the necessity, he hesitated for months to go under treatment, believing he would be deprived of the pleasure of the table. He finally, however, decided to try it out. Not only did he begin losing weight at once, quickly regaining his normal figure, all signs of rheumatism disappearing, but he found the new diet far more delicious to the taste and afforded a much keener quality of enjoyment than his old method of eating, and he wrote Christian a letter to that effect.

But perhaps the most interesting case that Christian told me of was that of a multi-millionaire—a man 70 years old, who had been traveling with his doctor for several years in a search for health. He was extremely emaciated, had chronic constipation, lumbago, and rheumatism. For over twenty years he had suffered from stomach and intestinal trouble which in reality was superaciduous secretions in the stomach. The first menus given him were designed to remove the causes of acidity, which was accomplished in about thirty days. And after this was done he seemed to undergo a complete rejuvenation. His eyesight, hearing, taste, and all of his mental faculties became keener and more alert. He had had no organic trouble—but he was starving to death from malnutrition and decomposition—all caused by the wrong selection and combination of foods. After six months' treatment this man was as well and strong as he had ever been in his life.

These instances of the efficiency of right eating I have simply chosen at random from perhaps a dozen Eugene Christian told me of, every one of which was fully as interesting, and they applied to as many different ailments. Surely this man Christian is doing a great work.

I know of several instances where rich men and women have been so pleased with what he has done for them that they have sent him checks for \$500 or \$1,000 in addition to the amount of the bill when paying him.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a course of little lessons which tell you exactly what to eat for health, strength and efficiency. This course is published by The *Corrective Eating Society* of New York.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon, and dinner, curative as well as corrective, covering every condition of health and sickness from infancy to old age and for all occupations, climates, and seasons, including special summer menus which enable you to withstand the heat and retain winter's vigor.

Reasons are given for every recommendation based upon actual results secured in the author's many years of practice. Technical terms have been avoided—every point is explained so clearly that there can be no possible misunderstanding.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, because every possible point is so thoroughly covered that you can scarcely think of a question which isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons and will find that you secure results with the first meal. And if you suffer from acid stomach it is quite likely that your trouble will successfully be overcome in from 48 to 72 hours.

If you would like to examine these 24 *Little Lessons in Corrective Eating*, simply write The *Corrective Eating Society, Inc.*, Dept. 43, 443 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial, with the understanding that you will either return them within the time or remit \$5.00, the small fee asked.

The reason that the Society is willing to send the lessons on free examination without money in advance is because they want to remove every obstacle to putting this knowledge in the hands of the many interested people as soon as possible, knowing full well that a test of some of the menus in the lessons themselves is more convincing than anything that can possibly be said about them.

Please clip out and mail the following form instead of writing a letter, as this is a copy of the official blank adopted by the Society, and will be honored at once

## THE BATTLE THAT NEVER WAS FOUGHT

(Continued from page 331)

...of these unhappy islanders, to say nothing of the insolent demeanor toward British and American citizens, as we now know these things were by the disgraceful complicity of the English Government in the German high-handed doings, have produced an indignant action that has dealt a sharp blow to our feelings of loyalty and affection to the British Government.

On the other hand, the open spirited conduct of the United States has stood out in startling contrast and we venture to assert that the action of that power in compelling Germany to let go her grip on Samoa has excited a feeling of enthusiastic admiration for the great republic, warmer and more pronounced than has ever existed among us before. The incident seemed to many like the abrogation by England of her leadership of Anglo-Saxon civilization in these seas and handing over the right to the kindred nation of the United States.

When a protest was raised in Parliament over the acquiescence of England in German expansion in the Pacific, December 17, 1888, Sir J. Ferguson replied: "We ought not to view with jealousy the advent of the civilized powers to colonies adjacent to our own." Again in 1896 Secretary Olney tried to get England to join the United States against Germany, but Lord Salisbury refused. The position of President of the Municipal Council at Apia, the real ruler of the islands, had been three times in succession held by a German. Olney offered to support any Englishman whom the British Government might nominate for that office, but Salisbury answered that Great Britain would support the German nomination. "Blood is thinner than water," said the American papers.

It is important to recall this bit of history just now for two reasons. First, it disproves the German charge that Great Britain had always thwarted Germany's expansion. On the contrary the British Government was then so favorable to the imperialistic policy of Germany as to alienate both Americans and Australasians. Second, it is well to remind the Australasians, who are now disappointed at not being able to secure absolute annexation of all the German colonies from the Paris Conference, that it was the United States and not the mother country that checked German expansion in the Pacific.

Such was the situation in the spring of 1889 when the shot that was heard round the world was not fired. In Apia harbor three German warships, the "Eber," the "Adler" and the "Olga" were arrayed against three American warships, the "Nipsic," the "Vandalia" and the "Trenton," and the British warship "Calliope" lay between. But the anticipated conflict never took place, for there interposed one of those natural catastrophes that our legal documents inheriting their phraseology from an age of faith still call "an act of God." A South Sea hurricane sprang up and swept into the bottle-mouth of the bay, casting the shipping upon the coral reefs. It was worse than the fictitious battle. Instead of one vessel, all were wrecked save one. The "Calliope" alone forced its way in the teeth of the storm out of the harbor to open sea and safety. As the British ship passed—almost within reach of the wrecked "Trenton"—the American marines gathered on her poop and cheered the British flag.

But I must not attempt to describe this dramatic episode of our history since it has been done by no less a master of the pen than Tinsdale, Teller of Tales. Robert Louis Stevenson's "Footnote to History" should be on the required readings of our schools both as a model of descriptive prose and also because the events of these "Eight Years of Trouble in Samoa" had greater historic importance than the modest title would imply. Perhaps Stevenson suspected

this, as we may surmise from the closing paragraph of his thrilling chapter on "The Hurricane":

Kane returned to Apia on the 19th, to find the "Calliope" the sole survivor of thirteen sail. He thanked his men, and in particular the engineers, in a speech of unusual feeling and beauty, of which one who was present remarked to another, as they left the ship, "This has been a means of grace." Nor did he forget to thank and compliment the admiral; and I cannot deny myself the pleasure of transcribing from Kimberley's reply some generous and engaging words. "My dear captain," he wrote, "your kind note received. You went out splendidly, and we all felt from our hearts for you, and our cheers came with sincerity and admiration for the able manner in which you handled your ship. We could not have been gladder if it had been one of our ships, for in a time like that I can say truly with old Admiral Josiah Tatnall, 'that blood is thicker than water.'"

Thus, in what seemed the very article of war, and within the duration of a single day, the sword-arm of each of the two angry powers was broken; their formidable ships reduced to junk; their disciplined hundreds to a horde of castaways, fed with difficulty, and the fear of whose misconduct marred the sleep of their commanders. Both paused aghast; both had time to recognize that not the whole Samoan Archipelago was worth the loss in men and costly ships already suffered. The so-called hurricane of March 16th made thus a marking epoch in world-history; directly, and at once, it brought about the congress and treaty of Berlin; indirectly, and by a process still continuing, it founded the modern navy of the States. Coming years and other historians will declare the influence of that.

The storm that swept into Apia harbor on March 16, 1889, cooled the blood of Americans and Germans below the fighting point. They caught a glimpse of what war might be and shrank back abashed. Of the crew of the "Vandalia" forty-three were lost. Of the eighty men on the "Eber" only four were saved. But the men on the spot did not realize that the war was over. Admiral Kimberley collected his shipwrecked men and marched them along the beach while the band played "Hail Columbia" in defiance of the shipwrecked Germans. The Samoans plunged into the surf to rescue their enemies and proudly refused the extravagant reward of \$3 apiece that the German commander offered for each German saved.

As an attempt at peaceable settlement of the question a condominium or joint rule of the three powers was established over Samoa, but this did not work to the satisfaction of anybody. In 1894, Premier Seddon of New Zealand proposed that the islands be placed under the administration of New Zealand. This caused great excitement in Germany but the British Government refused to support this demand and even went so far as to deny in Parliament that New Zealand had any such desire. In 1899 the old feuds broke out again. A faction of natives were supplied with German arms and the British "Porpoise" and the American "Philadelphia" joined in a bombardment of Apia. The German residents claimed \$450,000 damages. The question was referred to for arbitration to the King of Sweden and he decided in favor of the Germans.

In the Reichstag, Dr. Lehr, secretary of the Pan-German League, called for war against England and America, but Chancellor von Bülow replied:

The Germans agree in thinking that it would be in the highest degree criminal to allow war to break out between three great civilized and Christian nations on account of a group of islands in the distant South Seas inhabited by 30,000 savages among whom reside scarcely 500 Europeans and with a total trade of hardly 3,000,000 marks.

So an amicable partition was decided upon by the three powers in 1899. The dividing line was drawn along the 171° of longitude. The islands east of it were given to the United States. The island west

CATARRH  
COLDS AND  
HAY FEVERBY  
W. C. RALSTON, M.D.CATARRH  
& COLDSTREATMENT,  
AND  
PREVENTIONHay Fever Coughs  
Asthma Chills—  
Nasal Catarrh Sore  
Throat, Etc.A Neglected Cold or Catarrh is  
the Open Door for Consumption.

A Neglected Cold or Catarrh is the Open Door for Consumption. A cold or catarrh of the nose and throat is a common ailment, but it is often neglected and allowed to run its course unchecked. This is a mistake, for a cold or catarrh of the nose and throat is the open door for consumption. The germs of consumption enter the body through the nose and throat, and if the cold or catarrh is not treated, the germs will multiply and the disease will develop. It is important to treat a cold or catarrh of the nose and throat as soon as it is noticed, and to use the proper treatment. The treatment of a cold or catarrh of the nose and throat is simple and effective. It consists of using a nasal spray, and taking a course of treatment. The nasal spray is used to keep the nasal passages open, and to prevent the germs from multiplying. The course of treatment is used to kill the germs, and to prevent the disease from developing. It is important to use the proper treatment, and to use it as soon as the cold or catarrh is noticed. The treatment of a cold or catarrh of the nose and throat is simple and effective. It consists of using a nasal spray, and taking a course of treatment. The nasal spray is used to keep the nasal passages open, and to prevent the germs from multiplying. The course of treatment is used to kill the germs, and to prevent the disease from developing. It is important to use the proper treatment, and to use it as soon as the cold or catarrh is noticed.

Nasal Catarrh is inflammatory congestion of the mucous lining of the nose and throat, with its attendant symptoms. The cold of a "neglected cold" is a very sore throat, headache, points all over the body, etc.

THIS IS INCIPENT COLD. DO NOT NEGLECT IT. GET THIS BOOK AT ONCE.

## SHORT SYNOPSIS:

Catarrh, Colds, Hay Fever, Etc.

Many symptoms, one disease—The cause, form of catarrh. The arteries and bowels. Food and drink. What is Catarrh? Poison-laden blood. Waste matter seeking an exit. The body's rebellion. The mechanism of self-protection. How the body can meet an intruder. Some causes of Catarrh. Exercise. Climate changes. How to prevent Catarrh. Food and Drink. Care of exertions. Treatment of Catarrh. Focus of Catarrh. Local measures. Food and Elimination. Diet. Clothing. What is "Cold"? Where Colds are really caught. Causes of colds. Exposure and Colds. A series of Colds. What to do if you have a Cold. A breathing tube. Symptoms of Hay Asthma. Causes of Hay Fever. Treatment. The "rational method." Diet. Clothing. The mental state. What a Cough Is. The Cause of a Cough. What a Cough does. Caring a Cough. What a Sneeze indicates. Why do we Sneeze? The need of oxygen. Clothing. Winter clothing. Woven underclothing. External clothing. Foot covering. Food and drink in Winter. Body heat. Winter and summer food. The best food. Fresh air in winter. Ventilation. Breathing movements. Common winter ailments. All ailments preventable. Cold. Sore Throat. Winter care of the Baby. Feeding it properly. Need of fresh air. Clothing. The Nursery.

Catarrh sometimes originates from disordered stomach and confined bowels; when this is the case the cause must be rectified on the lines laid down in this book.

of it to Germany. England got compensation in the renunciation by Germany of her claims to Tonga, Savage and Solomon islands. At the same time the British Government agreed to a revision of the Clayton-Bulwer treaty regardless of the objections of Canada. This made it possible for the United States to construct the Panama Canal.

New Zealand will doubtless get from the League of Nations what she asked for in vain in 1894, a mandate for the administration of the Samoan Islands formerly held by Germany. The rule of the New Zealanders over Rarotonga has been benign and certainly we would prefer them as neighbors to the Germans. On the morning of August 30, 1914, the Germans at Apia were surprised at the apparition of three British cruisers with two troopships loaded with New Zealanders. They very sensibly surrendered without a struggle. The German ensign was lowered and the Union Jack hoisted in its place. Vailima, Stevenson's home, is now a British Government house, and over his grave on Mount Vaea there floats the flag under which he was born. "Coming years and other historians," said R. L. S., "will declare the influence of that" development of American sea-power and recognition by England and America of a common aim and a common enemy which sprang from their coöperation in the Pacific. The historian who writes the appendix to his "footnote" will tell how ten years later in Manila Bay as formerly in Apia Harbor a German and an American fleet were stripped for action and again a British warship lay between—with no doubt as to which side it would take in case of a conflict. Then he will tell how in 1917 the British and American joined in the protection of the Atlantic against German submarines.

### Pebbles

Wife—Really, John, I think you are one of the worst-drest men in town.  
Hubby—And you, my dear, are one of the best-drest women, which accounts for it. *Boston Transcript.*

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Was Eve a Feminist? By Corra Harris.

1. What is the real subject of the article?
2. Express the principal thought of the article in a single sentence.
3. What is the advantage of centering the article around the character of Eve?
4. How may you take advantage of this method when you write a composition?
5. If you have read Ruskin's "Sesame and Lilies" tell how the thought of the article is related to the thought of Ruskin's essay called "Lilies."
6. In "The Princess" Tennyson presents a poetic discussion of feminism. How is the thought of the article related to the thought of "The Princess"?
7. Write a paragraph concerning school work, basing your paragraph on the following sentence: "You cannot thrust knowledge nor ambition upon man."
8. Write a clear paragraph of exposition based on the following sentence: "The first woman was the first exponent of higher education."
9. Prove the following: "Love is the great miracle which is the beginning and end and purpose of all things."
10. Prove that the following sentence is true: "Nations are the mediums thru which love works to accomplish righteousness."
11. Show that the choice of the word "love" instead of the word "hate" is correct in the following sentence: "Love is the invincible destroyer of everything that ought not to last."
12. Give a talk contrasting the position of woman today and the position of woman in any previous century.
13. Write an original story to prove, or to disprove, the following: "No woman can be a good mother who is not a good citizen."
14. Write a dialog that might appropriately accompany the picture of Mrs. Harris and Mrs. Felton.

#### II. The Battle That Never Was Fought. By Edwin E. Slosson.

1. Write a single paragraph showing what conclusions concerning the former German Government may be drawn from the article.
2. Write a paragraph, based on the article, emphasizing the patriotic spirit of American leaders.
3. Contrast the American navy of today and the American navy of 1889.
4. Write the story of Captain Leary in vivid, dramatic form, as if it were part of a play.
5. Imagine that you were a newspaper representative, present at the time of the great hurricane in 1889. Write a thrilling account of the events that took place, making the hurricane a climax, and "an act of God."
6. Read Tennyson's "The Revenge." Show in what way the coming of the storm that destroyed the Armada and the coming of the hurricane at Samoa were strangely alike.
7. Read aloud the quotation from Stevenson. Explain its meaning.
8. Tell the story of Robert Louis Stevenson's life in the South Seas.
9. Give a talk in which you show that the events that took place in Samoa in 1889 led directly to the recent defeat of Germany.

#### III. Why I Like Army Nursing. By Katharine Tighe.

1. What principles of letter writing are illustrated by the selections?
2. Write one or two paragraphs of an original letter. Try to give your paragraphs something of the personality and humor shown in the selections.
3. Explain the reference to Masfield in the letter dated November 30.

#### IV. The Workman Speaks for Himself. By William Leavitt Stoddard.

1. Write a paragraph of exposition on "The Shop Committee System."
2. Present a series of arguments for, or against, the system.

#### V. The Story of the Week.

1. Give an oral account of the recent work of the Peace Congress.
2. Summarize present conditions thruout Germany.
3. Write a narrative account of President Wilson's movements during the past few weeks.
4. Give a talk explaining the events of the week that seem to you most important.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The President and the People—"I Have Come Back to Report Progress," "The American War Aims," "The President's Homecoming," "President Wilson Explains the League."

1. In his Boston address, the President said, "... every interest seeks out first of all ... the representatives of the United States." How does he explain this fact?
2. Why in the judgment of the President is it true that "America is the hope of the world"?
3. Quote passages from the address which indicate that the President had Senators Borah, Reed and Poindexter in mind when he was speaking.
4. In your opinion who is interpreting the will of the people best: the President or his opponents?
5. What were the chief objections raised to the League of Nations at the President's conference? How did he answer these objections?

#### II. Military Problems Past and Present—"Why Your Allotment Doesn't Come," "Why I Like Army Nursing."

1. What historical significance has each of these articles? Which one is more personal to you?
2. Give in brief outline the purposes and accomplishments of the War Risk Bureau. If your family has had any dealings with the Bureau describe the action which it took in the case.
3. What impressions do you bring away from the article by Katharine Tighe?

#### III. The Struggle for the Pacific Islands—"The Battle That Never Was Fought."

1. What was Mr. Slosson's purpose in writing this article? Quote extracts which prove that you are right.
2. "It was Cleveland's policy to restrict the United States to her continental confines." Upon what historical grounds did Cleveland base his policy? Why did his policy fail?
3. What was Great Britain's attitude toward the controversy over the Samoan Islands? How is this attitude to be explained?

#### IV. Industrial Democracy—"Industrial Democracy," "The Workman Speaks for Himself."

1. Quote parallel passages from the editorial and from Mr. Stoddard's article which show that both writers have a common belief.
2. What is the difference between the "shop committee system" in this country and England and the workingmen's soviets in Russia?
3. Describe the working of the shop committee in the Lynn plant of the General Electric Company. How would the same problem be settled in Moscow or Petrograd?
4. How does the new system differ from the older system of collective bargaining as carried on by the labor unions? Which is the more satisfactory system?

#### V. The Peace Congress—"Progress of the Peace Congress," "The Question of Reparation," "Organization of Poland," "Ukrainian Disturbances."

1. What are the chief questions which are still under consideration by the various commissions of the Peace Conference?
2. What are the measures which will probably be recommended by the commission on reparation, the commission on boundaries?
3. What are the Polish questions which still remain to be settled? the questions concerning the Near East?
4. What has become of the conference which was to have been held on Princes' Island on February 15?
5. Why does the Supreme Council desire to "accelerate as much as possible the labors of the Conference"?

#### VI. Unrest in Germany—"Civil War in Bavaria," "Other Troubles in Germany," "Seeking Relief for Germany."

1. What was the underlying cause of the attack on Kurt Eisner and his associates? What has been the result?
2. What is the cause of the unrest in other parts of Germany? How is the central government dealing with this unrest?
3. Explain the statement: "The disturbances in Germany have given new emphasis to the plea for a raising of the blockade," etc.

## WAR MEDALS FOR AMERICANS

The war medals seen in increasing numbers on our returning troops are principally those shown on our cover this week. In numbers, the American honors and the French Croix de Guerre, which is awarded for conspicuous bravery under fire to officers and enlisted men alike, are in the lead. The French Legion d'Honneur has been awarded by presidential decree, signed by Messrs. Poincare and Clemenceau, to some of the highest officers of the United States Army in France for distinguished services rendered to their own country and to the common cause of the Allies. This decoration has been conferred to Generals John J. Pershing and Peyton C. March, and such men as Major Generals George W. Goethals and William C. Gorgas have been made commanders of the Legion d'Honneur, and the honor of officers of the Legion has been bestowed on Dr. Livingston Farrand, former president of the Rockefeller Commission for the Prevention of Tuberculosis in France, and upon Henry P. Davison, whose place as chief of the American Red Cross has just been taken by Dr. Farrand.

The opportunity has not been great for Americans to win British decorations, yet in some instances of unusual bravery the British Distinguished Service Order has been added to the United States Congressional Medal of Honor, America's highest distinction for bravery. This happened in the case of a private and two sergeants when the 27th Division broke the Hindenburg line. They became separated from their platoon by a smoke barrage and took refuge in a shell hole, when they heard calls for help from a disabled American tank about fifty yards away. The intervening space was swept by an extremely heavy German machine gun and trench mortar fire, all three ran to the aid of the tank. The private fell mortally wounded, but the sergeants reached the tank, rescuing a wounded officer and two soldiers, and assisting them to the cover of a nearby trench. They then returned to the tank, dismounted one of the tank's machine guns, and carried it back to the trench. They were well advanced in the enemy lines but used their machine gun with such accurate effect for the remainder of the day that the enemy was unable to approach. When darkness fell they regained the American line, carrying the three wounded men and the machine gun with them.

In the name of the President the commander in chief of the Army awards the United States Distinguished Service Cross for extraordinary heroism in action. This distinction has come to men of all ranks. A private in the performance of his duties in France was obliged to travel over a road which was under constant and heavy shell fire, but he succeeded in delivering a message to his commanding officer, which enabled the latter to place his guns that

a direct fire was made on the enemy. In the Argonne Forest a major remained in command of his company after he had been wounded, and after the battalion commander had been wounded took command of the battalion and led it forward under heavy fire from artillery and machine guns, taking and holding all objectives.

The first woman to win the American Army's Distinguished Service Medal was Miss Beatrice MacDonald, of the Reserve Nurse Corps, who was seriously wounded while remaining at her post with wounded men at a British casualty station during a German night raid.

The Congressional Medal of Honor for the Navy is awarded as in the case of the Army for extraordinary bravery in action.

The Belgian Croix de Guerre and the Italian Order of the Crown will rarely be seen on American soldiers, and the Japanese Order of the Rising Sun possibly not at all. Sergeant Ruth Farnam, the first woman to hold a command in the Serbian Army, has been decorated with three different Serbian orders for valor and service.

The official figures on the transportation of American troops to France are given out as follows by Vice-Admiral Gleaves, commander of the transport and cruiser force: "Of the total strength of the naval escort guarding all these convoys the United States furnished 82½ per cent, Great Britain 14½ per cent, and France 3½ per cent. Of the entire army of 2,079,880 men, taken over, the statistics show 46½ per cent were carried in American ships, 48½ per cent in British, and the balance in French and Italian vessels." In The Independent of January 11 the proportion of British convoy was inaccurately given on the basis of earlier figures.

## REMARKABLE REMARKS

LOUIS COUPERUS—To be accurate, nearly everybody is ugly.

EX-PRESIDENT TAFT—Bolshevism in the United States is not an immediate danger.

HERBERT CASSON—If you have half an hour to spare, don't spend it with some one who hasn't.

JOSEPH BAGLEY—Take the beer away from us and we'll take the government away from you.

PREMIER LLOYD GEORGE—Civilization, unless we try to save it, may be precipitated and shattered to atoms.

DON MARQUIS—Some men can do almost everything nearly as well as the man who can do something well.

PRESIDENT WILSON—We are at last learning that the business of government is to take counsel for the average man.

RABBI STEPHEN S. WISE—As one who is familiar with sentiment overseas, I want to tell you that there is only one nation that can avert the coming to pass of a League of Nations, and that nation is the United States of America.

*The mimic!* It's a new sort of parrot-ism that the Mimeograph has brought into the world. At the great speed of five thousand copies an hour it *exactly* reproduces typewritten letters, forms, drawings, maps and the like. Throughout civilization it is used by business enterprises, governments, armies, navies and educational institutions as a quick means of saving a great deal of time and money. It works surprising reformations in methods and systems. Costs little to install and maintain. Cuts printing expenses down to minimum. What its great powers of mimicry have done for others they may do for you. Booklet "E" on request—today—from A. B. Dick Company, Chicago—and New York.

## THE TRUTH ABOUT RUSSIA

**W**E have read all the conflicting reports about the condition of Russia and have come to the conclusion that they are all true. But not true altogether. Take a country the size of the United States and add to it Canada, Mexico, Germany, France, Persia and Tibet and it would be hard to say anything about it that was not true in some degree. The only false statements being made about Russia are the sweeping statements—like this one. It is like balancing your account books at the end of the month. The individual items may be correct, but it is hard to sum them up. Nobody can sum up Russia.

Last year the British press was debating whether Russia was a Mary or a Martha. Now she is called a Jezebel with equal appropriateness. Competent authorities used to tell us that the Russian muzhik was superstitious, irreligious, tolerant, fanatical, truly democratic, loyal to the Czar, cleanly, filthy, lazy, industrious, cruel, kindly, intelligent and ignorant. Probably he was—or rather they were, the 160,000,000 of him. Doubtless they are all these things still, only more so. For the break-up of the administrative unity of Russia and the abrogation of all authority in politics, industry and religion has made confusion worse confounded. And we see it all thru the veil of multiple censorship and the cloud of partizan passion. So we are disposed to believe everything we hear about Russia and we believe a great deal more that we do not hear.

When we hear that many people are starving in Russia we believe that. When we hear that some are well fed we believe that, too. We are told that the Bolshevik army is admirably disciplined and competently commanded and we are told that it is a leaderless and cowardly rabble. We accept both, assuming that they do not apply to the same people at the same place and time. We do not doubt the reports of wholesale massacres, lynchings and atrocities. It is only when the same person is reported killed several times that we begin to be skeptical.

The hardest thing that we have been called upon to believe is that immorality is on the increase in Russia. Having read numerous Russian novels and the official investigations of the sectaries and the story of Rasputin and "Russian Traits" by E. B. Lanin (who was really the omniscient Dr. E. J. Dillon), it seems a physical impossibility that Russia could be any worse in this respect than before. Nevertheless we believe it. We know that the war has started a wave of crime and licentiousness in England, France and Germany and no doubt it is worse in Russia, where the old law and order have completely collapsed. Two opposite charges are made against Russia under the Bolsheviks—free love and compulsory mating. Probably both are true to some extent. Certainly both were true to a large extent under the old regime. The Revolutionists long before the Revolution repudiated marriage, that is, church

marriage, the only kind there was. Compulsory mating was imposed by certain landlords of the old regime and was common among the peasantry. Leroy-Beaulieu, who was the best authority on "The Empire of the Czars," said: "In no other country perhaps has personal inclination as little to do with rural marriages." We should therefore say—just guessing at it—that there was more free love and fewer forced marriages than formerly.

The anarchists of Samara and Saratov would probably be proud to be called free lovers, but they repudiate in vigorous—even we might say violent—language the institution of a system of compulsory mating ascribed to them. We publish on another page the original and translation of their denial of the charge so frequently made in the American press. We must bear in mind that the Bolsheviks regard the anarchists as their most dangerous enemies and are killing them off in batches whenever they can catch them. It does not seem to be realized in America that the Bolsheviks are being attacked at home on the ground of being too conservative! Mr. Minor, an American anarchist and correspondent of the *New York World*, has shaken off the dust of Russia from his feet in disgust at the Bolsheviks for their bourgeois and capitalistic tendencies. Tolstoy, who was a pure anarchist, would undoubtedly be anti-Bolshevik if he were living now.

Madame Breshkovsky, "the little grandmother of the revolution," who calls the Bolsheviks a pack of rascals and is in America to get help against them, denies that women have been nationalized or required to accept husbands chosen for them by the Government. Alice Stone Blackwell, her biographer, reports her in *The Nation* as saying:

One or two small soviets proclaimed some such foolishness but nobody would obey. It was never proposed for all Russia and it was never carried out anywhere. Women have more freedom in Russia now than they ever had before.

The marriage law promulgated by the Soviet Government is nearer to American standards than the old Russian law, but we do not suppose that the Bolsheviks keep to it any better than the people of other countries keep to their marriage law. The same is true of other Bolshevik legislation; we cannot tell how much of it remains on paper and how much has been carried into effect. But now that the constitution and the laws on land tenure, workingmen's insurance, eight hour day, control of industries, marriage, separation of church and state, education, judiciary, etc., can be purchased thru any newsdealer for five or ten cents, any one having that amount of money to spend can find out for himself what the Bolsheviks are doing, or rather what they are trying to do, or at least what they profess to be trying to do. Even that is worth knowing.

The laws granting freedom of conscience, separating church and state and providing for secular schools are

much like those of France, not so liberal as those of the United States, but still a great improvement over the old regime. No doubt the Revolutionists are in general bitterly anti-clerical and the Orthodox are now suffering from persecutions similar to those they formerly inflicted upon Protestants and Jews. The Archbishop of Omsk states that: "Vladimir, Metropolitan of Kiev, twenty bishops and hundreds of priests have been assassinated. Before killing them the Bolsheviki cut off the limbs of their victims; some of them were buried alive." It is interesting to note that this most moribund branch of the Christian church has been quickened into new life and even under the shadow of Bolshevik tyranny a real religious reformation has begun.

In short, we do not think that anybody can tell the truth about Russia because in this case—as perhaps in all cases—truth is not singular but plural. What we have been doing is to gather up such facts as we can find and print them from week to week. If the facts do not fit together it is not our fault.

## THE DIFFERENCE BETWEEN A AND O

CURIOSLY enough one of the common misconceptions of the Covenant of the League of Nations comes from spelling alike two different words. The adjective *mandatory* means "imperative." The noun *mandatory* means "an authorized agent." Now when the League of Nations talks about making a state mandatory for the advice, control or administration of one of the German colonies or a backward country some people get the impression that this duty is to be imposed upon a power without its consent. They seem to see China and Peru compelling the United States to undertake the job of policing the Congo.

Of course nothing of the kind is contemplated or possible. Australia is not ordered to take over the administration of New Guinea or New Zealand. On the contrary it is indignant because it cannot annex them outright. The United States will not be commanded by the League of Nations to take Armenia or Syria in tutelage—contrary to the advice and consent of the Senate. If we voluntarily accept such a mandate it will be because we, more than any other country, have helped the Armenians and Syrians when they were under Turkish oppression and that we are now willing to help them get onto their feet.

Formerly the United States in its official documents used to spell the word "mandatory," as for instance in the controversy over which of the three powers should be the mandatory for Samoa. This was its original form at the beginning of the seventeenth century. It is the spelling of Kent's "Commentaries" and has been in good usage ever since. It corresponds to the French *mandataire* of the diplomatic documents. The use of *a* instead of *o* warns the careless reader that it is not the same word as mandatory, meaning obligatory, and may help him to get the idea that it means nothing more alarming than proxy, committee, representative or agent.

## CLASS AND COMMUNITY

PERHAPS the party lines of the future will no longer be Radical against Conservative, Republican against Democrat, or Socialist against Individualist, but Class against Community. For example, Socialism is now used in two quite different, almost opposite, senses: the control of production by a government representing the community as a whole, and the control of production by a special class. People or Proletariat? That is the issue.

The doctrine of the "dictatorship of the proletariat" has recently been christened Bolshevism, altho it is much older than any Russian Bolshevik. The Bolshevik insists that "labor" should rule; but he limits the term to (a) industrial as opposed to commercial, professional or agricultural work or domestic service; (b) workmen having no means

of subsistence except their labor, thus excluding men who own farms, workshops or good bank accounts and are thus "capitalists"; (c) workmen placing loyalty to the proletarian cause above loyalty to church, nation, family or employer, in short only the organized and "class conscious" section of labor. These three limitations reduce "labor" to a minority of the population, and this minority must rule even if democracy must be abandoned. This is the doctrine not only of the Russian Bolsheviki but of the German Spartacists, some French Syndicalists and the American I. W. W.

But the Bolshevik is but one type of the class-minded man. He represents the proletariat; the unpropertied industrial worker. Certain agrarian movements, such as the Populist movement, have acted solely on behalf of the farmer without regard to that half of the civilized world which lives in towns and follows other trades than agriculture. The commercial man's attempt to rule without regard to either farmer or industrial laborer is only too familiar; it is what we have all cursed as "capitalism." The professional man is too poorly organized in these days to show an equal degree of class consciousness; but ancient Egypt was ruled by a priesthood, and Russia, until a few months ago, by a caste of civil servants, a class-conscious bureaucracy. In the middle ages all Europe was subject to one economic group, which combined the duties of the army officer with the rights of the landlord. This system acquired a special name, feudalism; and it was still flourishing in Germany as recently as November, 1918.

So the temptation to go it alone comes in turn to every trade; "rich man, poor man, beggarman, thief, doctor, lawyer, Indian chief." It is, indeed, right and natural that a group of persons with common interests should make common cause to express and remedy their grievances. But they should never forget that life is a big and complex thing of which one's trade is only a part. We do not all bake bread, but we all eat it. We do not all teach history, but we can all study it. We are not all lawyers and physicians, but we may need one any day. In other words, we are members of a class at one point; we are members of the community at a thousand points. Let us be citizens first, and keep our loyalty to the trades union, the manufacturers' association, the grange, the housewives' league, the professional society or the chamber of commerce for the second place.

## THE PROPOSED ISOLATION OF AMERICA

THOSE who oppose the participation of the United States in international affairs regard themselves as conservatives, defenders of the faith of the fathers. As a matter of fact they are innovators of the most radical type, for they are proposing a violent departure from the historic policy and practise of the United States. Whether they be Democrats or Republicans they are violating the fundamental principles of their party as repeatedly expressed in its platforms. An examination of the platforms of American parties such as we made in our issues of October 23 and 30, 1916, shows that either or both parties have at various times expressed their concern for the Armenians, Jews, Hungarians, Greeks, Italians, Poles, Boers, Irish, Cubans, Nicaraguans, Mexicans, Panamaians, Hawaiians and Filipinos. The United States has interfered by force in the affairs of Russia, France, Germany, Austria, Spain, Turkey, Morocco, Algeria, Liberia, Congo, Canada, Mexico, Haiti, San Domingo, Porto Rico, Cuba, Guatemala, Costa Rica, Venezuela, Paraguay, Chile, Salvador, Colombia, Panama, China, Japan, Korea, Manchuria, Guam, and Philippines. These are all we can think of just now, but doubtless there are others.

For a peaceable and home-loving chap like Uncle Sam this is quite a record. With the exception of his cousin John Bull none of his contemporaries has taken so much

interest in his neighbors' affairs or has been so ready with advice and aid. An appeal for the poor and oppressed always reaches his pocketbook and frequently makes him clench his fist. Uncle Sam is not a clam.

The number of cases when party declarations have been made or official measures taken are few in comparison with those where the American people have acted for themselves. Missionary, educational and philanthropic bodies have spent enormous sums in ameliorating the conditions of the peoples of all lands. The propaganda work for the liberation of most of the submerged nationalities has been largely financed and carried on in America.

The United States is by nature international. It is composed of all nationalities and concerned with all nations. It has been a leader in the international movement from the start. It tried on its own initiative to bind the world together by a network of arbitration treaties so that no outbreak of war could occur. Now it has the opportunity to carry out this idea on a larger scale with the coöperation of other powers in the League of Nations. It will be false to its traditions and principles if it does not embrace it.

## DR. MARY WALKER

WASHINGTON has lost one of its sights in the disappearance of the familiar figure whom strangers at first took to be a slender, long-haired, dapper but ungainly little old man, but whom on second sight they recognized as the only woman allowed to wear trousers by act of Congress. Yet they might have been puzzled to explain why she was such a celebrity when they could buy a Sunday paper showing rows of society ladies posing in overalls as farmerets and could easily see in munition factories, on athletic fields, on horseback and in street cars women wearing various forms of masculine nether garments without any act of Congress. The police, formerly so vigilant in repressing any tendency toward bifurcation, seem to have become struck with universal blindness. Mrs. Grundy, whose eyes are even sharper than theirs, appears to have shared their disability.

The laws prohibiting infringements upon the prerogatives of the opposite sex in the matter of costume have been suspended by mutual consent. *Inter arma leges silent*. Where are the mobs of boys who used to follow with jeers and rotten eggs a wearer of bloomers? Why is it that women of our day have obtained without a struggle that liberty of dress which women of the preceding generation suffered insult and ostracism in the vain attempt to achieve? Are the free-limbed ladies of the present reaping the reward of the martyrdom of their predecessors?

Apparently not. It would be difficult to trace any definite causal connection between the rational costume of the present and the dress reform movement of 1850 and after. Dr. Mary Walker was the solitary survivor of those intrepid pioneers who defied public opinion and sacrificed reputation for freedom—and failed. The rest succumbed to argument or persuasion, to the commands of parents or the entreaties of lovers, and sought refuge in skirts again.

Yet when we look up the pictures in the files of *Harper's Weekly* of that stormy time we fail to see what the fuss was about. The reform costumes there portrayed strike us as ugly but not immodest. The bloomers reached to the ankle instead of to the knee as nowadays. How could they have been called "unfeminine" when Mrs. Amelia Bloomer took them from the harem, which is the last stronghold of femininity as the conservatives conceive it?

Dr. Walker was different from such dress reformers. She was, as Bill Nye said, "a self-made man." She deliberately adopted the worst features of masculine costume, the straight trousers, the tight collar and the stiff hat, and deserved any ignominy she may have suffered—the probably she did not suffer at all but rather enjoyed her no-

toriety. Her excuse was that a man's dress was more convenient for her work as a surgeon in the army. The present war has afforded a similar opportunity for the breaking down of costume conventionalities, but fortunately the women who have been doing men's work at the front and at home have had better sense than to imitate blindly and have devised uniforms that are neither inconvenient, ungraceful nor unfeminine. In fact we may suspect that the uniform was in some cases an attraction of the service.

But the women who have been working in cotton mills and shoe factories have always needed knickerbockers as much as munition workers or street-car conductors of the present. Why have they not likewise been allowed to wear them? Was it American athletics or Paris fashions that first freed women from the necessity of concealing the fact that they have legs? Will they willingly relinquish their new freedom and return to bondage when the war is over?

In comparing the early abortive efforts at dress reform with the present effortless success we see two differences. First, the demand was formerly made on general grounds and latterly for specific purposes. It is doubtful whether the world is much more tolerant of deviations from the norm than it used to be. When the reformers of the fifties used to wear bloomers publicly in order to demonstrate their right to dress as they pleased, it was in a spirit of bravado, even tho it was done by a modest, shrinking woman for conscience's sake. But the women who adopt similar costumes today do it for the reason, or at least under the pretext, of practical necessity. Even Congress, which is the bulwark of conventionality, allowed Dr. Mary Walker to wear her absurd costume when she claimed that she needed it in her business.

Second, the feminist movement of the mid-nineteenth century was directed rather toward getting men's rights than women's rights. Its leaders often seemed to want to do what the men did than to do what they liked. We see this, for instance, in education. The girls who first tried to study Latin were mostly of a masculine type. Nowadays when any girl can study Latin not many of them want to. Howells says even our ladies no longer have any use for "the education of a gentleman." Having gained the right to study what they want to they very sensibly turn to those subjects for which they have special need or aptitude. Having gained the right to wear a rational costume they are mostly too rational to wear men's.

Another and still more interesting question forces itself into consideration, tho we have not space here to consider it, that is, are martyrs as indispensable as they think they are? "The blood of martyrs is the seed of the church" has been so often repeated that every new movement is embarrassed by a multitude of volunteer seed-sowers. Did the execution of Giordano Bruno and the imprisonment of Galileo actually advance scientific progress? Did John Brown greatly facilitate the solution of the negro problem? Did not the leaders of the early Christian church have to discourage their overzealous followers from throwing themselves to the lions and denouncing idolatry in high places because such conduct was hurting their cause? We wish we had time—a year or two—to look up the history of voluntary martyrdom and see if it has really been of so much use to the world as it is supposed to have been. We suspect we should find that an ounce of tact is worth a pound of martyrdom in the promotion of any reform. When one sets out deliberately to defy public opinion, as did the early dress reformers when they paraded the streets in bloomers, public opinion always reacts in a way to more than meet their expectations. When one is intent upon doing something definite, as when the munition women and farmerets and conductors walk to their work thru the streets, society is quite tolerant of deviations from conventional costumes. It is the difference between working for a cause and working for a purpose.

# THE STORY OF THE WEEK

## President Wilson Lauds the League

More than 100,000 people tried to get tickets of admission to the 4000 seats in the Metropolitan Opera House for President Wilson's address in New York on March 4, just previous to his sailing again for Paris. The general expectation was that the President would answer more or less specifically some of the criticisms of the League of Nations that have been made, particularly in Congress, during the two weeks since the covenant of the League was proposed.

But President Wilson kept to generalities and made a speech inspiring rather than informing, leaving to ex-President Taft, who preceded him on the platform, the task of giving detailed support and explanation of the covenant of the League. President Wilson made some ringing statements in the course of his address, beginning:

The first thing that I am going to tell the people on the other side of the water is that an overwhelming majority of the American people is in favor of the League of Nations. I know that that is true.

In expressing his appreciation of Mr. Taft's address the President added:

And I am the more happy because this means that this is not a party issue. No party has the right to appropriate this issue, and no party will in the long run dare oppose it.

Another stimulating epigram came at the end of the President's picture of the need of the League of Nations:

Intrigue cannot stand publicity, and if the League of Nations were nothing but a great debating society it would kill intrigue.

In many respects this address of the President reiterated the points made in his Boston speech of the previous

week. He spoke again of the faith of the peoples of Europe in an international league:

And I want to utter this solemn warning, not in the way of a threat; the forces of the world do not threaten, they operate. The great tides of the world do not give notice that they are going to rise and run; they rise in their majesty and overwhelming might, and those who stand in the way are overwhelmed. Do not let yourselves suppose for a moment that the uneasiness in the populations of Europe is due entirely to economic causes or economic motives; something very much deeper underlies it all than that. They see that their governments have never been able to defend them against intrigue or aggression, and that there is no force of foresight or of prudence in any modern Cabinet to stop war. And therefore they say, "There must be some fundamental cause for this," and the fundamental cause they are beginning to perceive to be that nations have stood singly or in little jealous groups against each other, fostering prejudice, increasing the danger of war rather than concerting measures to prevent it; and that if there is right in the world, if there is justice in the world, there is no reason why nations should be divided in the support of justice.

They are therefore saying if you really believe that there is a right, if you really believe that wars ought to be stopped, stop thinking about the rival interests of nations, and think about men and women and children thruout the world. Nations are not made to afford distinction to their rulers by way of success in the maneuvers of politics; nations are meant, if they are meant for anything, to make the men and women and children in them secure and happy and prosperous, and no nation has the right to set up its special interests against the interests and benefits of mankind, least of all this great nation which we love. It was set up for the benefit of mankind; it was set up to illustrate the highest ideals and to achieve the highest aspirations of men who wanted to be free; and the world—the world of today—believes that and counts on us, and would be thrown back into the blackness of despair if we deserted it.

On "the careful selfishness" which caused some critics to oppose the

League of Nations President Wilson poured his bitterest contempt:

I have heard no counsel of generosity in their criticism. I have heard no constructive suggestion. I have heard nothing except "will it not be dangerous to us to help the world?" It would be fatal to us not to help it. From being what I will venture to call the most famous and the most powerful nation in the world we would of a sudden have become the most contemptible. Mr. Taft was speaking of Washington's utterance about entangling alliances, and if he will permit me to say so, he put the exactly right interpretation upon what Washington said, the interpretation that is inevitable if you read what he said, as most of these gentlemen do not. And the thing that he longed for was just what we are now about to supply; an arrangement which will disentangle all the alliances in the world. Nations agree that there shall be but one combination, and that is the combination of all against the wrongdoer.

Men have at last perceived that the only permanent thing in the world is the right, and that a wrong settlement is bound to be a temporary settlement—bound to be a temporary settlement for the very best reason of all, that it ought to be a temporary settlement, and the spirits of men will rebel against it, and the spirits of men are now in the saddle.

Directly after his speech President Wilson went on board the "George Washington," which sailed from New York harbor early on March 5.

## Ex-President Taft Ex - President Explains the League Taft's famous chuckle never

served better its mission of putting people in good humor than on March 4, when he shared with President Wilson the honor of presenting the cause of the League of Nations to as large an audience as could get into the Metropolitan Opera House in New York. Mr. Taft is the president of the League to Enforce Peace, and he has been one of the pioneers in formulating the plan of a League of Nations. Much of his speech was devoted to an analytical discussion of the League covenant as now contemplated and the rest to defense of it in answer to the various objections of its critics.

It is said that this would prevent our resistance to a border raid of Mexico or self-defense against any invasion. This is a most extreme construction. If a nation refuses submission at all, as it does when it begins an attack, the nation attacked is released instantly from its obligation to submit and is restored to the complete power of self-defense. Had this objection not been raised in the Senate, one would not have deemed it necessary to answer so unwarranted a suggestion.

This is as it should be. It fixes the obligation of action in such a way that American nations will attend to America, and European nations will attend to Europe, and Asiatic nations to Asia, unless all deem the situation so threatening to the world and to their own interests as that they should take a more active part. It seems to me that appropriate words might be added to the pact which should show distinctly this distribution of obligation. It will relieve those anxious in respect to the Monroe Doctrine.

Will our country be forced by these covenants into a lot of little wars all over the face of the world? No.

Harding in Brooklyn Daily Eagle

PILGRIM LANDING IN AMERICA IN 1919

THE LEAGUE OF NATIONS

Kirby in New York World

PUSHING IT BACK

Harding in Brooklyn Daily Eagle

"SOME MINDS THAT HAVE NO SWEEP BEYOND THE NEAREST HORIZON"—PRESIDENT WILSON

The suggestion that Great Britain will have any greater power in shaping the policy of the league in really critical matters, when analyzed will be seen to have no foundation whatever.

The covenant takes away the sovereignty of the United States only as any contract curtails the freedom of action of an individual which he has voluntarily surrendered for the purpose of the contract and to obtain the benefit of it. The covenant creates no super-sovereignty. It merely creates contract obligations. It binds nations to stand together to secure compliance with those contracts. That is all. The assertion that we are giving up our sovereignty carries us logically and necessarily to the absurd result that we cannot make a contract to do anything with another nation because it limits our freedom of action as a sovereign.

**The Senate Discusses the League** No definite decision came from the Senate's discussion of the covenant of the League of Nations, proposed by President Wilson at the Peace Conference in Paris and further explained on his return to this country. On the whole the senatorial comments were critical, ranging all the way from Senator Borah's indiscriminating denunciation thru Senator Knox's fear for United States sovereignty to Senator Lodge's objections to the construction of the League. "I will follow any man and vote for any measure which in my honest opinion will make for the maintenance of the world's peace," said Senator Lodge, who is the Republican member from Massachusetts and ranking member of the Foreign Relations Committee. But he went on to point out flaws in the constitution of the League as now proposed:

In the first place, the terms of the league—the agreements which we make—must be so plain and so explicit that no man can misunderstand them. In this draft prepared for a constitution of a League of Nations, which is now before the world, there is hardly a clause about the interpretation of which men do not already differ.

Other changes altering the constitution of the League were suggested by Senator Lodge, as follows:

Let us put these lines into the draft for the league which will preserve the Monroe

Doctrine beyond any possibility of doubt or question. Let us also have, if we enter the league, a complete exclusion from the league's jurisdiction of such questions as are involved in immigration and the right of each country to say who shall come within its borders and become citizens.

There should be some definite provision for peaceful withdrawal from the league if any nation desires to withdraw. Lastly, let us have a definite statement in the constitution of the league as to whether the league is to have an international force of its own or is to have the power to summon the armed forces of the different members of the league. Let it be stated in plain language whether the "measures," the "recommendations," or the suggestions of the executive council are to be binding upon the members of the league.

Thirty-seven members of the next Senate, to which will probably be put the ratification of any treaty of peace, signed a round robin in support of Senator Lodge's stand and announced that they were in favor of his resolution

that it is the sense of the Senate that while it is their sincere desire that the nations of the world should unite to promote peace and general disarmament, the constitution of the League of Nations in the form now proposed to the Peace Conference should not be accepted by the United States.

And further that it is the sense of the Senate that the negotiations on the part of the United States should immediately be directed to the utmost expedition of the urgent business of negotiating peace terms with Germany satisfactory to the United States and the nations with whom the United States is associated in the war

## WHAT THE SIXTY-FIFTH CONGRESS DID

Made two declarations of war—one against Germany and one against Austria-Hungary.

Raised by the enactment of a selective service act the largest army this country has ever known.

Passed appropriation bills—mostly for war purposes—totaling approximately \$57,000,000,000, the equivalent of \$570 for every man, woman and child in the United States.

Enacted the greatest tax law in parliamentary history, levying \$10,000,000,000 in two years. It authorized bond issues to the amount of \$22,000,000,000.

Appropriated \$2,884,000,000 to create an American merchant marine, the largest in the world.

Authorized the taking over of railroads and the telegraph and telephone systems of the nation as a war emergency.

Created an American military air service and launched an aerial postal service.

Passed the largest army appropriation bill—totaling \$12,000,000,000—any country ever adopted.

Placed on the statute books 300 public laws and forty-eight public resolutions.

Passed the resolution for a national prohibition amendment to the Constitution.

Defeated the woman suffrage amendment.

Conducted twenty-six congressional investigations.

against the German Government and that the proposal for a League of Nations to insure the permanent peace of the world should be then taken up for careful and serious consideration.

## Congress Ends in Filibuster

A legislative jam probably unparalleled in our history marked the end of the Sixty-fifth Congress on March 4. Bills of importance had piled up thruout the session until even the members of the House and Senate admitted that it would be impossible to pass any but the most imperative—and on top of this excessive pressure of proposed legislation came a twenty-six hour filibuster which ended only when the session itself closed.

The filibuster was first threatened by Republican Senators when the Victory Loan bill came up for final vote during an all-night session on March 2, but the party caucus was unwilling to take the responsibility of thus holding up essential legislation, and the Loan bill went thru and was duly signed by the President. The Loan bill authorizes the launching of a final Liberty Bond issue of \$7,000,000,000 and gives the Secretary of the Treasury

## BIG BILLS CONGRESS DIDN'T PASS

*Among the important measures which the Sixty-fifth Congress failed to pass in the crush of its last session were the following:*

Army appropriation bill, \$1,238,282,967.

Navy appropriation bill, \$824,708,521.

Agricultural appropriation bill (including repeal of daylight saving law), \$37,355,352.

General deficiency bill, \$842,096,913, including \$750,000,000 for the railroad administration.

Sundry civil bill (including \$660,000,000 for Shipping Board), \$1,122,919,735.

District of Columbia appropriation bill, \$13,983,894.

Indian bill, \$15,430,010.

Civil service retirement bill, to extend Government control over telegraph and telephones.

Public buildings bill.

Redrafted women's suffrage Constitutional amendment.

Water power bill.

Coal and oil lands leasing bill.

Soldiers' settlement bill, \$100,000,000.

Wartime prohibition enforcement bill.

Immigration bill, including provision to exclude immigration for a period of four years.

Joint resolution to repeal Section 904 of the revenue law, known as the semi-luxury tax.

Proposals to reform the court martial laws.

Proposition to appropriate \$5,000,000 for expenses of President Wilson and the Peace Commission in Europe.

#### DO YOU RECOGNIZE YOUR GOVERNOR OR MAYOR?

The conference called by President Wilson in Washington brought together for a discussion of reconstruction problems the governors of forty-three states and mayors of more than a hundred cities in the United States. This photograph was taken outside the Capitol between sessions. Seated in the center (left to right) are President Wilson, Secretary of Labor Wilson, Secretary of Agriculture Houston and Secretary of Commerce Redfield

power to fix the rate of interest. The \$1,000,000,000 wheat guarantee bill was the only other important measure put thru in the last days of the Senate.

When the Senate reconvened for its final session on Monday morning, March 3, three Republican Senators—Sherman, of Illinois; La Follette, of Wisconsin, and France, of Maryland—took upon themselves the responsibility of conducting a filibuster that held the floor and prevented further legislation until the adjournment of the Sixty-fifth Congress at noon on March 4. As Vice-President Marshall banged his gavel to declare the Senate session over, he broke the strain of nervous tension among the members and in the crowded galleries by substituting for the usual phrase, "adjourned sine die," a bitterly spoken pun, "adjourned sine Deo."

This ignominious end of the Sixty-fifth Senate had its effect, of course, upon the House, where there was practically nothing to do in its last two days in session. But the House celebrated its end more jovially and wound up with a song service that started with "Hail, Hail, the Gang's All Here" and included "How Dry I Am!" and a contest on strictly party lines of "Keep the Home Fires Burning."

While the Congress held its final session President Wilson waited in a nearby room of the Capitol to sign any bills that might be passed. The only comment that he made on the filibuster was a statement issued to the press:

A group of men in the Senate have deliberately chosen to embarrass the Administration of the Government, to imperil the financial interests of the railway systems of the country, and to make arbitrary use of powers intended to be employed in the interest of the people.

It is plainly my present duty to attend the Peace Conference in Paris. It is also my duty to be in close contact with the public business during a session of the Congress. I must make my choice between these two duties, and I confidently hope that the people of the country will think that I am making the right choice.

It is not in the interest of the right conduct of public affairs that I should call the Congress in special session while it is impossible for me to be in Washington, be-

cause of a more pressing duty elsewhere, to cooperate with the Houses.

I take it for granted that the men who have obstructed and have prevented the passage of necessary legislation have taken all of this into consideration and are willing to assume the responsibility of the impaired efficiency of the Government and the embarrassed finances of the country during the time of my enforced absence.

Without an extra session of Congress before the President's return the railroad administration, the Shipping Board, the employment service, the army and the navy will all be put to grave financial embarrassment, since appropriations necessary to maintain them were among the bills the present Congress failed to pass.

#### When Governors and Mayors Confer

When President Wilson called to conference in Washington the Governors of all the States and the mayors of more important cities he paved the way for some interesting diagnoses of reconstruction problems and their remedies. The keynote of the President's opening speech was

that the business of government is to take counsel for the average man. We are at last learning that the whole matter of the prosperity of peoples runs down into the great body of the men and women who do

the work of the world, and that the process of guidance is not completed by the mere success of great enterprises—it is completed only by the standard of the benefit that it confers upon those who in the obscure ranks of life contribute to the success of those enterprises.

Then the Governors began discussion of the problems of their several states: in Arizona, for instance, the unemployment of miners due to the falling prices of copper, in Florida the need of laborers in the truck gardens and fruit groves, in Kansas the enormous wheat acreage, in West Virginia unemployment in the coal mines, and so on.

In more general discussion a degree of unanimity developed on four points:

1. Business lassitude and unemployment are largely due to the fact that the railways under national control, tho representing 30 per cent of the consuming capacity of the nation, are neither efficiently conducted nor buying the supplies and making the improvements that they need.

2. Road building and other public and private improvements are discouraged by the excessive freight rates—in some cases four times as much as formerly—on building materials.

3. The Federal Government is urging other governments and private concerns to get busy and produce, but it is doing nothing but talk itself, Congress being roundly blamed for having deserted its responsibilities and adjourning without passing bills essential to governmental activities.

4. The unemployment situation is not generally bad now, but is getting worse, and a desperate Bolshevik propaganda is actively at work to aggravate the situation.

Resolutions were adopted asking the Government to begin to rehabilitate the railroads and to reduce freight rates on road building materials; opposing the reduction of wages, unless accompanied by a reduction in the cost of living; urging the War Department to speed up the settlement of war contracts; urging the Government to announce its policy as to the disposition of the raw materials it has on hand; asking continuation of the Government survey of the natural resources of the country; asking continuation of the Federal Employment Service; favoring demobilization thru the state and local draft boards; recommending that war memorials take the form of improved community utilities.

THE BOLSHEVIK DOG IN THE MANGER

**To Remember the War By** A bronze lapel button somewhat like that worn by G. A. R. veterans will be the "honorable discharge" emblem issued by the United States War Department to all our veterans of the Great War, whether they actually fought or not. The Government will distribute these buttons free of charge.

The design of the "honorable discharge" button was chosen by the Commission of Fine Arts after a competition among American artists and sculptors.

**The Thriftiest State** Nebraska's sales of war savings stamps in 1918 were \$21.18, greater per capita than those of any other state. The state's aggregate sales were \$27,450,000.

Ohio, with \$86,244,000 aggregate sales, ranked first in volume, but second in per capita sales, which were \$16.39. South Dakota came third in per capita records, the District of Columbia fourth, and Iowa fifth.

**North Dakota Has Self-Service** By the bills passed at this session of the state legislature North Dakota has laid out for itself an unparalleled program of actually democratic government, industrial as well as political. The recent legislation puts upon the state these tasks:

1. Establish and operate the Bank of North Dakota;
2. Build and operate terminal grain elevators and flour mills;
3. Establish and operate the North Dakota Home Builders' Association for the purpose of enabling inhabitants of the state to build and own their own homes;
4. Set up an industrial commission to manage these and the other industries the state may decide to embark upon under the unlimited power granted by new amendments to the state constitution.

The motive power behind this reform program was the Farmers' Non-Partizan League of about 100,000 members, organized three years ago to safeguard the people's interests. The Farmers' League was also instrumental in getting fourteen state amendments approved by the people at the last election and ratified by this legislature.

Among the amendments are provisions for an easier method of amending than was previously in force; removing the limit on state indebtedness which hitherto stood at \$200,000; and authorizing the state, or any city or county, to engage in any industry except the manufacture of intoxicants.

Other bills passed at this session of the legislature include a workingman's compensation act with a state insurance fund; women's forty-hour week and minimum wage laws; a mining law and various laws providing for new methods of taxation and of regulations of freight rates and franchises.

**Another New York Harbor Strike** For three days last January the port of New York was paralyzed by a strike of 16,000 marine workers asking for higher wages and an eight-hour day, and

### A NURSE WITH MILITARY HONORS

The Secretary of War pinned the Distinguished Service Medal of the United States on this American army nurse, Mrs. Beatrice MacDonald, for extraordinary heroism while on duty at British Casualty Clearing Station No. 61. During a German night air raid she continued at her post until she was wounded by a bomb, thereby losing one eye.

strike the municipal ferries, the Lackawanna Railroad ferries and all boats in hospital service continued to run and it was announced that there would be no danger of a food shortage for at least two weeks.

Forty per cent of the harbor workers in New York are under railroad, that is to say government control, and the railroad administration has offered to make a separate settlement with them, granting the eight-hour day as promised by the War Labor Board award and giving the overtime pay they ask.

**Preparing for the President** Arrangements were made in Paris for President Wilson on his return to that city to occupy not the Murat Palace as before but the Hotel Bischoffsheim on the Place des Etats-Unis, the home of Francis de Croisset, a prominent author and playwright. It was also planned, on the suggestion of Colonel House, that the President should land at Brest and go directly to Paris, instead of landing at Antwerp and visiting Brussels and the war-devastated regions of Belgium and France before going to Paris. This course was adopted in order to expedite the work of the Peace Congress, where it was hoped to have the draft of the preliminary peace treaty ready for the consideration of the President and the British Prime Minister when they reach Paris at the middle of March. Then it would be possible to admit German representatives to the Congress by April 1, to listen to the military, diplomatic, financial and economic terms which the Allies purpose to impose upon them.

**Doings of the Peace Congress** M. Clemenceau had recovered from his wounds sufficiently to resume attendance at the meetings of the Supreme Council of the Peace Congress on February 27. On that day the claims of the Jugo-Slavs to Styria, Trieste, Fiume and nearly all of the Dalmatian Islands—most of which territory is also claimed by Italy—were heard and considered. On March 1 the Council began consideration of the financial and economic problems involved in the actual treaty of peace and in the permanent conditions following the war. The chief financial points raised were concerning war debts and ante-war debts in enemy countries and whether they were to be paid or repudiated, and concerning the reapportionment or "pooling" of the war debts of the Allied countries. The thought has been much broached in France that that country fought not alone for self-defense but for the defense of the world, that the brunt of the war fell upon it because of its geographical position, that it was subjected to a disproportionately heavy expense, for the sake of other nations as well as its own, and that therefore justice requires the assumption of some of its debt by other countries. The American, British and Japanese delegates are said not to assent to this proposition. The Council on the same day decided to ap-

JOHN BULL (TO MISS PEACE): "AND JUST AS I WAS LOOKING FORWARD TO A PLEASANT TIME WITH YOU!"

#### THOSE BRITISH STRIKES

point a committee consisting of one member from each of the five great powers to define the approximate future boundaries of the enemy countries and, presumably, of the new states which are being formed; practically remaking the map of Europe and western Asia.

The eighth week of the Peace Congress opened on March 2 with increased energy and earnest desire to expedite work, and with the feeling and expression of intense interest in the reception of the President in the United States and the attitude of this country toward the proposals for a League of Nations. Mr. Lloyd George left London for Paris on March 5 to resume attendance at the Congress, and to remain continuously, if possible, until the adoption of the preliminary Treaty of Peace.

#### Dealing with Germany

Marshal Foch laid before the Supreme Council on March 1 the military terms which he desires to have incorporated in the treaty of peace, and two days later the Council began consideration of them. These, together with the naval terms previously submitted, provide for the reduction of the German army to a force of about 200,000 men, the destruction of the fortifications of Heligoland and the Kiel Canal and the neutralization of the canal, the destruction of the German main fleet and all German submarines, and the retention of control of the German cable systems by the Allies. There is also said to be a prohibition against the building or use of submarines by any power in the world, tho the competence of the Peace Congress to enact such international legislation is not obvious to all. The French delegates are reported to oppose the destruction of the German fleet and to favor dis-

tribution of it among the Allies, or at least utilization of its vast value in hulls, machinery and material. The American delegates are said to be reserving judgment on the proposal to destroy the fortifications of the Kiel Canal and to neutralize that waterway, lest the same rule should be applied to the Panama Canal, the entrances to New York Harbor, and other American waterways.

The Commission on Reparation reported to the Council on March 3 that Germany and her allies ought justly to pay to the Allied and associated powers the sum of \$120,000,000,000. In connection with that report it is to be recalled that the total wealth of those four countries was estimated at the beginning of the war to be as follows:

Germany .....	\$85,000,000,000
Austria-Hungary .....	55,000,000,000
Bulgaria .....	4,000,000,000
Turkey .....	4,000,000,000

Total .....\$144,000,000,000

It is insisted by many that the countries should be able to pay an indemnity equal to so large a proportion—more than 83 per cent—of their entire assets, provided the process is extended over a suitable period of years. The French proposal is that the payment of \$5,000,000,000 at once, in gold, foreign securities and goods, be required, and that the remainder be payable in instalments during twenty-five to thirty-five years.

#### Grave German Disturbances

At the end of February the political and industrial disturbances in Germany presented three ominous phases. There was the attempted revolution at Munich, moving toward either its own spread thruout all Germany or the separation of Bavaria from the rest of the empire.

There was the strike of coal and railway workers at Halle, which interrupted communication between Weimar and Berlin, and which had for its avowed object the overthrow of the Ebert government and the dispersal of the National Assembly. There was also a call for a convention of the Soldiers' and Workmen's Councils, to resume the power which they had surrendered to the National Assembly and to control or overthrow the latter body. At the same time the Assembly at Weimar was neglecting the work of perfecting the Constitution, and was engaging in factional disputes of an increasingly acrimonious nature.

The Government on March 1, after conferring with leaders of the Soldiers' and Workmen's Councils, issued an address to the country, reaffirming its loyalty to the principles of democracy and denouncing the Spartacan and Bolshevik designs against the National Assembly. The Independent Socialists generally deserted the National Assembly to take part in strikes and agitation, and on the evening of March 3 a universal strike was ordered at Berlin, in consequence of which that city was without transportation service or lighting or water supply.

The Spartacans on March 4 attempted to take possession of Königsberg, in East Prussia, with the avowed purpose of opening a route thence to Moscow, so that Russian Bolsheviks might come to their assistance. The Government, however, hastened troops to Königsberg and after hard fighting apparently suppress the movement.

The Independent Socialists, Spartacans and other revolutionists on March 4 presented to the Government their formulated demands, to this effect: Trial of the former Emperor and Crown Prince, Generals Hindenburg and Ludendorff and Admiral Tirpitz, by a people's tribunal; release of all political prisoners, including agents of Russian Bolsheviks; disarmament of all volunteer troops and development of the Red Guard; and the establishment of a political and commercial alliance with the Soviet Government of Russia.

#### Economic Ills of Germany

A correspondent of the London Daily Telegraph who has been investigating conditions reports that while before the war Germany was able to feed 95 per cent of her people from her own resources, now, because of deterioration of the soil, lack of live stock and other conditions, she could not feed half that number on a pre-war scale of rations. Her ills are also aggravated by unemployment due to lack of coal transport facilities. At the time of the signing of the armistice there were 500,000 unemployed workmen in Germany. Now the number is estimated at 1,500,000. In the face of this urgent need of food for Germany, however, the French Government on March 2 indicated its unwillingness to participate in the work of supplying that need. It took the ground that it could not consent to have Germany

spend for supplies the money which should be paid to the people of France to restore the damage done to them by the German armies. On March 4, Marshal Foch demanded the immediate surrender and delivery of the German mercantile fleet, without regard to the question of food supply.

**The Troubles of Russia** The closing days of February saw much military activity in northern Russia. The Allies were advancing at several points and were inflicting heavy losses upon the Bolsheviks. In Esthonia and Lithuania and elsewhere on the Baltic front successful operations were conducted against the Bolsheviks, and similar reports came from the Northern Caucasus, where a volunteer army of Cossacks was waging a vigorous campaign. General Krasnoff, the Cossack leader, was announced to have made important progress on the Volga River. On March 3, however, news came of a Bolshevik advance in the north and a retreat of the Allies.

Captain Andre Tardieu, at Paris, on February 28 informed press correspondents that the proposed conference with the various Russian governments at Princes' Island had been abandoned, the Bolsheviks having failed to cease fighting as demanded by the Allies as a preliminary to that gathering. At the same time Nicholas Tschaikovsky, the veteran revolutionist and President of the government at Archangel, made the suggestion that instead of attempting to hold such a conference the Allies should send an authoritative commission to travel thru Russia on a tour of investigation.

Zinovieff, the Bolshevik Governor of Petrograd, is reported in the official organ of the Petrograd Soviet as declaring in a recent speech to the Soviet Council of Petrograd that the Government was quite willing to enter into conference with the Allies at Princes' Island, because, he said:

The signing of such a peace with the Allies would not mean that we would even for a second stop building our Red army. It would only mean that we put no trust whatever in the bit of paper which we would have signed.

Sergius Sazonoff, Minister for Foreign Affairs in the Omak Government and its representative at Paris, declares that forty millions of Russians, under organized governments, are now cooperating for the reuniting and rehabilitating of Russia, and that even among the Bolsheviks many are striving toward the same end.

**Poland and Her Neighbors** The Inter Allied Mission to Poland arrived at Posen on March 1, intending to spend a week there, investigating the political and social situation. They began their work by consulting the German leaders and authorities, and afterward the Poles. For a time there was cessation of strife between the two nationalities, but in a day or two fighting was resumed at various points. There were also hos-

tilities between the Poles and the Ukrainians in Galicia and elsewhere. The Poles renewed their attempts to take Kovel and Rovno, and the Ukrainians again attacked Lemberg. Meantime the Polish Prime Minister, Mr. Paderewski, protested against the opposition which is being manifested at Paris to the organization of a large Polish army. The menace of Bolshevism in Russia, he insisted, made it reasonable and necessary for Poland to have an army of 350,000 men.

**For a Large British Army** The British Secretary of State for War, Winston Churchill, on March 3 asked the House of Commons for an appropriation sufficient to maintain an army of 2,500,000 men. This force would gradually be reduced to 925,000, he said; but the outlook of affairs in both Europe and Asia was so uncertain that it would not be prudent to effect any sudden decrease of military strength. In order to bring about a satisfactory settlement of the war with Germany it would be necessary to maintain a powerful force on the Rhine for a considerable time to come. Then, as soon as peace was made, the Allies must supply that country with needed food and thus aid it to avert the horrors of Bolshevism.

**British Labor Negotiations** Mr. Lloyd George held an all-day conference with British labor leaders and capitalists on February 27, earnestly trying to persuade them to compose their differences and to avoid a strike. As a result of his efforts, the miners agreed to postpone their threatened strike until March 22. On motion of Arthur Henderson, leader of the Labor party, a committee was constituted consisting of thirty representatives of labor and thirty of capital, comprizing both men and women, to study the causes of unrest, the condi-

tions of labor, the questions of hours, wages, coöperation, profit-sharing, etc., and to report in time for the calling of another conference with the Prime Minister before April 5. Addressing the first meeting of this committee of sixty, on March 4, Mr. Lloyd George advised it that it was the trustee of the safety and welfare of the whole nation. Unemployment must be banished and the workers must never again be put in dread of the horrors of hunger and distress.

The importance of this committee and its labors was estimated by Mr. Thomas, Labor Member of Parliament for Derby, and General Secretary of the National Union of Railwaymen, when he said that the next three weeks might determine whether Great Britain could avoid an industrial dispute whose consequences might be almost as disastrous as defeat by Germany in the war would have been.

**Spanish Cabinet Resigns** The Spanish Cabinet dominated by Count Romanones, which was formed in November last by the Marquis de Alhucemas, resigned on February 24. The King requested it to remain in office, however, until the budget could be passed by Parliament.

**Afghan Ameer Murdered** Habibullah Khan, the Ameer of Afghanistan, was murdered by shooting, in camp at Laghman, on February 20. The motive for the crime was not apparent. Habibullah was a son of the famous Ameer, Abd-ur-Rahman, and was born in 1872 and succeeded to the throne on the death of his father in 1901. He was, for an Oriental despot, an enlightened and progressive ruler, who effected some important reforms in the government of his country and strengthened the friendly relations between it and British India.

#### A DANGEROUS AFTER THE WAR JOB

Clearing the seas of floating mines is a task that compels war heroism still. For a ship has a very good chance of hitting a mine instead of picking it up. This photograph is of the Dutch minesweeper "Medusa" working in the North Sea. It is hauling up a mine thru the open space astern.

# UTOPIA OR HELL

## Theodore Roosevelt's Plan for the League of Nations

AS PRESENTED BY HIM THRU THE INDEPENDENT OF JANUARY 4, 1915

SHERMAN'S celebrated declaration about war has certainly been borne out by what has happened in Europe, and above all in Belgium, during the last four months. That war is hell I will concede as heartily as any ultra pacifist. But the only alternative to war, that is to hell, is the adoption of some plan substantially like that which I have advocated and which has itself been called utopian. It is possible that it is utopian for the time being; that is, that nations are not ready to accept it. But it is also possible that after this war has come to an end the European contestants will be sufficiently sobered to be willing to consider some such proposal.

The proposal is not in the least utopian if by utopian we understand something that is theoretically desirable but impossible. What I propose is a working and realizable Utopia. My proposal is that the efficient civilized nations—those that are efficient in war as well as in peace—shall join in a world league for the peace of righteousness. This means that they shall by solemn covenant agree as to their respective rights which shall not be questioned; that they shall agree that all other questions arising between them shall be submitted to a court of arbitration; and that they shall also agree—and here comes the vital and essential point of the whole system—to act with the combined military strength of all of them against any recalcitrant nation, against any nation which transgresses at the expense of any other nation the rights which it is agreed shall not be questioned, or which on matters that are arbitrable refuses to submit to the decree of the arbitral court.

In its essence this plan means that there shall be a great international treaty for the peace of righteousness; that this treaty shall explicitly secure to each nation and except from the operations of any international tribunal such matters as its territorial integrity, honor and vital interest, and shall guarantee it in the possession of these rights; that this treaty shall therefore by its own terms explicitly provide against making foolish promises which cannot and ought not to be kept; that this treaty shall be observed with absolute good faith—for it is worse than useless to enter into treaties until their observance in good faith is efficiently secured. Finally, and most important, this treaty shall put force back of righteousness, shall provide a method of securing by the exercise of force the observance of solemn international obligations. This is to be accomplished by all the powers covenanting to put their whole strength back of the fulfillment of the treaty obligations, including the decrees of the court established under and in accordance with the treaty. . . .

No man can venture to state the exact details that should be followed in securing such a world league for the peace of righteousness. But, not to leave the matter nebulous, I submit the following plan. It would prove entirely workable, if nations entered into it with good faith, and if they treated their obligations under it in the spirit in which the United States treated its obligations as regarded the independence of Cuba, giving good government to the Philippines, and building the Panama Canal; the same spirit in which England acted when the neutrality of Belgium was violated.

All the civilized powers which are able and willing to furnish and to use force, when force is required to back up righteousness—and only the civilized powers who possess virile manliness of character and the

willingness to accept risk and labor, when necessary to the performance of duty, are entitled to be considered in this matter—should join to create an international tribunal and to provide rules in accordance with which that tribunal should act. These rules would have to accept the *status quo* at some given period; for the endeavor to redress all historical wrongs would throw us back into chaos. They would lay down the rule that the territorial integrity of each nation was inviolate; that it was to be guaranteed absolutely its sovereign rights in certain particulars, including, for instance, the right to decide the terms on which immigrants should be admitted to its borders for purposes of residence, citizenship or business; in short, all its rights in matters affecting its honor and vital interest. Each nation should be guaranteed against having any of these specified rights infringed upon. They would not be made arbitrable, any more than an individual's right to life and limb is made arbitrable; they would be mutually guaranteed. All other matters that could arise between these nations should be settled by the international court. The judges should act not as national representatives, but purely as judges, and in any given case it would probably be well to choose them by lot, excluding, of course, the representatives of the powers whose interests were concerned. Then, and most important, the nations should severally guarantee to use their entire military force, if necessary, against any nation which defied the decrees of the tribunal or which violated any of the rights which in the rules it was expressly stipulated should be reserved to the several nations, the rights to their territorial integrity and the like. Under such conditions—to make matters concrete—Belgium would be safe from any attack such as that made by Germany, and Germany would be relieved from the haunting fear its people now have lest the Russians and the French, backed by other nations, smash the empire and its people.

In addition to the contracting powers, a certain number of outside nations should be named as entitled to the benefits of the court. These nations should be chosen from those which were as civilized and well behaved as the great contracting nations, but which, for some reason or other, were unwilling or unable to guarantee to help execute the decrees of the court by force. They would have no right to take part in the nomination of judges, for no people are entitled to do anything toward establishing a court unless they are able and willing to face the risk, labor and self-sacrifice necessary in order to put police power behind the court. But they would be treated with exact justice; and in the event of any one of the great contracting powers having trouble with one of them, they would be entitled to go into court, have a decision rendered, and see the decision supported precisely as in the case of a dispute between any two of the great contracting powers themselves.

No power should be admitted into the first circle, that of the contracting powers, unless it was civilized, well behaved and able to do its part in enforcing the decrees of the court. . . .

Most certainly the proposed plan would be dependent upon reasonable good faith for its successful working, but this is only to say what is also true of every human institution. Under the proposed plan there would be a strong likelihood of bettering world conditions. If it is a Utopia, it is a Utopia of a very practical kind.

Waiting to be helped to find a job by the United States Employment Service, a Federal organization with an agency in every city

## TWO WEEKS' EXTRA PAY

### A Safety Check on the Dangers of Rapid Firing

BY EDWARD ALSWORTH ROSS

PROFESSOR OF SOCIOLOGY IN THE UNIVERSITY OF WISCONSIN

**T**HE Czar's Government withheld from Russian workingmen the right to

strike by requiring them to give their employer two weeks' notice before quitting his employ. On the other hand the law required the employer likewise to give the man two weeks' notice or if he dismissed him abruptly to pay the dismissed employee for two weeks beyond the term of employment. The enforcement of the law was in the hands of the Government factory inspectors and the workmen appeared not to have gotten much benefit from it. I did hear, however, of a peppery manufacturer who paid a fortnight's extra wages to men he had "fired" incontinently and who declared that his quick temper would bankrupt him.

After the Revolution of March, 1917, an endeavor was made to enforce this law and to secure for the dismissed workman a month's wages instead of a fortnight's wages. In a number of industries the month of leeway was established by joint agreement. In the typographic industry masters and men agreed to a three months' minimum term of employment. When I was at Baku, in October, 1917, the hundred odd oil firms were concluding an agreement with their seventy thousand employees which stipulated, among other things, that on dismissal an employee should receive a month's pay for every year he had been in the service of the firm. The employers made no protest on this point, for it simply made general a practice which long had been followed by the best oil companies.

In some cases the demands went very far. A large American manufacturing concern near Moscow was asked by its men to pay three months' dismissal wages for every year of service. On the break-up of the office force of a certain American life insurance company with headquarters in Petrograd the men put in a claim for six months' pay all around!

I do not know how the dismissal wage idea has fared under the Soviet regime in Russia and I have little information as to its actual working dur-

ing the troublous time in 1917 before the old order was broken up. But I believe that it rests on a sound principle and deserves to be seriously considered as a means of stabilizing industrial relations in this country.

In a mature and humane civilization great importance is attached to the economic security of the individual. As the civil service develops, the public employee is protected in various ways against abrupt and arbitrary dismissal. In universities it is customary to notify the instructor a considerable time in advance of the termination of his employment. The professor is usually given a year's notice or else his salary is continued for at least a half year after his services are dispensed with. School boards, hospitals, churches and non-gainful organizations generally feel that it is indecent to cut off a faithful servant without giving him a reasonable time to look around for another place. Even from private employers, professional men are usually able to secure an agreement not to end relations without a month or more of notice.

On the other hand, the common practice of American industrial employers is really amazing in its lack of consideration for the worker found superfluous. No doubt many firms take a pride in building up and maintaining a stable labor force and give serious attention to the plight of the men they have to drop. But the average employer seems to give himself not the slightest concern as to what is to become of the worker let out thru no fault of his own. I have heard of a firm long aware of the necessity of curtailment waiting till half an hour before the evening whistle blew to post a notice throwing hundreds of men out of a job for an indefinite time! Since Americans are not generally inhumane, the barbarous "firing" policy so characteristic of our industries can be accounted for only as a survival from the time of the small concern when the competent workman

dismissed could walk around the corner and get a job just as good. That such is not the case

today may be learned by simply interviewing workingmen as to what loss of job has meant to them. What tales of tramping the streets looking for work, of rushing hither and thither on a rumor that this firm or that is taking on men, of returning night after night worn out and discouraged to an anxious family, of the frantic cutting down of household expenses, the begging of credit from butcher and grocer, the borrowing of small sums from one's cronies, the shattering of hopeful plans for the children! Here are real tragedies, hundreds, nay thousands, of them a year in our larger centers, yet the general public goes its way quite unconscious! No wonder among wage-earners the bitter saying runs, "A workman is a fool to have a wife and kids."

What of the far greater number who are employed continuously but who are always worrying lest they lose their jobs without warning? From conversation with wage-earners one gathers that fear of finding a blue slip in the pay envelope really poisons life for multitudes. So long as many employing concerns move in the present ruthless inscrutable way, not deigning to give their men any advance hint of what will happen to them, there will be resentment and unrest in the ranks of labor, no matter how reasonable the hours and pay.

The tragedy in the situation of the wage-earner in the modern industrial organization has been his *insecurity*. Step by step we have lessened this. Mechanics' lien laws did away with the risk of losing his pay, postal savings banks with the risk of losing his savings, "safety first" with the risk of preventable industrial accidents, accident compensation with the risk of losing livelihood by injury in his work, pensions with the risk of a destitute old age. The chief insecurity which remains is that of losing one's job. How can we lessen that?

There is no virtue in the suggestion

that the law should require either party to give a fortnight's notice before terminating relations. The workman who has received notice will be of little use the ensuing two weeks and the average employer would prefer to make him a present of his wages and let him go. On the other hand if the workmen were obliged to give notice two weeks before quitting they would lose their sharpest weapon—the sudden strike.

The true policy is to establish for the workman who has been with the employer long enough to establish the presumption that he is of value—say six months—the legal right to receive a fortnight's free wages when he is dismissed without fault on his part. This would give him two weeks to look about and find himself another job. Even if he has nothing saved up and no credit it would be a month or more before his family came into acute distress. There are few competent men who cannot find a job in a month unless times are hard and during hard times their recourse will be an altogether different provision, viz., unemployment insurance. Still more important, however, is the consideration that the man who has made good on the job and continues to make good would be relieved of the haunting fear of offhand dismissal. It will not pay his employer to fire him for frivolous reasons and if business is slack the men let out will be men recently taken on, who have not yet established the right to the dismissal wage.

**T**HE dismissal wage should not be looked upon as something held back out of wages which a man will never get unless he is "fired." It should be regarded in the light of the "compensation for disturbance" which some countries allow the evicted tenant who has farmed the land well.

Of course the man who "fires himself" by persistent negligence or misconduct should get no dismissal wage, and since an unscrupulous employer might charge fault when there is none, there will have to be local boards to hear complaints on this score.

The employee who quits of his own free will to take a better job or do something else has no claim. But since

such an employee might "soldier" or grow careless just in order to get himself "fired" the employer must have the right to escape paying him a dismissal wage by proving to the local board that he is "soldiering." As a matter of fact no workman could afford to get the reputation among employers of being that kind of a man.

Until we have accident, sickness and old age insurance, incompetency arising from accident, sickness or old age would not, of course, release the employer from the obligation to pay a dismissal wage. The dismissal wage might be combined with a system of unemployment insurance by providing that the unemployment allowance should not begin until the end of the term for which free wages is paid.

The legal dismissal wage should not become involved with strikes and lockouts. Let the rule be that the striker has not relinquished his job any more than the man who has been absent on account of sickness. When the man resumes his job—whether on his terms or on the employer's—he has whatever rights he had when he struck. Only in case he applies for his job and is refused is he entitled to a dismissal wage. If he never applies, he gets nothing.

Let the lockout be looked upon as if it were a temporary stoppage owing to a fire or a dearth of fuel or raw material. When the men are taken on again all is as before. If they stay away they get nothing. If they are refused their old jobs they get the dismissal wage.

If the employer goes bankrupt his men's dismissal wages constitute precisely the same kind of claim on his assets as their back wages.

Since an employer could always avoid dismissing a man by cutting his wages to so low a point that the man would quit of his own accord, the cutting of a competent workman's pay below the "going" wage for the time and place should be construed as dismissal. Likewise when an employee without fault is reduced to a lower position in the works or is shifted permanently to harder or more onerous work the workman should have the option of staying on or claiming dismissal pay and leaving.

What of "lay off" when, on account of slack business, the men dismissed are not replaced? Instead of dismissing men, let the employer cut down hours uniformly in the shop and not until he cuts them below half time shall the men have the option of staying or of taking their dismissal wage and leaving. When a man is laid off because there is not enough work to keep him busy but the job is supposed to be held open to him, let the dismissal wage payment be strung out thru six weeks. If the employer has him back sooner he saves himself something.

A board to decide all such questions should be created in each industrial community. One member should represent employees, another employers and the third should be named by the State Industrial Commission.

**H**OW would the legal dismissal wage affect employers?

On all hands, it is agreed that the amount of labor turnover in American industries is scandalous. I know of an industry employing 28,000 men which not long ago hired and "fired" at least that many men a year. Fifty-seven Detroit plants took on and let out in 1917 two and a half times as many men as they carried on the pay roll. Few employers have any conception of what they lose by such a turnover. The inquiries of Magnus W. Alexander show that the hiring of 22,031 unneeded employees in twelve factories involved an economic waste of nearly a million dollars, i. e.,  $3\frac{1}{2}$  per cent of the total wage bill!

The obligation to pay a dismissal wage would give such employers a motive to make their practice conform to that of those thoughtful and humane employers who have brought their annual turnover in some cases down to 30 per cent with profit to themselves and contentment to their employees. They would find it paid to give attention to human engineering, to install employment managers who investigate why an employee is doing badly and find a way to remove the cause. Before letting a man go with a fortnight's free wages they would try him out in different positions or departments in the hope of [Continued on page 384]

This long line of unemployed waiting to answer an advertisement, is due partly to the dismissal without notice system

# MORE LIGHT ON RUSSIA

## First Hand Observations That Correct Some Popular Misconceptions

BY JEROME DAVIS

*In view of the conflicting testimony which has been brought before the Senate Investigating Committee we have asked Mr. Jerome Davis, who as secretary of the International Committee of the Young Men's Christian Association has had exceptional opportunities for seeing Russia from the inside, to present his view of conditions there. In our issue of February 8 we published an article from Mr. Davis on "What We Can Do for Russia" and in this issue he brings out some original documents bearing upon the most controverted questions of Bolshevik policy*

AS one who has but recently returned from Russia after over two and one-half years in that country I have read with tremendous interest the stories of witnesses appearing before the Senate committee investigating Bolshevism, as reported in the press.

While I am absolutely opposed to the Bolsheviks and believe that they merit a good deal of criticism, I feel that the testimony presented as reported by our press is misrepresenting. It would require too much space to attempt to review all the mass of testimony. Any one who was in Russia during the Bolshevik regime knows that wild rumors were everywhere. A great many Americans had friends limited largely to the aristocratic and propertied classes. Many of these latter were naturally rabidly bitter in their denunciation of the Bolsheviks and each day saw some new story concocted to discredit Bolshevism. Many of these rumors quickly proved themselves false. In the case of others it was much more difficult to determine judiciously their truth or falsity. Let us consider one statement which was officially reported as authenticated fact. One Allied officer while in Murmansk solemnly reported that 300 officers had been shot in Petrograd on a certain date. It so happened that the American Red Cross was in Petrograd itself on that day. It would have been practically impossible for that number of officers to be killed and all traces of the crime obliterated while the Red Cross was in the city.

Some of the evidence before the Senatorial Investigating Committee seems to be of a similar nature. Even if we are bitterly antagonistic to the Bolsheviks, does it not pay in the long run to present only well authenticated facts? Manufactured stories usually react in favor of those whom they are planned to harm and throw doubt on the reports of what is really bad about Bolshevism. Even if we condone misrepresentation about the fanatical Bolsheviks, it seems as if the truth ought to be presented to the American people

in order to justify our Allied policy. As an admirer of the action taken by President Wilson at the Peace Conference, as a supporter of his fair and generous policy of attempting to call a conference of all Russian factions, and as one who admires President Wilson's stand on the withdrawal of American troops from Russia, my reason for giving the few brief facts in this article is because I believe an impartial investigation of Bolshevism will support those policies.

When one reads that women have been nationalized for immoral purposes by the Bolshevik Government and that people in great numbers were put to death simply because they were considered of higher intelligence than the leaders approved of, allegations which I believe to be untrue, it naturally has a reaction on the feeling of the American people toward our Russian policy. I shall not attempt to prove that the great mass of this testimony is simply slander and rumor; doubtless much of it is truth, but it is not always easy to distinguish.

Let me take simply a couple of instances. A few days ago the New York Times reported that one witness testified that General Brusiloff had been shot while in bed. The facts are that during the period of fighting when the Bolsheviks took the power one shrapnel shell, among hundreds fired, fell into the home of General Brusiloff. A splinter from the exploded shell struck him in the leg as he was walking down the hall of his home. When I left Russia General Brusiloff was alive, altho arrested by the Bolshevik authorities. In all the time I was in Russia I never heard of any one being put to death by the Bolshevik Government simply on the charge that he was considered of higher intelligence than the leaders approved of.

Mr. Simmons, as reported by the New York Times of February 18, read a decree of the Saratov Soviet nationalizing women. It so happens that the writer was in the city of Samara not far from Saratov shortly after this decree had been posted up about the city. In order to find out whether it was genuine or not I went to the Anarchist Club in Samara. The leaders of the anarchists not only denied absolutely that any anarchist club had ever even proposed such a decree, but they stated that this had been printed by certain forces antagonistic to the Soviets who were doing all in their power to discredit them. On investigating the matter carefully I believe that what they said was true. Not content with denying the decree purporting to come from the Saratov anarchists in the press, the Anarchist Club posted up the follow-

#### ПО ПОВОДУ „ДЕКРЕТА“.

Враг бессилен. Враг падает ниже и ниже. И в своем падении кощунствует. И в своем падении клеветает. И пускается на самые отвратительные провокационные меры.

Враг угнетенных — он жаждет господства, и страдание всех для него анархизм, подлинное высшее проявление свободы.

И враг распространяет лживую клевету, что свобода — это проституция до насильственной женщины. От нашего имени распространяет он своими грязными руками „Декрет о социализации женщин“.

Какая грубая, циничная провокация!

Венами, веками и поколениями анархисты борются со всеми декретами и законами всяких властей, — так могут ли они сами выпускать декреты?

Враги всякого насилия, — могут ли анархисты требовать или даже допускать принудительного отчуждения женщин?

Сколько же найдется таких буржуазных ослов, что поверят этой провокации, что заругают себя в став этих гадких шивалов!

Нет и нет! Страхом натравить на нас бесовские массы, враг не расчитал и обманул только свою грязную душу.

Увы! — он еще не узнал всей остроты нашего оружия — так узнает! Смерть провокаторам! Внезапная смерть! На месте — без колебаний — всеми средствами и всяким оружием!

И всякий, кто — тайно или явно — будет поддерживать эту клевету, приравляется к орудиям агента. — Будет объявлен соучастником этой темной банды, будет объявлен провокатором. И постигнет их участь одна.

И всякий, кто — с нами или не с нами — честно живет и борется, будет помогать нам в расправе, будет сам истить эти злодеяния такой подымающейся реакцией.

Для расправы огня хватит у нас!

И все средства будут хороши!

*The Anarchists' decree, translated below  
ing decree all over the city. Roughly  
translated it reads:*

FROM THE SAMARA FEDERATION OF  
ANARCHISTS

In Reference to the Decree

The enemy loses strength. The enemy falls lower and lower. In his falling he scoffs at sacred things. In his falling he throws out slanders. And he throws them out in the most loathsome and provocative manner.

The enemy is prest down—he lusts for power, worst of all for him are the anarchists, bearing aloft the banner of liberty. The enemy circulates disgusting slanders, that freedom stretches out its branches to do violence to women. In our name they circulate with their dirty hands “The Decree of the Socialization of Women.”

What a coarse immoral provocation! For centuries, everywhere, far and wide, the anarchists fight against all decrees and laws of every authority—how can they themselves put out decrees?

As opponents of every power—can the anarchists demand or even allow forced expropriation of women? How many can there be of such boorish beasts, who will believe such provocation, that harness themselves in the yoke of their own foul hisses? No, No! The enemy does not reckon on us, the unconscious masses, he only unmasks his own dirty heart. Alas, the enemy still does not know all the sharpness of our weapons—but he will know. Death to such provocators! Unmerciful death! Let us sweep them away—without hesitation—with all our power and with all our weapons! And all who secretly or openly will support such calumny, turning themselves into ridiculous hobgoblins—will be declared associates with those dark hands. They will be declared provocators. But one disastrous fate will overtake them. All those, that—with us or against us—live and fight for honor, will help us in justice, they will themselves avenge this venomous, foul rising reaction.

For redress we have enough fire.

And all our ways and means will be good enough.

Samara Federation of Anarchists

# WITH THIS BLACK MAN'S ARMY

BY DAVID LE ROY FERGUSON

**M**OST of the American colored stevedores never saw a ship until they started for France," says the *Stars and Stripes*, the American army's overseas newspaper, "but they have proved their worth as cargo handlers. Working in the hold of a ship with the August sun raising heat waves from the deck isn't the easiest job in the army, but they are breaking records at it, and it hasn't dampened their sunny disposition, either.

"On the same day that the American infantry, trekking in the wake of the retreating Germans, gained the outskirts of Fismes, colored stevedores unloading a ship at one of the base ports unostentatiously won an important victory by discharging 1200 tons of flour in 9½ hours, setting a record for the A. E. F. and a pace which is rarely excelled on the best equipt docks in the United States. The same group of stevedores over a period of five days discharged an average of 2000 tons of cargo per day from one ship, a record more notable still.

"It is a twenty-four hour a day grind at the base ports now, where thousands of American colored troops are putting ashore the million and one articles, big and little, which are necessary for the maintenance of a modern army.

"With the same force with which American line units, in the last few weeks have made their debut in a big scale warfare, have the other branches of the service upon whose efforts depend the potency and effectiveness of the men in the trenches accomplished their less spectacular but equally important work."

This vast army of stevedores in France is composed mostly of men who volunteered at the first call. The first men who came

Mr. Ferguson, who is standing at the extreme left of the photograph below, is a negro preacher from Kentucky who has been at St. Nazaire, France, during the war, in charge of Y. M. C. A. work with the negro stevedore troops there

The stevedore band that entertained not only the men but also the French people

over in early June, 1917, were a civilian contract company, experienced as stevedores in America. They served one year, finishing their contract in June, 1918, and returned to America. During the early days of July, 1917, other companies of volunteers arrived, so the army grew until the stevedore camps at base ports became one great industrial army, numbering about fifty thousand.

This army of stevedores had all the equipment, regulations, military rank and uniform that the infantry had. The industrial in its nature, all the line and workings, and details of procedure was according to military law and order. This vast army of workers was divided into companies and regiments and had their individual camps regularly officered and numbered. Anything by the way of uniform and ration that

to suit the keenest military eye for discipline and fine training.

The stevedores also took great pride in their companies, their camps and all that belonged to the army, and because their work and contribution was always emphasized by officers as being essential to the boys in the trenches, the name stevedore finally became a dignified and distinguished term, representing part of the great American Army.

Naturally, many amusing stories and jokes, with the war and France as a background, will feature the colored boys over there. One hears many funny "bon mots" and puns and clever stories attributed to the colored soldier, until it seems that they brought and made most of the humor connected with the grim, frightful war. With that native talent and fun-making nature of his, the colored soldier was quick to see whatever was humorous over there: the war, the army, the firing line; even the serious and dangerous things that make others sad, he made the base of jokes, and oftentimes ridiculed, so that even his dangers and tasks seemed to have been less difficult.

As to cheerfulness, the stevedore camps had their share of songs, music and that gaiety which characterizes a cheerful race. One thing that most im- [Continued on page 385]

# NATIONAL EFFICIENCY SOCIETY

The Ratio of Achievement to Effort Is the True Measure of Efficiency

## HOW ONE TOWN BOUGHT HEALTH

BY DONALD WILHELM

**H**EALTH is catching, like disease. In fact, it is more catching in some respects, for there are not a few factors which can easily, almost automatically, be made to operate in the extension of health that do not operate in the extension of disease. One is education, another is the doctor, a third is the nurse, a fourth is the dentist, and others are so many that there is indeed a whole train of agencies making war on sickness.

But, as a rule, sickness is its own reward, by which is meant that one of the great discoveries of the war is that a large percentage of the people of America may be presumed to be suffering from physical defects which they are quite unaware of thru their own neglect; that 60 per cent of even the young men called to the service of their country were disqualified because of disabilities; that virtually all those thousands had been quite disposed to look upon a thoro clinical examination of themselves, not as the best annual insurance against sickness and death, but as something diabolical and dreadful. The draft, in a word, taught the nation a lesson; those who enjoyed military service are likely to emphasize that lesson. And now comes the elect little city of Framingham, Massachusetts, to make that lesson clearer, and to drive it home.

By the draft examination thousands of young men learned of disabilities which deprived them of the opportunity to get a lifetime of physical and mental growth in a year, and that kept them out of the best Marathon race that civilization ever staged—because they thought that since they continued to move, why consider the doctor? And Framingham now goes further, to show by a striking demonstration that the little motto heralded by the New York City Board of Health, "Within natural limitations public health is purchasable," is an axiom that Solomon overlooked.

**F**RAMINGHAM, in spirit and in fact, was a typical small American city. It was a cross-section, statistically, of America. It was, indeed, America in the miniature. It had, and has, levels high and low—a rural population, an Italian population, a Canadian, an Irish, a Jewish population and others. Twenty-six per cent of Framingham's population is foreign-born—exactly the percentage that obtains for the registration area of the deaths in the United States. Some of its industries are old, some are modern. Some employ foreign workers in large numbers, some do not. There is a business section, of course. There are churches of various kinds, but no Y. M. C. A. There is a typical public school system, but no parochial schools. There is a library, and a Civic League. There was a typical city government, there were well-trained physicians, a good local and a good state health department—and some inertia, collective and individual. Indeed, it was just because Framingham was typical that, when the Metropolitan Life Insurance Company offered one hundred thousand dollars to the National Tuberculosis Association "for an intensive experiment" over a period of three years, that Framingham was selected after

much comparison among other communities and much searching for a typical community affording, for the use of all other American communities, a just basis for experiment.

And now, when only two years of the experiment, or demonstration, have passed and the accumulated results in the third year are still to be recorded, New England begins to boast, gently, "Well, even if we are believed to be more or less the creature of our fancy, still, we have the Health Town!"

And from far and near inquiries are pouring in and requests for speakers are being made.

**F**RAMINGHAM set out to be the Health Town intelligently, with the guidance of Dr. Donald B. Armstrong—a graduate of Lafayette College, the College of Physicians and Surgeons of New York City and some years of study of public health and sanitary engineering at the Massachusetts Institute of Technology and elsewhere—as executive officer and head of a small but able staff. After careful planning and scientific analysis and checking-up of local environment, industrial, rural and other, and of disease, death, birth and sickness data for the ten-year period preceding (a difficult and expert business other communities now need not attempt), an intensive preparatory program was undertaken. It was undertaken thru the local paper, which, like most local papers, was ready to coöperate with a will, so that, regularly, now, it publishes a "health department." Then, of course, local physicians were apprized of the intelligent and comprehensive plan about to be undertaken, and busy tho physicians are, each doing the wartime job of several, they were not found wanting. Leaflets, likewise, in English and Italian, were distributed by insurance agents of companies having local representatives, by visiting nurses, by others. Church pulpits were utilized. The schools were utilized. Then, after the fullest arrayment of the various community products and purposes against the problem of the future, various offensive and defensive committees and councils were appointed and, at last, by the employment of the insurance agents and nurses gathered in from local and neighboring organizations, a sickness census was undertaken, to the end that Framingham might look in the glass and announce what, and to what extent, it *thought* it had anything the matter with it. Then followed a drive for a diagnosis covering all types and conditions of this "body politic" of some sixteen thousand individuals. In other words, enough doctors were gathered in, and enough nurses, from the town and round-about, for five thousand men and women—who are about equally balanced in the town—and children and babies, to be thoroly examined to determine, confidentially, and without cost, if they were ill, and where and how and why. And most of them were! Framingham, in a word, took another look at herself in the mirror and submitted to surprize, remarking, no doubt, that "Whereas, I, Framingham, always

thought I was much healthier than most towns, and *am*, they tell me, now I discover that far from having mumps only, and an occasional boil in the May-time, I am about 70 per cent sick—tho probably not so sick as many towns!" In other words, only a score of Framingham's members knew they had tuberculosis, to take only one of some hundreds of ills in large part unsuspected, yet 140 members needed advice about or treatment for tuberculosis; more than 100 children were bundled off to summer camp, and 3000 other citizens were consigned to their doctors for cure.

All this was a rending shock for Framingham—and it ought to be for the nation, which is loath to confess itself an ostrich, with its goodly physical head buried in the sands of time. The result was that the year ensuing saw Framingham gathering in her skirts and starting, with broom, baby books, "baby weeks," dental clinics, every intelligent weapon available, for health and happiness. The ensuing year accordingly saw—tho Framingham had undergone a 50 per cent increase in population in the two or three years preceding—a reduction of infant deaths of at least eleven for every 1000 babies born, as compared with the figures for the preceding ten years, and a reduction of deaths for all persons of nearly two per thousand. But there were all kinds of diseases discovered, and the cold figures do not tell the tale.

The first year's survey showed, in short, that Framingham, which had about 300 deaths a year, was suffering from its own negligence so much that from 150 to 200 of those deaths were from preventable diseases; that tho every year about 3000 persons were seriously sick in Framingham, fully one-half of all this sickness, with all its attendant pain and suffering, loss in wages, and loss of work, was preventable, by means that were at hand but had not been used.

In the following year another census and another extensive inventory, by nurses and doctors, were undertaken, with most of the examinations conducted in the homes.

**T**HE two surveys and inventories, with all the zeal for health that they aroused, constituting, as they did, an educational campaign of tremendous force, could in all their detail hardly be described in a book. For purposes of illustration, it is best, therefore, to turn in a paragraph or two to one disease and to speak in terms of that and make it serve for illustration. To do that is to pass by some interesting conclusions, which indicate, for instance, that the sickness and mortality rates in Framingham are affected by economic conditions, that the rate is lower for those with an income of \$1800 or over than for those with less income, and other confirmations just as striking, and to turn to tuberculosis, which is a menace such as few Americans appreciate, and a challenge in that it is usually curable if detected and treated intelligently in time. In 1916 there were forty known cases of tuberculosis in Framingham. That is, it was believed that only  $\frac{1}{4}$  of 1 per cent of the population had tuberculosis. When the war started it was supposed there were only twenty-seven cases.

And the average for 1916 and 1917 indicated that there were about three cases to each death. During 1917 and including 1918, to November, there were 242 cases on record, and there are now, counting "lost cases," more than 250.

In the little office with its broad partitions, where he is demonstrating that what is being done in Framingham can be done in almost any community—for about one dollar per capita, Dr. Armstrong explained, "For the period 1918 we now have instead of three cases for every death, ten active cases for every death and eleven arrested cases for every death—altogether twenty-one for every death, instead of three." This does not mean, of course, that the tuberculosis rate in Framingham soared with the coming of Dr. Armstrong and his assistants; it means, instead, that there were—and in every community in America there probably are—an unconscionable number of men and women and children in all stages of the disease, giving it to the very ones they hold most dear. In terms of Framingham, one can see what this means. Measured in terms of 110,000,000 Americans, many of them living in conditions worse than those that obtained in Framingham, one can apprehend, vaguely, what it means, when it is considered that 2 per cent, a new figure, of this civilian population is tubercular, with 1 per cent active and 1 per cent arrested. "It means," says Dr. Armstrong, "that, as surely as Framingham is typical, and it is presumed, statistically, so to be, there are in America 1,000,000 active cases of tuberculosis, and another 1,000,000 which ought to be under less rigid observation, instead of 250,000, the estimate heretofore."

And when the tuberculosis mortality for the United States is 141 per 100,000, and that in Framingham only 99, the lesson is clearer.

There is not space here for the striking manner in which the tuberculous cases in Framingham were classified in accordance with a quite new and seemingly far more intelligent plan available to any other community

The office of the Framingham Community Health Station is made attractive with posters and the whole town is constantly reminded and invited to think in terms of health

Dr. Donald B. Armstrong, executive head of the health station

now. There is not space for study of the results of a recent Von Pirquet skin test of children between the ages of one and seven years, a test that indicated that a third of them were already suffering from tuberculous infection, though up to this time the cases of actual disease among those children have proved to be relatively few. Nor space for the study of the findings come of the use of the X-ray, and other treatments. The point simply is that while the number of known cases of tuberculosis has been increased greatly, the discovery has been coupled with such adequate provisions for its reduction that the mortality rate has been reduced, which, again, points an imperative finger at every American community.

The same result was demonstrated in the case of children's diseases so that nineteen infants, according to comparative studies, are now living, instead of having died, in Framingham, thanks to having been born after the town had turned in to provide clinics and other ample provisions for infant care.

Whether children or adults, 77 per cent of Framingham's population were in need of some kind of medical, dental, or other treatment, and 65 per cent of those were suffering from illnesses that are preventable or remediable. But the lesson in all this is not merely that individuals should in every community appoint themselves committees of one to see that each gets a thorough clinical diagnosis once a year, but that every community in the United States can, if it will, do for itself what Framingham has done.

It has been pointed out that Framingham is a typical community. It has been pointed out, and such authorities as have been consulted by the writer seem to agree, that Framingham has now the best medical inspection machinery in ratio to the number of its people in the United States. But closer analysis of that machinery will discover that, in one form or another, all its components exist in almost any community that makes the least pretense of caring for the [Continued on page 387]

The baby clinic where skin tests indicated that one-third of the children from one to seven years old were already suffering from tuberculous infection

# THE TRACTOR THAT YOU NEED

*The caterpillar type of farm tractor carrying on steadily in an uphill haul. This type has a spectacular way of overcoming difficulties—but farm demands are less exacting than war work.*

*12-24 horse power kerosene tractor. Starts on gasoline. A well balanced, slow speed motor; on endurance test pulled its load \$12 continuous hours, without stop—a proof of solid qualities.*

*A general purpose tractor adapted to practically all power work on the farm. Will pull an 8-foot double action disc, and a smoothing harrow in one operation; dependable. Kerosene. 20 horse power.*

*Kerosene tractor, 12-24 horse power with line drive attachment—which means that you drive it as you would your horses. While you are seated comfortably on any implement the tractor is pulling.*

*Small, light, economical, good for the small farm. It will pull all farm implements or drive farm machinery, 22 horse power. Kerosene. A strong, reliable helper, built for wear.*

*You can walk with this tractor—one to five miles an hour. You can use its power for many farm purposes. 2-6 horse power. Gasoline. It may appeal strongly to the market gardener.*

*8-16 horse power gasoline tractor pulling three mowing machines at once. It is clear from all these illustrations that motor tractors are decidedly superior to horse drawn or man power machines in all the phases of farm work to which they are adapted.*

# WOULD YOU RATHER LOSE YOUR HANDS OR YOUR HEAD?

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**S**UPPOSE you had to lose your hand or your head, which would you rather let go? "Foolish question!" you remark. Foolish? No—logical. Hundreds of thousands of hand workers in this country have been taught to save their hands, while millions of head workers have not been taught to save their heads. The assumption is that hands are more valuable than heads. Are they?

Put the matter another way. If a great insurance company would offer to insure the product of your hands, or the product of your head, would you rather have insurance on the output and reward of your manual effort guaranteed for a lifetime, or insurance on the output and reward of your mental effort guaranteed? Do you earn your income with your body—or with your brain?

Whatever part or function of you makes the income for yourself and your family should be insured against disease, disability, accident, impairment or death. A great pianist or violinist now insures his hand for a hundred thousand dollars or more. A great athlete or prize-fighter insures his foot for a similar amount. A great captain of industry, or banker, or lawyer, insures his brain for perhaps \$1,000,000 so that if anything happens to his brain—tho he himself retains physical life, the amount of the insurance is paid to his family or his company.

Why should not this modern principle of income insurance be applied with equal justice and beneficence to the humblest worker whose brain power supplies him also with the necessities of life? Barring accidents, every one of us can by a few simple, easy, logical and inexpensive precautions guarantee that the product of our brain will be the most and best possible under the circumstances.

I have spent several years learning how to keep brain workers fit. I have doubled the daily output of my own brain, while increasing its earning capacity several hundred per cent. I have watched other brain workers rise from errand boys to millionaires—and do it by the regular adoption of such principles of mental and physical hygiene as will be told in the following pages. Conversely, I have seen great minds go to smash because of the failure to conserve mental and physical energies.

A prolonged study of the average conditions, both outer and inner, of the factory workers, and of the office workers, of the United States reveals a surprising situation. The hand workers in the factories are protected, safeguarded, informed and inspired along the new line of preventive hygiene and production conservation while the brain workers in the offices are not. The factory employees are given, without charge or at actual cost, many kinds of practical aids to keep them physically and mentally fit. We mention a few: sanitary surroundings, appliances and equipment; guards and uniforms to prevent accidents from tools and machines; regular examinations by the company physicians; home consultations and visits by doctors and nurses; factory talks on hygiene by na-

tional experts; meals planned in relation to scientific food values; rest periods allowed after meals in the company dining room; drinking water guaranteed chemically pure; facilities and instructions provided for bathing, exercising and playing so as to increase vitality and promote longevity; musical, theatrical and literary entertainment furnished as a means to scientific relaxation; welfare work organized to aid the home life or satisfy the personal needs of the individual worker.

Now take the average office located near you and compare the situation. What do you find? Practically none of these helps to the factory worker has been supplied to the office worker. Is the man whose effort is mostly of the hand worth more than the man whose effort is mostly of the brain? Why qualify the former and disqualify the latter? We protest.

The reason for the better treatment of

body, and every body worker should exercise his brain. Physical or mental work, properly done, takes both mental and physical energy. But the typical brain worker is apt to neglect the laws of hygiene, is often stupid about caring for his body, is prone to be lazy, and is generally of a more delicate physique than the body worker; therefore we will emphasize here the rules of health, vigor, vitality and productivity that most apply to the brain worker.

The two main divisions of the topic are general sanitation and personal hygiene. General sanitation covers the items of drinking water, sanitary fixtures and conveniences, hygienic towels and soap, removal of dust and dirt, elimination of noise, comfort of working garments, prevention of disease.

Every human being should drink at least five glasses of water during regular business hours. Bad water is a prolific medium for carrying disease—a single glass of impure water may contain hundreds of deadly germs. Water that comes from any source but a pure mountain stream should be analyzed at the source, then treated to overcome excessive hardness, or mineral, chemical or vegetable impurity when such is found to exist. If the only available drinking water is hard, containing excess of lime and other minerals, it should be softened by chemical process before being distributed for use by employees.

Beware of the cheap household filters that are nothing more than a superficial straining apparatus. They are screwed on to the faucet, and merely collect the large, coarse particles of dirt in the water, leaving you to drink the dangerous elements, which are the small invisible germs. Beware also of any type of filter that has to be taken apart and cleaned or sterilized every few days. If such filters are neglected, or if the sterilizing job is poorly done, they are worse than no filter at all, since the bacteria multiply faster when collected in the filtering compartment and make the water deadlier than before.

One type of inexpensive filter approved by sanitary engineers is the sand filter when operated by gravity or by pressure. The first type is placed at a higher elevation than the delivery point and allows the water to percolate thru it by gravity; the second type is equipped with a special apparatus by which the water is forced thru it under pressure. Either of these filters requires a coagulant for sterilizing purposes. The coagulant is usually a sulphate of iron or alumina, placed in the water before it reaches the filter. A layer of substance resembling jelly forms over the sand bed, foreign matters including bacteria are engaged by this means, and so the water leaves the filter in a comparatively pure state. When buying a filter you should always include the apparatus to supply coagulation, and make certain that enough coagulation is furnished regularly.

A guaranteed bottled spring water is

*Thomas Edison all his life has worn clothes that looked too large for him but that felt just right!*

the factory worker is apparent. A man who has sense enough and character enough to build up a national enterprise that employs from 5000 to 50,000 operatives knows human nature well enough to appreciate the production value of the unseen forces in a man's life, that make him feel, hope, work, love and live in the right or the wrong way. So the great factory head, regarding manhood his chief product, puts time, thought and money into making better and stronger men. He finds the investment exceedingly profitable. Whereas, the common variety of peanut headed, pickle hearted office manager knows little about the human side of production.

ideal for regular use in the home or the office, but the different brands on the market vary so widely that a comparison should be made before choosing a bottled water. A good water company gives on request a certified analysis of its product. Get a number of these analyses, then ask your physician or druggist to tell you which water is purest, softest and best judged wholly by the analysis. The water one drinks, being used most largely of any food element, should be selected with the utmost care.

Ice water should never be taken into the stomach. Pure ice, either natural or artificial, is almost impossible to obtain, therefore all ice should be kept out of drinking water. Furthermore, nothing should be swallowed whose temperature on entering the mouth is too cold or too hot to be comfortable when applied to the outer surface of the skin. A water cooler that packs the ice around or adjoining the water is the one safe kind to install.

Three solutions of the common drinking cup problem are available. You can give each employee a drinking receptacle of his own; you can supply individual paper cups which are used only once and thrown away; or you can have a sanitary fountain of the bubbler type placed in your building as a part of your system of water circulation, being careful, however, that the bubbler is equipt with a guard for the mouth, consisting of a projection or attachment that keeps any mouth from touching and infecting the nozzle or vent of the fountain.

The sanitary appliances and conveniences that pertain to the building proper cannot be discussed here for lack of space. But they are vital factors in the efficiency of brain workers, no less than of body workers. Every office manager as well as every factory owner should consult an experienced sanitary engineer on the fundamental items of building equipment, such as lockers, wash rooms, rest rooms, emergency rooms, closets, facilities for the disposal of sewage and its chemical or bacterial treatment. The toilet arrangements of many an office that boasts a gilded front are merely a disease trap in disguise. The owners of hundreds of great factories have proved that modern sanitation is not only a sign of progress and decency but a paying proposition first and foremost, yielding ample returns in health, vitality, energy, ambition, contentment, cheerfulness, thoughtfulness, care, zeal, endurance. All these traits and habits in employees are

steady profit makers. Yet a large proportion of office managers and department heads, outside of those connected with large industrial enterprises, have ignored this fact persistently.

The community cake of soap is a relic of barbarism. All kinds of germs cling to it from the atmosphere and from the soiled, perhaps diseased, hands of other employees. A family tooth brush has not been fashionable for some time. A family cake of soap is almost as undesirable, and we trust may become almost as unfashionable. It will disappear in time, just as the common drinking cup has disappeared by legislation from public rooms and railway coaches in progressive states. The least cut or abrasion of the skin may serve as an entrance for a deadly microbe that lingers unsuspected on a dirty cake of soap. You can order individual cakes for each employee, as are furnished every guest by all good hotels; or you can equip your lavatory with a modern automatic dispenser of liquid soap, which is preferred by the majority of good chemists and physicians. Pure liquid soap is economical, healthful, containing no free alkali; it works in hard water, lathers quickly and generously, cleans rapidly, tends to prevent chapping of the skin, is used to the last drop.

The office towel is a criminal deed. Whoever perpetrates it or shares in it should be arrested. Would you give up your individual handkerchief and be satisfied with a small section of a partnership handkerchief hung up near a common wash stand? There is no more reason for you to be satisfied with a section of a partnership towel. A public towel is never safe. It may carry germs of eczema, influenza, trachoma, blindness, catarrh, syphilis, tuberculosis; and you don't know the germs are there till you get the disease. Insist on having your own towel in your place of business. If you can't get the individual towel, carry an extra handkerchief with you and use that.

You have your choice of three types of individual towel as office equipment; the separate cloth towel, the attached cloth towel, and the personal paper towel. The separate cloth towel, scientifically made of absorbent crash, may be rented from a towel supply company, the towels being collected, laundered and returned by the company. Two points should be guaranteed if the separate cloth towel is used: first, that every employee use none but his own towel, which he keeps in a cabinet or

locker marked with his own name; second, that the towels be thoroly boiled in laundering to insure complete sterilization.

The attached cloth towel is used by hundreds of hospitals, hotels, factories, banks, theaters, restaurants, department stores and office buildings. A wooden cabinet, resembling a wash stand with a very high back, holds the towels on a shelf at the top of the back. The towels are all made with eyelets near the edge. A metal rod runs thru the eyelets, turns out and bends over to clear the shelf, and drops to a basket below which collects the soiled towels. After each towel is used, it slides down the rod automatically and leaves itself in the basket for the laundry man to take away. The rod by special device is locked firmly in place and the towels cannot be stolen or lost.

The personal paper towel is ideal for a public building, especially where strangers have to be accommodated. When paper towels were first introduced they were liable to waste in being torn, or being pulled off several at a time, and were liable to infection where a diseased person touched a towel which was left on the roll unused. But the modern cabinet overcomes these two disadvantages.

How do you sweep your office floor? Does your method of sweeping collect and hold the dust—or merely drive it up into the air you breathe? And does it waste three times as much money as the sweeping utensils cost—by reason of the fact that they are old-fashioned, poorly made, inadequate for their purpose? A moistened brush or mop, or a suction cleaner, affords the proper method of sanitary sweeping. One of the newest appliances is a patent brush moist with oil, that catches not only the dirt on the floor, but also the dust in the air, which it holds, moistens, then pushes forward on the floor—instead of allowing it to escape into the air.

Even more modern than the dustless broom is the dustless floor—a floor that raises no dust for a broom to tackle. The material is a composition put on like plaster over a base of wood, concrete, iron, steel, brick or tile. The floor when dry becomes a solid, smooth sheet and amounts to a seamless tile. The surface, being continuous, allows no cracks or joints where dust, dirt, grease or moisture may gather. The composition is fireproof and waterproof. It is warm, fibrous and resilient, affording special comfort to people whose work requires [Continued on page 382]

## EPISODE

BY S. FOSTER DAMON

She was a dead branch of the family tree,  
—plain, unobtrusive—you have seen the sort;  
so, when the lover came, all of us knew  
just how the thing would be. And you can guess  
what he was like. He was a sort of sparrow,  
quite cheap and cheerful, with a little rush  
of eagerness in everything he did.

And when the summer came (there had been no  
spring),  
he, sparrow-like, lighted upon the nearest twig,  
—and that was she, the dead branch.

I must say  
one never blamed him; it was the way he acted  
with every girl he met, and every girl  
expected it when first she saw him coming.

But not this girl—that was the nasty part.  
She never liked men—men never liked her;  
and so she was entirely unprepared.  
An innocent flirtation meant too much;  
and the dead branch that had never stirred since  
childhood  
now trembled to his every foolish phrase  
and swayed as he swayed. With a tragic beauty  
she was the basis for his song of songs.

Well, you have guessed what happened; off he flew  
with not a thought in his silly head. The branch,  
the dead branch, gave one terrible last shudder,  
then was as motionless as she always had been.

And I could never satisfy myself  
whether it was as well for her he came.  
Most people are too sentimental to judge.

Time and labor are saved by motor truck haulage from farm to railroad, and the crops, in fresh condition, sell higher

# THE LINK BETWEEN FARM AND MARKET

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**M**OTOR transportation has had a remarkable growth in the past two years aided largely by the increased needs of the nation in the war emergency, accompanying a decreased rail-carrying capacity and efficiency. One field in which the motor truck, under these conditions, has made giant strides, is that of connecting the farms of this country with their nearby markets and with rail and water carriers for distant markets.

The significant thing in this particular field is that there is every indication that motor transportation will continue to grow under peace time conditions. This is in sharp contrast, for example, with the inter-city hauling of freight and merchandise by motor truck which flourished during most of 1918 along the Atlantic Seaboard, but which now has gone back to pre-war volume.

The truck has been about the last of available motor equipment to be adopted by the farmer. Stationary engines for belt power purposes were introduced many years ago on all progressive farms thruout the United States. The passenger automobile came next and within the last four years tractors have been adopted in ever increasing numbers. The farmer's real problem has long been that of getting his products to nearby markets or to stations on the railroads. Prevailing conditions have been such that the cost of even a ten-mile haul to the railroad has averaged more than the cost of a one to two-hundred-mile haul on the railroad itself. Again, prices obtained by farmers for their products are largely influenced by the condition of these products when they reach the market. In the case of hard wheat, for example, there is little or no shrinkage, but with live stock, vegetables, and even potatoes and onions, to say nothing of milk and eggs, every hour saved in getting them into market means an actual dollars and cents saving to the farmer.

The possibilities attending the use of motor trucks by farmers is well brought out in a letter written by H. I. Miller, a farmer of Banner County, Nebraska, which appeared recently in the *Nebraska Farm Journal*. In it Mr. Miller says:

We live twenty miles north of Bushnell, which is on the Union Pacific Railroad, and as we had about eight hundred acres in crops last year we bought two one-ton trucks. We delivered our crops to the railroad with these trucks besides hauling lumber for a large barn. We also hauled all our winter coal and I don't know how many loads we hauled for neighbors. We did all our threshing with the trucks—in fact in the last six months we have not had a team of horses hitched up except to haul a little hay. I find that I can take a truckload to town when the roads are in such condition that I would not want to take a team out at all. The passenger car is a fine thing and I would not like to be without one, but I would miss a motor truck more than a car. I figure that my trucks put

me within five miles of town as compared with team hauling. I can take a load of fifty bushels of wheat to town in one hour and thirty minutes, and I have made as many as four trips in one day, taking both my dinner and supper at home. I know of nothing that has come to the farmer that is such a boon to him as the motor truck, especially the farmer who lives a long distance from town. We have two trucks, two passenger cars, two tractors, and two stationary engines on this farm, and we find use for them all.

In the particular field of motor transportation which we are now discussing, there is a branch which serves well to illustrate the advantage of the motor truck in minimizing deterioration and shrinkage of farm products en route to market. This branch is the hauling of live stock direct to the stock yards which are to be found in all of the principal centers thruout the great middle western stock raising sections. A recent report of the stock yards located at St. Joseph, Missouri, show that live stock has been hauled there regularly over distances as high as eighty miles. Every class of live stock has been included and a single day's receipts by motor truck were 1400 hogs, 200 head of cattle and calves and 200 sheep. These were carried by 180 motor trucks. Similar receipts for a period of nine months ending last October were 75,211 hogs against 33,286 for the same period in 1917; for the entire year of 1917, 56,529 hogs were delivered to St. Joseph's stock yards by motor truck. In twenty-four days last October the receipts by motor truck were 11,622 cattle, 418 calves, 16,150 hogs, and 25,922 sheep. The vehicles engaged in making these deliveries ranged from small trailers hauled by passenger automobiles to five-ton trucks. The big trucks have a capacity equal to one-third of a regular railroad stock car. A feature of this work is the fact that in the majority of cases motor vehicles delivering stock at the yards were able to get a return load to take back. The major part of these livestock deliveries are handled by concerns specializing in this branch of transportation.

As far as actual transportation costs are concerned, it is considerably more expensive to haul by motor truck than it is by railroad. This difference, however, is more than offset by the saving in shrinkage and the ability to take advantage of high prices. For example, the farmer can ascertain in the morning the prices quoted at the stock yards for various classes of live stock, and make his deliveries at the stock yards the same day. In the case of shipment by railroad, it would take at least a day to secure a stock car at the local siding and trouble in getting his neighbors to join him in making up a full load.

There is another angle to the use of motor transportation between farm and nearby market or railroad station, and that is its

comparison with haulage by horse-drawn wagon. Here the item of time saved in connection with labor is one of the most important. A recent investigation by the United States Department of Agriculture resulted in some interesting tabulations secured from a dairy farmer near Detroit. This man delivers ten gallons of milk a day to the city and by substituting a motor truck for a horse he brought the transportation cost down from twenty-five cents to ten cents a can. With horses the time required for the round trip was seven hours and fifty-six minutes, while with the motor truck it took only two hours and twenty minutes. The following tables cover this particular case:

## COST OF TRUCK A MILE (PRE-WAR)

Depreciation (based on 100,000 miles at 36c)	\$0.0196
Tires	.0219
Gasoline	.02
Oil	.0013
Repairs	.0120

Total .....\$0.0747

## COST OF TRUCK A TRIP (PRE-WAR)

Driver, 2 hours 20 minutes, at 36c	\$0.84
Garage	.05
Interest at 6 per cent.	.33
Insurance and taxes	.20
19.8 miles at .0747 a mile	1.48

Total .....\$2.90

## COST OF HORSE A TRIP

(ONE TRIP A DAY)

16 quarts of oats at 3c a quart	\$0.48
18 pounds hay at 2c a pound	.36
Bedding	.10
Hostling	.10
Shoeing and small repairs	.20
Stable rent and insurance	.08
Water	.001
Insurance and taxes	.02
Accident, sick and idle	.18

Total .....\$1.521

## COST OF FOUR HORSES AND WAGON

(WAGON AND DRIVER)

Driver's pay a day	\$3.30
Four horses at \$1.521	6.084
Interest on wagon, \$837 at 6 per cent.	.14
Depreciation	.32
Repairs and maintenance	.08

Total .....\$9.924

The foregoing by no means includes all the benefits derived by substituting a motor truck for horses in this particular case. For example, the farmer is back home again at 11:30 a. m. for his dinner, which otherwise would have to be eaten in town. Also his wife undoubtedly goes to town far more frequently than was the case when the journey took over five hours.

A forty-page booklet has been prepared by The Capper Publications, of Topeka, Kansas, entitled "Motor Trucks on the Farm." Readers of *The Independent* will find this booklet most valuable.

## GMC Trucks Serving 200 Lines of Business

The use of GMC Trucks in more than 200 lines of business has a significance that is best explained by referring to the outstanding features of the trucks themselves.

To begin with, six standard sizes, ranging from  $\frac{3}{4}$  tons to 5 tons, when equipped with suitable bodies, are adaptable to the widest differences in weight and character of load.

Then, so large is the factor of safety that in handling such a wide variety of goods as 200 lines of business represent, GMC trucks have proved universally dependable.

Again, from the standpoint of power and general roadability GMC chassis units are so judiciously

rated and proportioned as to perfectly balance the engineering plan.

Everywhere in the mechanical make-up of every GMC Truck there is a big reserve factor—more power, more gear strength, greater chassis flexibility than may ever be needed.

These are a few of the more important points on which are based the selection of GMC Trucks in more than 200 lines of business.

# UNUSUAL BLESSING

Attended the Conference on "World Evangelism and Vital Christianity After the War" held at The Moody Bible Institute of Chicago, February 3-7. From Monday night, when Dr. James M. Gray gave the address of welcome, sounding the keynote of the Conference, which was to be the importance of "proclaiming the Gospel that we have always proclaimed, and holding up the standard of the Cross," until the last address by Dr. Howard Agnew Johnston on "The Atmosphere of Spiritual Power," every speaker rallied wholeheartedly to a constructive program of evangelism and united testimony to the fundamentals of the faith.

Men from many denominations, leaders in their circles, spoke of nearly every phase of work which now lies before us in preaching Christ and Him Crucified to a lost and perishing world. Among the speakers were the following: Rev. Joseph Kyle, D.D., LL.D., President Xenia Theological Seminary; Rev. J. C. Masee, D.D., First Baptist Church, Dayton, Ohio; Evangelist Henry Ostrom, Methodist; Rev. Samuel M. Zwemer, D.D., Missionary, Cairo, Egypt; Rev. E. M. Poteat, D.D., ex-President Furman Baptist College; Rev. D. S. Kennedy, D.D., Editor "The Presbyterian," Philadelphia; Rev. John McNicol, B.D., Toronto Bible College; Rev. E. A. Wollam, Cleveland Bible Institute; Rev. Mr. Ellis, Vancouver Bible Institute; Rev. Wm. B. Riley, Northwestern Bible School, Minneapolis; Rev. Wm. L. Pettingill, Dean Philadelphia School of the Bible; Rev. John A. Davis, Evangelist; Bishop Joseph F. Berry, Methodist, Philadelphia; also Jewish Mission and Rescue Mission representatives.

By special arrangement THE CHRISTIAN WORKERS MAGAZINE will publish a full report of the important addresses in the March and April numbers. No extra charge will be made for this report, as it will be sold at the regular price of a single copy of the magazine—only 15 cents or the two for 25 cents—but order at once if you desire a copy.

In the April number to follow will be published a special article by Pastor D. M. Pantton, of Norwich, England, on "The Present Rise and Ultimate End of Democracy."

# The New Books

## For the Business Office

**STANDARD MANUAL OF THE INCOME TAX 1919.** (Standard Statistics Co., \$5.) A clear explanation of the income tax law with complete answers to all income tax problems. Invaluable to the business firm.

**LOANS AND DISCOUNTS.** (A. W. Shaw Co., Chicago, \$3.) This latest addition to the Shaw Banking Series deals with the routine for handling all types of loans in the most direct and effective way.

**HOW TO SELL MORE GOODS,** by H. J. Barrett. (Harper & Bros., \$1.50.) Gives in conversational, semi-story form, selling experiences of many kinds. Keen observations, useful hints and helpful suggestions are numerous.

**MAKING THE OFFICE PAY,** edited by W. H. Leffingwell. (A. W. Shaw Co., Chicago, \$4.) How to keep tab on all the office activities, to assure good work, to write good letters, and to increase the turnout. Helpful illustrations.

**READINGS IN INDUSTRIAL SOCIETY,** by L. C. Marshall. (University of Chicago Press, \$3.50.) Over a thousand pages, some five hundred selections, on the theory and problems of modern business. Invaluable for students in economics, sociology and commerce.

**THE MOTOR TRUCK AS AN AID TO BUSINESS,** by S. V. Norton. (A. W. Shaw Co., Chicago, \$7.50.) Figures and comparisons of horse and motor truck answering the dollars and cents questions of prospective motor truck users. Meets a positive need for authoritative information.

**SCIENTIFIC OFFICE MANAGEMENT,** by W. H. Leffingwell. (A. W. Shaw Co., Chicago, \$10.) A work of more than passing value to office managers who are keen to adopt the best methods of dealing with their problems—those of cold statistics and those into which the human element enters.

**WHO'S WHO IN AMERICA, 1918-1919.** (A. N. Marquis & Co., Chicago, \$6.) Volume X of this biographical reference book contains life sketches of 23,000 living Americans. In the office, school-room and library it is indispensable.

**THE ETHICS OF COOPERATION,** by James H. Tufts, Professor of Philosophy, University of Chicago. (Houghton Mifflin Co., \$1.) This addition to the Barbara Winstock Lectures on the Morals of Trade is an inspiring argument for consistent work to create new resources instead of considering present systems as fixed.

**THE FUTURE OF GERMAN INDUSTRIAL EXPORTS,** by S. Herzog. (Doubleday, Page & Co., Garden City, \$1.) A carefully considered and unscrupulous plan for forcing German products upon a hostile world. American manufacturers will have to learn some of these methods of efficiency and organization if they are to meet German competition.

**PRINCIPLES OF ACCOUNTING,** by W. A. Paton and R. A. Stevenson. (Macmillan Co., \$3.25.) Of value beyond the text-book purpose of general accounting courses in colleges, for which it is primarily written. A thoroly well considered treatise on the elements of accounting, equity accounts, interest, valuation, construction and analysis of financial statements.

**THE BANKER AT THE BOARDING HOUSE,** by the late Montgomery Rollins. (Lothrop, Lee & Shepard Co., Boston, \$1.50.) Taking "The Autocrat of the Breakfast Table" as his model, the author gives in this story wise suggestions about the care and handling of money, which can be read with profit by many who would not understand a technical discussion of the subjects treated.

**THRIFT,** by Orison Swett Marden. (T. Y. Crowell Co., 75 cents.) The latest addition to the favorably known Marden Success Books written in a convincing style. The illustrations include Andrew Carnegie, John Jacob Astor, Benjamin Franklin and John D. Rockefeller.

**USE OF FACTORY STATISTICS IN THE INVESTIGATION OF INDUSTRIAL FATIGUE,** by Philip Sargent Florence. (Columbia University Studies in Political Science.) A manual for field research giving tests for the proper methods of preventing industrial fatigue.

**EVERYDAY EFFICIENCY,** by Forbes Lindsay. (T. Y. Crowell Co., \$1.25.) Treats under three heads, Mental Efficiency, Physical Efficiency and Functional Efficiency, those traits of character the development which may be depended upon

to bring mind, body and will into that harmonious training which should make the reader better satisfied with himself and his work.

**SOCIOLOGY SECTION OF THE STANDARD CATALOGUE.** (H. W. Wilson Co.) Contains about a thousand titles of the most useful books on social, economic and educational questions.

**COMMERCIAL ARBITRATION AND THE LAW,** by Julius Henry Cohen. (Appleton & Co., \$3.) A careful historical study of the legal basis for arbitration agreements, by the author of "Law and Order in Industry."

**SOCIAL INSURANCE IN THE UNITED STATES,** by Gurdon Ransom Miller. (National Social Science Series, A. L. McClurg & Co., 60 cents.) No new material is presented, but as a handbook of general information on past achievements and possible future developments it will serve its purpose well.

**BUDGET MAKING IN A DEMOCRACY,** by Edward A. Fitzpatrick. (Macmillan Co., \$1.50.) Plea for the consideration of the public funds budget not merely as a manipulation of figures but as a fundamental matter. An important contribution to the Citizens' Library of Economics, Politics and Sociology.

**THE A B C OF THE FEDERAL RESERVE SYSTEM,** by Edwin Walter Kemmerer, Professor of Economics and Finance, Princeton University. (Princeton University Press, \$1.25.) Tells why the federal reserve was called into being, the main features of its organization and how it works. There are good indices both to the text and to the Federal Reserve Act.

**THE HISTORY OF STATISTICS,** by John Koren. (Macmillan Co., \$7.50.) Traces the development of an interest in and the compiling of many varieties of statistical information in many countries. This big book is not a dry, dull thing; it is full of interest for the casual reader, and for the student it is invaluable.

The English Reference Shelf

**FORMATIVE TYPES IN ENGLISH POETRY,** by George Herbert Palmer. (Houghton Mifflin Co., \$1.50.) A philosophical inquiry into the lives and influences of Chaucer, Spenser, George Herbert, Pope, Wordsworth, Tennyson and Browning.

**A MANUAL OF THE ART OF FICTION,** by Clayton Hamilton. (Doubleday, Page & Co., \$1.50.) A revised edition of "Materials and Methods of Fiction" with an introduction by Brander Matthews; a careful consideration of the elements of fiction, with chapters devoted to character, plot, setting, style, structure, etc.

**TODAY'S SHORT STORIES ANALYZED,** by Robert Neal. (Oxford University Press, \$1.75.) Twenty-two contemporary short stories from popular magazines with introductory notes analyzing their structure. A valuable handbook for the student of short story writing.

**ESSAYS OF HAZLITT,** edited by Arthur Beatty. (D. C. Heath & Co., 75 cents.) Twenty-two essays illustrating Hazlitt's prose style, with valuable notes for the student of written English.

**STEVENSON'S INLAND VOYAGE AND TRAVELS WITH A DONKEY,** edited by James Cloyd Bowman. (Allyn & Bacon, 60 cents.) A new volume of the Academy Classics, with introduction and notes to each narrative.

**EUROPEAN THEORIES OF THE DRAMA,** by Barrett H. Clark. (Macmillan & Co., \$2.50.) Anthology of dramatic theory and criticism from Aristotle to the present time, with texts, biographies and bibliographies. Especially helpful to students.

**UNIVERSITY DEBATES' ANNUAL, 1917-1918.** (H. W. Wilson Co., \$1.50.) Affirmative and negative speeches in intercollegiate debates on compulsory education, government price control, league of nations, federal regulation of industry and minimum wage, with biographies and bibliographies.

**THE MODERN NOVEL,** by Wilson Follett. (Alfred A. Knopf, \$2.) A study of the purpose and meaning of the English novel during the past two centuries. Reading lists and bibliographies.

**THE WRITING AND READING OF VERSE,** by Leonard C. L. Anderson, M. S. A., formerly Professor of English in Ohio State University. (D. Appleton & Co., \$2.) Aim to strengthen one's appreciation of poetry by a clear explanation of the principles of the writing and reading of verse.

**CHOOSING A PLAY,** by Gertrude E. Johnson. (H. W. Wilson Co., 45 cents.) A handbook of valuable suggestions on the material for production and detail of coaching, with a graded bibliography, for directors of amateur dramatics.

**A PAGE OF SHORT STORIES,** compiled by Barthelemy C. Williams. (D. Appleton & Co.) A careful selection of short stories for high school use, all interesting, and shown in subject matter, but as indicative of the development of the modern short story.

# Pay Her \$3

## For Each Empty Package

### A Suggestion to Men

The 32-cent package of Quaker Oats contains 6,221 calories—the energy measure of food value.

In meat, eggs and fish the average cost of 6,221 calories would be at least \$3.50.

So each 32-cent package served in place of meats saves around \$3. And the housewife who saves it should have it.

Make each empty package worth \$3 in some special household fund. Then watch the fund grow.

This is how some necessary foods compare in cost, at this writing, based on their calorie value:

Cost of 6221 Calories					
In Quaker Oats	-	-	-	-	\$0.32
In Round Steak	-	-	-	-	2.54
In Veal Cutlets	-	-	-	-	3.53
In Average Fish	-	-	-	-	3.70
In Canned Peas	-	-	-	-	3.35
In Cod Fish	-	-	-	-	4.85

And Quaker Oats, which costs so little, is the greatest food in the list.

Analysis shows the oat to be almost the ideal food in balance and completeness.

Make Quaker Oats your standard breakfast. That's the best way to bring down food cost.

## WOULD YOU RATHER LOSE YOUR HANDS OR YOUR HEAD?

(Continued from page 376)

them to stand on their feet. Dust cannot rise because it cannot form, as the composition is practically indestructible, and when laid properly will outwear the building of which it forms a part.

If you do much telephoning, a valuable instrument is the telephone accessory which enables you to hear as well as tho you had a sound-proof booth built around your desk. This device is really an extension of the wire, formed by placing the receiver in an auditory disc provided with an extension line and double ear tubes similar to those used by the telephone operator. The sound is clarified by entering both ears at once; time is saved by cutting out the necessity for repeating messages; both of your hands are free while you telephone; a bad line full of buzzings, hissings and sputterings or impaired by circuit disturbances or bad weather is immediately corrected; long distance calls are made as quick and painless as local calls; and the hearing process is guaranteed clear and distinct at all times.

Noise in a business office racks the nerves, confuses the brain, hinders the work, fatigues and frets the worker, induces errors and complaints. Recently a special form of acoustical treatment has been devised to meet any condition of noise found to exist in a large or small office, by placing on the walls a kind of absorbent material resembling felt, which stops the reverberation from typewriters, human voices, machinery, mechanical operations, and other sources of business noise.

The heads of large corporations who have had acoustical treatment applied to the walls of their buildings declare that their employees do more work because it is easier to do, and are less tired at the end of the day because relieved of the nerve strain of noise; that their typists take dictation more quickly and accurately; that the sense of greater comfort reacts favorably on the workers and the work; that nearly twice as many phonograph operators and office typists can occupy the same room; that even the noises of wagons, automobiles and street cars outside are materially softened; that the effect on visitors, clients and customers of increased dignity, composure and character is not the least of the desirable results produced.

The principles of personal hygiene are not so easily put into execution. They require examination, organization, reorganization of the individual. The average individual, blind from birth to his own highest welfare, does not want to be examined, organized, reorganized. The price of success, namely self knowledge and self rule, is more than he is willing to pay. Let him go. Offer to aid, instruct and empower him; then if he complains, object or resist—drop him from your scheme of welfare work. He is a born failure and should be allowed to proceed with his destiny. Personal hygiene is a matter of personal life, and that belongs to the individual worker—not to his employer. Sanitation can be and should be enforced; hygiene cannot be and should not be enforced. We give below the main factors in personal hygiene of special importance to men and women whose temperament or whose occupation goes to brain rather than brawn.

1. Regular physical examinations. Most of the common types of diseases or disability may be recognized before they occur and prevented or minimized to a large ex-

tent, thru personal examination, yearly or semi-yearly, by a good physician who is also an experienced hygienist and psychologist. If your concern is too small to employ a physician regularly, you can arrange for the examination of the individual worker by application to one of the national health societies furnishing local examinations as a part of its hygienic service. Health consists not in taking prescriptions but in taking precautions.

2. Scientific health instructions. The average person has never learned the fundamental principle of life—how to keep well and strong. You can largely avoid getting sick or feeling tired, depressed, weak or indisposed, by carrying out the simple, easy, rational, inexpensive and remunerative teachings of the modern health school of scientific physicians. Personal instructions may be had from recent books and popular magazines; or from teachers of health by mail; or from a visiting nurse now available thru almost any local health board; or from a national health organization supplying as one of the privileges of membership a series of personal bulletins on the preservation of health; or from one of the large life insurance companies now specializing in the modern science of preventing disease.

3. Food elements and habits for brain workers. The housewife with the husband or son brain worker laboriously figures how to give him the 2000 calories a day he ought to have, but she regards not the chemical nature of the calorie food. If she gives her brain worker a lot of starches, sugars and fats, she may give energy to his body but she will leave his brain powerless. The brain worker must have a higher percentage of protein foods than the body worker, but they must not be of red meat or pork or other indigestible substances; they must be largely milk, butter, eggs, fish, poultry, legumas, cheese, oats, and the more digestible nuts like the pignolia and the pecan. The brain worker must also have a higher percentage than the body worker of foods containing vitamins, mineral salts, and the direct nerve and brain elements such as potash, phosphorus and iron. The brain worker should take his heavy meal at the close of the day and should live on two meals a day if possible.

4. Individualized muscular motion. A public gymnasium is no place for a man who thinks. Few men who really think are ever found there. But every man who exercises his mind must exercise his muscle for the sake of his health, just as every man who exercises his muscle must exercise his mind for the sake of his wealth. Among the best forms of exercise are golf, tennis, hand ball, swimming, rowing, skating, mountain climbing, wood sawing, garden digging, lawn mowing. And if your wife, being ever maidless and forlorn, should politely hint that a modicum of masculine force applied to a broom or scrubbing brush would promote the well-being of the family, you may take our word for it that broom gymnastics are exceedingly beneficial. I often scrub the kitchen floor myself. Among the kinds of exercise not good for a brain worker are boxing, wrestling, tumbling, racing, violent ring or trapeze work.

5. Comfortable work clothes. Why should a factory operative dress in a loose, pliable, comfortable uniform—and an office executive dress in a merely stylish garb—stiff as a fashion plate and senseless as a tailor's dummy? Should a custom rule our

## FLORIDA

Buy a Commercial  
Grapefruit Grove

AT

**LAKELAND HIGHLANDS**

A 1/2 acre grapefruit grove will provide an income equivalent to 5% ON \$50,000. The cost of a grove is only ONE-EIGHTH OF HIS SUM. Our Company conservatively estimates the net profits on a grove at only \$6 PER TREE = \$240 PER ACRE. That is only one-fourth of the 10% return returns on good groves. Even \$5 per tree will NET 40% on the investment. The income on a grapefruit grove begins after the fifth year.

Our illustrated booklet answers all questions. Write for a copy and read it. Then, if you are in a position to finance a grove, visit the property and spend a week at the Country Club as our guest.

W. L. HALLAM & CO., 225 5th Ave., N. Y.

body and brain when the custom lessens the power of both. One reason why the mental product of famous authors exceeds and excels the brain output of equally good business men is that the authors do much of their work in a dressing gown and slippers. Their blood is in their brain where it ought to be—not in their feet under tight shoes, or in their neck under a tight collar, or anywhere else in their anatomy under conditions that irritate and distress the mind. You never saw a high collar or a stiff hat on Theodore Roosevelt. The clothing of great financiers like Russell Sage or E. H. Harriman was never of the stylish fit that betokens a foolish character. Thomas A. Edison all his mature life has worn outer garments that looked too large for him but that felt just right. We urge every man always to look neat, well drest, immaculate. But if you have to choose between style and comfort, choose comfort. Don't let your clothes put a crimp in your brain by putting a cramp on your body. Great men do not bother with the small superficialities of the current style. And they secure physical ease for themselves as a part of their industrial equipment.

6. Genuine relaxation. The keen, persistent, brain worker has to learn to be a vegetable. He must be able to forget that he has a brain or nervous system. He must leave his thoughts behind him in the office, just as the laborer leaves his work behind him in the factory. Now you might think it easy to stop thinking; but if you once really start, I assure you it is not. One of the acute problems of the ambitious brain worker is to make an end of thought while he eats, plays, exercises, sleeps, and is otherwise a normal human being. When your work demands extreme concentration, your whole current of thought must be changed outside of business hours. What will produce for you the quickest and most complete change of thought? Perhaps music, light fiction, or love stories, or detective tales; perhaps a merely physical job of manual work, working in the garden; perhaps playing with the children, wandering about in strange places and entertaining new sights and sounds. Perhaps walking far into the country by night, communing with the stars and letting the wind sweep away your trivial human cares. The higher you climb toward the pinnacle of leadership, the more firmly and regularly must you free yourself from all responsibility and for a little while make believe you are a boy again.

7. Mental and emotional conservation. A brain worker is hurt twice as much as a day laborer by the poisonous emotions of anger, fear, anxiety, worry, suspicion, suspense, discouragement, dissatisfaction. The mind of the average man is a chronic source of poison to his body. Ultimately this poison reaches the brain; so that, according to poetic justice, the mind that conceives bad thoughts will be destroyed by them. You can't think one sad or mad or bad thought which does not react unfavorably on your brain. The practitioners of psychotherapy claim that much of the ignorance, lethargy and stupidity of the majority of people can be traced to a diseased condition of those portions of the body which are half physical, half psychic, such as the spleen, thyroid gland, pituitary body. You can't think straight with the corners of your mouth turned down.

8. Prevention and cure of nerve strain. Mental power is fundamentally nerve control. The nerves are to the brain what the muscles are to the body—you cannot exercise clear, vigorous thought unless you have clean, strong nerves. But the nerves are more than sinews for the brain—they are wires, inconceivably fine, delicate, sub-

## Again at the Service of Modern Business

During the war, because of the great demands made upon us by the Government, and due to the shortage of material and labor, we were compelled to disappoint many firms who wanted to install the—

# Dictograph

## System of Interior Telephones

*Do not confuse with dictating machines*

### We are again prepared to accept orders

and are happy in announcing that the Dictograph is now ready to do its share in the reconstruction period facing American executives.

### No wasted steps—no misspent energy—no needless errors

The Dictograph is the last word in *Interior Telephone Systems*, and is in daily use by over 50,000 leading executives in every line of business, large and small, throughout the country.

It can be used where only 2 or 3 stations are necessary, and is sufficiently elastic to meet the requirements of the largest organizations.

Let us show you on your own desk—in your own office, bank, plant or factory—how the Dictograph will simplify and expedite the work of every executive and employe in your organization—how it will enable each to do more work, better work, quicker work; and yet permit each man to remain at his own desk or within his own department.

### May we give you an actual working, talking, 5-minute demonstration?

Let us show you how the famous loud-speaking Master Station gives the executive the "right of way," at the same time affording complete, direct and efficient inter-office and inter-department communication—how the voice is heard as perfectly as if

the party talking were in the same room sitting at your desk—how you can hold conferences, dictate letters, receive reports, give orders, talk to callers—  
—all without effort and without leaving your desk!

### Send for "An Essay on Executive Efficiency"

We want to send this booklet, free, to every interested executive with an inter-communication problem, whether bank, office, store, factory, plant or Governmental department. It will show you how to analyze your inter-communication problems, and how to lighten the burden of routine that tends to smother you and your other creative executives.

Send for your copy now—check the Coupon.

**THE INDEPENDENT  
EFFICIENCY SERVICE**  
HOUSEHOLD CONSULTING DIVISION  
119 West 40th St., New York

the wires, that convey messages of warning and appeal from any diseased portion or disordered function of the body or mind. A few of the conditions that are merely reflected in bad weak trembling or complaining nerves are faulty posture, shallow breathing lack of muscular exercise, over-eating, auto-intoxication, poorly ventilated sleeping or working rooms, weak or defective eyesight, faltering will or flickering purpose, chronic doubt or pessimism, lack of emotional balance, compromise with conscience, the hurry habit, selfishness or greed, the willingness to do slipshod work, lack of faith in God, your fellows and yourself.

9. Outdoor amusements and occupations. The body worker regularly consumes from 30 to 60 per cent more oxygen than the brain worker. Muscular effort creates new blood automatically, while mental effort permits the blood to stagnate unless you voluntarily and systematically improve combustion by working, playing and living out of doors as much as possible. Besides, the nervous forces of the human organism are refreshed, invigorated and renewed by the restorative power of sunlight, free air in motion, the magnetic currents of the earth. Nerve and brain health is largely a matter of keeping away from houses. The brain worker who isn't out of doors at least an hour every day is merely taking money from his pay envelope. He doesn't know it, but only because he is mentally asleep—and is robbing himself while walking in his sleep.

10. Vocational guidance, outlook and incentive. A brain worker in the wrong job might as well be paralyzed. He won't and can't move ahead while monotony and mediocrity halt his mental machine. A big, stupid hulk of a man may drone like an ox all his life and be content as the ox; but a keen, sensitive man who holds the brain worker's job has to be in line with opportunity or fall down and drop out. The right stimulus for a brain worker is a well directed imagination. You have to see a big chance ahead before you can do your best work here and now. The way to keep your brain on edge is to sharpen it on a whetstone of difficulty, then use it to carve out your dream. Without a high dream and a huge purpose, a man is not a man but a mollusc. Your brain is a miracle machine, but the marvelous things you can make it turn out will depend on your systematic, scientific resolve to do the biggest and best work you ever dreamed of doing.

## TWO WEEKS' EXTRA PAY

(Continued from page 366)

finding the right place for him, or would even provide him with the instruction which would enable him to make good on the job. In time of slack business they would put their men on part time rather than turn some of them off.

Just as the burden of accident compensation sinks to the minimum in the case of the employer who takes the most pains and goes to the most expense to eliminate accidents from his mill, so the burden of a legal dismissal wage will be least on the employer who picks his men most carefully, tries them out most speedily and gives the most care to building up a permanent labor force. By providing the worker with an added inducement to keep a good job and the employer with an added inducement to keep a good man, it would tend to stabilize American industry and favor the survival of the types of employer and worker society ought most to encourage.

## WITH THIS BLACK MAN'S ARMY

(Continued from page 368)

prest those who were willing to observe, was that all thru those stressful days, and anxious, when the strain of work and the handling of cargoes and ammunition for the front became really one long grind for the stevedores, morning, noon and night, one could see them thru all sorts of weather and hours, swinging by companies into line, marching bravely to the difficult tasks, singing or whistling.

Frequently the base commander and other distinguished officers visited the camps and the public gatherings and Y. M. C. A. buildings. I have heard them repeatedly emphasize how much the army at the front depended upon the work and loyalty of the stevedores at the base. They also spoke to them in the highest terms about the way in which they were performing their tasks, without the show and excitement that inspire the soldier at the front.

They were doing the drudgery, the dull routine, the monotonous labor; still they were the foundation and groundwork upon which the whole army was built. They also were American soldiers and heroes!

Such patriotic sentiment to encourage them. I believe acted also as a spur to keep the morale up to the highest, and the energy with which they worked was all the more vital because they responded readily to the principle of patriotism that urged them on, believing that thru their efforts all the more quickly, victory and peace would come.

Even after the armistice was signed and their thoughts naturally turned homeward, a new appeal was made to them to which they are responding loyally. The Army of Occupation now needs supplies and food, and the stevedores are over there still at work, far into the night.

When it is considered to what extent with regard to different states and communities the huge army of stevedores was organized, and the various types and conditions of men represented ranging from city bred young men of school training to those often illiterate, from hamlets and small farms way down South, it is remarkable how they were all brought together and welded finally into a fine industrial army that made a wonderful record.

Personally, I am amazed and frankly proud at this development under army discipline of hundreds of young men from crude farm hands, very raw material, indeed, to earnest, industrious soldiers, erect and alert, and I believe in them may be found a type of industrious and useful citizen for the future America.

They have learned remarkable lessons in this experience of war times, aside from the broadening view of life that travel and foreign contact give; the lessons of self-control, cleanliness, promptness, obedience, efficiency, and the value of time.

Another agency with the camp that greatly influenced the men and urged the development of mind, body and soul was the Y. M. C. A. In each camp wherever the stevedores were stationed there soon were established very homelike and commodious Y buildings, all equip't with the same regular, standardized furnishings and supplies as others, under the able direction of colored secretaries. That the men received additional help and advantage here also is well recognized. Our programs were elaborate and interesting. These fine influences must have reached the minds and hearts of the stevedores, and I know scores of men who came to the army illiterate, who were able after the training received, to write their first letters home.

## Doubling the Production of Palmolive Soap

The business of the Palmolive Co. had increased. Lockwood, Greene & Co., Engineers, were called in to increase the capacity of the main plant at Milwaukee.

A complete study of the manufacturing processes was made. Plans were worked out in detail. New buildings were constructed over the old, materials were re-routed, power was increased, the production of the plant was more than doubled, the insurance rate was decreased two-thirds—and

meanwhile the making of Palmolive Soap never stopped.

We have just published a booklet, "Making Over the Home of Palmolive," which describes and pictures the way in which we served that firm. This book will be sent to interested persons upon request.

Whatever your problem, if it includes the building or rebuilding of a plant, the rearrangement of processes, the more efficient use of power or any other question of production, we can help.

## MORE LIGHT ON RUSSIA

(Continued from page 367)

answer to the charge that they had nationalized women?

Afterward I met a rich Russian who admitted to me that the decree published by Mr. Simmons had been prepared as a sort of joke by some of the younger, formerly well-to-do men of Saratov. Later the anarchist clubs and councils were suppressed by the Bolsheviks not for nationalizing women but for lawless stealing.

I never heard of the second decree Mr. Simmons read purporting to come from Vladimir. It may be true. Perhaps most readers learning the real history of the other decree will have serious doubts as to the validity of that of the Vladimir Soviet. In any case I am absolutely certain that leaders of the Central Soviet Government such as Mr. Lenin and Mr. Chicherin would be absolutely opposed to anything so preposterous as the nationalization of women. I am sure every American Red Cross and Y. M. C. A. worker who knew these two leaders will agree with me in that statement. In all my stay in Russia I never met any one connected with the Soviet Government, with whom I talked on the subject, who was not only violently opposed to any such immoral doctrine but who did not also think it was too ridiculous a suggestion even to discuss.

The little grandmother of the revolution denies that women have been nationalized and says: "Women have more freedom in Russia now than they ever had before."

One has only to turn to the official Government paper of the Bolsheviks, the *Isvestia*, No. 98, for May 18, 1918, to see how false it is to charge the Bolsheviks with the fictitious decree nationalizing women. Here is the translation:

### THE STRUGGLE WITH THE INVENTIONS OF THE BOURGEOISE PRESS

The following decision was passed by the Moscow Soviet: The Moscow newspaper, *The Evening Life*, for printing an invented decree regarding the socialization of women, in the issue of the 3d of May, No. 36, shall be closed forever, and fined 25,000 rubles.

After reading the above official order which any one can verify in the official Bolshevik Government paper, can any sane American believe that, "nationalization of women" has ever been introduced by the Bolsheviks? In reality the Soviet decree for marriage is more like ours in America than was the marriage law under the Czar. Any one can read a translation of it in the International Section of the *Nation* for December 28. It provides for a compulsory civil marriage and stipulates that a religious ceremony is optional. The age for marriage all over Russia, except for natives of the Transcaucasia, is eighteen for the male and sixteen for the female. This provision as well as the compulsory registration of births and deaths is an advance over that of some of our American states.

Some of the evidence presented before the Senate as reported claimed that all Bolsheviks were anti-religious. No doubt this is true of many but let me quote from a rough translation of an editorial appearing in the Bolshevik Government paper, the *Isvestia*:

### THE REFORMATION MOVEMENT

Side by side with the influence of the higher clergy on ecclesiastical life a new reformation movement is being born which gets more and more influence among priests and believers. The realization of the futility of ceremony, which in reality has taken the place of our religion, is coming.

At the head of this movement stands the organization of the All Russian Society for Distributing Christian Literature. In it are united a large part of the Christian world. It would destroy commercial and ritual tendencies in the life of the church, cancel the payment for ceremonies, relieve the church from tinsels. It

believes that the costly articles in the church—gold, brilliants, etc., are not adornments but insults to the believers' spirit. Simple wooden things must be substituted for the costly vessels of collection, cups, etc., as was the case in the early life of Christianity.

Another problem for the reformation movement is how to enter into close touch with the people, so that the people themselves can build up their own religious life, so that the church can be a place of rest and convenience for them, a real refuge for the soul, and not as now a temple of gold and glitter, where they feel poor and humiliated.

The services must be held in Russian and not in foreign languages like the Slavonic and the Greek. The All Russian Society for Distributing Christian Literature is developing fast. In one of its branches already more than 200 priests have registered themselves as members. Among the members of the All Russian Church Assembly there are also groups with sympathy for the reformation movement. The idea of reform is also finding a great deal of support from the workingmen. I believe that the moment is not far off when the reborn clergy will take new roads, the roads of liberty, brotherhood and life.

Up to the time of writing two classes of witnesses have been called before the United States Senate Investigating Committee, those who violently oppose the Bolsheviks and those who are violently in their favor. Are not other men, who should be perfectly reliable, honest, and keen observers, and who were in Russia during the Bolshevik régime, to be called?

Why should not America hear from Brigadier-General Judson of the United States Army, who certainly ought to be an unprejudiced witness? Why should we not have the testimony of Colonel Thompson, the former Commander of the American Red Cross in Russia? It seems as if some of the testimony in this investigation has been in effect an attack on President Wilson's Russian policy. The above article, dealing with only a few of the statements which have been made before the United States Senate Committee, is written with the hope that Americans may still believe in the Allied Peace Conference decision about Russia.

## HOW ONE TOWN BOUGHT HEALTH

(Continued from page 373.)

health of its populace. When the demonstration in Framingham was started, there was a part-time physician and nurse for the public school. Nearly every modern school has similar provision, which is an admission of the need.

Dr. Armstrong estimates that for every 3000 children there should be at least one full-time physician with two nurses and adequate clinical facilities. Such an equipment in Framingham last year demonstrated, among any amount of such ills as adenoids, and other lesser but important ills, ten positive cases of tuberculosis—one to each schoolroom, let us say—and sixty-four children who, it was thought, should be kept under observation. Framingham likewise maintains a part-time nurse during the summer months. There was a full-time lay health officer, who now has a nurse, caring for tubercular cases, working with him. There was one factory clinic; now there are two and likely there will be another. In Framingham the School Committee has increased its expenditures from something like \$1200 a year to about \$5000 a year.

It must not be presumed that any amount such as the \$100,000 being used by the Framingham experiment is necessary for the typical community. It can take the scientific findings of the Framingham demonstration to itself and obtain, from the National Tuberculosis Association in New York City, or from Framingham, ample data to suggest the need of such a campaign and as much of the technique employed at Framingham as desired.

Lloyd T. Bigelow Needham, Mass

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOOK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. The League of Peace. By President Willson.

1. Write a graphic description of the scene in the Metropolitan Opera House at the time when President Willson delivered the speech.
2. Contrast the scene with the scene at the delivery of any speech famous in history. Refer to any of the following: Cicero's Oration, Antony's speech to the Roman mob, Burke's Speech on Conciliation, Washington's Farewell Address, Webster's Bunker Hill Oration, Lincoln's Gettysburg Oration.
3. Give a character sketch of President Willson, pointing out which elements of his character are most prominent in the speech.
4. Explain the sentence: "No party has the right to appropriate this issue." Show the relation of the thought of the sentence to the thought of Addison's essay on "Party Spirit."
5. Point out examples of figurative language in the speech. Give a full explanation of every figure. Prove that the use of the figures added materially to the value of the speech.
6. Write appropriate titles for every paragraph of the speech.
7. Read aloud any paragraph that you think particularly well written. Explain in what respects the paragraph is excellent.
8. Select from the speech twenty-five words that pupils in school do not ordinarily use. Give the meaning of every word. What do these words add to the speech?

#### II. Utopia or Hell. By Theodore Roosevelt.

1. Explain the meaning of the word "Utopia." Tell something about Sir Thomas More's "Utopia."
2. Write an original story of life in a Utopia.
3. Show how the article, written in 1915, is related to present-day plans.

#### III. With This Black Man's Army. By David LeRoy Ferguson.

1. Is the article principally narration, description, exposition, or argument? Explain.
2. Condense the thought of the article into a single paragraph.
3. Write an explanation showing how the article emphasizes the dignity of labor.

#### IV. How One Town Bought Health. By Donald Wilhelm.

1. Prepare an example of argument based upon any thought suggested by the article.
2. Prepare an original article showing how pupils in a school may aid in maintaining the health of the school.

#### V. Would You Rather Lose Your Hands or Your Head? By Edward Earle Purinton.

1. Show what plan the writer of the article prepared before he wrote the article itself.
2. Write a somewhat similar article concerning the life of a pupil in school.

#### VI. Episode. By S. Foster Damon.

1. Is the article a poem? Is it prose? What is "poetry"?
2. Compare, or contrast, the article with other examples of somewhat similar writing.
3. Explain the meaning of the following figurative expressions: a dead branch, a sort of sparrow, the nearest twig, the dead branch swayed.

#### VII. Two Weeks' Extra Pay. By Edward Alsworth Ross.

1. Imagine that you are a labor representative sent to convince a manufacturer that he should adopt the "dismissal wage" system. Give the arguments that you would use.

#### VIII. The Story of the Week.

1. A boy, or girl, who lives in Germany has a cousin who lives in Russia. They write to each other telling what they know of conditions in their respective lands. Present two or more of their letters.
2. Imagine that you are in Paris. Write a letter to your brother in this country, telling him of the recent work of the Peace Congress, and of the relations between the Allies and the Germans.
3. Point out methods of condensation employed in the various articles in "The Story of the Week."

#### IX. Editorial Articles.

1. For every editorial article write a single sentence that will express its principal thought.
2. Point out the following: the best written editorial article, the most interesting, the most helpful, the best title.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The League of Nations—"The Proposed Isolation of America," "The Difference Between A and O," "Utopia or Hell," "Story of the Week"

1. Why do the senators who oppose the adoption of the plan for a League of Nations regard themselves as "defenders of the faith of the fathers"?
2. What are the facts behind the assertion that the United States has interfered by force in the affairs of Russia, France, Germany, Austria and the twenty odd other countries listed in the editorial?
3. Just what does the word "mandatory" mean? How is the mandatory power to be applied under the proposed League of Nations?
4. Why does The Independent republish Roosevelt's message just at this time?
5. How far does the plan for a League of Nations now before the Peace Conference conform to the plan proposed by Roosevelt four years ago? Does Roosevelt's prediction strengthen or weaken the position taken by Taft and Willson?

6. In what sense is it true that President Willson's address and that of ex-President Taft read as tho they had been prepared by two members of a debating team?
7. Study the chief objections raised by Senator Lodge and his colleagues and the answers made to these objections by Taft. Who has the best of the argument?
8. What, in your judgment, is the strongest paragraph in the President's address?
9. In view of the action of the Republican senators was the President justified in saying that he was going to tell the people of Europe that the overwhelming majority of the American people is in favor of the League?

10. On what ground did the President declare that the formation of a League of Nations would be in strict accord with the spirit of Washington's Farewell Address?
11. What proofs did the President offer that the League is a thing generally desired by the people of Europe?

#### II. The Truth About Russia—"Class and Community," "The Truth About Russia," "More Light on Russia," "The Troubles of Russia."

1. What does the editorial writer mean when he declares that all the conflicting reports about conditions in Russia are probably true? Illustrate by comparing these reports.
2. Can you gather any evidence of constructive legislation enacted by the Soviet Government? Why, in spite of this legislation, is the Bolshevik Government not a success?
3. Does the phrase "dictatorship of the proletariat" adequately characterize the theory of the Bolsheviks? What is the weakness of a theory of this sort?
4. As a result of the reading of Mr. Davis's article what weakness do you find in the methods pursued by the Senate Investigating Committee?

#### III. The President and Congress—"What the Sixty-fifth Congress Did," "Big Bills Congress Didn't Pass," "Congress Ends in Filibuster."

1. Divide the acts of the Sixty-fifth Congress into two classes (a) war measures, (b) peace measures? What, in your judgment, is the most important peace measure enacted?
2. Discuss briefly one or more of the bills which Congress failed to pass. What will be the result?
3. How do you account for the "legislative jam unparalleled in our history" which marked the end of this Congress?

#### IV. The Cost of "Firing"—"Two Weeks' Extra Pay."

1. What do you think of the system of employment insurance advocated by Mr. Ross in this article? What safeguards does he propose to prevent the abuse of the system by workers? by employers?
2. "The tragedy in the situation of the wage-earner in the modern industrial organization has been insecurity." What steps have been taken to lessen this insecurity? What further steps should be taken?
3. What evidence does Mr. Ross give that the adoption of his system would be profitable to the employer as well as to the worker?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## THE GREAT ADVENTURE

BY DAVID MCKEE WRIGHT

Had God grown old, and did He cease to keep

His watch below the starlight and the sun?

Was there some breach of Fate that Hell could leap

Out from her central fires and sulphurous deep

And make Hate dance to music of a gun?

Did the four great archangels drop their shields,

And tremble wing to wing in sudden fear,  
While the vast Reaper on the stricken fields,

Harvest on harvest, counted his pale yields  
Of garnered youth that cost the world so dear?

I know not if the shattered battlement  
Of Truth rained broken pearl into the void,

And jasper flakes, from the foundations rent,

By storming Falsehood, to the far suns sent

Rumor of Heaven defeated and destroyed.

I know not what a silver clamor fell  
Along the shining trenches far and high  
Where sworded angel ranks were seen to swell

And the clear captain-word of Gabriel  
Rallied the white defenders of the sky.

But this I know: the heavens were dark with doom,

And Truth strove mightily when hope was fled;

And tortured earth below became one tomb  
Of youth and joy; and in a little room

Of every street a woman wept her dead.

This, too, I know: thru darkness and despair

There came a sudden glory on the night;  
The very rose of death bloomed white and fair;

Triumphant bugles shrilled along the air  
And faith stood victor crowned in all men's sight

Perchance at that great moment bolts of fire

Flamed thunder linked, with keen, white lightnings shod;

And Heaven's artillery with loud desire  
Swept from the Holiest over wall and spire

To scourge black ruin from the gates of God.

Perchance, with beat of wing and clash of shield

And shouting of innumerable hosts,

Last angel armies strove in open field  
And saw the ranks of darkness break and yield

Along the cloud-ropes of their golden comets

Perchance into the horror of the deep,  
O'erflamed with tumult of supernal wo,  
A cataract of vengeance, leap on leap,  
Poured Hellward, roaring, from the crystal steep,

Weighted with broken legions of the foe.

I cannot tell; but this the winds have told,  
Blowing across the grasses of our graves:

The world is wide, the ways are manifold;  
And all the stars of night that seemed so cold

Are warm to burning with a faith that saves.

Speed, speed the ship of high adventure fast!

God has uncharted lands of life to find;  
The pennon of the truth flies from His mast.

Together, thru new seas, out of the past  
We sail into the wider ways of Mind.

Heaven wins. Earth cheers. The ranks of Hell are broken.

On! On to find God places in the sun!  
Each to his post. The last great word is spoken.

The wind of victory for splendid token,  
The voyage of the ages is begun!

—From the Sydney Bulletin

## THE NEW PLAYS

The Chicago Opera Company gave New York an opportunity to hear Giordano's *Fedora* for the first time in ten years and a new prima donna Dorothy Jardon, for the first time. (Lexington Theater.)

*La Veine*, by Alfred Capus. A modern comedy, played with clean-cut characterization by Jacques Copeau and his company. (Theatre du Vieux Colombier.)

*The Book of Job*, given in full Biblical text, is one of the most impressive achievements of the Stuart Walker repertory. George Gaul interprets Job with compelling sincerity. *The Tents of the Arabs*, a new Dunsany play, has colorful charm. (Punch and Judy Theater.)

## TWO NOTABLE ARTICLES

Shall the nations completely disarm? General Tasker Howard Bliss, former Chief of Staff of the United States Army and one of the delegates of the United States at the Peace Conference in Paris, will discuss the question for readers of The Independent in an article cabled from Paris, which will be published in an early issue.

General Bliss has followed a military career for nearly half a century and his recommendation of complete disarmament is made from the standpoint of a man pre-eminent in military affairs.

We shall also publish shortly an article by William Jennings Bryan on "The Rights of Residents," an answer to some of the puzzling questions that have arisen in connection with the redistribution of territory.

## HOW IT LOOKS TO EUROPE

**W**ILL America back up or back out of the League of Nations is the question on which the fate of the world depends. The American people were the first to point the way to the union of quarreling states, and they have been thruout their history leaders in international movements of all sorts, educational, philanthropic, financial, postal, legal, administrative, and political. Now when the nations have been fused together in the furnace of the Great War and when for the first time in history the European powers have been brought to listen to the American proposals for international organization, it looks queer to have certain senators hasten to declare that they will have nothing to do with any League of Nations. This blow from behind is visibly weakening the authority of the American delegates at Paris and hindering the conclusion of a permanent peace such as America most desires. In proof of this we are permitted to cite a cablegram just received by the League of Free Nations Association of New York from their Paris representative, Norman Angell.

In this Mr. Angell quotes a member of one of the commissions of the Peace Conference as saying:

Will America destroy the League of Nations after other nations show a readiness to accept it? The question seems absurd, yet nothing is more likely. If the League succeeds it will not

be as an instrument for compelling two bitterly quarreling groups to refrain from war at the last moment but as an instrument for remedying conditions which provoke such quarrels. To this end nothing is more important than, for instance, measures touching on open ports, internationalization of waterways, transit across neighboring states, access to sea, etc. Such work is the very soul of the League and no peace is possible unless there are new regulations for these matters now being discussed by the various commissions, particularly that on ports and waterways. Most of the Great Powers are agreed that an entirely new body of law is necessary, but America absolutely opposes creation of such, just as she opposed the perpetuation of interallied commissions for the control of raw materials, etc., which were also so essential a part of the League's constructive work. American attitude in the Ports and Waterways Commission, for instance, provokes openly the criticism that while apparently America is ready that rules should be made for others she declines to make herself subject to them or permit their application to the Panama Canal or to any American river or railroad, thereby not merely arresting beneficent development in world order but positively creating bad conditions by such an attitude. This point may be thus illustrated: The best way of insuring Polish access to the sea is by internationalization of routes and ports not Polish. Failing this, annexation is the alternative, altho this will do violence to the principle of nationality. For fear that the rules of internationalization might be made general and so applicable to America, there is a disposition to acquiesce outright in annexations producing a settlement which no league can hope to render permanent. Moreover, this attitude renders it impossible for America to protest effectively against the imperialist tendencies of certain European belligerents.

## THE ATTACK ON ILLITERACY

**T**HE psychological examination of drafted men in the American army camps brought to light an amount of practical illiteracy in the American population that has startled the public. The Federal census of 1910 had reported 7.7 per cent of the population of the United States ten years of age and over as illiterate. By comparison with 14.1 per cent in France, 18.7 per cent in Austria, 37 per cent in Italy, 58.7 per cent in Spain, and 69 per cent in Russia this rate was not thought alarming, altho it was discreditable by comparison with the 1.6 per cent of Scotland, the 1.8 per cent of England and Wales, the .8 per cent of the Netherlands, the .2 per cent of Sweden, the .05 per cent of Germany, the .3 per cent of Switzerland. The rates by broad census areas were, New England 5.3 per cent, Middle Atlantic 5.7 per cent, East North Central 3.4 per cent, West North Central 2.9 per cent, South Atlantic 16 per cent, East South Central 17.4 per cent, West South Central 13.2 per cent, Mountain 6.9 per cent, Pacific 3 per cent. The individual states reported as having more than 20 per cent were South Carolina 25.7 per cent, Georgia 20.7 per cent, Alabama 22.9 per cent, Mississippi 22.4 per cent, Louisiana 29 per cent, New Mexico 20.2 per cent, and Arizona 20.9 per cent. These high rates were attributable to the large proportion of negroes.

The basis of these figures is understood to have been a

total inability to read or to write. The test usually given by the Psychological Section in the army camps was "ability to read and understand newspapers and write letters home." Those who passed this test were assigned to a group for further examination designated Alpha. Those that failed were assigned to a group designated Beta. In certain instances a definite educational qualification, namely, four, five or six years schooling, was added to the requirement already named. It is obvious that the test applied in the camps was for practical purposes a real test, whereas a vast amount of the literacy that "got by" for census purposes was merely nominal.

In twenty-eight camps the Alpha Beta classification was carried out. The camps to which 25 per cent or more of men examined were assigned to the Beta group were, Dix 29.2 per cent and at this camp 19.8 per cent of all men examined were negroes; Dodge 32.5 per cent, the negroes being 25.4 per cent of all examined; Funston 29 per cent, negroes being 25.5 per cent of all examined; Gordon 25.3, negroes being 10.8 per cent of all examined; Grant 29.1 per cent, negroes being 18.8 per cent of all examined; Green 37.8 per cent, negroes being 38.6 per cent of all examined; Hancock 28.6, negroes being 5.1 per cent of all examined; Lee 28 per cent, negroes being 8.8 per cent of all examined; Meade 32.1 per cent, negroes being 20.8 per cent of all examined; Pike

78.8 per cent, negroes being 16.1 per cent of all examined; Hewitt 27.2 per cent, negroes being 18.1 per cent of all examined; Sherman 41.8 per cent, negroes being 30.4 per cent of all examined; and Wheeler 41.6 per cent, negroes being 19.2 per cent of all examined.

It appears from these figures that at Camps Gordon, Harwich, Lee, and Wheeler high illiteracy was found not accounted for by the percentage of negroes.

Camps where the assignments to the Beta group did not exceed 15 per cent were, Humphreys 14 per cent, no negroes; Kearney 16.6 per cent, no negroes; and Lewis 13.5 per cent, where negroes were 2.2 per cent of all examined. At Camp Logan the assignments to Beta were 18.4 per cent, negroes being only .3 per cent of all examined. At Wadsworth the assignments to Beta were 19.9 per cent, negroes being only 6 per cent of all examined.

Such a showing as this cannot and will not be permitted to pass into the records without provoking a serious determination to get more knowledge on the subject and to face the situation in a practical way. Neither pride nor considerations of safety can tolerate in a nation that is trying to make the world safe for democracy a state of affairs which puts us among the backward peoples of the world in respect of elementary education.

That the Federal Government will have to act in coöperation with the states will probably be conceded even by educators and statesmen who would regret to see an extensive centralization of educational administration in this country. It is, therefore, earnestly to be hoped that the public will give careful consideration to the bill that has been introduced in the Senate by Senator Hoke Smith of Georgia and in the House by Congressman Bankhead of Alabama. The purpose of the bill as admirably set forth in its title is "To promote the education of native illiterates, of persons unable to understand and use the English language, and of other resident persons of foreign birth; to provide for coöperation with the states in the education of such persons in the English language, the fundamental principles of government and citizenship, the elements of knowledge pertaining to self-support and home making, and in such other work as will assist in preparing such illiterates and foreign-born persons for successful living and intelligent American citizenship."

This is an imperative task. The bill appropriates five million dollars for the fiscal year ending June 30, 1920, and for each fiscal year thereafter twelve million, five hundred thousand dollars until June 30, 1926. All this money must be spent for actual teaching of illiterate minors or minors unable to speak, read or write the English language who are over sixteen years of age or for supervision or training of teachers. It cannot be used directly or indirectly for the purchase, direction, preservation, or repair of any building or buildings or equipment or for the purchase or rental of lands or for the support of any religious or privately owned and conducted school or institution. To avail itself of the appropriation a state must appropriate an equal amount to the sum assigned to it by the Federal Government and its plans for expenditure must be approved by the Secretary of the Interior.

It is to be hoped that intelligent public opinion thruout the United States will promptly get back of this measure and so initiate a real campaign for elementary Americanization.

## CABLE CONTROL

THE question of freedom of communication under the seas has recently become almost as important as the old question of freedom of commerce on the seas. Great Britain is mistress of the seas in both respects since she controls most of the cables as well as the shipping. This has been of inestimable advantage to the Allied cause in the Great War and remains an equally serviceable

weapon in commercial conflict afterwards, as the following quotation by *The Nation* from the *London Times* of November 20 shows:

The British control of the cables was a weapon the power of which was not realized before the war either by ourselves or by our enemies. It has done us marvellous service in promoting the efficiency of our blockade. The secret of its potency is the fact that it gives us power to survey the trade of the world; and, as a result of that survey, to facilitate those activities which are in our interest, and to impede those which are not. But it is obvious that a weapon of this kind is readily adaptable to different, yet analogous, uses during the reconstruction period. Thus, a maintenance of control will enable us to prevent our enemies from cornering the markets of the world against us by making contracts for *post bellum* delivery. Moreover, if our enemies were allowed to cable freely, their messages would congest our lines, and our traders would be hampered in their efforts to make contracts for those raw materials which we all so urgently need.

Of the 55,000 miles of government-owned cables in the world, Great Britain has 16,000, and of the 235,000 miles of other cable lines, 135,000 terminate at British ports, and much of the rest is controlled by British capitalists. Now that the advantages of such control in war and peace have been shown, this British predominance is certain to be challenged by her commercial competitors. Each of the great powers will be trying to construct its own cable routes to the main centers of trade so as to secure secrecy and independence of intercommunication. This is one of the many points where the League of Nations could save us duplication and unnecessary expense. A complete system of lines could be put down under control of the League which would guarantee equality and freedom to all nations, large and small.

## THE BOOK OF KINGS

THE Book of Kings is now a closed volume in the Bible of human history.

It is true that in a few nations, such as Great Britain, Italy, Japan and the Scandinavian countries, there is an hereditary presiding officer who goes thru the form of appointing officials, in reality chosen by the popularly elected parliaments, but such an official is not a king in the old meaning of the word any more than a medieval castle is now a fortress. Like the castle, he is now only an historical relic. The last kings who really ruled, who ventured to defy either press or parliament, were the princes of the German states, the Kaiser at their head, all of whom are now very much in retirement.

We may therefore speak of hereditary rulership in the past tense, with the impartiality of the historian, moved neither by the partizanship of the courtier or of the revolutionist.

From the democratic standpoint there is, of course, nothing to say. But not all persons accept the democratic standpoint. Some have argued that the hereditary principle was sound because, as the science of eugenics has pointed out, genius is to a great extent inheritable. To prove that the rulers of Europe were of a superior eugenic strain they point out that no one could make a list of the hundred greatest men and women of whom history tells without including from ten to thirty crowned heads, and yet not one human being in a million ever held the title of king, queen or sovereign prince.

This is true, but fallacious. A man or woman of very ordinary abilities could not fail to make some impression on history with the whole resources of the nation at command. Queen Elizabeth was unquestionably sagacious, prudent and skilled in diplomatic craft, but fifty thousand other Englishwomen of her time may have had equal abilities without the same opportunities for writing them upon the map of Europe. In estimating the statesmanship of those who are born to power we are constantly in danger of confusing native genius with opportunity, wise counsel and commonplace shrewdness or ambitious vigor.

Yet we may admit that the royal lines produced somewhat more than the average amount of genius; for this is shown in directions more easily tested than statesmanship. We can, for example, compare the strategy of royal generals, such as Frederick the Great or Gustavus Adolphus, with generals not of royal position of descent, and they do not suffer by the comparison. There have even been royal poets—in Japan for example—of unquestionable merit, and no one doubts the merits of the Emperor Marcus Aurelius as a philosopher. It may be said, on the other hand, that insanity has occurred more frequently in royal lines than the statistical average for the whole population. Sometimes extraordinary genius and insanity meet in the same individual as in that mad miracle-worker Charles XII of Sweden. The reason why kings were so often above or below the normal may have been the result of intermarriage, which intensifies traits good and bad, or of the highly artificial environment which surrounded them from infancy.

One thing, however, is unquestionable. The average ability of the elected ruler is greater than that of the hereditary ruler for the simple reason that the former must first pass thru the test of getting elected; a "preliminary examination" in statesmanship that eliminates most of the absolute dullards. No doubt, even under democratic institutions some of the present rulers of Europe could have made some figure. We fear that the ex-Kaiser of Germany could, for he had the typical talents of the demagog: Versatility, jingoism, fluent oratory, dramatic pose, a touch of skill in the arts (like Nero), great personal energy and inordinate ambition. He might have had the career of the romantic adventurer in politics—like Aaron Burr or General Boulanger—or edited some influential yellow journal. But, on the other hand, a poor, pathetic figure like the ex-Czar of Russia would scarcely have kept out of the poorhouse or the asylum had he not been born to his position. Certainly France has had no king since Henry IV to rank with Clemenceau, England no king since Edward I to rank with Lloyd George or any of a dozen other living British statesmen, and who since the days of King Alfred can be ranked with Wilson?

On the whole, we must rejoice that the Book of Kings has been written to its last chapter and that there promises to be no sequel.

## UNDESIRABLE AMERICANISM

THE old-time Kentuckian used to say that some whiskey was better than other whiskey, but that there was no bad whiskey. There are priests and prophets of Americanism who say that some Americans possibly are better than other Americans, but that there are no bad Americans. Concerning all of these dicta we may with some confidence affirm that in the judgment of a majority of the American people there is such a thing as bad whiskey and such a person as a bad American.

Theodore Roosevelt, as most of us believe, was a sturdy and right-thinking American and in Theodore Roosevelt's Americanism the central place was held by a fearless and whole-hearted patriotism which was law-abiding in its methods and manifestations. At the present moment when the whole world is uneasy, and millions of men and women have fallen into thoughtless acceptance of the teaching that revolutionary action has been made necessary and justifiable by the alliance of law with privilege, it is imperative that every creed of alleged Americanism should be scrutinized with reference to its underlying political theory.

A plausible creed that has been receiving some notice in the press of late is a provocative instance. Its first two articles of fundamental Americanism are first, "The premise that all people are created politically free and equal," and second, "The conviction that self-government at its worst is better than autocratic government at its best."

It would be difficult to pick out of the whole range of

political literature two propositions to which a larger majority of Americans would unthinkingly subscribe or two to which they would more certainly demur if their attention were directed to certain implications that do not appear on the surface of these venerable dogmas, but that undoubtedly are to be found within them.

It is certain, for example, that neither Thomas Jefferson, nor Thomas Paine nor any one else who may have had anything to do with drafting the Declaration of Independence believed that any people on the face of the earth had ever from the beginning of history been created politically free or equal.

They knew that they were attempting for the first time in human experience to create a political system within which there should be no governmentally established inequalities of political rank and power. All that they meant by their hypnotic phrase was that all men in the world would be politically free and equal, or would have been so but for the deliberate creation of legally instituted inequalities by reigning individuals or ruling groups strong enough to round up and corral the advantages that they desired for themselves.

The phrasing of the equality doctrine of the Declaration of Independence has doubtless served a useful purpose in awakening and strengthening the emotions of political democracy, but also it has done a lot of mischief. By demagogues and their mentally indolent followers it has been perverted into the shibboleth that all men are created equal, not only in political rights but also in political capacities, which is not true. Practically this perversion has worked out in political antagonism to men exceptionally qualified by character, talents and education for public service and to the benefit of ignorant and vicious office seekers who have played upon the alleged democracy of rotation in office, and of the distribution of spoils to partizan victors. This sort of thing may be Americanism, tho we doubt it, but if it is, it is an undesirable Americanism, and should be fought uncompromisingly by all Americans who believe in character and political ability. Instead of a perverse dogma of capacity-equality we need to stress the importance of equality of obligation, of duty and of service.

Of the second proposition that self-government at its worst is better than autocratic government at its best, it must be said that it contains a bit of important truth, but that otherwise it is false. Self-government is an opportunity without which individual self-control and public responsibility cannot arise, much less develop, but unless they do arise and develop self-government, so far from being better than autocracy at its best, is quite as bad as autocracy at its worst.

When self-government degenerates into violence or any other sort of lawlessness, it is as despicable, outrageous and destructive as any other tyranny. Murder by a lynching mob is no better than murder by the secretly instructed agent of a czar. Looting, burning and maiming by bands of "Reds," calling themselves the people, is not ethically preferable to like acts perpetrated in the name of divine right.

If we are to have a systematic teaching of Americanism (and it is desirable that we should) let us see to it that we do not thoughtlessly strengthen the notion that freedom means an exaltation of the plain man, irrespective of character and fitness to serve his generation, or the notion that self-government when it becomes a ruthless tyranny is any better than tyranny under any other name.

March did not come in like a lion this time. More like a crocodile.

"They shall beat their swords into plowshares and their spears into pruning hooks." But the Bible does not say they should be sunk in the sea as England proposes to do with the German fleet that cost \$350,000,000.

# THE STORY OF THE WEEK

## Discussing the Terms of Peace

The Supreme Council of the Peace Congress on March 6 began giving most of its time to consideration of the terms of the preliminary peace treaty, and especially of the military and naval terms. By March 10 the military provisions were substantially agreed upon. They reduced the German army to only 100,000 men, with not more than 4000 officers, the men to be volunteers enlisted for twelve years. All artillery and other equipments in excess of the needs of such a force are to be surrendered, the Imperial General Staff must be abolished, the manufacture of very large cannon is prohibited, and the fortresses along the west side of the Rhine are to be dismantled. The requirement that men shall be enlisted for twelve years is intended to prevent the enlistment of a new force of 100,000 every year or two and thus the making of a nation of trained soldiers as before.

Naval and other provisions were taken up on March 11, and it was tentatively agreed that the personnel of the German navy should hereafter be restricted to 15,000 men. At the beginning of the war in August, 1914, the German navy contained 3889 officers and 75,486 men, besides a Naval Reserve of about 110,000 men. At the date of the surrender of the fleet it had approximately 197,375 officers and men minus casualties of 69,000, most of which occurred on land. It was also decided to require from Germany guarantees that no "tanks" will be built, and that no poison gas will be manu-

factured; and that all surplus war material, and all forbidden equipments such as "tanks" and gas, will be surrendered for destruction.

The question of boundaries was also taken up, and it was proposed, with a strong probability of ultimate adoption, that Poland should be restored with the same western boundaries that it had before the First Partition, thus depriving Prussia of extensive territory; that Danish-speaking Schleswig should be restored to Denmark; that the purely German provinces of Austria should be permitted to unite themselves with Germany; and that all the extensive German provinces west of the Rhine should be separated from Germany and constituted an independent republic. This would mean a net loss to Germany of about 30,000 square miles of land and a population of 7,000,000. It would also mean the loss of the most important coal and iron mining regions.

The Commission on Waterways, Railroads and Ports on March 12 recommended that the Rhine be opened to all nations for navigation under a control similar to that long exercised by the Danube Commission, and that the Kiel Canal remain under German ownership and operation but be opened freely to merchant and naval vessels of all nations in time of peace.

## Claims for Indemnity

All the nations except France were reported to have filed their claims for indemnity by March 9. The amounts were not disclosed, but it was stated on what seemed good authority that

Belgium's claim was for between \$7,000,000,000 and \$8,000,000,000, of which \$5,000,000,000 was for actual physical war destruction, and the remainder for thefts, requisitions and the like. It was also understood that Belgium would ask that her claim to the extent of at least \$2,000,000,000 should be paid before any other. If such a sum cannot be secured from Germany for Belgium at once, the latter country will expect the Allies to advance her that amount from some other source, in fulfilment of their promise made at Havre on March 14, 1916, that they would not stop hostilities until Belgium was "largely indemnified" for the damages which she had suffered, and that they would lend her their aid to ensure the restoration of her commercial and financial standing.

The United States delegates announced that they would ask for no indemnity in excess of the value of the German property and securities which had been seized in this country and which amounted to approximately \$800,000,000. It was estimated that the damages suffered by the United States, apart from war expenses, were not more than \$775,000,000.

American and other experts estimated that the Central Powers would be able to pay within a reasonable term of years about \$50,000,000,000, and it was assumed that such an amount would be demanded in indemnities. It was also estimated that the Central Powers would be able to pay between four and five billions within two years.

The President's Return to France The President had a safe and pleasant voyage and by March 12 was nearing the shores of France. It was arranged that he should land at Brest on the afternoon or evening of March 13, be received with brief official ceremonies, and proceed at once to Paris. He was constantly kept informed by wireless telegraphy of the progress of affairs at the Peace Congress, so that on his arrival at Paris he would be almost as conversant with them as his colleagues who had been there all the time. He made no public comment on the criticisms of the League of Nations plan which were being made in the United States, and of which he was also kept informed, but seemed confident of the adoption of the plan with only the slightest modification.

The League of Nations News of the criticisms of the League of Nations plan, and particularly of Senatorial opposition to the proposed Constitution thereof, was received in both Paris and London with intense in-

THE PEACE CONFERENCE REPRESENTATIVES OF AMERICAN WORKING WOMEN President Wilson has appointed these two delegates to the Peace Conference in Paris to present the viewpoint and the demands of working women in America. Rose Schneiderman (left) is head of the Shirtwaist Workers' Union in New York. Mary Anderson (right) is Assistant Chief of the Women's Bureau in the Department of Labor at Washington and a member of the executive board of the International Boot and Shoe Workers' Union.

terest, which was further enhanced when it was announced that Mr. Taft had conceded the necessity of material changes in the draft. There was apparently no thought that the entire plan would be abandoned, but the feeling gained force that some modifications of the plan, along the lines of Mr. Taft's suggestions, might be desirable, provided there would be no general reopening of the whole subject. It was intimated, however, that France and Italy would ask for the inclusion of some new provisions making for greater security of their borders against another German attack.

**Speaking of the League of Nations** William Jennings Bryan gave his indorsement to the League of Nations on March 11, but urged amendments to the proposed covenant which would preserve specifically the Monroe Doctrine, make the qualifications for admission to membership easier, enlarge the proportionate voting power of the United States, and make it clear that each member nation might decide for itself whether it would support decrees of the League's general council.

"The greatest step toward peace in a thousand years" was Mr. Bryan's characterization of the League of Nations. He went on to say:

I venture to suggest that the scope of the League's work might well be extended beyond what is now contemplated. A substitute for war must be able to deal with every situation that can become a cause of war.

One of the most fruitful causes of war has been the necessity for expansion.

A nation feeling a need for more territory should be able to go before the League and present its claims, and point out the territory which it can use to advantage. The council should consider the claim and advise upon it, and the force of public opinion should be used to secure such an adjustment of equities, as would afford a peaceable means of securing needed territory.

**Dealing with War Criminals** The Commission on Responsibility for the War is understood to be doubtful of the legal possibility of trying and punishing the former German Emperor for crimes committed by his troops even under his orders in the war. It is considering a plan for having him solemnly proclaimed by the Peace Congress to be the arch-criminal of the world; a stigma such as never before was placed upon any man.

Regarding subordinate officers, it is thought that arrangements can be made for trying and punishing them for acts committed or permitted, or orders issued, in violation of the international laws of war.

**The German Insurrections** After a week of incessant and often severe fighting the German Government was reported on March 11 to have gained a decisive advantage over the Spartacan and other insurgents, and to have restored its own authority at Berlin, Leipzig and other centers of the disturbances, altho fighting was still going on. The situation was so serious on March 7 that Herr Scheidemann, the Chancellor, of

#### DOUGHBOYS ON LEAVE IN THE ALPS

Here are two samples of the good fun that enlivens a vacation for our soldiers whose job isn't yet over over there. At the top a hiking party at Mt. Renaud. Below the Casino at Chamonix, a famous French winter resort now turned into a center for American soldiers on leave

ferred his resignation to President Ebert, in order that the latter might have a freer hand in dealing with the insurgents, but the President refused to accept it and asked the whole Cabinet to remain in office. On that day the members of the American Red Cross mission in Berlin had to fortify themselves in their hotel with machine guns. The Government troops used flamethrowers and other appliances of trench warfare against the Spartacans, and when these failed they employed a number of large military aeroplanes, of the bomb-dropping type, to cruise over the city and destroy the machine gun nests which had been established on the roofs of buildings. Poison gas was also employed.

In such fashion the insurgents were largely subdued, whereupon the victorious Government entered upon rigorous measures for the punishment of the rebels, and there were many summary shootings of prisoners charged with wanton atrocities. Greatly varying reports were made of the losses of life and property during the week of fighting. The semi-official Wolff News Bureau reported that 1000 persons were killed or wounded in Berlin. A "bour-

geois committee" on March 11 reported that 182 non-combatants had been killed in street fighting and in houses, that 340 houses had been destroyed, and that the damage to property amounted to \$150,000,000.

**Revelations of Conspiracies** It is announced from Switzerland that American Secret Service officers have discovered proofs of a German-Russian plot to crush Poland and to intimidate the Allies into granting food supplies to Germany thru menace of a Bolshevik invasion of Western Europe. It is said that a secret compact was made between Field Marshal von Hindenberg and the Soviet government of Russia for a concerted attack upon Poland from both sides.

London reports the discovery of a plot, made some months ago, for a Bolshevik revolution in Holland. This plot was organized on a formidable scale, and was greatly facilitated by the scarcity of food in Holland and consequent discontent of the people. It was discovered in time, however, and was suppressed by the Government, which armed all the middle class people of the kingdom against it. The failure of the Spartacan insurrection in Germany

THE PATIENT. I WISH THE DOCTOR WOULD HURRY. COMPLICATIONS ARE SETTING IN.

also discouraged the Dutch revolutionists, who had counted upon its success, and the final blow was given to the plot by the timely arrival of food supplies from the United States.

**Americans and Germans** The fraternization between American soldiers and German civilians, at Coblenz and elsewhere in the zone of occupation, appears to have greatly abated. It had been carried to a point which incurred official censure, and there is reason for suspecting that it was encouraged by the Germans for the sake of causing, if possible, dissensions among the Allies. The French, it was observed, regarded such conduct by Americans with special disapproval, and some ill-feeling arose between them and Americans over the matter. Now such conduct by Americans has been made a crime, punishable with fine or imprisonment.

In order to make all relations between Americans and Germans in that region more strictly business-like it has been arranged that all arrears of indebtedness of any kind shall be immediately paid, and that hereafter all transactions shall be on a cash basis. The money for this purpose will be advanced by the American Government if necessary, but of course it will all be collected ultimately from Germany, on the principle of international law which compels a conquered country to maintain an occupying force.

**German Political Predilections** Professor Herman Fernau, author of the book "J'Accuse," declaring Germany to have been responsible for the war, has analyzed the results of the recent general elections in Germany, and in consequence holds that country to be overwhelmingly republican. There were cast, he says, nearly 19,000,000 votes in favor of a republican form of government, by which there were elected 260 Deputies. On the other hand, there were cast only 4,000,000 votes for a restoration of monarchical government, by which only sixty-three Deputies were elected. The Catholic Center cast

5,500,000 votes and elected eighty-eight Deputies, and maintains an equivocal attitude. It is not made clear how large a proportion of the 19,000,000 republican voters have now gone over to the Spartacan movement.

**The Looting of Belgium** The Belgian Peace delegation reports that among the papers left behind by the Germans in their retirement from Brussels were some documents showing that the German Government had organized and chartered five corporations for the express purpose of looting Belgium. They were to seize and ship to Germany as much as possible, and were to destroy all that could not thus be removed. They were to have a cash commission on all goods stolen or destroyed, and this is said to have aggregated nearly \$400,000 down to the end of 1917. These firms down to April 30 last shipped to Germany nearly 36,000,000 tons of iron and steel, and comparable quantities of copper, tin, wood, glass and other materials.

**Affairs in Russia** Desultory fighting continues in northern Russia between Americans, English and other Allies and Russian Democrats on the one hand and Bolsheviks on the other, with no great gain for either side. The Bolsheviks were reported on March 10 to have destroyed the village of Vistavka on the Vaga River, tho the Allies, greatly outnumbered, defended it desperately and afterward reoccupied the ruins. In Courland and elsewhere along the Baltic coast German troops are active and are making headway against the Bolsheviks; Libau and several neighboring towns having been taken by them.

Meantime famine, typhus fever and other scourges are reported to be raging to an almost incredible extent in Petrograd, Moscow and other cities, while the industries of the whole country are paralysed. Worst of all, there is little prospect of agricultural

## THE GREAT WAR

- March 6 Peace Congress considered terms of peace treaty. Violent fighting in Berlin.
- March 7 Powers filed indemnity claims. Government gained ground against Berlin insurgents.
- March 8 Plans formulated for feeding Germany and using German ships. Berlin revolt waning.
- March 9 Germans showed antagonism toward Americans at Coblenz. Plot exposed for Bolshevik revolution in Holland.
- March 10 Military terms of peace treaty formulated. Spartacan insurgents put to death.
- March 11 Naval terms of peace treaty formulated. Renewed fighting in northern Russia.
- March 12 Peace commissioners proposed internationalizing the Rhine. Fighting renewed in Berlin.

activity, so that the year's planting is likely to be small and the harvests scanty. Lack of coal and oil has caused many transportation lines to cease or greatly to curtail operations, thus greatly adding to the general distress and depression.

**The Pope on Palestine** The Pope on March 10 issued an allocution in opposition to the restoration of Palestine to the Jews. He said:

I am anxious regarding the fate of the Holy Land. At present it is in the hands of Christians, but I am anxious regarding the decisions of the Peace Conference. I am aware that non-Catholic foreigners, supplied with great wealth, have taken advantage of the war's misery to disseminate their doctrines in Palestine. It is intolerable that so many souls losing the Catholic faith should go to perdition from the spot where the Saviour bought eternal salvation.

He was also reported on March 11 to have sent an appeal to the powers urging the need of speedily concluding peace with Germany, on terms which will not humiliate the German people, in order to prevent the spread of Bolshevism, which he regards as a serious menace to the whole world.

**Dispute Over Ships and Food** The Allied and German armistice commissioners had a serious disagreement in their conference at Spa on March 6, which resulted in the withdrawal of the Germans. The French commissioners demanded the surrender of the German merchant fleet, and agreed to grant Germany in return 276,000 tons of food. This proposal the Germans rejected with some show of indignation, declaring that such a supply of food would last only two weeks. After this failure of negotiations at Spa the matter was taken up by the Supreme Council at Paris on March 8, and it was agreed that Germany should be supplied with not more than 300,000 tons of food a month until her own harvests are ripe. This food Germany is to pay for with potash and other commodities which she will be permitted to export, by the use of such credits as she has still existing in neutral countries, and, as a last resort, by drawing upon her gold reserve. The French delegates had strongly objected

Darling in New York Tribune

DID YOU EVER HAPPEN TO FORGET TO SAVE OUT ENOUGH FOR YOUR RETURN TICKET?

to Germany's paying for food in any way which would impair her ability to pay war indemnities, and had urged that the United States and other countries furnish the food and accept in payment long-term German notes, to be redeemed after the war indemnities had been paid. In return for this guarantee of food Germany will turn over her ships to the Allies, and these will be used in transporting American and Australian soldiers home, carrying back food to Germany on their return trips. It is estimated that Germany can in the manner suggested pay \$500,000,000 for food without impairing her ability to pay indemnities.

**Food Scanty Everywhere** General scarcity of food is complained of in nearly all European countries, and this situation is causing much anxiety. Even in neutral countries, such as Holland, Switzerland and Sweden, acute distress prevails and stringent official action has to be taken to prevent actual starvation. This state of affairs provokes the Bolshevist and other revolutionary elements to violent activity, which in turn makes the situation worse by preventing the industry which alone can give substantial relief. The threats of general strikes in the transportation service in Great Britain are regarded with much apprehension, since they would interfere to a disastrous extent with the shipping and distribution of supplies.

**Is Army Law Unjust?** Before Brigadier-General Samuel T. Ansell testified to Congress that the system of military justice in the United States Army is a travesty on judicial procedure and in effect deprives a soldier of the protection of life and limb guaranteed by the Constitution, the War Department had awarded him a medal for most distinguished service as acting Judge Advocate Gen-

Over in Chicago Daily Tribune

THEY ARE ALL OUT OF STEP  
BUT ME

eral. But after this testimony had been given the War Department ordered General Ansell demoted and superseded as head of the Judge Advocate General's Department.

Whether this chain of circumstances is more than a coincidence or not the War Department does not state, but it has been the center of much correspondence on the subject. Representative Royal Johnson, of South Dakota, recently decorated for military service in Europe, wrote to Secretary Baker in a letter published March 7 declaring that General Ansell was demoted for his stand upon the administration of military justice. Secretary Baker wrote, in a letter published March 9, to Major General Crowder, whose position as Judge Advocate General was filled by General Ansell during the war, and after expressing his surprise and sorrow at the recent outburst of criticism

Harding in Brooklyn Daily Eagle

HE'S TOO SICK TO BE BOTHERED BY  
THOSE LITTLE MATTERS

and complaint, added his assurance that the system of military justice both in structure and in operation is entirely sound and asked General Crowder to confine his faith on these points.

General Crowder in his reply admitted General Ansell's contention of a fault in the organic structure of the court-martial system, but put upon Congress the blame for not rectifying it. By way of personal vindication General Crowder accused General Ansell of trying to get himself appointed Judge Advocate General by a misrepresentation of facts. This charge General Ansell answered in a letter to the Secretary of War not yet made public.

The whole affair, therefore, clouds with personal recriminations the original attempt to call attention to the existing evils in army law and to initiate their reform.

Altho he defends the court-martial

WHERE THERE'S A JOB FOR TWO HUNDRED THOUSAND MEN

The Great Lumbermen's Organization announced recently that two hundred thousand workmen are needed to make railroad ties—an industry completely untouched by war. This photograph shows one of the big cross-tie yards at Fort Steele, Wyoming.

## WORLD'S GREATEST DRY DOCK OPENED

The world's greatest dry dock was opened at Norfolk Navy Yard by Mrs. George Leary, wife of the contractor who constructed the dry dock, and Mrs. F. R. Harris, wife of Admiral Harris, chairman of the War Control Board. When the sluiceway was opened, it let the waters of the southern branch of the Elizabeth River into the dry dock and for half an hour after the water began to flow into the dock, every whistle in the navy yard accompanied by whistles of the ships tied up to the docks, made the air shiver with noise.

system Secretary Baker himself has recently recommended the commutation of sentence in the case of four soldiers sentenced to death, in the case of two for sleeping on sentry duty and in the case of the other two for refusing to attend drill. The court-martial found these men guilty tho it was not proved that the men accused of sleeping on duty were actually asleep and in spite of the extenuating circumstance that the two men ordered to drill asked to be excused on account of having been on duty in severe cold the day before and being still incapacitated from the effects of that exposure.

President Wilson ordered on March 5 that new trials be held of nineteen negro soldiers recently court-martialed

at Camp Grant, Illinois, for criminal assault. Eight of the negroes were sentenced to be hanged and five given life sentences. In announcing the new trials Secretary Baker said: "The Judge Advocate General found that, by reason of the haste of the trial, fundamental rights of the accused were ignored."

## The Harbor Strike Goes On

The second week of the marine workers' strike in New York harbor increased the shipping and transportation difficulties in some cases to the danger point, but brought no change of attitude on the part of either the workers or the employers. One of the most serious conditions brought about by the strike was the delay to transatlantic liners because they could not fill their coal bunkers or get cargo on and off, since longshoremen refuse to handle work for concerns against whom the harbor men are striking. The trouble was complicated because a warning was said to have gone out to all transatlantic lines stating that because of the unsettled labor situation in British ports it would be well for

liners to carry coal enough for a round trip when they clear from this side. Several of the steamships sailing from New York found it necessary to go to Halifax to coal.

As a result of this arrangement the wholesale coal dealers of New York wired Secretary of War Baker suggesting that the Government commandeer harbor equipment sufficient to meet the needs of all troopships managed by the Army and Navy departments. There is an ample supply of coal at the port of New York.

The lack of tugs to bring steamers in and out of port—another of the problems created by the harbor strike—was solved in one instance by a spectacular bit of seamanship when Captain Ranson, of the "Adriatic," docked the big liner under her own power at Pier 57 in the North River on March 11. Few of the liners, however, will care to chance so difficult a landing.

The 40 per cent of the workers who are employed on railroad craft went back to work on March 7 after the Railroad Administration had granted the concessions they asked for, including the eight-hour day and various wage increases amounting in some cases to over 3 per cent. The War and Navy Departments, altho not directly affected by the strike, announced on March 12 their agreement to the terms offered by the Railroad Administration and accepted by the workers. This action is interpreted to mean that the War and Navy Departments will now be in position to keep supply ships and transports moving by renting or commandeering tugs and employing men to operate them at wages similar to those which the Railroad Administration has offered. At any rate, this action places the War and Navy Departments, the Railroad Administration, and the Shipping Board on the same basis, and reduces the controversy at New York to one between the unions and the private operators of tugs, lighters, coal and grain vessels. The Marine Affiliation has signed contracts with some of the individual owners on the same terms as those made with the Railroad Administration. Joseph H. Moran, chairman of the New York Tow Boat Exchange, made a statement

77% OF THE  
POPULATION  
OF THE  
WORLD

THE RESOURCES OF THE ALLIES AND AMERICA

refusing the workers' demands and blaming the Railroad Administration for surrendering to the strikers on every point, adding

It is to be regretted that the purse of the private boat owners is not sufficiently long to enable them to join in the great uplift.

**Strikes Farther South** The shipping agents of Buenos Aires announced recently that they estimate their losses resulting from the strike of workers in that port to amount to \$10,000,000 for January and February.

After a week of negotiations between the Government, shipping agents and striking port workers, the agents notified the Government on March 7 that the strikers could return to work if they would agree to declare off the existing boycotts and not interfere with the employment of any one hired by the agents.

This was answered by an offer by the strikers who said they were willing to return to work under the conditions prevailing before the lockout. Those conditions did not embrace the two points mentioned today, which are virtually a repetition of previous offers which the men have refused to meet.

In Havana, Cuba, the sugar harvest has been seriously hindered by a general strike involving almost every industry and all transportation, including even the railroads in the provinces. This strike is by way of sympathy with the building trades unions' strike declared last December. All attempts at arbitration have so far failed. President Menocal of Cuba and his cabinet held a conference on March 10 which resulted in offering the workmen government protection if they go back to their jobs. It is believed that many of the men want to go back to work, but that they fear attack if they break the strike.

**The Railroads and the Government** Congress' failure to pass the General Deficiency bill with its \$750,000,000 appropriation for the railroads will not result in immediate return of the roads to their owners. Nor will it prevent the Railroad Administration from carrying out its program for improvement to carriers and increased efficiency in service. So much Director General Hines announced on March 5 in an address to the conference of Governors. He went on to say:

We contemplated that we could keep up maintenance of the railroads and then equipment to the standard which the railroad companies themselves had established during the three years ending June 30, 1917, generally spoken of now as the three year test period, go ahead on a substantial

London Daily Express

INDUSTRIAL DISCONTENT

It's the wild, wild women, the wild, wild women,  
They're making a wild man of me. (Popular Song.)

thoro, conservative scheme of improvements and, thru ability, which we anticipated we would have, to pay the amounts due the railroad companies, equipment companies and other creditors, establish a general credit situation which would enable the railroad companies to borrow substantial amounts of money for the purpose of engaging upon a larger improvement program than the conservative program we had fixed upon.

Our program rested upon anticipation of an appropriation of \$750,000,000 from Congress.

There are two general ways in which we might attempt to adapt ourselves to this new situation. One way would be to cut down expenditures as rapidly as possible in every direction, even tho these expenditures were highly desirable. The other way would be to resort to every possible expedient to prevail on the railroad companies and the other business interests affected to borrow the necessary money to enable us to go forward with these expenditures.

I am emphatically in favor of the plan which contemplates financing these matters so we can go forward with the expenditures. I am absolutely out of sympathy with any policy which contemplates the slowing down of industries for the purpose of throwing men out of the employment on the idea that thereby the rate of wages may be cut down for the future.

The Director General's plan of borrowing money to finance the roads was approved by a conference of representatives of the great banking interests and of the principal railroads, and plans were made by which the stronger roads will be financed directly thru the banks and the weaker roads will obtain all necessary assistance from the War Finance Corporation, which has ample resources to meet the emergency, including \$337,500,000 available for direct loans.

**For More State Roads** The plans that have been announced by various states for the construction and repair of roads this spring will cost, it is estimated, \$300,000,000 and provide employment for large numbers of men.

In California agitation in favor of the Tahoe-to-Ukiah highway, for which an appropriation of \$3,000,000 has been asked from the state, is focusing attention and bills have been introduced in the legislature for the construction of roads from the San Joaquin Valley to the coast and for a road connecting the California and Nevada highways.

Kansas has under consideration a hard-surface program that eventually will cost \$60,000,000. This contemplates several thousand miles of highway connecting all the market centers and county seats in the state.

The chairman of the state roads commission of Maryland has announced that \$6,000,000 will be spent on the roads of the state, beginning early in the spring. Illinois has approved the issue of \$60,000,000 of bonds to be used in the next five years for the construction of 4800 miles of good roads. Utah is interested in going on with work stopped by the war, \$1,300,000 being available. Ohio is to spend more than a million in thirty-seven miles of state-aid roads.

Greatest of all are the demands for work in New York State where State Highway Commissioner Edwin S. Duffy sees the need of a vast expenditure in addition to the \$75,000,000 appropriation now being used.

THE RESOURCES OF THE REST OF THE WORLD - ENEMY AND NEUTRAL.

# THAT'S HOW IT FEELS TO BE SHOT

BY A GUNNERY SERGEANT OF THE U. S. MARINES AT CHATEAU-THIERRY

*These are the actual notes of a United States Marine, a gunnery sergeant, mainly scribbled just before and during the fight and then while he lay wounded in a shell-hole at Chateau Thierry. He was shot thru both legs—fortunately without injury to the bones—and after some hours was rescued by a field messenger. Loss of blood had already begun to cause the weakness reflected in the last few sentences; but this abruptly vanished in the terse official report which closes the story. The 4th Regiment of the U. S. Marines, to which this gunnery sergeant belonged, was decorated with both the Croix de Guerre and the Legion d'Honneur*

**T**HIS is the memory of the sunset—a pale radiance mysteriously melting into summer's starlight. We are on a broad, comfortable hill slope; it spreads well to the right and well to the left, and it reaches down to a little woody ravine. The other side of the ravine is steep; it also is wooded; it is not high, but reaches above the level of my eyes as I stand on the hill slope. What brilliant starlight!

On the hill slope we dig holes. They are grave-like, but shallow. The hole I dig may save my life. Shells scream when they come. They make a great noise when they explode. They kill. We dig these holes to hide in—to crouch and shiver in. It seems strange to dig in the starlight a hole that may save my life. It is quite cool—the night I suppose: digging will warm me. This clay is stiff—hard to dig. In the dawn we will go up and over that steep bank on the other side of the ravine. There will be bullets to meet us. I hope we will not be hurried up the bank! It is so steep. I am tired. How strange they look as they dig their little graves! So we go over in the dawn. I must dig. What will it be like? Screams, shells, bullets, blood. I must dig faster or there will be no time for sleep. What is the use of sleeping? We go over in the morning. The fresh earth is cool. How dark it looks in the starlight! This time tomorrow—Home is so far away, so removed, remote, and consequently so doubly and desperately dear. In the dawn we go over. Will we go thru woods or will it be done in the open? Will the day break any differently tomorrow? The stars say "no!" The hole is deep enough. I wonder if it is long enough.

How cool and moist! I see nothing but a patch of dark sky and the swimming stars. Here I stay until dawn—the inevitable dawn. I hope it will be

a clear day. I wonder what a real bed would feel like. Oh, New York! So far away. The lights—the crowds—the theaters! The subway—the taxis! Home! I am in a dark hole. Earth, then me and then sky. I feel alone. I may die tomorrow. I don't think so, but I may. It is the only thing that is not inevitable. The stars, the dawn, the sun, the line of boys, the bullets, shells, all are inevitable. My death is not. I feel quite safe and secure. I am glad that I am well trained. Sleep is slow. I had better close my eyes. We go over in the dawn. Boys will drop dead. It seems hard. It is inevitable.

Dawn. This is the day we do it. I must get my pack together. Time to fall in—form a line. Time to become part of a unit—time to stop being one's self. How sleepy and uninteresting every one looks! They don't look as they ought to look before going over. Here we go. We do not keep step. It is not important that we should. Who has a cigaret? Smoke is good at dawn before going over. I wish they would not hurry so! The bank is steep. The underbrush is holding us back. Does it know more about this thing we are going to do than we ourselves? Perhaps, but it is written that we go on. A few steps further. We deploy. I am no longer a part of a column. I am an individual again. The summit! Now for the bullets and the shells!

Long level fields of yellow grain, dotted with scarlet poppies gently whispering to strange breezes; banked against the further edge, a ragged

I'm hit.—In the leg. It ought to hurt!  
Drive those flies away.—My leg throbs, throbs, throbs.  
What was that? I must be calm.  
All day be quiet with the flies and the blood. The shells can scream—you must not.  
Here comes a runner.—Hope he gets to me before a sniper gets him!  
I'm in command, am I? I'm scared green. Happy, just the same. I feel important, too. Send a report back. Yes, of course.  
Tell the Major everything O. K. Gained objective easily. Many wounded—send reinforcements and stretcher-bearers

wood. Brilliant sunshine—brilliantly blue sky. Birds sing. Is this war? There must be a mistake. The sky is blue, the sunshine brilliant, the fields beautiful and birds are singing. Why, this is not a proper place to fight! How golden the wheat fields are! There goes a bullet, and another, and I think I heard a third. They make a thin, painful whine. They come from a distance. A lark is singing. I am moving forward. The whole line is moving forward. How bright the sunshine is! Look out! They have seen us. Keep moving. I cannot feel my legs at all, yet I move for-

ward. That man is hit. He limps. Will you be able to keep moving after you have been hit? How they whine! We can never make it! That man's face is like a mass of bloody rags. He should keep his hands away from it. Why doesn't some one make him stop screaming? I don't like this place. Keep moving. Your turn has not come. Will my name really be on the bullet that hits me? There's a shell. What an explosion! The smoke is like a mighty tree springing up in full foliage. Look at that boy! Where is his arm? What a shriek shells make! Will I leap into the air if I am hit? That man did. Will I? I could never leap quite as high as he did. Oh, those bullets—those shells! Let's hurry and get somewhere. This place is horrible. That fell close. Something wet—wet and hot—in my face. Wipe it away, wipe it away. You are not hurt: some one else. Keep going. You are not hit. Keep moving. Step over that man. Why don't they get me? Keep going. Oh, the wheat! Oh, the dead boys! I knew it would be horrible. Keep moving. The whine and the hiss of the bullets. There's another shell. What are we supposed to be doing? Where are we going? This is slaughter. Something has splashed on me! Never mind—push on. Move! Go on! Down! Drop quickly! Dig. Use bayonet—anything. Dig. Hurry. I must try to be calm. Dig. Throw the dirt up in front—it gives protection. Dig faster. Keep down, but dig. Your turn has not come. Keep digging. There goes that boy. He's dead. A second ago alive, now dead. Bullets still thump him. He does not jump as they thump him. I hear a lark singing. Dig. Keep on digging. Oh, I'm hit—in the leg. I'm hit in the leg. What should I do about it? I'm wet—warm wet on my leg. It ought to hurt. Warm wet running down my leg. Do something about it. Get up and run to a deeper hole. Hurry—blood is running. My blood! It lies wet and red on the green grass. Blood on the grass. Get up. Hurry! Hurry! My leg, it gives at the knee but holds me. Hurry! There!

My, My! Sitting in a hole wounded, alone. Cut the leg of the trousers. The knife is cold on my warm wet leg. The blood is beautiful in the sunshine. The wound! I must examine it. Why, that's not bad, that's not bad. Just a hole, a sort of rip. Red, of course; everything is red around here. It is not a bad wound. Bandage it up. Quick! The blood again! Wrap it around and around—wrap it tightly. It hurts. Never mind. Wrap it tightly. There! It is difficult to move my leg. This is a nice little hole I am in; quite comfortable, quite. Much better than out there in the [Continued on page 419]

*"Back of the factory must always be contented and prosperous farmers by the million, willing to absorb vast numbers of laborers"*

## PUT YOURSELF IN THE FARMER'S PLACE

**I**N the course of human events it all too frequently becomes necessary to step into the arena to expound a doctrine that was aged when the pyramids were young. But the disturbed conditions which this country and nearly all others face at present make it imperative that every one be reminded of two incontestable facts: money is neither food nor shelter nor clothing. There cannot be more food to divide than mankind has produced or gathered.

The farm must come first in the program of reform.

Back of the factory and the shop there must always be contented and prosperous farmers by the millions, ready and willing to absorb vast numbers of laborers under fair living conditions and at wages that will be at least comparable to those paid in the cities. But that is not the condition at present. The farmer is not able to provide good houses and good wages for those who work for him. He is often abused and cheated and he grows suspicious and hard to deal with. He is not nearly so good an employer as the manager of the factory or shop. Consequently the dream of the best youth on the farms is to get to the city. And they are going. They have been going to the cities since America was young. And they will continue to go regardless of the world's crying need for food until the conditions of rural life in America are radically improved.

I have, as a boy, stood beside the son of the owner of two hundred acres of fertile land and watched his eyes glisten with the joy of anticipation when a passenger train steamed by. That boy firmly intended then to have something to do with the running of a railroad train. He has carried out his boyhood plan. And I know no more tragic fact than that he was exactly right about it. He is making an excellent living. His father never lived one half so comfortably and pleasantly as that son of his has lived. The father has always been poor and is still poor

BY CHESTER T. CROWELL

tho the high prices of the last two years have helped him a great deal. As a farmer he is engaged in one of the most hazardous businesses known to man while the boy could count his income to a dollar for quite a long period ahead.

Farming ought to be one of the pleasantest, most profitable and most respected means of earning a living. Until it becomes such and until the dream of our youth shall be the ownership and operation of a farm we shall have things terribly wrong in the cities. Nothing we can do in the cities will be of much avail until the farmer has been taken care of. Every effort toward betterment of city life—and there are thousands of such efforts now being made by thoughtful and loving men and women—only serve to increase the reason for leaving the farm.

**I**N my state which is one of the first, agriculturally, in this nation, we have a department of agriculture which concerns itself with experiments and distribution of information on how to increase production. It is well provided for financially and respected. We also have a state marketing department which has narrowly missed being abolished or merged with the agricultural department at every session of the state legislature since that department has existed. But our problem is not how to raise more but how to get a fair price for what is raised. I do not mean to say that cheating accounts for all of the losses. There is the loss which accrues because the farmer does not know the grade of his produce or does not know how to pack it or does not know how to organize for the safe storage and protection of the fruits of his fields, pending the demands of the market. He gathers his crops, rushes wildly to the nearest market, sells at whatever price is offered, pays his note at the bank and goes back to remain a pauper all winter, and finally in the spring to go hat in hand to some little

country banker who will charge him a high rate of interest for money enough to make another crop.

It is the marketing end of the farming business that is vitally wrong. It is the financial end. There is land enough in this country, there are labor saving implements enough, there is good seed enough, there is the will to work and the willingness to learn, but all of these count for very little if the returns do not promise anything more than a bare existence. Such is the lure of the city in my state that as soon as a farmer can afford it he moves to the city and builds a comfortable home and rents his farm to a tenant. There simply is no rural life altho we have less than 5,000,000 population in the largest state in the Union and three-fourths of our population is rural. Until that condition is changed it is useless to talk about what constitutes a fair wage in the city. Nothing will ever constitute a fair wage until the country is able to compete with the city for labor.

There will always be many thousands of men and women working at what are called seasonal employments, that is to say, their positions are not good for twelve months of the year. Back of them should stand the farm ready to absorb them during the dull season. The farm needs them but it does not offer enough to get them. And after looking into what it offers I think these people do just about as well not to go to the farm in the dull season. We are all so delightfully ready to tell the other fellow what he ought to do as a matter of patriotism. Poor, overworked word! Only a few days ago I heard a county attorney denouncing those who will do only so much work for so much money, then quit regardless of consequences to the public weal. He had an appreciative audience. But I happen to know that he is paid under the fee system which obtains for county officials in my state, and that he has the maximum fee allowed by the law. Consequently, when a law providing for inheritance taxes was passed about ten

years ago he never enforced it, neither did his predecessors in office, because they were already getting all the tax allowed and they saw no reason for taking up their valuable time to collect these taxes for the state when there was nothing in it for them.

The people who work in cities must learn that they are brothers and sisters of those who work in the country. There is a close kinship between all who labor. And they are all the debtors of the inventor and the scientist. No matter what laws may be passed, regardless of any rules of trade unions or other organizations, the hours of labor and the wages of the workers will always have a direct relation to the number of hours a farmer must work to produce the amount of food consumed by these city people. If half of what he produces must rot on his farm or in railroad cars every man who eats must bear part of the loss.

If his profits increase in proportion to the amount of produce he does not raise, then it is useless to tell him about a hungry world. In time of war or peace overproduction is always more to be feared than poor crops. Ask any farmer. Poor crops bring high prices. Overproduction brings ruin. The same men who rob the farmer in time of overproduction rob the worker in the cities. A few years ago I had the unpleasant experience of riding more than one hundred miles thru fields of rotting onions and cabbage. The price offered would not cover the cost of gathering the crop. It was being plowed under for fertilizer. Two hundred miles from there in a large city I saw onions for sale at eight cents a pound and cabbage at six cents a pound. If the farmers had been able to get one cent a pound for either the cabbage or the onions they would have made fortunes because the crop was unusually large.

The United States Government has purchased large tracts of land in my state to be sold on long time payments to demobilized soldiers. There is reason to hope for success in this venture because the small annual payments will give the men a chance. But there is not the slightest doubt in my mind that this land would have been under cultivation years ago without Government aid if the prospect of good returns from farming had been better. Of all things to aid by Government intervention, farming ought to be the last considered as an orphan. But it is an orphan. So much so that the present Federal land loan banks are about the most important institutions since the Declaration of Independence.

A great pioneer governor of my state, O. M. Roberts, once said: "Civilization begins and ends with the plow." It was true then and it is true now. It has

always been true and it always will be true. If a farmer has to work from dawn until far after dark to produce enough to feed three men, then those men may be absolutely certain that they will have to work almost as long as the farmer. If the farmer can work an average of five hours a day and feed one hundred men then they will not have to work much longer than he works. The human race is never going to get away from the soil. Its troubles will increase in proportion to its efforts to do so. And we have been making some frightfully strenuous efforts in that direction during the past quarter of a century. If I have read history aright every age has tried to do exactly the same thing. The issue before the world at present, as I see it, is whether or not we have gotten so far away from the farm that our little house of cards is going to tumble absolutely to ruin and chaos.

But what is the remedy? you ask. Well, the remedy is numerous and it is not new. Nothing about this problem is new and therefore I could not be fair and assert that I have something new as a remedy. First let me state that the farmer must prosper. When he prospers we are all rich. When he is

of the packing and shipping and storage of what we eat. I ask you only to visit commission house row in your home town—I care not where you live—and I know that you will agree with me that supervision is necessary. There must be schools to teach men how to grade their wheat and their cotton, and laws to make it a crime to order a man's produce and then not pay for it. There must be state agencies to provide warehouse facilities where a man can store his produce and borrow money on the receipt given by the manager of the warehouse. It is utterly insane for billions of dollars worth of agricultural products to be dumped on the market each year within a few weeks so that the price is forced down, not to rise to normal again until the farmer has parted with it. That happens every year in this country and has been happening since before I was born. The farmers call it manipulation of the market but it is not. They ought to hold that produce but they have no place to hold it. None of this is original. Farmers have been pleading for help along these lines for decades but all they ever get is free seeds from Congress and experiments to increase production.

And then there is something else that every one of us can do. We can buy with more intelligence and less artistic temperament. Not many years ago I saw a man loading celery into crates and he was making more money than the man who raised the celery. Not long ago I saw a man packing tomatoes and he was making more money than the man who raised the tomatoes. A few weeks ago a friend of mine told me that one of his inexperienced packers (he took any one he could get during the war) had put some off colored apples in the cases which made up a certain car of a certain grade, and the fifty off colored apples cost my friend easily fifty dollars. Do you know that you buy with your eyes rather than with your brains? All the apples on the shelf must have exactly the same size or color or you will not buy them. The cabbage or the celery must be exactly so large. You proba-

bly never stop to think that all the vines in a field do not yield exactly the same size and color of tomatoes. If you will buy only a certain kind and color you must certainly pay for those that are thrown away. And you do pay, rest assured of that. But you do not always pay the farmer. You pay the dealer and the packer and the grader. No reform to meet the demands of those who work will be worth anything until the farmer is taken care of. We need only listen to his petition and act. Labor and the farmer together can conquer the world. We will live in a better world when they have won their battle.

*"Wages and hours of labor have a direct relation to the time a farmer must work to produce sufficient food for city people"*

poor we are all poor. Hundreds of thousands of farmers can tell what must be done in their particular communities or counties or states. Listen to them! That is the first remedy. Labor is generally represented at every session of every legislative body in America. Labor ought to be the first to stand shoulder to shoulder with agriculture. There must be better rural schools and they must prepare boys and girls for farm life instead of holding up to their youthful imagination the soldier and the lawyer and the politician as the only great men. There must be better supervision thru governmental agency

# ARE YOU FAIR TO THE CHURCH?

BY CHARLES EDWARD JEFFERSON

PASTOR OF THE BROADWAY TABERNACLE, NEW YORK

**S**OMEBODY is always mauling the church. The sport started a long time ago—in fact, it began as early as the Day of Pentecost. While the church was yet in her cradle the world began to jab at her, the first accusation being that all the church members were drunk. The experience of that hour was prophetic. The twentieth century slanderers are lineal descendants of the jeering Jerusalem crowd.

In the early days, nearly all of the pummeling was done by outsiders. It was the men who hated the church who slapped her. She received the most vigorous whacks at the hands of those determined to crush her. But times have changed. The insiders have joined hands with the outsiders. Those who love the church now carp at her. Her well wishers take pleasure in cuffing her. Men who are her devoted servants paint her black, and endeavor to raise up friends for her by exhibiting her bruises and sores. Often it is a layman who does the yapping, sometimes a deacon or elder emits a snarl. Occasionally a preacher hurls a stone. Now and then a professor in a theological seminary gives an exhibition of his critical prowess. And once in a while a secretary of some missionary organization ventures to try his hand. It has become a pastime in sundry circles—this furious cudgeling of the church.

The effect inside the church and outside is worth noting. These diatribes cause great hilarity among all who sit in the seat of the scornful. The enemies of the church make merry whenever the believers and saints begin to scoff. The Shimeis, or stone throwers, love to have their number increased. The inhabitants of the cave of Adullam—the rendezvous of the discontented—all say "Amen," whenever anathematizing things are uttered. Any man who is willing to rush to the housetop and shout the sins of the church to all creation, finds a crown waiting for him at the hands of almost any enterprising journalist or magazine proprietor. There is a crowd in every community eager to be confirmed in their conviction that the church is not deserving of an up-to-date man's support.

But we must not take this gibbeting of the church too seriously. It is not half so fatal as it seems. It gratifies the maulers, and does no enduring damage to the church. When we are assured that the churches are filled with Pharisees and Sadducees, or that they are dead or asleep, or that they are narrow and petty, or that they are belated in their thinking, or stupid in their program, or that they are an obstacle to the progress of the religion of Jesus, the outlook seems dark indeed. But as soon

as one faces the facts, the skies immediately brighten and one dares to hope again. We are assured by the Founder of the church that the gates of Hades shall never prevail against it, and it is not likely, therefore, that the muck-rakers will have any greater success.

One is deeply impressed by the way in which the facts of experience contradict the findings of the detractors. They are honorable men and try to speak the truth, but the world refuses to believe what they say.

These critics may fool one another, but they cannot fool the people. If the church were half as petty, and benighted, and bigoted, and selfish, and unbrotherly as sundry truth-loving men assert it to be, how could so many millions of sensible Americans respect it and love it? Calumny always seems about to win, but it never does. God will not let it. The church may be asleep, but it is surprising how it gets on—it walks, as it were, in its sleep, indeed it leaps and runs. The church of today may be in a state of decadence, but it is astonishing how much ahead it is of the church in any preceding epoch of the Christian era. It may be dead, but it is astounding how active the corpse is. It is doing a thousand more things, dead, than it ever tried to do in the days of its most abundant vitality. Being dead, it yet speaks and also acts as if it were alive. It may be negative and narrow and stupid, but have you noticed the size of the schemes which the churches are just now launching? For petty minds engrossed in inconsequential minutiae the idea of raising ten million dollars for after-war work seems fairly good. It may be that Denominationalism has eaten the life out of Protestant Christianity, and has rendered the church impotent in the presence of the work she has to do, but it is amazing how people persist in leaning on her. It has been said many times that the church has "fallen down," and yet even when "down" she seems to be able to render greater assistance than any other institution

*Press Illustrating*

*Dr. Charles Edward Jefferson*

on its feet. There lies now before me a communication from the Government of the United States—the last of a long series of similar letters which have come to me within the last two years—calling on the churches of the United States for assistance in a difficult and immensely important piece of work which has to be done. If the church is dead, or impotent, or asleep, the Government officers evidently do not know it. Nor do any of the thousand noble causes which appeal constantly for help. They all, without exception, come trooping to the church, not knowing she is selfish, never suspecting she is asleep. And if it be true, as is often asserted, that the intellectuals in our universities and colleges have abandoned the church, and likewise the socialists, and also the laboring classes, and also vast multitudes who are hungry for reality, it is a mystery from what quarters the church is increasing her membership. The United States Census says that between 1906 and 1916, the period in which the lashing of the church was most vigorous, and in which it was demonstrated that the church was impotent and forever disgraced, the Baptists increased 28 per cent, the Disciples 25 per cent, the Methodists nearly 25 per cent, the Episcopalians 24 per cent, and the Presbyterians over 23 per cent. The churches seem to be jogging along in their old complacent way, quietly adding every day to their membership thousands who are in the process [Continued on page 418]

# LEAGUE OF NATIONS

## LOS OF GREECE

I have always been quite prepared to lay down my power without success. "Europe's foremost democrat," as Mr. Holt characterizes me, was President of the Cretan National Assembly in 1897. Later I was made Prime Minister in 1905. To Premier Venizelos I owe my life. Take Joneson, the leading Rumanian statesman, says of M. Venizelos, the Statesman, when, with no other support but popular favor, he insisted upon a mere revisionary chamber. Secondly, the constitution of Greece. Thirdly, the Cretan, who dared to forbid the by a stroke of genius concluded a treaty of alliance with Bulgaria. In this case it was not only courage it was genius.

to violate the Monroe Doctrine the United States with its representatives in each body could veto such action. In fact, by the Covenant the Monroe Doctrine is now extended to cover all nations; for all nations will in the future have the same protection under the League that the nations of the new world have had under the United States.

Once the League of Nations is established the process of disarmament will begin. Cynics may sneer but I honestly think this will come about, as do all the other delegates at Paris.

Of course we must discriminate. Naval armaments do not come exactly under the same category as land armaments. Take, for example, England, whose dominions are separated from each other by vast expanses of ocean. It would be difficult for England to abolish its fleet, and we must not forget that during the nineteenth century the British navy has been used for the good of the world. Even the United States, I suppose, can have a big navy if she should want to.

But with land armaments the situation is different. Here is where the menace of militarism lies. Land armaments and armies must be reduced to the minimum. Even France will disarm despite the questions raised by M. Bourgeois at the Second Plenary session of the Peace Conference. When Germany is disarmed, as is now assured, France will have no danger to face such as would compel her to maintain a large army.

I am sorry that the American proposal guaranteeing freedom of religion was left out of the Covenant. President Wilson was especially anxious for this. But when Japan suggested there should also be equality of race freedom both proposals were abandoned for reasons that America can readily understand.

But I consider both religious freedom and race equality sound proposals and they can subsequently be incorporated in the Covenant. Even now we have provided for religious freedom in the new states we have formed and in the new portions of the old states where boundaries have been extended.

In our labor of making a just and lasting peace we shall succeed, but there are breakers ahead. The secret treaties that have been concluded since the war began are already rising to plague us. For example, a few days ago, when the question of the Dodecanesus came up, Italy claimed these twelve islands along the southwestern coast of Asia Minor which she now holds, altho the inhabitants are entirely Greek, on the ground of the secret treaty made with England and France.

England and France admitted the existence of such a treaty but appealed to the higher spirit and generosity of Italy to relinquish the islands as they belonged by all rights to Greece. The American delegate said that the United States could not acknowledge the validity of such a treaty owing to the acceptance of the Allies of the President's fourteen points. England and France agreed to the American view but Italy reserved decision.

I sincerely hope that the American people will support Wilson in his championship of the League of Nations. If they do not the world will necessarily revert to the old system of alliances and future wars will surely ensue.

Americans must realize that the world has become very small owing to the inventions of science. America can no longer stand alone even if she would. As this war has demonstrated, whatever Europe does affects America and whatever America does affects us. We are one.

If the Covenant of the League of Nations is rejected by the United States Senate all liberal and humane men everywhere will despair. But I cannot believe this will happen, for I am certain that the Peace Conference will establish a just peace and the corner stone of a just peace must be a League of Nations.

# THE WHOLE STORY OF THE WAR

## IN 1914-15

In 1914, there were five distinct battle areas—the Marne, the Aisne, Nancy, Alsace, and Ypres—and the extent of country covered by them was very large. In 1915 both sides had settled down to trench warfare, and there were only three battle areas—Neuve Chapelle, Loos, and Champagne

## FOUR YEARS' FIGHTING ON THE WESTERN FRONT

### IN 1916

The year 1916 was the period of the successive battles of Verdun and the Allied offensive on the Somme. This fighting, in which 1,500,000 men were killed and wounded, was concentrated in two limited areas more than 150 miles apart

### IN 1918

The feature of the fighting of 1918 was that after the early German offensive had been checked or baffled the entire Allied line went forward in a great general assault. There were seven main theaters of war, but all closely connected

## IN 1917

In 1917 the fighting spread along a greater length of line than in 1916. It consisted mainly of eight Allied offensives with limited objectives—one at Verdun, three in the Aisne Ridge district, and one each in the regions of Cambrai, the Vimy Ridge, Ypres (the Messines Ridge), and Flanders

# THE PEOPLE OF PALESTINE

## Living in the Dark Ages Today

Mr. Koven spent the greater part of the year 1913 visiting the out of the way places in Palestine, studying the country and mingling with the people—Arabs, Turks, Jews and Moors. When the war broke out he made his way to Egypt, then to France and finally reached England. In the following article he sketches some of the characters found in the Holy Land

BY JOSEPH KOVEN

"The Arab horseman who dismounts and prays with his face toward Mecca"

**M**Y friends in Petach-Tikvah often remarked on my coldness toward the "picturesqueness" of the barbarous life that surrounded us:

"That white-haired grandfather praying near the Wailing Wall in Jerusalem, is he not an interesting figure? That Arab horseman yonder on his little black horse—see, he dismounts; he kneels and prays with his face turned toward Mecca—is he not a model for an artist? That fat and pompous Turk scrambling upon his donkey—he looks like a figure in 'Arabian Nights'; those Jewish urchins with love-locks and amulets—they walk and talk like old men, and their little sisters have their heads covered like Jewish matrons—are they not picturesque?"

Granted! As all things upon earth are picturesque, the animate and inanimate, the unconscious and the conscious.

"That white-haired grandfather praying near the Wailing Wall": There is the atmosphere of ancient woes and joys, a miasma of ancient history enveloping him. But what can he offer to civilization except to serve as a contrast to the things that should be? His life embraces nothing that lends to progress. He is now where his ancestors were, spiritually, in the dark ages. Nothing new is developed, evolved, given birth to in the little gloomy synagogue where he and his kind spend most of their days. Spiritual stagnation, encouraged by a reverent leaning toward a crumbling state of existence, breeds cowardice, race-hatred, repugnance for every new ideal, and tends to sow discord upon the world by separating man from man. He leans on his religion as on a crutch: the Prophets are his rest and his footstool. But the Prophets of ancient days were not like him; they knew the world and the times in which they lived. They spoke for their own time and not for the future. They foresaw the coming generations of man, but they made laws for

their own peoples. They destroyed the molten, barbarous conceptions of the Infinite because they knew God, the Infinite, the Intangible. Yet "that white-haired grandfather" is making blasphemous images with every word of his prayers, creating golden calves in whose worship he loses all sense of reality.

"That fat and pompous Turk": with the memories of Ali Mohammed, Hafiz, Jalal-u-din, Kurat-el-Eyn and the Persian martyrs for his religion surrounding him. What is there to him but his

obesity and his pomp? His life moves along straight and even lines that lead nowhere. He lives to eat—to pamper his body with sloth and gluttony, to procreate not that his name might survive his flesh. . . . He has manipulated the teachings of Mohammed so that life might better suit his barbarous tastes. Yet he has deified Mohammed who said, "I am not divine, I am a man, as you are."

And the Arab horseman "praying with his face toward Mecca" might do as "a model for a painter" but he cannot be a model for living. He prays to Allah! What is Allah to him but a fearful personality who is whimsical and may, at pleasure, interfere with the business of the day? Allah is to him as to the other a *hadja* who stands over the little schoolchildren with a menacing rod in his hand. "He has dismounted and prays—"; soon he may be climbing the hills to ambush and rob an unoffending traveler, a pilgrim to the "holy shrines" or a brother Moslem. His prayers have given him spiritual strength to carry on his business, and in his heart he hopes that Allah has listened to his prayers and will grant him success in his enterprize!

My friends speak of the Jewish urchins with their amulets and love-locks, and the little girls with their heads covered like matrons. True, one cannot detract from the interesting picture they make. Let us consider them: They are mentally maimed from the cradle; the spontaneity, the freedom, the playfulness so characteristically beautiful in the normal child are absent in these. At an early age they are warned against free and sympathetic intercourse with their fellow creatures. There is no reasoning with them; everything is dogma. They acquire a sophistication as unwholesome and unhealthy as the poison that lies in the heart of the beautiful poppy. Even in childhood the little boy is initiated into the mysteries of life by the "holy books" he is compelled to study. And the manner in which he acquires his knowledge is too much for his young imagination: Life becomes distorted, vapid; humanity the capricious mistake of God who is a monster and breathes flame, a tyrant whose only pleasure is to torment mankind because He has nothing else to do save to create sin and vice and mete out punishment for their existence.

I knew an orthodox Jewish family in Petach-Tik-

A bazaar street—it is picturesque but it is arrested civilization

van, a colony built up by modern Jews and inhabited by men and women some of whom had cast off the chains that bound the spirits of their fathers.

The parents of the family were young people and observed the laws and traditions of their race to a point of insanity. The man had forgotten to smile, for to be happy in a world "of malice and intrigue and ungodliness" was to call down the anger of the Most High and austere Jehovah. The woman had shaved off her golden hair and wore the orthodox head-covering. There were lines upon her face that spoke distinctly of many an inward struggle with herself, her instincts, the beautiful promptings of a free, spontaneous nature.

Their little girls followed in their mother's footsteps. They never dared to sing or play or romp about as every child has a right to do. An unattractive austerity was gradually settling down on them. Their words, thoughts and manners were beginning to resemble those of the old women who sit near the tomb of Rachael and dolefully say their prayers.

Once I said to the little girls, "Why aren't you as free and playful as some other children?"

The older one answered, "You mustn't be free. Only heathens and unbelievers are free. If we don't behave now we will do worse things when we

are older." A child of ten to speak this way!

One day I gave each of them a doll. They were afraid to accept the presents while their mother was in the room.

"Why should you waste your money on such things?" they said. The mother went outside.

"Ah, let's take them," said the younger, "they look like real children.

"That grandfather praying near the Wailing Wall"

Remember the one we had last year?"

Their imaginations were aroused. After all, they were still children; the rigor of their bringing up had not crippled them completely as yet. They took the dolls and fondled them like mothers their children. Their father's voice was heard in the next room. They became quiet and frightened.

"Let's hide them from papa," said the older.

"Why?" I asked.

"Because papa will cut off the dolls' noses or take off their arms."

I did not understand why, except thru an insane chimera the children's father should want to mutilate their dolls. One day I came across a passage in the Bible which explained the matter. In Exodus (ch. xx. 4) it says:

And God spake all these words, saying, . . . Thou shalt not make unto thee any graven image, or any likeness of anything that is in heaven above, or that is in the earth beneath or that is in the water under the earth . . . for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children . . .

And it is because of this and other such antiquated mandates, handed down by the chroniclers of ancient times, that thousands of children in the Holy Land look like miniature old men and women. I cannot enjoy the "picturesqueness" of a stunted, joyless childhood.

## THREE POEMS

By Wilfrid Wilson Gibson

### WATER

Upon the table by the bed,  
Where it was set aside last night,  
Beyond the bandaged, lifeless head,  
It glitters in the morning-light.

And, as the hours of watching pass,  
I cannot sleep, I cannot think,  
But only gaze upon the glass  
Of water that he could not drink.

### THE FOUNTAIN PEN

The pen's unbroken nib of gold  
The ink has stained to blue,  
Yet while they're broken, crushed and cold,  
It's just as good as new.

I signed the warrant with this pen,  
And in an hour they lay—  
Those young fire-hearted fearless men—  
Cold clay beneath the clay.

### IN FIFTH AVENUE

A negro in a dandy livery  
Of blue and silver, dangling from one hand  
A rose-embazoned bandbox jauntily,  
With conscious smile of gold and ivory,  
He ambles down the side-walk . . .

And I see

Him naked, in a steamy forest-land  
Of dense green swamp, beneath a dripping tree,  
Crouched for the spring, and grinning greedily.

## WHERE OUR SOLDIERS ARE FIGHTING THE BOLSHEVIKI

This is the supply depot of the 310th Engineers in Archangel, Russia. A bulletin from that place on March 11 announced that the Bolsheviki had made a severe artillery and infantry attack on a comparatively small number of British, Russian and American troops in Vistarka on the Vaga, but that they had been repulsed with heavy losses.

U. S. Official, from Western Newspaper Union

## FIREWOOD AND FOOD

The Bolshevik prisoners above are providing firewood under the direction of an American guard. This log, it happens, is to be cut up for fuel for the Red Cross hospital in Archangel. Below is the British steamer "Seattle" unloading a cargo of food at Archangel. This photograph was taken October 27, 1918, but has only recently reached this country.

# IN THESE SIGNS WE CONQUERED—

The First Division, also first to arrive in France, wear a red 1 on khaki

Second Division—a red Indian head on a blue star over a red and white circle

Three white stripes on blue for the Third Division symbolize also their three battles—Marne, St. Mihiel and Argonne-Meuse

Fourth Division—four green ivy leaves on drab—IV is a pun, you see

A red "Ace of Diamonds" is the sign of the Fifth Division

Sixth Division—red cross and circle with white center

Seventh Division—two black triangles on red. The first seven divisions are of the Regular Army

A red imp on blue stands for the Tenth Division

The white rattlesnake is the sign of the Fifteenth Division

Nineteenth Division—black triangle with white tips on red circle on khaki ground

Yankee or New England or Twenty-sixth Division—a dark blue YD on khaki

New York's Own—the Twenty-seventh Division—has its monogram in black on red with the constellation of Orion (General O'Ryan being its commander)

Twenty-eighth Division has a red keystone in honor of Pennsylvania, the Keystone state

Twenty-ninth Division—a blue and gray pieced disc, symbolizing the reunion of North and South. These troops are from New Jersey, Delaware, Maryland, District of Columbia and Virginia

Thirtieth or Old Hickory Division—troops from North and South Carolina and Tennessee—have the monogram in blue on red

Thirty-first or Dixie Division—troops from Alabama, Georgia and Florida—wear a red and blue triangle on khaki

Thirty-second Division—Michigan and Wisconsin troops—wear a red arrow shot thru every line

Thirty-third Division—troops from Illinois and West Virginia—wear a yellow cross on a black circle

Thirty-fourth or Sandstorm Division—Iowa, Minnesota, North Dakota and Nebraska troops—a red bovine skull on black

Thirty-fifth Division—Missouri and Kansas troops—the Santa Fe cross of yellow and blue on a khaki disc

Thirty-sixth Division—Texas and Oklahoma troops—a white star on a red disc

Thirty-eighth or Cyclone Division—Indiana and Kentucky troops—CY on a blue and red shield

Thirty-ninth or Bulls-eye Division—Louisiana, Mississippi and Arkansas troops—a black, white and red target

Fortieth or Sunset Division—California, Utah, Nevada and Arizona troops—a gold sun on blue

# DIVISIONAL INSIGNIA OUR SOLDIERS WEAR

Forty-first, another Sunset Division—troops from Washington, Oregon, Montana, Idaho and Wyoming—yellow and blue on red

Forty-second, the famous Rainbow Division, made up of National Guard from Twenty-six states—a red, yellow and blue rainbow

Seventh-seventh or Liberty Division—New York drafted troops—a golden statue on blue

Seventy-eighth or Lightning Division—New York and New Jersey drafted troops—gold rays on red

Eightieth or Blue Ridge Division—Virginia, West Virginia and Pennsylvania troops—three blue mountains on a khaki shield edged with blue

Eighty-second or All-American Division—Georgia, Alabama and Tennessee troops—gold letters on blue

Eighty-third Division—Ohio troops—a gold monogram on a black triangle

Eighty-sixth or Black Hawk Division—a black design on a red shield

Eighty-fifth or Wildcat Division—a yellow cat on a blue disc

Eighty-seventh or Acorn Division—a brown acorn on a green leaf on a red disc

Eighty-eighth Division—Minnesota, North Dakota, Iowa and Illinois troops—a red clover leaf on khaki

Eighty-ninth Division—troops from the Middle West—a black monogram on khaki

Ninetieth Division—Texas and Oklahoma troops—the monogram TO in red on khaki

Ninety-first or Wild West Division—troops from Alaska and the Northwest—a green fir tree on khaki

Ninety-second Division—the Buffaloes, negro troops from various parts of the country

Ninety-third Division—mostly negro troops—French blue helmet, because they were brigaded with French troops

Tank Corps—a red, yellow and blue triangle combining the three colors of infantry, artillery and cavalry

First Army Corps, Artillery—a black A with red and white in the square below

Second Army Corps—a red and white 2 on khaki

Aviation Corps—a black A and inside it a red, blue and white circle

Camouflage Corps—a yellow chevron on black

Anti-Aircraft Corps—a yellow shell with red letters on black

301st Tank Battalion—an oblong, half yellow, half red

Trench Mortar Service—yellow stitching with a red device

# THE NEW BOOKS

## Workers to the Front

WHEN the need for fair play for the workers of the world begins to come home to those who dwell in the strongholds of conservatism it is indeed a propitious omen for the future. And when we find a plea for the workers uttered by the church which has, in recent times been allied with the forces of capitalism, we may look upon it as a striking fact and one worthy of comment.

Percy Stickney Grant is well known as the pastor of one of the most conservative of New York churches, yet one in which there is a people's forum which gives to every one the right of free speech. Dr. Grant looks upon such a forum as one of the most potent factors in educating the workers and making for increased sympathy between workers and employers, thus obtaining industrial equilibrium:

The most unexpected result of the war is, perhaps, the enlarged influence of the working classes . . . the people have recently emerged to new power in many countries . . . the proletariat of most of the countries have taken a new part in war discussions and look forward to signal influence at the peace councils. This coming to the front of the workers of the world is the important news of our times. . . . The day of the proletariat has arrived but America is not ready. A new and commanding influence to be exerted by the working classes has arisen. America is unprepared to meet the situation because it has failed on the whole to grasp the profounder concerns of the people's hopes and has given aristocratic status to the successful classes. The object of this volume is to call attention to some of the consequences of our blindness to the world's deeper democratic activities and to the dawn of proletarian control.

Dr. Grant reviews many matters of common sociological knowledge, giving them a popular appeal which should meet with quick response. "Some sides of their maladjustment and the causes," is his way of putting his plea for the workers. This is a book which will be and should be widely read by many who would find a more detailed and searching inquiry boring. It is distinctly stimulating and inspiring.

*Fair Play for the Workers*, by Percy Stickney Grant. Moffat, Yard & Co. \$1.60.

## Mechanistic Conduct

FROM speculative disputation on the freedom of the will, to quantitative experiments on the determination of animal conduct is the long distance traversed by the scientific thought of the past generation. In the first volume of "Monographs on Experimental Biology," Prof. Jacques Loeb summarizes all the significant experimental work on forced movements and tropisms in animals, and explains how this method of analysis may be applied to the interpretation of "instincts" of rather complex kinds. The commonly accepted accounts of animal behavior have been thru-out vitiated by unformulated assumptions

*Underwood & Underwood*

Three leaders of the Battalion of Death, whose stirring story is told in "Yashka"

as to the thoughts and feelings and desires of animals. The scientific method which these monographs are to present assumes that the causal relations discovered and described by quantitative studies in physics and chemistry apply equally to living things. Every change results from the action of energy upon matter (or of matter upon energy, if you will), whether the change is in living bodies or in non-living systems. The experiments already made are sufficient to demonstrate that many types of animal behavior can be understood in terms of chemical and physical reaction. It is no more necessary to assume that the hydra loves the light, or that the female fly loves asafoetida than it is to assume that a bit of iron loves a magnet, or that the magnet loves the poles of the earth more than the equator.

Why then does the butterfly hover over the flower, and why does the moth choose suicide in the flame? Why do fish grasp at the bait? The thousands of activities of animals recorded in connection with food-getting, with escape from "enemies" or dangers, with mating and care of young, can be understood readily in terms of structure and chemical peculiarities. Indeed, machines have been constructed that behave quite as "intelligently" as many of the animals that arouse our wonder. Professor Loeb describes the Hammond mechanical "dog" that would follow a light about the room, made to demonstrate the principle of the dirigible torpedo. This dirigible torpedo is so constructed that it goes directly for the enemy who tries to interfere with the guiding station's control of its movements—a truly dangerous creature. But the point is that the wonderfully adaptive conduct of many animals can be explained by the same principles as those which explain the conduct of these artificial contrivances—purely physical and chemical principles. There is also a machine which will "turn its head" when it is turned away from the object at which it is "looking"; and there is another machine that is as "intelligent" as the burnt child—that is, it will avoid heat when it has been made too warm. These machines do not, of course, "prove that an animal is only a machine," but they do go far toward making unnecessary the metaphysical explanation of the facts of life upon which

the older generation has been brought up.

The fact that an animal indifferent to light may be made sensitive by means of chemical action, the fact that a tropism can be reversed by physical or chemical means, the fact that rather complex sexual instincts can be modified by chemical means, and that racial conduct traits can be radically modified by conditions entirely within our control would indicate that

at bottom the conduct forms in question are the resultants of physical and chemical relations. What appears as free movement in a crowd of animals roving at random, no longer appears free when we establish conditions that force all to move in the same way. But this only means that we are quite ignorant of the forces that determine the movements in the one case, and that we are justified in considering all movements "forced" since all that we do really understand are forced movements.

*Forced Movements, Tropisms, and Animal Conduct*, by Jacques Loeb, Rockefeller Institute for Medical Research. Monographs on Experimental Biology, Vol. I. J. B. Lippincott & Co., Philadelphia. \$2.50.

## Women Fighters of Russia

MARIA BOTCHKAREVA'S *Yashka* is a wonderful record of the strength of character developed by a Russian peasant girl to rise from the most degraded conditions to a war heroine of remarkable military ability. The author fought as a private in the Russian Army, to bear upon her sleeve the honor bars of four wounds. Subsequently she organized the famous women's Battalion of Death. In command of this force her courage and resource well earned for her Colonel Roosevelt mark of esteem in \$1000 from his Nobel Peace Prize Fund. *Yashka* is one of the great human war stories come out of the war.

*Yashka*, by Maria Botchkareva. F. A. Stokes Co. \$2.

## A Sinister City

THE most artistic of war novels was "The Dark Forest," by Hugh Walpole the story of a medical unit behind the lines in Russia. What the author did for Russia during the war he has intensified in his present novel, *The Secret City*, for Petrograd during the revolution. The former novel gave the actual feel of the forest, dark with suffering; *The Secret City* is Petrograd—huge, formless, menacing, sinister; the city itself is threat and protagonist of the revolution:

This poem only emphasized for me the suspicion that I originally had, that the great river and the marshy swamp around it despised contemptuously the buildings that man had raised beside and upon it, and even the buildings in their turn despised the human beings who thronged them.

The winter of 1916-17 pervades the story

of the Markovitch flat, its friends and inmates, with a deadly chill—the revolution seems not so much red, as gray; more depressing than exciting. We shuffle thru clinging snow toward stretches of black ice on the waiting river, as we read, and the sharp rattle of machine-guns seems only incidental to the personal tragedy, the war of temperaments, the kindness and cruelty, patience and pessimism of the Russian nature.

Altho the author assures us that "no one can understand Russia," there is verisimilitude in these pictures. An old Russian proverb: "In each man's heart there is a secret city at whose altars the true prayers are offered," gives its title to the book and an explanation of the tangled destinies of the characters. Russia is a nation of intense individualists; but they are lonely souls; hence their gregariousness and endless conversations and disputes.

They are disappointed idealists; hence their pessimism. They are like children who expected too much of the party, and are bitterly disenchanted. Yet altho the sinister slinking figure of the rat typifies the red peril, the form of the noble peasant which appears now and again in the book may be a symbol of Russia's ultimate deliverance.

*The Secret City*, by Hugh Walpole. George H. Doran Co. \$1.60.

## Fiction for Every Taste IN THE OPEN COUNTRY

*THE TEXAN*, by James B. Hendryx. (G. P. Putnam's Sons, \$1.60.) A story of the mountains and the cattle country, which centers about the personality of a real, red-blooded hero, the breezy, big-hearted "Tex."

*THE COW PUNCHER*, by Robert J. C. Stead. (Harper & Bros., \$1.50.) A romance of love and character beginning on a ranch, developing in a mushroom cow-town, and ending in No Man's Land.

*SKYRIDER*, by M. Bower. (Little, Brown & Co., \$1.40.) An exciting novel of the West with a cowboy hero who becomes an aviator (and a lover!) and finally goes to France.

*THE VALLEY OF THE GIANTS*, by Peter B. Kyne. (Doubleday, Page & Co., \$1.40.) A virile tale of love and of conspiracy in the vast and primitive spaces of the California redwood forests.

*ONCE ON A SUMMER RANGE*, by Francis Hill. (Macmillan Co., \$1.50.) The breezy atmosphere of life on a Montana ranch lends color to this tale of love and of adventure.

*THE RED ONE*, by Jack London. (Macmillan Co., \$1.40.) Four tales, each with the tang of outdoor life, the flavor of adventure and the gripping delineation of personalities, characteristic of this author.

*THE PEACE OF ROARING RIVER*, by George Van Schaick. (Small, Maynard & Co., \$1.50.) A graphic and unusual tale of the great North and of a girl who finds happiness at the end of a long road. Very well told.

*THE MAN AT BARRIN ROCKS*, by Albert Benjamin Cavanaugh. (George H. Doran Co., \$1.40.) Backward narrative of the West Virginia hills. Little part or pseudo-incident, but the hospitable person's family is worth knowing for its own sake.

*BOSTON OF THE ROYAL MOUNTS*, by Ralph S. Kendall. (John Lane Co., \$1.50.) A tale of the Royal Northwest Mounted Police, told with a strength and acuity of presentation and a clear portrayal of character, by an ex-sergeant of the force.

## STORIES OF MYSTERY

*THE HOUSE OF INTRIGUE*, by Isabel Ostrander. (Robert H. McBride Co., \$1.50.) The action of a young heiress who is spirited away to a island by a whole family of "fake" relatives.

*THE BLACK GUEST*, by Maxwell Gray. (D. Appleton & Co., \$1.50.) A tale which mingles a mystery of the "Who stole the opal?" order with a rather unusual love story.

*THE MAN WHO KNEW*, by Edgar Wallace. (Small, Maynard & Co., \$1.50.) An exciting mystery story involving greed and possible disasters and carrying with it a surprise ending.

*THE HOUSE OF INTRIGUE*, by Leland Hall. (Houghton Mifflin Co., \$1.50.) A very very story containing a very real and decided thrill, which is vastly

## The Twofold Economy of the IDEAL

The great economy in using the Ideal Tractor Lawn Mower rests on the fact that it will keep such a large average of lawn in perfect condition with a very minimum of labor. Because the Ideal is a mower and roller in one. The roller is built as an integral part of the machine and the grass is rolled every time it is cut.

Moreover, it is easily converted into a power roller by substituting for the mower the small castor which we furnish. In early spring when heavy rolling is required it is only necessary to add a little extra weight.

Thus one machine and one man does quicker and better work than several men with several hand mowers and rollers.

### Cuts Four to Five Acres a Day

The mower has a 30 inch cut and one man with one of these machines can cut four to five acres of lawn a day on an operating expense of about fifty cents for fuel and oil. The Ideal is of extremely simple design and all complicated clutches and gears have been eliminated. All the operator has to do is to guide the machine and operate the starting and stopping lever.

### Uses Tractor Principle

The cutting blades operate by the traction of their side wheels upon the ground, just the same as the blades on a hand mower operate. This eliminates the difficulties that are almost sure to occur where an attempt is made to drive the blade direct by power from the engine.

### Cuts Close to the Walks, Trees, Flower-beds and Shrubbery

With the Ideal a man can work just as close to various obstacles as with a hand mower. The mower is hung at the front in such a manner that it turns easily and is guided around corners, flower-beds, trees, etc., without difficulty.

### Five Day Trial—Satisfaction Guaranteed

Write for details for our five day trial offer. Ideal Power Lawn Mowers are sold on a positive guarantee of satisfaction and we will willingly refund money on any machine that does not prove satisfactory when properly operated.

You can secure this Ideal through your hardware dealer or direct from our factory. Write today for special literature.

Cuts close to trees or other obstacles.

Photo shows how cutting mower turns when working around flower-beds, etc.

### ARMSTRONG CORK CO. PITTSBURGH, PA.

November 29th, 1918.

Ideal Power Lawn Mower Co.:

It is a little early to pass a final opinion on the Ideal Power Mower I purchased this fall, but can say that so far it has demonstrated its time and labor saving features in a forceful manner. From what I have seen of it, I consider it a good investment for anyone having any considerable amount of lawn to keep up. Yours very truly,

C. D. ARMSTRONG.

### UNIVERSITY OF MICHIGAN, ANN ARBOR.

Buildings and Grounds  
Department.

E. C. Pardon,

Superintendent.

November 25th, 1918.

Ideal Power Lawn Mower Co.:

The Ideal Tractor Mower which we purchased from you last spring has proved entirely satisfactory in the past season's work. Yours very truly,

E. C. PARDON,  
Superintendent.

# The New Outlook In Religion

## The New Orthodoxy

By EDWARD SWEDENBURY. AMER.  
PRICE \$1.00 net.

Shows a summary of the orthodox  
faith and its basis in modern times.

## The Gospel in the Light of the Great War

By OLIVER S. DAVIS. Price \$1.25  
net.

A book for every minister. Shows how  
the Gospel is the light to the New  
Era.

## The Psychology of Religion

By GEORGE ALBERT COE. Price  
\$1.50 net.

Deals with the entire subject, analyzes  
religious phenomena.

## The Religions of the World

By GEORGE A. BARTON. Price  
\$1.50 net.

All great religions considered; com-  
pares the virtues of popular presenta-  
tion and scholarly accuracy.

## What Is Christianity?

By GEORGE CROSS. Price \$1.00  
net.

"A re-interpretation of our faith is  
essential to the prosperity of the faith  
itself."

## The Millennial Hope

By SHIRLEY JACKSON CASE. Price  
\$1.25 net.

Proves that ancient forms of millen-  
nial hope which look for a sudden  
reversal of present conditions are no  
longer tenable.

## The Evolution of Early Christianity

By SHIRLEY JACKSON CASE.  
Price \$2.25 net.

Presents first century Christianity in  
the light of the actual situations within  
which the Christians lived.

## A Guide to the Study of the Christian Religion

Edited by GERALD BIRNEY SMITH.  
Price \$3.00 net.

Represents the latest results of schol-  
arship, written by specialists for gen-  
eral readers; indispensable for every  
student of religion.

## The Finality of the Christian Religion

By GEORGE BURMAN FOSTER.  
Price \$2.50 net.

"The most important religious book of  
the generation."

## The Function of Religion in Man's Struggle for Existence

By GEORGE BURMAN FOSTER.  
Price \$1.00 net.

"It is one of the few popular books  
on religion which do not insult the  
reader's intelligence and dull the sense  
of reality."

## The Function of Death in Human Experience

By GEORGE BURMAN FOSTER.  
Price 27 cents postpaid.

One of the most philosophical, as well  
as one of the most solacing and beau-  
tiful, presentations of the great facts  
of death and life.

## University of Chicago Sermons

Edited by THEODORE GERALD  
SOARES. Price \$1.50 net.

"All these sermons are good; some are  
brilliant."

POSTAGE

THE UNIVERSITY OF CHICAGO PRESS

5751 ELLIS AVENUE

CHICAGO, ILLINOIS

enhanced by the complete commonplaceness of  
much of the setting.

THE VANISHED HERO, by Elizabeth F. Cor-  
bett. (George H. Doran Co., \$1.50.) An unusual  
heroine and a very human hero lend a touch of  
distinction to this highly modern novel.

PHILO GABB, by Ellis Loring Butler. (Hough-  
ton, Mifflin Co., \$1.50.) A "Correspondence  
School Detective." Philo Gabb is a new variety  
of Sherlock Holmes, and a most diverting one.

THE GOLDEN BOUGH, by George Gibbs. (D.  
Appleton & Co., \$1.50.) A breathless tale about  
a young American who dashes into Germany to  
rescue a treasure-chest, and a girl from the  
Secret Service.

THE APARTMENT NEXT DOOR, by William  
Johnston. (Little, Brown & Co., \$1.50.) Mys-  
tery tale of love, German spies and the Secret  
Service, centering about a wealthy American  
girl and a British peer.

### TOUCHING ON THE WAR

MINNIGLEN, by Agnes and Edgerton Castle.  
(D. Appleton & Co., \$1.50.) A lively story pic-  
turing the effect of the war on English society,  
with plenty of amusing incidents and a wholly  
satisfactory love story.

THE FLAMING SWORD, by Andre Fribourg.  
(Macmillan Co., \$1.50.) A war narrative in  
which the author so injects his own personality  
that he conveys the impression of carrying a  
considerable part of the burden of the conflict  
upon his own shoulders. Still the volume has  
power of an unusual quality.

DEER BILL, MABLE'S LOVE LETTERS TO HER  
ROOKIE, by Florence Elizabeth Summers. (Fred-  
erick A. Stokes Co., 75 cents.) We all laughed  
heartily over Bill's letters to Mable, but if you  
can even grin feebly over Mable's replies, you're  
lucky.

TOWARD MORNING, by I. A. R. Wylie. (John  
Lane Co., \$1.50.) An account in narrative form  
of the stern training of every German boy to  
obedience and duty to his Government.

### NOVELS OF HISTORICAL INTEREST

SONNICA, by Vincente Blasco Ibañez. (Duf-  
field & Co., \$1.35.) A modern example of the  
historical novel. A story of Saguntum, the rival  
of Carthage and a center of Greek culture in  
Africa. It ends with Hannibal's siege of Sa-  
guntum, magnificently described.

DONALD McELROY, SCOTCH IRISHMAN, by W.  
W. Caldwell. (George W. Jacobs & Co., \$1.35.)  
A novel dealing with the period of the American  
Revolution and containing, in addition to a  
pleasing love story, much of historical interest.

THE COURT OF BELSHAZZAR, by Earl Williams.  
(Bobbs Merrill, \$1.50.) Life in the sumptuous  
court of Babylon, richly painted in gorgeous  
detail, together with the story of its fall into  
the hands of the Persian King Cyrus.

THE THIRD ESTATE, by Marjorie Bowen. (E.  
P. Dutton & Co., \$1.75.) A vividly sketched  
story of the French Revolution in its reactions  
on the lives of a few of the brilliant court cir-  
cle of the pre-revolutionary days.

### TALES OF LOVE AND ROMANCE

MANY MANSIONS, by Sarah Warder McCon-  
nell. (Houghton, Mifflin Co., \$1.50.) A rather  
cloying, sentimental story of love, morbid in a  
mild way, but readable. The development of a  
lonely child with an artistic temperament into  
a sensitive, lovable woman.

THE BELL RINGER, by Clara Endicott Sears.  
(Houghton, Mifflin Co., \$1.35.) Full of the sweet  
simplicity of rural New England life is this  
idealistic romance of a crippled girl and her  
strong young lover.

SISTER THERESA, by George Moore. (Bren-  
tano's, \$1.50.) A new edition, uniform with his  
other works, of George Moore's novel of a  
woman's struggle between sensuality and ascet-  
icism.

THE GHOST GIRL, by H. De Vere Stacpoole.  
(John Lane Co., \$1.50.) Light and charming lit-  
tle romance; fragrant with the flower laden at-  
mosphere of the South, and tender with an echo  
from yesteryear.

THE MERRY HEART, by Helen Raymond Ab-  
bott. (Century Co., \$1.40.) The fresh, appealing  
story of a plucky New England girl; her strug-  
gle for family happiness and the love which  
came as her reward.

BEYOND THE HORIZON, by Fred B. Morrill.  
(Neale Publishing Co.) A highly imaginative  
romance, the scene of which is laid upon an-  
other planet, where a "share and share alike"  
system results in happiness for all.

JIMMY THE SIXTH, by Frances R. Sterrett.  
(D. Appleton & Co., \$1.50.) Amusing story of  
what happened when Jimmy refused to study  
law to please the family, and determined to be-  
come a "man dressmaker" instead.

A RUNAWAY WOMAN, by Louis Dodge. (Scrib-  
ner's Sons, \$1.50.) A story of the sordid adven-  
tures of two vagabonds who philosophize instead  
of beg. There is charm in the telling of the tale,  
if not in its characters.

THE PATHETIC STORIES, by Dolf Wylderde. (John  
Lane Co., \$1.50.) From this author we have  
come to expect romances that are tropical in  
both senses of the word. It is then a surprise to  
find her writing a village study of the style of  
"Cranford" with a bread-and-milk miss as a  
heroine. But she handles her new manner well.

HEARIS' HAVEN, by Clara Louise Burnham.  
(Houghton, Mifflin Co., \$1.50.) A happy tale in  
which the romance of a "little mother" vies in  
interest with the love story of her son.

THE FLAME OF LIFE, by Gabriele D'Annunzio,  
translated by Viviana. (The Modern Library,  
Boni & Liveright, 70 cents.) A novel of pas-  
sionate love and eternal sadness, in which D'An-  
nunzio set down his own experiences with Elea-  
nore Duse.

THE HEART OF NAMI-SAN, by Kenjiro Toku-  
tomi. (Stratford Co., Boston, \$1.50.) A story  
of Japanese home life emphasizing the cramp-  
ing of the individual under the weight of an-  
cestral custom.

ALMANZAR, by J. Frank Davis. (Henry Holt  
& Co., \$1.) An amusing tale which deals with  
the performances of a "cullud" house-boy who  
moves in the best "Pullman circles" in San  
Antonio.

SIMPLE SOULS, by John Hastings Turner.  
(Charles Scribner's Sons, \$1.35.) Romance of  
the duke and the shopgirl told in a style as  
entertaining as the plot is superficial.

THE GILDED MAN, by Clifford Smyth. (Boni  
& Liveright, \$1.50.) Gertrude Atherton says:  
"This is the most breathless yarn I have ever  
read." Mrs. Atherton loses her breath more  
readily than we do.

THE UNKNOWN WRESTLER, by H. A. Cody.  
(George H. Doran Co., \$1.50.) A novel which  
shows how a young curate, disgusted with life  
as he saw it in a wealthy city parish, found its  
inner meaning in a small country community.

### GROUPS OF SHORT STORIES

WHITE NIGHTS AND OTHER STORIES, by Fyo-  
dor Dostoevsky. (Macmillan Co., \$1.50.) Newly  
translated stories in the intensely analytical,  
even morbid vein familiar to readers of this  
Russian author. Moving, gripping and human  
in the extreme.

CHILDREN OF THE DEAR COTSWOLDS, by L. Al-  
len Harker. (Charles Scribner's Sons, \$1.50.)  
Delightful sketches of Gloucestershire village  
folk, most of whom lived in "those old easy  
times of twenty years ago."

THE DISCARDED CONFIDANTE, by Frank Twee-  
dy. (Neale Publishing Co., \$1.25.) Eight short  
stories, characterized by individuality of sub-  
ject and unconventionality of treatment, ap-  
pealing to readers of all ages.

FREE AND OTHER STORIES, by Theodore Dre-  
iser. (Boni & Liveright, \$1.50.) Several short  
stories in the vein of stark realism which  
Dreiser has made familiar as his native style.

CAN SUCH THINGS BE? by Ambrose Bierce.  
(Boni & Liveright, \$1.50.) Fortunately not, for  
a more ghoulish lot of stories were never  
brought into one volume.

MISS MINK'S SOLDIER, by Alice Hegan Rice.  
(Century Co., \$1.25.) Eight short stories with  
a wide range of situations, handled with a  
charm of style equal to the author's "Mrs.  
Wiggs of the Cabbage Patch."

## Interesting People

MEMORIES GRAVE AND GAY, by Florence Howe  
Hall. (Harper & Bros., \$3.50.) Informal re-  
miniscences of a long life and famous people by  
the daughter of Julia Ward Howe.

RUPERT BROOKE, A MEMOIR, by Edward Marsh.  
(John Lane Co., \$1.25.) A brief biography by  
one of the poet's closest friends; extracts from  
Brooke's unpublished letters and a few poems  
not contained in his "Collected Poems."

THE KAISER AS I KNEW HIM, by Arthur N.  
Davis. (Harper & Bros., \$2.) Extremely inter-  
esting picture of the personality of the ex-  
Kaiser and of conditions in Berlin before the  
war.

THE GOLDEN ROAD, by Lillian Whiting. (Little,  
Brown & Co., \$3.) Résumé of the varied ex-  
periences of this American woman of letters,  
including travel, biography and criticism. Illus-  
trated by photographs.

THE LETTERS OF ANNE GILCHRIST AND WALT  
WHITMAN, edited by Thomas B. Harned. (Dou-  
bleday, Page & Co., \$2.) New addition to the  
Whitman bibliography, as well as the record of  
a beautiful and spiritual friendship.

GEORGE BERNARD SHAW, HIS LIFE AND WORKS,  
by Archibald Henderson. (Boni & Liveright,  
\$1.50.) The standard Shaw biography in a pop-  
ular priced edition. Authoritative, readable, en-  
hanced by excellent illustrations and quotations.

YESTERDAYS IN A BUSY LIFE, by Candace  
Wheeler. (Harper & Bros., \$3.) An autobiog-  
raphy which derives much of its interest from  
the large circle of artists and authors drawn to  
Mrs. Wheeler during her artistic career.

## Pebbles

"Tell me, is he such a fool as he looks?"  
 "No, indeed: more so."—*Baltimore American*.

Hush, Little Barroom, don't you cry.  
 You'll be a drug store by and by.  
 —*New York Tribune*.

You may break, you may shatter the Hun  
 if you will, but the same propaganda comes  
 from him still.—*Washington Herald*.

"Pa, what's an inheritance tax?"  
 "It's when your mother blames all your  
 faults on me."—*Boston Transcript*.

"Have you the latest war book?"  
 "I'll find out, sir. I've just been out to  
 lunch."—*Judge*.

Queer that the human race can't all get  
 together on a little thing like the sort of  
 government they'd like.—*New York Evening Sun*.

Margaret—I'm going to Mrs. Baker's to  
 play auction this afternoon. I always win  
 a prize there.

Katherine—Well, you may have better  
 luck today.—*Life*.

"Why do you always type your letters,  
 old top?"

"Saves brain-fag, dear boy. I just type  
 'My Darling' and then tap away at the  
 jolly old 'X.' and—er—well, there you  
 are!"—*Passing Show, London*.

"Why do hats cost more than houses,  
 mamma?"

"But they don't, dear. What made you  
 think so?"

"Well, that sign says: 'Hats, \$10 up,'  
 and yesterday I saw a sign that said:  
 'Houses, \$10 down.'"—*Los Angeles Times*.

"Why didn't you stop when I signalled  
 you?" inquired the officer.

"Well," replied Mr. Chuggins, "it had  
 taken me two hours to get this old flivver  
 started, and it seemed a shame to stop her  
 merely to avoid a little thing like being  
 arrested."—*Washington Star*.

Hostess—I'm sorry you found Miss Big-  
 le a poor conversationalist.

Jack—Poor conversationalist? She's ab-  
 solutely the limit! Why, the only thing she  
 said to me the entire evening was "no,"  
 and I had to propose to her to get her to  
 say that.—*Boston Transcript*.

A sign in the San Fernando valley reads:  
 "Trespassers will be persecuted to the  
 full extent of 2 mean mongrel dogs which  
 aint never been orally soshibil with  
 strangers and 1 dubbel barrel shot-gun  
 which aint loaded with no sofpy pillers.  
 Dam if I aint tired of this hel raisin on  
 my propety."—*Los Angeles Times*.

"It is not always necessary to make a  
 direct accusation," said the lawyer who  
 was asking for damages because insinua-  
 tions had been made against his client's  
 good name. "You may have heard of the  
 woman who called to the hired girl, 'Mary  
 Mary, come here and take the parrot down-  
 star,' the master has dropt his collar  
 button."—*Exchange*.

Sympathetic Old Lady (to convict):  
 Ah, my unfortunate friend, your fate is  
 indeed a hard one; and as she thinks of  
 you here in this dreadful place, how your  
 wife must suffer!

Convict (very much affected): Yes'm,  
 and these are two of 'em, mum. I'm here  
 for legum.—*Tut Bats*.

While in a certain government office re-  
 cently Sir Ivan Jones, the British trans-  
 port chairman, overheard the following dia-  
 log between two fair typewriter tappers:  
 "Isn't it terrible the way we have to  
 work these days?"

"Rather! Why, I typed so many letters  
 yesterday that last night I finished my  
 prayers with 'Yours truly.'"—*Vancouver (B. C.) Province*.

## McCutcheon's Dependable Hosiery for Women

IN spite of the present shortage of high-grade Hosiery we find ourselves in the fortunate position just now of having an unusually fine selection, in Silk, Wool and Cotton.

The prices make it distinctly advantageous for our patrons to lay in a liberal supply, particularly in view of the luxury tax which will go into effect May 1st.

**Fine Grade Silk Hose**, Grenadine Rib. Solid Black or Solid White. \$6.75 pair.

**Black and White Shot-Silk Hose**. \$4.50 pair.

**Pure Silk Hose**, Black, with self or White Clox, and White with self or Black Clox. \$3.50 pair (upper illustration).

**Pure Silk Black Hose**, Open Clox, medium weight. \$3.00 pair (lower illustration).

**Morley's Fine English Black Cashmere Hose**, \$2.75 and 2.95 pair.

**Wool Golf Hose**, extra heavy weight, Colors: Fawn and Havana Brown. \$2.75 pair.

**Silk and Wool Golf Hose** in Black, White, Bronze, Tan and Green. \$2.50 pair.

**Silk Hose, Cotton Top and Sole** in Black, White, Brown and Suede. \$1.25 pair.

**Lisle Hose** in Black, White, Bronze, Tan, Grey and Khaki. 65c pair.

**Medium Weight Cotton Hose** in Black, White, Grey and Cordovan. 55c pair.

**Black Lisle Hose**, light weight. 50c pair.

**MAIL ORDER SERVICE**:—Any of the merchandise described or illustrated above may be ordered with complete satisfaction thru our Mail Order Service.

 550 WEST 27<sup>TH</sup> STREET, NEW YORK CITY

Principal  
Cities

This would seem a favorable time to launch a world language, but the trend is all the other way. Instead of getting together on one the effort is to develop as many different languages as possible, Ukrainian, Czech, Irish, Hebrew, Lithuanian, Albanian, etc.

119 West 40th Street New York

Perhaps this tendency may work its own cure by compelling the adoption of a common language.

Several universal languages have been invented but no people speak them. Probably Ido, a simplified form of Esperanto, is the best. If English would abolish its abominable spelling it would have the best chance of becoming general. The vast extent of the territory acquired by Great Britain over Africa and Asia in the present war has given the English a start over its rivals not likely to be overcome.

\* \* \*

The misapprehensions and misstatements of well-informed men about the proposed constitution for a League of Nations justify The Independent in making plain what may be news for some. The Peace Conference in Paris has taken no action whatever on the first draft of a constitution for a League of Nations, but will discuss it later and probably amend and improve it. Until then the Peace Conference will not approve or recommend this first draft of the constitution, or submit it for ratification to Congress and the Parliaments of other nations. This is to enable the people of these nations to see and discuss what is proposed. The Prime Minister of Great Britain stated to Parliament that the perfected constitution would be submitted to Parliament for ratification.

## SOME LITTLE MATHEMATICIAN

BY W. F. DIX

"Of course \$300 is a lot of money for a fur coat but I'd love to have the coat and we can spare the \$300, so why not get it?" urged Mrs. Quibble.

Mr. Quibble nervously hitched in his chair, did a little figuring on the margin of his newspaper and replied, "Well, that coat, as I figure it, would cost you \$525."

"Why, the idea," cried his spouse indignantly, "the price is \$300. I know you are some little figurer but how can you figure \$300 into \$525, for goodness' sake?"

"Easy," said Mr. Quibble. "The loss of interest on \$300 at 5 per cent, which is a good general, long distance rate to go by, is \$15 a year. You spend \$300 for the coat and lose \$15 a year interest. In other words, you rent the coat for \$15 a year. That is over \$2 a month winter and summer. And what is more, it's renting it forever! Or let us, to be conservative, call it renting it for your lifetime. You are forty years old and your expectation of life according to life insurance tables, is thirty-five years. That is, statistics go on the assumption that you will live thirty-five years more. So I reckoned at simple interest because, if you invested that \$300, instead of spending it, you would enjoy an income of \$15 to spend every year as long as you lived. And \$15 a year for thirty-five years means \$525. So you are out \$525 if you buy that coat."

"What a horrid way of putting it," spluttered Mrs. Quibble. "When you spend money it's gone and done for. We spend that \$300, it is gone, but I have the coat!"

"And what is more," persisted Mr. Quibble, "that coat would really cost \$525 because at your death your estate would still have the original \$300, and if you used compound interest instead of —"

"Why that's simply outrageous and preposterous," cried his outraged spouse. "You might just as well say that we rented that dinner we ate today. Here, let me do some figuring!" and she snatched the

The League of Nations at first will be composed only of those nations now represented in the Peace Conference and of a few others, like Norway, Sweden, Denmark, Holland and Switzerland. (See Article VII of the Covenant.) There will be difficulties enough without admitting many other nations at present. J. BRADLEY

It is all right to discuss the preliminary draft of the League of Nations Covenant. That is what it was put out for. But why condemn it totally because some clauses are found obscure or thought undesirable? We are still amending our own Constitution.

\* \* \*

"With the Buffaloes in France," by Lieut. Osceolo E. McKaine, in The Independent of January 11, is a brilliant summary of what is filling the minds of many Americans of color. From one who thinks and feels with him will you accept this humble but earnest bit of praise for your high spirit of courage and democracy in publishing this article at this time? On the eve of the great World War reconstruction era we are happy to greet a worthy successor of that fearless Independent of the great American reconstruction era.

JOHN F. MATHEWS.

Auditor and Secretary.

Florida Agricultural and Mechanical College, Tallahassee, Florida.

We are glad to hear that The Independent is thought not unworthy of its high traditions.

pencil. After a period of ominous silence, broken only by the supprest snorts of Mrs. Quibble, she said, "You will pay on that soup you ate a rental of half a cent a year for life. And just think of it! You had the nerve to sit there and consume a big chunk of roast beef and obligate yourself to paying two cents a year rent for it all the rest of your life—you are my age, you know, within a year or so, and that's near enough. The vegetables and ice cream will cut your future annual income down by another cent and as for those cigars you burn up every day! Why, Henry, you are doing that sort of thing every day and three times a day! In the course of the year you are renting an awful amount of food! You really can't afford to eat any more, and as for smoking — I am so glad you called my attention to the real way of looking at our finances. It is wonderful. I have wondered why it was costing us more and more to live each year."

"Hold on, my dear! Hold on!"

"No, you hold on!" said his wife. "Think of your golf club expenses! Wait a moment," and she did some more pencil work. "You told me that your golf had cost you only \$400 a year. You have been a member ten years. In other words, ten years ago your golf cost you \$400, which represents \$20 loss of interest for forty-five years and amounts to \$900. For the second year, \$400 or \$20 for forty-four years is \$880. For the third year \$860, then \$840, \$820, \$800, \$780, \$760, \$740 and this year \$720. That makes a total of \$8100. Your golf costs you \$8100 this year, Henry! Just think of it! And what is more your estate —"

Mr. Quibble, with haggard eyes and ruffled hair, got up and went over to his desk. Presently he came back and silently placed a check for \$300 on the table in front of his wife, went back to his arm chair, picked up his newspaper and remarked, "My dear, I wonder who the Republicans will nominate for President."

## Sunshine In Bran

It is Nature's laxative.

It makes life sunnier by helping one keep well.

Everybody needs it, because fine foods clog. Most folks who omit it must take drugs, and doctors denounce that habit.

One dish of Pettijohn's supplies enough bran for a day. The food is delicious, the bran is concealed. Try it once a day for a week. See what it does for good cheer and for fitness. It will be a revelation.

### Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent of bran.

Also Pettijohn's Flour—75 per cent fine Government Standard flour, 25 per cent bran. Use like Graham flour in any recipe. (3016)

## ALLEN'S FOOT-EASE

The Antiseptic Powder to Shake Into Your Shoes

And sprinkle in the Foot-Bath. It takes the sting out of corns and bunions, the friction from the shoe and gives rest and comfort to tired, aching, swollen feet.

The Plattsburg Camp Manual advises all men in training to shake Foot-Ease in their shoes every morning.

Nothing relieves the pain of tight or new shoes so quickly or thoroughly.

If you want genuine relief, Allen's Foot-Ease will give it and give it quickly as proved by 30,000 testimonials from all over the world. Try it to-day and be comfortable. Sold everywhere. **Don't accept any substitute.**

# A Mental Stimulant

WHETHER men congregate and discuss the absorbing issues of the day there HARVEY'S WEEKLY is quoted, praised, scolded. Every reader of HARVEY'S WEEKLY is either for it or against it. And that is so because HARVEY'S WEEKLY is never neutral. It stands squarely for Nationalism vs. Internationalism; Americanism vs. Bolshevism.

Among so called journals of opinion HARVEY'S WEEKLY stands by itself. It has called itself, using the language of Marse Henry Watterson, "a sure enough free nigger." It is just that. It is ever ready to applaud good service and just as ready to condemn incompetence. The "swivel-eyed beast, political expediency," does not write for its columns.

You will enjoy HARVEY'S WEEKLY if you have that all too rare open mind which can enjoy reading not only the things it believes, but the things it opposes.

As a mental stimulant you need

## HARVEY'S WEEKLY

## ARE YOU FAIR TO THE CHURCH?

(Continued from page 403)

of growing into the likeness of Jesus of Nazareth. When the church in the United States can add in a single decade several million adherents, and that too in a period when the best were fleeing from her, and when trivialities were absorbing the attention of her leaders, one sits down astonished and feels that he is justified in demanding an explanation.

Is not the explanation simply this? A large part of all the current criticism heaped upon the church is slander. Some of the derogatory things which are said are true, but there are so many true things left unsaid, that the true things which are said become untrue because they convey false impressions. The church is large, and the church is old, and the church is made up of human beings, and the church is engaged in doing a tremendously difficult piece of work, and because of all these reasons, it is the easy prey of the faultfinder. It is not a homogeneous mass of mortals—this bundle of life which we call the Christian church. It is made up of men and women and children of all races, and classes, and grades of culture, and degrees of enlightenment, and stages of development, and therefore to bring an indictment against it is far more difficult than to bring an indictment against a nation.

Death loves a shining mark, and so do the critics. That is why so many of them dote on bespattering the church. A caricature of the church is always attractive. A finely phrased vilification is sure of a hearty welcome. All of the traducers follow practically the same order of procedure. They exploit the tart judgments of a few anonymous and disgruntled individuals. Caiaphas had no difficulty in finding witnesses to testify against Jesus, and the modern church scourger has even less difficulty in finding men ready to speak the condemnatory words. After spreading out the chiding judgments of the anonymous grumblers, it is customary to pick out a few eccentric or old-fogy specimens found in the pulpit or the pew, and hold them up as horrible examples. Of course such specimens exist, and why not make use of them in order to give the world a correct idea of what the church really is?

And finally, it is always commendable to go back at least forty years for evidence of what the church today is thinking and doing. Quietly assume that Christians never change either their attitude or outlook from generation to generation, and proceed to read into men now living the views of men whose bodies have long since been dust, and you have the ideal background on which to paint a portrait of the church sufficiently ludicrous to estrange the intellectuals and also to excite the derision of the man in the street.

It is easy to do this, but one is haunted by the question: Is it fair? These are days when we are talking much of justice, and, if we are ever to have a better world, it is pretty generally agreed that justice must be the foundation stone. We are going to demand, hereafter, of our diplomats and statesmen that they shall obey the everlasting law of justice, and probably we shall some day begin to feel that it is important that men who are in good and regular standing in our churches shall not make the church of God odious by exploiting selected weaknesses of belated groups, as if these alone composed the full life and character of the Christian people. The church, like an individual, has the right to claim to be judged not by her worst but by her best. Saul of Tarsus was once a merciless

## The League of Nations

Whether you favor a league or not you want to know what has been said, recently, for or against it.

No one book, no one magazine, can give as comprehensive a view of the problems and difficulties incident to the formation of such a league as the Handbook, A LEAGUE OF NATIONS.

Into its 350 pages, Miss Phelps has collected 70 of the most important speeches and writings which appeared in books, magazines and newspapers and has grouped them under the plan they advocate or condemn. The third edition (just off the press) includes the twenty-six articles of the proposed Constitution and President Wilson's explanation of them.

The Handbook, A LEAGUE OF NATIONS, is priced at \$1.50 so that every good American can own a copy.

Other Titles in Handbook Series:

Americanization, \$1.50 Monroe Doctrine, \$1.25  
Russia - - - 1.50 Prohibition - - 1.25

THE H. W. WILSON COMPANY

## How to Use The Independent in the Teaching of Civics

By Simon J. Jumnefsky, A.B., LL.B.

Teachers write for it and it will be sent free.

THE INDEPENDENT, 119 W. 40th St., New York

critic of the church. He persecuted her because he did not know any better. After he once caught a vision of Christ and his relation to the church, he lamented to the end of his days his career as a persecutor. He was ever keenly sensitive to the blemishes and blunders of church members, but he never washed the soiled linen of the church in the public square. He ever kept his eyes on the glorious church without spot or wrinkle or any such thing which by God's grace is going some day to be. His motto for himself as well as for all Christians was: "Let everything be done with a view to building up." He endeavored to keep his converts in an atmosphere made warm by appreciation and praise. He corrected by creating. He got rid of the faulty by calling attention to the good. He beguiled men away from the better by holding up before them the best. When an old man in prison he wrote this to a group of friends in Philippi: "If there be any virtue, and if there be any praise, think on these things."

## THAT'S HOW IT FEELS TO BE SHOT

(Continued from page 400)

open field. These are bullets whining over. I wonder who they are getting. Not me! There's an ant on that grass blade up there on the edge of the hole. I do not think that ants care for blood. Flies do. Flies do. I must drive them away. The blood has soaked thru. Let it soak. It will stiffen. I can't keep them away. Let them eat. Should I say drink? A few are finished. Why do they remain so near to clean their feet and wings? Is it the sunshine that makes their bodies look so pink as they settle on the grass blades to clean their feet and wings? Is it the sunshine, or something else? Get out! Fly away! Go feed on dead boys. What a swarm! What a sight. My leg is pounding close to the wound. My wound—all mine. Drive away those flies. It is hot. My leg throbs, throbs, throbs. Some one must bring water. I am thirsty. Ring the bell. Drive those flies away. Please bring some water. just a little. Please, please, please. Oh, I'm hot! Burning! My wound. What was that? Some one calling? I must be calm. Be calm. You have got to be quiet, quiet. All day be quiet with the flies and the blood. The shells can scream—you must not. What time is it? How long am I supposed to stay here? How blue the sky is! There should be a few snow-white clouds floating in it. Then it would seem more real. There goes that bird again. This isn't much fun. I have had much better times than this—much better. There are not so many shells now. I will look and see what is going on. A man digging. Good work. He isn't dead. I'll call to him so he will know I am here. He waved and laughed. Look at those helmeted heads sticking up out of their holes! Comrades, all of them. All smiling and up to see who laughed. Why, this isn't so bad after all! Not at all bad. Here comes some one. He stoops low as he runs. Looking for me? Yes, here he comes. A runner. What does he want? He looks anxious. I don't blame him. Hope he gets to me before a sniper gets him. The hole will hold us both. How he puffs! A canteen of water! It's warm, oh, but good. Some more good! Fine! Fine! I'm in command, am I? Good Lord, I'm in command! I'm scared green. Happy just the same. Happy as can be. I feel important too. Send a report back. Let me see. Yes, of course, that's the thing to do!

"Tell the Major everything O. K. Gained objective easily. Many wounded and reinforcements and stretcher bearers."

## Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Dr. Esenwein

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

### ENGLISH: LITERATURE AND HISTORY, CIVICS AND COMPOSITION

BY FREDERICK HOUR LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, SILVERMAN  
HIGH SCHOOL, NEW YORK CITY

I. Why We Need the League of Nations. By Premier Venizelos.

1. In "Locksley Hall" Tennyson wrote:

I dip't into the future, far as human eye

could see;

Saw the Vision of the World, and all the

wonder that would be;

Saw the heavens fill with commerce, argo-

sues of magic sails,

Pilots of the purple twilight, dropping down

with costly bales;

Heard the heavens fill with shouting, and

there rain'd a ghastly dew

From the nations' airy navies grappling in

the central blue;

Far along the world-wide whisper of the

south wind rushing warm,

With the standards of the peoples plunging

then the thunder-storm;

Till the war drum throbb'd no longer, and

the battle-flags were fur'd

In the Parliament of Man, the Federation

of the World.

There the common sense of most shall hold

a fretful realm in awe,

And the kindly earth shall slumber, lapt in

universal law."

Explain the selection in relation to the arti-

cle, and the general subject of "The League

of Nations."

2. Premier Venizelos says: "The world has

become very small." Explain his meaning.

3. Premier Venizelos is called "Europe's fore-

most democrat, and the most constructive

statesman at Paris." Explain clearly what

the above words mean.

II. The People of Palestine. By Joseph

Koven.

1. In Milton's "Comus" and in Tennyson's

"Idylls of the King" the persons are some-

what allegorical. So are the persons in the

article. (a) What type of American char-

acter is pointed at in "The white-haired

grandfather"? (b) In "The fat and pomp-

ous Turk"? (c) In "The Arab horseman"? (d) In "The Jewish urchins"?

2. Explain the following expressions: "A

miasma of ancient history"; "Spiritual

stagnation"; "Mentally maimed from the

cradle"; "Unwholesome sophistication";

"Arrested civilization."

III. Three Poems. By Wilfrid Wilson

Gibson.

1. Prove that every poem makes important

use of climax and contrast.

2. Prove that the poems are drawn from the

commonplace, and emphasize the romantic.

3. Prove that every poem suggests an untold

story.

IV. That's How It Feels to be Shot. By

a Gunner Sergeant.

1. What is the effect of using the present tense

throughout the article?

2. What is the effect of using short sentences?

3. What is the effect of using incomplete

sentences?

4. In what way does the writer's spirit repre-

sent the spirit of all American soldiers?

5. How is the writer's physical point of view

indicated?

6. What method does he take to emphasize his

emotions?

7. Prove that the article is consistent in every

way.

V. Some Little Mathematician. By W. F.

Dix.

1. Show how the article develops climax.

2. What gives the article its amusing quality?

VI. Are You Fair to the Church? By

Charles Edward Jefferson.

1. What is the principal proposition made in

the article?

2. Make a brief of the writer's points in the

support of that proposition.

VII. Put Yourself in the Farmer's Place.

By Chester T. Crowell.

1. Point out constructive suggestions made in

the article.

2. Point out epigrammatic sentences.

VIII. The Story of the Week.

1. Underline the principal sentence in every

article in The Story of the Week.

2. What paragraph position does the principal

sentence most often occupy? Why is this

position most effective?

3. Make original titles under which the vari-

ous items in the principal parts of The

Story of the Week may be grouped.

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

I. The League of Nations—"How It Looks

to Europe," "Why We Need the League

of Nations," "The League of Nations."

1. Why may the opposition to the League of

Nations in this country be regarded as "a

blow from behind"?

2. On what ground is it alleged that the

League will be "an instrument for remedy-

ing conditions which provoke [internation-

al] quarrels"?

3. In what sense is it true that opposition to

the League "renders it impossible for Amer-

ica to protest effectively against the im-

perialistic tendencies of certain European

belligerents"?

4. Why do "the small nations regard the

League of Nations as absolutely essential to

the future peace of the world"?

5. "The American people need have no fear

that the Covenant will abolish the Monroe

Doctrine. Why not?"

6. Discuss the assertions of Venizelos in re-

ference to land armaments and naval arma-

ments.

7. "If the Covenant of the League of Nations

is rejected . . . all liberal and humane

men everywhere will despair." Why?

II. The Terms of Peace—"Discussing the

Terms of Peace," "Claims for Indemnity,"

"Dealing with War Criminals,"

"Disputes Over Ships and Food."

1. Summarize the military and naval terms

of the preliminary peace treaty as far as

they have been formulated.

2. What decisions as to boundaries have been

proposed? What will be the effect if they

are adopted?

3. What will be the effect on Germany if all

the claims for indemnity are allowed?

4. Why is the Commission doubtful as to the

legal possibility of trying and punishing the

former German Emperor?

III. The Problem of the Holy Land "The

People of Palestine," "The Pope on

Palestine."

1. Why are the "white-haired grandfather

praying near the Wailing Wall in Jeru-

salem," the Arab horseman who "Prays

with his face turned toward Mecca," the

"Jewish urchins with love-locks and amu-

lets" described as "living in the Dark Ages

today"?

2. Why is the Pope opposed to the restoration

of Palestine to the Jews?

IV. The End of Monarchy—"The Book of

Kings."

1. Why, according to the editorial writer, may

we now speak of hereditary rulership in

the past tense?

2. What are the arguments presented in the

editorial for hereditary rulership? the argu-

ments against it?

V. American Political Theories—"Undesir-

able Americanism."

1. Explain the second paragraph of this edi-

torial.

2. What were the political theories of Thomas

Jefferson and Thomas Paine as embodied in

the Declaration of Independence? From

what earlier sources did they derive these

theories?

3. Under what conditions is it true that self-

government is quite as bad as autocracy?

VI. A Bulwark of Democracy—"Attack on

Illiteracy."

1. Tabulate the figures on the per cent of

illiteracy given in the first paragraph of

the editorial. What conclusions do you

draw about illiteracy in the United States

compared with the foreign countries enu-

merated? About illiteracy in the various

sections of the United States?

2. What are the facts revealed by the psycho-

logical tests applied in the various army

camps in the United States?

VII. Agricultural Reconstruction—"Put

Yourself in the Farmer's Place."

1. Discuss the economic theory back of the

assertion that "money is neither food nor

shelter nor clothing."

2. Upon what grounds does the author assert

that "the farm must come first in any pro-

gram of reform"?

3. Why is farming called "one of the most

hazardous businesses known to man"?

4. Discuss the statement: "Our problem is

not how to raise more but how to get a fair

price for what is raised."

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. Entered at the New York Post Office as second-class matter March 28, 1918, under Act of March 3, 1879. Copyright, 1919, by The Independent. Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month

## REMARKABLE REMARKS

**WILLIAM ALLEN WHITE**—War is a maelstrom's court.

**CANON BALDWIN**—Morbid spiritualism is now making great headway.

**PREMIER CLEMENCEAU**—It is harder to win peace than it is to win war.

**THOMAS ADDIS EMMET**—In justice England must some time become an Irish province.

**LORD ROBERT CECIL**—A League of Nations must consist of all the nations worth mentioning.

**BISHOP OF HEREFORD**—You cannot have an A1 labor policy with a C3 morality at the bottom.

**J. H. THOMAS, M.P.**—The essence of democracy is to be loyal to those you have put into authority.

**H. W. STANLEY**—Liberals believe in democracy but not in equality. Bolsheviks seek equality but not democracy.

**FELIX ADLER**—It is on the relations of the civilized to the less civilized that the future of mankind will depend.

**HENRY G. ALBERG**—Bolshevism is anything in the way of a social or economic reform that half scares you to death.

**LENINE**—We must have the courage to confess freely that our communist plan is going to smash if we do not change front.

**FRANK DILNOT**—The American woman is just such a woman as the poets and story-writers describe for their livelihood.

**LABOR DELEGATE RAMSAY MACDONALD**—The German Democracy, if allowed to settle down, will be the freest Democracy in Europe.

**JOHN D. ROCKEFELLER, JR.**—The day has passed when the conception of industry is chiefly a revenue-producing process can be maintained.

**DR. HENRY VAN DYKE**—Let the Constitution be amended if necessary. There is nothing sacrosanct about it and nobody has claimed that we must bow to an idol.

**SECRETARY WILSON**—I do not believe that any country owes any man a living; but I do believe that every country owes every man an opportunity to earn a living.

**E. W. HOWE**—Except that we have not yet engaged in cutting each others' throats, the Americans are engaged in a revolution as certainly as are the Bolsheviks in Russia.

**PRESIDENT WILSON**—It is perfectly understood in Paris that we are not meeting the masters of anybody—that we are meeting as the servants of about 700,000,000 people.

**PROF. IRVING FISHER**—Our society will always remain an unstable and explosive powder as long as political power is vested in the masses and economic power in the classes.

**MALCOLM W. BINGAY**—The world has grown weary of paternalism whether its form be monarchical, bureaucratic or industrial and a strident individualism is its normal reaction.

**PROF. HORACE MEYER KALLER**—Africa cannot compete with the United States as a attraction for the surplus European population and all the talk that very lofty

talk of founding colonies for the advantage of the surplus populations of Germany or any other country is merely a little more of lying that is called diplomacy.

**PREMIER LLOYD GEORGE**—The threat of intervention in the affairs of Russia is driving even the moderate parties in Russia into the hands of the Bolsheviks. Some of the officers of the old armies are actually taking part now in reorganizing the Red Army of Russia.

## POETS OF TODAY

The first volume by George Rostrevor, a poet whose work came to the attention of the public during the war, has been published by the Macmillan Company under the whimsical title *Escape and Fantasy*. Consistent with this spirit is "The Change," in which Mr. Rostrevor speaks for all city workers at the coming of spring.

### THE CHANGE

All the daytime I belong  
To the solemn-coated throng  
Who with grave, stupendous looks  
Study cash and ledger books,  
Or who go,  
Staid and slow,  
On sad business to and fro.

But when twilight comes, I range  
Over topics new and strange,  
Wasting all my leisure hours  
On fay birds and phantom flowers,  
Or I sing  
Some mad fling  
Thru the impish evening.

Yes, and when the moon goes by  
Rocking in a foamy sky,  
Then I swear I'm more akin  
To the laughing Cherubin  
Than to those grave men who go,  
To and fro, to and fro,  
On sad business to and fro.

Another typical springtime poem, "If I Were Pan," we reprint from a collection of sympathetic and sincere outdoor verse by Ivan Swift, which is published by the James T. White Company in *The Blue Crane*.

### IF I WERE PAN

Deep in the wood across the way,  
I dreamed that I was Pan today,  
And tuned me joyous pipes to play,  
And fronds came out to me,  
And nymphs and graces three—  
The world was Arcady!  
For I was Pan and this was Spring!

I played the part of Pan today  
And laughed at mortals on the way,  
But no man heard and none would stay,  
Their ears were sorely dull,  
And sad their eyes and full  
Of pelf and pride and mull;  
And spring to them is never Spring!

I know that I was Pan a day,  
But would that I were Pan alway,  
With ears like his and eyes of May,  
To hear and feel and see!—  
Pipe tunes to bird and bee  
And set the world's heart free  
With laughter, love and light of Spring!  
I would if I were Pan.

# Why Live An

*Conscious Evolution can easily and quickly demonstrate to you that you are only half as dynamic, vital, brave, authoritative, forceful, dominant, self-reliant, daring, courageous, progressive, masterful, aroused, powerful and creative as you easily may become, through higher personal evolution. Why Take Less Than Your Full Share of Real Pleasure and Real Life?*

**C**ONSCIOUS EVOLUTION can quickly show you that you are only half as alive as you must be to realize the higher joys and complete benefits of living in full, and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be, and only half as well developed as you ought to be.

Conscious Evolution can easily and quickly give your powers new and higher values. With only blind evolution to lead you, life means less pleasure, less profit, less money, less health, less power, less energy, less joy, less success and less life in every respect.

Conscious Evolution means more pleasure, more profit, more health, more power, more wealth, more joy and genuine success.

scheming power which you may easily acquire through self-evolution. In fact, Conscious Evolution can prove that you have thus far relied solely on blind evolution, and Conscious Evolution can demonstrate to you that you may easily and quickly double your mental power, bodily power, health power, heart power, nerve power, brain power, executive power and business power.

## Daily Results

Problems that formerly worried me are now so easy as to seem almost unreal, since I gained power of personality through Conscious Evolution."

Conscious Evolution has made me conscious of new energy, of a better power of mind. I seem tireless. I seek action instead of stagnation, as formerly."

I am filled with a new zeal."

I would not take fifty thousand dollars for the power which in six weeks Conscious Evolution has given me."

I am happy to say that I received your instructions, and that in spite of traveling a good deal, my condition or power is remarkable at ninety years of age."

I am certain I am gaining in every way, for I feel as full of 'fight' and energy as a wild cat."

"I owe my rise from the position of a country insurance agent to virtual head of one of the largest insurance companies of the world entirely to the power of personality Conscious Evolution has given me."

"My weak will and personality for years made it possible for my business partners to rob me of my proper share of profits. Conscious Evolution gave me courage, self-reliance and power of personality, and I made my partners pay me \$160,000 out of which they had bulldozed me during my feeble and powerless days."

"One year ago I was an old man at forty; today I am a youth of forty-one."

"Fourteen years ago at the age of 68 I was an old man; today at the age of 82 I am the marvel of my friends; I am younger than most men at 40. Your system gave me a new lease on life."

## Become an Aggressive, Fearless, Positive Personality

Many men and women have amazing memories, wonderful education, excellent health and even unusual strength, many are good looking and are good talkers and possess every advantage that education plus whatever mere blind evolution gives them, and many have read practically every book ever written on how to be a success and attain a dominant will power, and yet these men and women are failures in life, because they do not possess a vital, dominant and dynamic power of personality. Their energies and knowledge are not co-related and activated; they do not possess the dynamic conquering personal power such as Conscious Evolution develops and which is so essential to intelligent and concrete crystallization of the personal factors leading to real creative success.

## Become a Victorious Personality

Make up your mind to convert your personal liabilities into assets. Convert fear into courage, timidity into confidence, nervousness into self-reliance, feeble health into super-health, failure into success, disappointment into pleasure, weak personality into dominant personality, negative will into dominant will, stagnant mentality into dynamic mentality, mind wandering into intense power of concentration, and indifferent memory into positive memory. Become a live personality.

## Become Dynamic—Supreme

No matter who or what you are, whether young or old, strong or weak, ill or well, highly educated or unlettered, a recognized success or a moderate personality, whether you graduated from universities and colleges such as Yale, Harvard, Cambridge, Oxford, or merely from a country school, Conscious Evolution can demonstrate to you that you possess not one-half the creative, thinking, reasoning, memorizing, planning, concentrating power, penetrating power, or logic sensing and

## Become a Giant in Personal Attitude and Power

You will be a bigger, better, finer, nobler higher, and more-free human being by recognizing yourself as you really are and advancing yourself eternally through scientific evolution.

Conscious Evolution can make you think faster and better. Under its influence you can have higher aims, higher ambitions, higher aspirations, higher ideas and every result you genuinely desire.

You are a tremendous possibility — and Conscious Evolution is the key to your further and higher evolution.

New energy—new life—new power and new success are yours—through evolution conscious advanced!

# Inferior Life?

## A New and Higher Life

The fact is that regardless of whether you are rich or poor, Conscious Evolution can prove to you readily, by demonstration, that you are living an inferior life: and you owe it to yourself to give Conscious Evolution the opportunity to show you the way in which you may completely and easily without inconvenience or loss of time, and without contrivances, apparatus, chemicals, study, special bathing or dieting, come into possession of a new dynamic life, an unusual vigor, a higher type of dominant energy and power of personality—a **new realization of the meaning of life and success.**

Are you living the full and successful life? Why not always be at your very best—thoroughly well, virile, energetic, vital, zealous, keen, alert, fearless, dominant, dynamic, magnetic, masterful, creative, supreme? Why not invest in yourself? Why not raise yourself above the level of blind evolution and make the most of your every opportunity? Why not improve your personal atmosphere?

The more dynamic your personality, the greater is your power of decision, the keener is your power of judgment and the more aggressive is your power of action and the greater is your power of reasoning.

The more dynamic you are, the more precise, exact, definite, clear and positive become your ideas.

## Why Accept the Crumbs Instead of the Rich Prizes of Life?

Conscious Evolution gives greater power to live the superior life, the better life, the higher life, the more successful life, the life worth while, and the life in complete accord with the ultimate laws of life, evolution and creation.

Conscious Evolution can increase your combative, fighting, aggressive motive, forward and persistence power. Conscious Evolution can increase your power of continuity.

Conscious Evolution is the way to a forceful personality, forceful mentality, forceful will and forceful mind.

## Daily Results

"The increased amount of energy enables me to accomplish more work in the same length of time, and thus I actually save time through your system."

"My work is manual labor. I am forty-three years of age and have worked hard all my life, but in one month Conscious Evolution has increased my strength by nearly fifty per cent. It has improved my digestion and overcome my constipation. Before taking Conscious Evolution I was always bothered with my limbs cramping at night, but have had no such trouble since starting this course."

"I am a farmer. At the end of four weeks I have more energy. I recuperate better, am less tired upon arising, and when at the end of the day's work I come home tired, Conscious Evolution removes the fatigue and soreness."

"I feel better than I have for months. My circulation is so much better and I feel younger and I can actually enjoy the energy through a better circulation of blood. I can endure working hard and longer and have much greater powers of concentration. People tell me how well I look."

"I felt that I was doing your system an injustice to take it when I was in such a run-down, nervous condition, but it certainly has proved a great blessing to me. Your system has benefited me both mentally and physically. That awful feeling in the pit of my stomach has completely left me."

"My whole person simply effervesces with keen, alert, enthusiastic energy."

## These Amazing Books Are For You

Swoboda has published for distribution two remarkable books which explain his system of Conscious Evolution and what it has already done. Write for these books—not because Conscious Evolution has meant so much to 262,000 other men and women, not because there is scarcely a prominent family in the country that hasn't at least one member a pupil of Swoboda. Conscious Evolution is being personally used by many of the most prominent physicians and such men as Woodrow Wilson, Charles E. Hughes, the Rockefellers, the Vanderbilts, the Goulds, the Huntingtons, the Cudahys, the Swifts, the Armours and McAdoo for advancing themselves in energy, health, vitality and power of personality.

CONSCIOUS EVOLUTION and THE SCIENCE OF LIFE show how to double or even treble your power of mind and body; not by tedious prolonged study, but by a process of energization which raises the very level of your life and mental powers.

These books show how to amazingly increase your power of will and personality, as well as your power of body for every action and for every purpose and process.

CONSCIOUS EVOLUTION also explains the dangers and fallacy of excessive exercise and conscious deep breathing.

CONSCIOUS EVOLUTION and THE SCIENCE OF LIFE show the way to attaining what you genuinely desire or want. You have a pleasant surprise in these books. They lead to higher pleasure, higher joys, and higher realization.

CONSCIOUS EVOLUTION and THE SCIENCE OF LIFE will show you what amazing possibilities exist for you if you cease to rely wholly on blind evolution. These books are absolutely free and there is no obligation now or after. These books are yours to keep, that you may attain a higher understanding of yourself and of evolution and the means to a higher existence.

Just write your name and address on this page, tear it out and mail to Swoboda, or draw a ring about your name on your letterhead, or merely send a postal, giving name and address. Do it today! This is your opportunity! Now to your turn! This is your day! This is your hour! Write now!

WITH WHICH IS INCORPORATED  
HARPER'S WEEKLY

## BLUE BIRDS IN THE BUSH

THE new radical democracy under all its manifestations of Bolshevism, syndicalism, I. W. W.ism is bent upon the realization of two purposes: one is to substitute collectivism for the individual ownership of capital, the other is to substitute herd instinct and mass suggestion for individual direction of industrial and political affairs. It is intensely envious of ability, and quite as determined to destroy it as to expropriate private wealth.

Individual ability and direction of affairs has dominated human activity from the beginning of history for the same reason that man dominates the lower animals. The struggle for existence has been a sifting and selecting process, which has discovered and emancipated ability. It is this sifting and selecting process which the defeated hate above all things, and vainly dream of setting aside.

It is always possible to interfere with it and for a time apparently to stop it. Like a river it can be dammed or turned into new channels. While the dam is filling up or the new channels are unobserved, the flow itself seems to have stopped, but the day comes when the water runs over the dam or the current sweeps freely on in its course.

What will happen, when the land and the mines and the mills of England have been nationalized, as the British Labor party proposes, and the control of their operations has passed into the hands of committees of working men; when the Soviets of Russia have taken over all business enterprises in that land; and when the syndicalist groups of Italy have expropriated private capital and assumed responsibility for industrial production, railway transportation and financial undertakings? Ability, of course, will have been shown its place. The men who built up business interests and controlled them will have been "put to work," at union wages, and every decision will be made by the

"equal voice" of the plain man, industrial, agricultural, mining, intellectual or what not.

Two things will happen. First, the world will begin to suffer. Luxuries will go, and for a brief day the envious and the bitter will rejoice that the rich are "getting what was coming to them." Then comforts will go, and then sufficiency will go. Starvation and pestilence, which have turned the gay city of Petrograd into a city of death, will begin to stalk the earth. Second, inequality not destroyed, but only repressed, will reassert itself. Ability of the crude sort that first appeared among men in the ages of primitive savagery, will again force its way to the front. It will not be the superb intellectual power to foresee, plan, organize, and direct, which has maintained the marvelous activities of modern civilization. It will be raw, merciless, obedience-compelling power, exhibiting itself in Trotskys on horseback, and at length in Napoleons raised to absolute power by the acclamation of frenzied, ignorant multitudes.

Meanwhile, for strikes of labor against capital there will have been substituted strikes of Soviet against Soviet and syndicate against syndicate. The dream of an industrial world made peaceful by the expropriation of capital and the elimination of directive ability is one of the sorriest delusions to be found outside insane asylums. Some envious fellow in a farming group or in a mining group will want to know why the men of the railroad group are demanding all the traffic will bear. The men of the railroad group will call the trouble makers in the agricultural or the mining group a lot of lazy, jealous liars, and the fight will begin.

Never so long as the world lasts will the Soviet, Bolshevik, syndicalist blue birds in the bush be caught. The only question is, how much of the garden of civilization will be trampled into ruin while the hunt is on.

## SPREADING AMERICANISM

ONE of the reasons why the United States is disliked and suspected in foreign lands is because their newspapers show our seamy side. What they print from America consists largely of lynchings, murders, defalcations, municipal corruptions, scandals in high life and similar stuff. This is taken, of course, from the headlines of our own papers, but with us such sensationalism does not do so much harm, for the readers have an internal corrective in the knowledge of the wholesome normal life about them. But foreigners do not have easy access to information as to what Americans are really doing and thinking. We are conceited enough to think that the more people know of us the better they will like us, so efforts are now being made to disseminate knowledge of America.

The Creel Bureau did a vast amount of such publicity work during the war, tho of course nothing was said about it at the time. It was found that the most effective way to

counteract the German anti-American propaganda was simply to tell the truth about American educational, religious, industrial, agricultural and military activities. Toward the end of the war even the German organs in such neutral countries as Spain and Switzerland were carrying more of the American than of the German propaganda.

In fact the activity of the United States Committee of Public Information became so great as to alarm our Allies as well as our enemies. A member of Parliament recently called attention to the fact that "a free news service was supplied to the South American press with the result that for months past every newspaper thruout South America has published daily propaganda in its news columns as to the efforts, resources and prosperity of the United States."

This Government publicity has unfortunately been stopped, but various unofficial agencies are trying to carry on the work. A Foreign Press Service has been organized

in New York to place American articles in foreign journals and *vice versa*. The *Inter-America* magazine of New York publishes every month translations into Spanish of a selection of American magazine articles and editorials and likewise translations into English of choice articles from the Latin America periodicals. But for serious readers books are necessary, so the Inter-American Division of the American Association for International Conciliation, acting for the Carnegie Endowment for International Peace, has selected 13,194 of the best books from and about the United States and shipped them to the leading libraries of South America. In this way Rio de Janeiro in Brazil, Montevideo in Uruguay, Asuncion in Paraguay, Lima in Chile and Santiago in Peru have a choice collection of two or three thousand American books. Similar libraries of Americana are to be installed in Paris, London, Rome, Zurich, Peking and Tokyo.

We would suggest that the new nationalities just starting out in life, Poland, Yugo-Slavia, Czecho-Slovakia, Armenia, Syria, might welcome American libraries as a birthday gift from one of their liberators. There will be about a million volumes left over from the libraries supplied to our soldiers and these could not be put to better use than to distribute them among the schools and towns of the Mid-European nationalities.

## GIVE THE INDIVIDUAL A CHANCE

IN a thoughtful paper on "The Reconstruction of Education Upon a Social Basis," contributed to the *Educational Review*, Prof. Charles A. Ellwood, of the University of Missouri, says that political, industrial and social solidarity must replace the régime of individualism and class war if we are successfully to carry the tremendous economic and moral burdens that have been loaded upon us, and, in a heavier measure, upon other nations, by the European War. All the problems, therefore, of social, national and human unity have suddenly assumed new importance.

They have; and at the same time the center of gravity of our thinking has shifted; and in our newly attained conviction that solidarity is supremely important we are in danger of forgetting that solidarity is, after all, only a means to an end, and that we court disaster if we sacrifice the end in our efforts to magnify the means.

Precisely this practical mistake was the fatal blunder of Germany. The solidarity of the state was everything in the Teutonic scheme of life, and the individual was compelled to fit himself into standardized schemes of education, occupation and military service. Initiative and self-reliance were destroyed. He was made responsible not to his own judgment, his own conscience, and the world, but to a politically constituted authority, and he ceased to think independently. Such a form of society tends to become, and if you gave it time enough it would become, a hill of ants.

Solidarity and standardization (in a word, unity) are necessary in the degree that the human group (community or nation) is collectively imperiled, as it is when an enemy makes war upon it, or as it may be by great calamity, for example, famine, pestilence, flood, or fire, or convulsion of nature; but the unity is always purchased at the expense of individual spontaneity, and with sacrifice of the possible differentiation and enrichment of life. Under circumstances of peace and safety a maximum solidarity is not necessary, and it is then not desirable, because of its restriction of individuation.

Furthermore, let us not forget that it was the splendid development of the individual in France, in England and in the United States in the years between Waterloo and the German invasion of Belgium that made possible the ultimate achievement of allied victory over the German arms. And not the least factor in the collective effort was the economic ability of the United States, a product of an indi-

vidualism not always fair, not always consistent with the general welfare, but dynamic beyond all precedent, and daring beyond comparison.

By all means let us work out the federation of the world and the skilful correlation of all its component and constituent groups and energies, but let us beware also of that over-emphasis of solidarity and that mechanical standardization, which tend to destroy individual initiative and responsibility, the very things which, as ends, justify any social organization whatsoever.

## BOLSHEVISM AND DEMOCRACY

THE question has often been raised why the most redoubtable enemies of the Bolsheviki should be the Czecho-Slovaks who are fellow Slavs and largely revolutionists, radicals, republicans and socialists. The answer is best given in the words of General Stefanik in his speech on presenting the colors to the First Czecho-Slovak Storming Battalion in Siberia:

Bolshevism is the negation of democracy. Bolshevism speaks, shouts, howls; democracy thinks, teaches, convinces. Bolshevism awakens the lowest instincts and desires; democracy appeals to honor and conscience. Bolshevism steals the neighbor's furcoat: democracy weaves an overcoat for all, even the poorest. Bolshevism gives to the people the torch and the dagger; democracy the hammer and the plow. Bolshevism throws its opponents into the sea, pulls them out of prison to beat them to death; democracy ascertains evil to cure it, eventually punishes to correct it. Bolshevism sells souls for profits and forms parties of bandits and sectionaries; democracy gives advantage to all in accordance with right. Bolshevism means decay, misery, hunger; democracy creates and is the foundation of normal life and well being. Bolshevism is the blinding light of a rocket—democracy the glowing beacon of salvation. Bolshevism is the enemy of mankind and we have to fight it.

## WHAT HAPPENED IN PORTUGAL

THE news from Portugal during the recent rebellion was so scanty and conflicting that it was impossible to get a consistent view of events, but now that the smoke has cleared away we can see what took place, tho the causes of it are still obscure. We all read in our papers that "on January 25, at 6 o'clock in the morning, Dom Manoel entered Portugal from Spain by crossing the Minho River at Caminkra." Also we read that he had been brought from England on a British vessel and was waiting off Lisbon until his loyal subjects got ready to receive him. As a matter of fact the canny ex-king did not get any farther than London, where he was waiting to see which way the cat would jump. But in spite of his caution he cannot altogether escape the charge of complicity in the conspiracy to overthrow the republic and restore him to the throne. On January 21, when the false news from Vigo, Spain, announced the success of the royalist rising, his lord-in-waiting, Viscount Asseca, gave out in London the statement that "King" Manoel had disapproved of any movement in his favor during the war, but now circumstances were altered and "he has lived with no other idea than to return to his throne."

He would have done better to have kept his mouth shut a little while longer, for three days later he learned that the royalists on Monsanto had surrendered to the republicans. Among the prisoners was the authorized agent of Dom Manoel, Senhor Ayres d'Ornellas, who at the beginning of the rising had declared that it had no monarchical aim but was later found engineering the Lisbon mutiny.

One regiment of cavalry and three batteries of field artillery from the Lisbon garrison succumbed to the enticements of the royalist agents and deserting their barracks took up a position on Monsanto, a hill two miles out of town. From this point they bombarded the capital, doing little damage, altho the cables reported that one shell, exploding in the zoölogical garden, wounded the hand of a chimpanzee. On the other hand, in the defense of Monsanto 130 were wounded, not monkeys but men. At the cry that the republic

was in danger, the people of Lisbon turned out in mass, civilians and students as well as military and marines. Monsanto was besieged by a volunteer army of 9000 and soon capitulated. From the royalist headquarters at Oporto came too late a wireless message of cheer for Monsanto: "Great enthusiasm north. Long live the monarchy! Paiva Couceiro." To which the victorious republicans wirelessed back: "Great enthusiasm south. Monarchist forces defeated. Long live the republic!"

This is the fifth time since 1910 that Couceiro has tried to overthrow the republic by an armed insurrection. In the north of Portugal, the seat of the Braganza dynasty, the republican sentiment is weaker than in the south, and when Couceiro unfurled the banner flag of the king at Oporto he hoped that the people would rally to its support. He declared himself regent and premier and announced the annulment of all the internal legislation of the republican administration, the restoration of the ancient privileges of the Catholic Church, and the organization of the Royal Guards. He asserted that he had the support of the British and that the British cruisers in the harbor had been sent to prevent the navy of the republic from bombarding the city. But the Portuguese failed to rise or if they did they took the other side. His followers fell away. The British warships withdrew. The Portuguese fleet arrived. The republican forces attacked. And after holding out for ninety minutes Oporto surrendered. Couceiro was captured and we hope he will be put where he can do no more harm.

Since Couceiro is half English and boasted of British backing and since the ex-king is still received with royal honors at the Court of St. James's, the Portuguese republicans are becoming suspicious of British intentions. They did not object to England's giving sanctuary to the sovereign whom they deposed and expelled in 1910, but it is naturally not pleasing to them to hear him still officially address in England as "Your Majesty," and what is worse to have the same title accorded to his wife, Princess Augustine of Hohenzollern, whom he married in 1913 and who therefore has never been Queen of Portugal.

Manoel was only twenty when he fled to England, and while enjoying the protection and favor of the British court he has served as the figurehead if not the instigator of repeated conspiracies to overthrow the republic. One such conspiracy was frustrated last December by the assassination of President Paes, who had obtained power by a military revolution and was undoing all the work of the republic. When the monarchists failed in their attempt to use Paes as a tool they resorted to open rebellion—and failed.

Altho Portugal and England were allies—it is the oldest alliance in Europe—the Portuguese did not enter into the war with much enthusiasm and did not distinguish themselves upon the battlefield. This was largely because they suspected England of being inimical to the republic and of attempting to buy off Germany by sacrificing to her the Portuguese colonies in Africa. These suspicions were intensified by the publication during the war of the Lichnowsky memorandum. Prince Lichnowsky was the German Ambassador at London previous to the war and negotiated the secret treaty with England by which Germany was to secure extensive and exclusive concessions in the Portuguese colonies. We quote the passage from the *London Times* in its entirety for it is not so well known in America as its importance deserves:

In the year 1898 a secret treaty had been signed by Count Hatzfeldt (then German Ambassador to London) and Mr. Balfour, which divided the Portuguese colonies in Africa into economic-political spheres of interest between us and England. At the Portuguese Government possess neither the power nor the means to open up or adequately to administer its extensive possessions, the Portuguese Government had already at an earlier date thought of selling these possessions and thereby putting their finances in order. Between us and England an agreement had been reached which defined the interests of the two parties and which was of all the greater value because Portugal, as is well known, is completely dependent upon England. This

treaty was no doubt to secure outwardly the integrity and independence of the Portuguese Empire, and it only expressed the intention of giving financial and economic assistance to the Portuguese. Consequently it did not, according to the text, conflict with the old Anglo-Portuguese alliance, dating from the fifteenth century, which was last renewed under Charles II and which guaranteed the territories of the two parties. Nevertheless, at the instance of Marquess Soveral, who presumably was not ignorant of the Anglo-German agreement, a new treaty—the so-called Windsor Treaty—which confirmed the old agreements, was concluded in 1899 between England and Portugal.

The object of the negotiations between us and England, which had begun before my arrival, was to alter and amend our treaty of 1898, which contained many impossible features—for example, with regard to the geographical delimitation. Thanks to the conciliatory attitude of the British Government, I succeeded in giving to the new treaty a form which entirely accorded with our wishes and interests. All Angola, as far as the 20th degree of longitude, was allotted to us, so that we reached the Congo territory from the south. Moreover, the valuable islands of San Thomé and Principe, which lie north of the Equator, and therefore really belonged to the French sphere of interests, were allotted to us—a fact which caused my French colleague to make lively, altho vain, representations. Further, we obtained the northern part of Mozambique; the frontier was formed by the Likungo. The British Government showed the utmost readiness to meet our interests and wishes. Sir Edward Grey intended to prove his good will to us, but he also desired to promote our colonial development, because England hoped to divert Germany's development of strength from the North Sea and Western Europe to the world-sea and Africa. "We don't want to grudge Germany her colonial development," a member of the Cabinet said to me.

Originally, at the British suggestion, the Congo State was to be included in the treaty, which would have given us a right of preemption and a possibility of economic penetration in the Congo State. But we refused this offer, out of alleged respect for Belgian sensibilities! Perhaps the idea was to economize our successes? With regard also to the practical realization of the real but unexpressed object of the treaty—the actual partition at a later date of the Portuguese colonial possessions—the new formulation showed considerable advantages and progress as compared with the old. Thus the treaty contemplated circumstances which would enable us to enter the territories ascribed to us, for the protection of our interests. These conditional clauses were so wide that it was really left to us to decide when really "vital" interests were concerned, so that, in view of the complete dependence of Portugal upon England, we merely needed to go on cultivating our relations with England in order, later on, with English assent, to realize our mutual intentions.

The sincerity of the English Government in its effort to respect our rights was proved by the fact that Sir Edward Grey, before ever the treaty was completed or signed, called our attention to English men of business who were seeking opportunities to invest capital in the territories allotted to us by the new treaty, and who desired British support. In doing so he remarked that the undertakings in question belonged to our sphere of interest.

The Lichnowsky Memorandum was circulated extensively by the Creel Bureau and other agencies as part of the anti-German propaganda and with good reason, for it shows conclusively the falsity of the German claim that England was, previous to the war, trying to check German expansion. On the contrary England was willing to offend Portugal, France and Belgium by furthering the German schemes for commercial penetration and ultimate annexation in Africa with a view of diverting Germany from her aggressive designs in Europe.

The German menace has been removed but the African problem remains. Portugal has forfeited her right to African territory by neglect and maladministration and it would be well for them and for the world if the Portuguese colonies were assigned by the League of Nations to some power which as mandatory could develop and administer them properly. The Union of South Africa is striving to acquire Delagoa Bay, which indeed is the natural outlet of the Transvaal. One of the reasons why the Portuguese were reluctant to go to the aid of England was because of the rumor that, to quote the *London Times*, "Delagoa Bay had been bartered away by the British Government to the South African Union in exchange for assistance in the war." But, of course, if Delagoa Bay or any other Portuguese possession passes into other hands Portugal will be sufficiently remunerated and this may account for willingness of various individuals to assume the precarious honor of becoming the head of the Portuguese Government.

# THE STORY OF THE WEEK

The President and the League of Nations reached Brest on March 13, were informally received, and proceeded that night to Paris. At the French capital the next day the President was greeted by M. Clemenceau, a little later had a conference with Mr. Lloyd George, and plunged at once into the work of the Peace Congress. Much of his first attention was given to the project of a League of Nations. Publicity had been given to a report that the Congress, or its Supreme Council, would defer action upon the League until after the conclusion of a treaty of peace. This the President promptly denied, cabling to his secretary, Mr. Tumulty, in Washington on March 15, that there had been no change in the decision, made on January 25, that "this League should be treated as an integral part of the general Treaty of Peace." M. Pichon, the French Foreign Minister, the next day expressed grave doubt whether such inclusion of the League in the Peace Treaty would be practicable, and intimated that the Supreme Council might decide to adopt the treaty first and take up the League afterward. It was also reported that the British delegates, for the sake of hastening peacemaking, were inclined toward the same course. It was urged that the various neutral nations had not yet been sufficiently consulted on the subject. But on March 18 the President, M. Clemenceau, Mr. Lloyd George and Signor Orlando conferred on the matter, and it was practically decided that by speeding up other features of the work it would be possible to adhere to the program formerly adopted and to include the League in

the Peace Treaty without unduly delaying the latter. The President personally undertook the task of revising the Constitution of the League so as to make its purport clearer in some respects and so as to meet some of the objections which have been made to it in the United States.

## The Lodge-Lowell Debate

More than 40,000 people proved their earnestness to understand the League of Nations by clamoring for admission to Symphony Hall in Boston on March 19 to hear Senator Lodge, of Massachusetts, and President Lowell, of Harvard University, debate the merits of the proposed covenant of the League. Tho they were labeled for the purposes of debate "opponents," the two speakers were basically in accord on the need of a League of Nations and on the principles of its establishment. Both agreed that the covenant as at present drawn up is unsatisfactory.

Senator Lodge, who spoke against the covenant in the closing sessions of the Sixty-fifth Senate and who was leader of the Republican forces there, opened the debate by saying:

It has been said that I am against any league of nations. I am not. Far from it. I am anxious to have the nations, the free nations of the world, united in a league, as we call it, a society, as the French call it, but united to do all that can be done to secure the future peace of the world and to bring about a general disarmament.

That the covenant in its present form would fail to do that without being radically revised was the Senator's chief argument; he made five definite, constructive suggestions for its change.

1. That it be redrawn so as to remove general ambiguities.

The draft itself, the articles themselves, should answer as far as possible all questions. There is no court to pass upon them. They would have to be decided by the nine powers whose representatives compose the Executive Council. The people who are for this draft of a league and those who are against it differ about construction of nearly every article; and, not only that, but those who are for it differ among themselves, and those who are against it differ among themselves as to its construction. There will be differences arising out of that very porous instrument.

Mr. Taft said on the 7th of March: "Undoubtedly the covenant needs revision. It is not symmetrically arranged, its meaning has to be dug out, and the language is ponderous and in diplomatic patois."

2. That it be made clear by what vote, whether by a majority or a unanimous vote, decisions of the executive council should be reached.

There are so many places where it says that the executive council which is the real seat of authority, shall recommend or advise or propose measures, and it fails to say by what vote they shall do it.

Now, either there should be a clause in there saying "where not otherwise stated, the decision of the executive council shall be by a majority vote," or else it ought to be expressed in every article where they are called upon to make a recommendation or a proposal or a decision of any kind.

3. That there be a larger reservation of the Monroe Doctrine.

The Monroe Doctrine in its essence rests upon the proposition of separating the Americas from Europe in all matters political. I have therefore found it difficult to understand an argument that we preserve the Monroe Doctrine by extending it. The Monroe Doctrine was the invisible line that we put around us to exclude other nations from meddling in American affairs, and I have never been able to get it thru my head how you can preserve a fence by taking it down.

The Monroe Doctrine is the corollary of Washington's foreign policy. . . . It is not ephemeral because it rests on two permanent facts—human nature and geography.

They say that if we demand the exclusion of the Monroe Doctrine from the operation of the league they will demand compensation. Very well. Let them exclude us from meddling in Europe. That is not a burden that we are seeking to bear.

4. That domestic questions—such as immigration and the tariff—be expressly excluded.

The question of immigration must not be within the jurisdiction of the league at all. It lies at the foundation of national character and national well-being. There should be no possible jurisdiction over the power which defends this country from a flood of Japanese, Chinese and Hindu labor.

The tariff is involved in the article for the boycott. The coastwise trade is involved in Article XXI. I think we ought to settle our own import duties.

5. That clear provision for the termination of the League be inserted.

I have been surprised to hear in the Senate and elsewhere the statement that this was only a treaty and we could abrogate it by an act of Congress at any time, as we can under the decisions of the Supreme Court. Why, ladies and gentlemen, nothing could be worse than that. No greater misfortune could befall the peace of the world than to have a nation, especially a powerful nation, abrogate the treaty.

Senator Lodge in closing laid heavy

**SUCCESSOR TO ADMIRAL SIMS**

The commander of our naval forces in foreign waters is now to be Admiral Harry S. Knapp, who was military governor of Santo Domingo in 1917 and 1918 and has lately represented the United States in the inter-allied aerial conference in Paris.

emphasis on the serious obligations incurred by the United States in accepting the covenant of the League.

Article X pledges us to guarantee the political independence and the territorial integrity against external aggression of every nation a member of the league. That is every nation of the earth. We ask no guarantees; we have no endangered frontiers; but we are asked to guarantee the territorial integrity of every nation, practically, in the world—it will be when the league is completed.

**A FRENCH GOVERNOR FOR ALSACE LORRAINE**

M. Charles A. Jonnart, formerly Foreign Minister of France, has been appointed to govern the provinces that the war gave back to France. M. Jonnart has been governor of Algeria and he was the High Commissioner to Greece at the time of King Constantine's abdication.

Now, mark; a guarantee is never invoked except when force is needed. We, under that clause of the treaty have got to take our army and our navy and go to war with any country which attempts aggression upon the territorial integrity of another member of the league.

Guarantees must be fulfilled. They are sacred promises. If the United States agrees to Article X we must carry it out in letter and spirit.

I ask those—the fathers and the mothers, the sisters and wives and the sweethearts—whether they are ready yet to guarantee the political independence and territorial integrity of every nation on earth against external aggression, and to send the hope of their families, the hope of the nation, the best of your youth, forth into the world on that errand?

President Lowell's speech was chiefly in answer to specific criticisms of the covenant of the League, outlining first the minimum essentials of "an effective League of Nations to prevent war."

Such a league must forbid a resort to arms before submitting the question in dispute to a public trial, arbitration or inquiry of some kind; and probably it ought also to forbid a resort to arms after an award which is universally believed to be right and just. Such a delay before hostilities will not prevent all wars, but it will make them much less common, and it will wholly prevent a nation from deliberately planning a war, as Germany did, and seeking the advantage of surprise.

Obviously, the submission to arbitration must be compulsory. The country that goes to war before submitting its case to arbitration must be regarded as a criminal against mankind, and treated instantly as an outlaw.

The principle should apply not only to disputes among the members of the league, but also to dissensions between other nations not belonging to the league, because war, like fire, has a tendency to spread.

Altho the penalty against the aggressor is automatic in the sense that it does not depend upon the action of an international council, nevertheless such a council for purposes, not of command, but of consultation, is highly beneficial. It tends to remove friction by enabling nations to understand one another's point of view, and to reconcile or adjust differences before they reach an acute stage.

The suggestion made by Senator Lodge that the drafting of the covenant is ambiguous and faulty was likewise pointed out by President Lowell, who said:

This covenant is not perfect; it is a draft published for criticism and will receive plenty of it, and thru criticism some improvement also. But even when perfected it will not be perfect. Nothing human is perfect; still more, it will not satisfy everybody. In the nature of things it is an attempt to harmonize the views of many nations and of many people within each nation.

Senator Lodge in rebuttal answered two significant questions put to him by President Lowell.

If the covenant were amended as you wish would you vote for it?

Will you formulate and send to the proper quarters the amendments you wish made?

To the first question Senator Lodge answered

If this league is to be in such form that it will really promote peace, instead of breeding dissension and quarrels, as I believe it will, if it will be put in such shape that it will bring no injury or injustice to the United States, of course I will support it.

The second question gave him an opportunity to score an effective point against President Wilson's attitude in presenting the League covenant.

**GOVERNOR OF OUR LATEST COLONIES**

The Virgin Islands, or Danish West Indies, as they were called before the United States bought them from Denmark for \$25,000,000 on March 31, 1917, have an officer of the United States Navy as governor. Rear Admiral Joseph W. Oman, who was commandant of the Second Naval District during the war, has just been appointed governor of the islands to succeed Rear Admiral James H. Oliver, retired.

If the President had laid that draft before the Senate, as other Presidents have done; if he had said to the Senate: "I submit this draft to you for your advice, I hope for your approval, and for such suggestions as you may have to make," he would have had the amendments laid before him to present to the Peace Conference in Paris. The battle would have been more than half won by the mere submission.

**THE LEADER OF GERMAN PEACE DELEGATES**

Count von Brockdorff-Rantzau, Secretary of State for Foreign Affairs in the present German Government, is one of the new leaders who was also prominent under the Imperial Government. In 1907 he was appointed by the Kaiser Ambassador to Vienna.

CARRYING ON

**The Work of the Peace Congress** The President's first meeting with the Supreme Council of the Peace Congress after his return to Paris was on March 17. In addition to the Prime and Foreign Ministers of the great powers there were also present Marshal Foch, Field-Marshal Haig, General Diaz, and other Allied and American army and navy officers; and there was a long discussion of the military, naval and aerial terms to be imposed upon Germany in the Treaty of Peace. The reduction of the German forces which had been formerly agreed upon, as described last week, was approved by the President and was adopted. The next day it was decided that the Heligoland forts must be dismantled, and the Kiel Canal be opened to all nations in time of peace, on equal terms. The navigation of the River Rhine is to be internationalized, and placed under the control of an international commission, similar to that which has long had control of the Danube.

The question of the delimitation of the boundaries of Poland was also taken up, and it was proposed that in order to give that country an outlet

upon the sea the old Polish port of Danzig should be given to it with a "corridor" or strip of territory along the Vistula River, connecting that port with Poland proper. This strip would comprize territory largely inhabited by Poles. Such an arrangement would sever the Kingdom or State of Prussia into two parts, completely cutting off and isolating East Prussia, the original home of the Prussians, from the rest. It was therefore proposed that Prussia should have a right of way across the Polish "corridor" in order to maintain land connection between the two parts. It was also proposed by the Polish Commission that the 600 000 Protestant Poles in the Mazurian Lakes region of East Prussia should be permitted to decide by plebiscite whether to join Poland, which is chiefly Catholic, or to remain with Germany.

The Supreme Council also virtually decided that Germany must relinquish all her holdings in the Chinese province of Shan-tung; and that the treaty of 1839, fixing the boundaries between Belgium and Holland, must be revised. This revision is expected by Belgians to give to them some small but important strips of territory now held by Holland.

**Germany and the Peace Congress** Owing, presumably, to intimations that he would not be received or recognized by the American delegates, the German Government refrained from appointing Count von Bernstorff, formerly Ambassador at Washington, as a delegate to the Peace Congress. Instead, on March 12, the German Cabinet appointed Count von Brockdorff-Rantzau, the Foreign Minister, to lead the delegation, with five colleagues, to wit: Dr. Edward Davis, first President of the National Assembly; Herr Giesbertz, Prussian Minister of Posts and Telegraphs; Max Warburg, a merchant of Hamburg; Adolf Mueller, Minister to Switzerland, and Professor Schuecking, of Marburg University. These delegates will proceed to Paris at a date to be fixed in the near future, to listen without privilege of debate to the preliminary terms of peace as prescribed by the Peace Congress, and will then return to Berlin, to lay the treaty before the National Assembly for its acceptance.

Mathias Erzberger, the head of the German Armistice Commission, and a member of the Cabinet without a portfolio, declared at a great public meeting in Berlin on March 16 that Germany was under no obligation to pay indemnity for any act committed after her first offer of peace in December, 1916; that she had almost unlimited confidence in President Wilson; that she would refuse assent to any peace treaty which went beyond the bounds of his fourteen points; and that the only means of checking Bolshevism was for the Allies to abandon their severe policy toward Germany. Meantime on March 15 the British forces extended their occupation of German territory at Cologne, and the French at Mayence did the same, pushing their outposts into the environs of Frankfurt.

**The Crimes of Germany** A sub-committee of the Commission on Responsibility for the War has reported a formidable list of thirty-one different crimes which Germany and her allies are considered to have committed during the war. These comprize: Massacre of civilians; putting to death of hostages and torture of civilians; starvation of civilians; deportation of civilians; internment of civilians under brutal conditions; forced labor of civilians on military works; abduction of women and girls; usurpation of sovereignty during military occupation; conscription of soldiers among the inhabitants of occupied territory; pillage; theft of property; exaction of illegitimate tribute and requisitions; debasement of currency and issue of spurious currency; imposition of collective penalties; wanton devastation; bombardment of undefended places; wanton destruction of churches, schools, hospitals and historical monuments; destruction of non-warlike shipping without notice; destruction of fishing boats; destruction of relief ships; bombardment of hospitals; destruction of hospital ships; violation of Red Cross rules; use of poisonous gases in warfare; use of explosive or expanding bullets; directions to give no quarter; ill-treatment of prisoners; misuse of flags of truce; poisoning of wells. All these acts are violations of international law or of international agreements.

**The German Disturbances** Despite the confident report of Gustave Noske, the German Minister of Defense, on March 13, that the Spartan insurrection might be considered as suppressed, serious disturbances continued. The very next day there was

## TO DIRECT MILITARY AERONAUTICS

Brigadier General William Mitchell has been appointed successor to Major General Kenly as Director of Military Aeronautics in a sweeping reorganization of the Air Service under Major General Menoher. The Director of Military Aeronautics is now ranked as third assistant on the executive staff of the Air Service. All but two of the big aviation training fields in the United States have been ordered discontinued.

## THE GREAT WAR

**March 13**—President Wilson arrived in France. German delegates to Paris appointed.

**March 14**—President Wilson resumed work in Paris. Germany agreed to surrender ships for food.

**March 15**—Draft of Peace Treaty submitted to President Wilson. Austria voted for annexation to Germany.

**March 16**—Peace Congress considered amendments to Constitution of League of Nations. Riots in Berlin.

**March 17**—Allies extended area of occupation of Germany. Germany threatened to reject any but "Wilson peace."

**March 18**—Supreme Council decided to dismantle Heligoland forts and to internationalize Kiel Canal.

**March 19**—Lloyd George agreed to remain in Paris until Peace Treaty was completed. Bolsheviks menaced Odessa.

much fighting in the suburbs of Berlin. The Government reported its discovery that the Spartacans had put prisoners to atrocious torture, and retaliated by putting many Spartacan prisoners to death. Many Socialists of the "Independent" or "Red" faction, who were not actively engaging in the revolt, were arrested as rebels. Herr Noske reported to the National Assembly at Weimar that these non-combatant prisoners had approved and encouraged the "brigandage and atrocious practices" of those in arms. On March 17 he again announced the revolt had been definitely crushed. At the same time at Ruhr and elsewhere in the great industrial districts extensive strikes were apparently impending. When the new Prussian Diet met in Berlin on March 15 a strong cordon of troops was placed around the building to protect it from attack by the Spartacans, and all the members of the Diet, including the women delegates, were carefully searched for concealed weapons before they were permitted to enter.

**Food for Germany** Arrangements were finally agreed upon on March 15 for the supplying of Germany with food. A monthly ration of 370,000 tons of food was promised to Germany. In return she was to surrender to the Allies for their use about 700 ships, with a total tonnage of 3,500,000. Nine of the largest passenger ships, including the giant "Imperator" of 52,000 tons, were awarded to the United States, and will be used for the transportation of troops. Germany was also to place a large sum in gold in the National Bank of Belgium, as a guarantee. Thus \$35,000,000 was to be deposited within four days and \$55,000,000 more within ten days later. Germany is to pay for the food partly by freight hire accruing from the use of her shipping, partly from credits in neutral countries, partly from exports which she is permitted to make, partly from the sale of foreign securities held in Germany, and partly, if necessary, from her gold reserve.

**Cost of the War to France** An impressive idea of the money cost of the war to France apart from the loss and destruction of property, was given by M. Klotz, the Minister of Finance, in his budget speech on March 13. More than \$7,800,000,000 was spent for artillery, and more than \$2,225,000,000 for the pay of soldiers. The total expenses of the army department were \$23,200,000,000, and of the navy department \$1,125,000,000. The yearly budget would now, he said, be between three and four times greater than before the war.

**Affairs in Russia** Hostilities in Russia continue, with much heavier losses to the Bolsheviks than to the Russian Democrats and the Allies. It was announced that down to March 13, American casualties aggregated as follows: Killed in action, 75; died of wounds, 19; died of disease, 69; missing, 36; wounded, 252; total, 451. During the same period at least 500

ANY ONE SEEN ANYTHING OF A DARKISH SORT OF HORSE ANYWHERE AROUND?

Bolshevists are believed to have been killed outright. Nevertheless the Bolsheviks reported great gains of territory, and boasted that they would be in Archangel by May 1. A fierce attack of the Bolsheviks on March 14, in an attempt to cut the line of communication between the Vaga and Dwina fronts of the Allies, was repulsed by American troops, with heavy losses to the Bolsheviks. In Siberia, also, the Bolsheviks suffered loss, being driven out of Ufa on March 13, a place which they had held since January 25.

Meanwhile the Allied Food Commission in Northern Russia reports imminent danger of famine thruout much of Russia, and declares that "the outside world, particularly America, must be prepared to feed most of the Russian population for at least six months after peace is restored."

The Russian Committee in Paris, composed of representatives of the various governments in that country opposing the Bolsheviks, have renewed their appeals to the Peace Congress for recognition, and their request that no questions relating to the boundaries of Russia as they existed before the war,

excepting Poland, should be determined by the Congress without giving the Russian people a chance to be heard.

**Poland and Her Neighbors** Major General Henrys, a distinguished officer of the French army, was sent on March 14 to Poland, by the Supreme Council, to be a military aid to General Pilsudski, Commander-in-Chief of the Polish army. Meantime conflicts between Poland and neighboring states continue. The Ukrainians on March 17 entered Przemyśl, driving out the Poles, and advanced to the suburbs of Lemberg. The Prussians protested against the plans of the Allies with relation to the Polish boundaries, and on March 13 were reported to have broken off negotiations. At the north the Letts, Lithuanians and Esthonians made great gains against the Russian Bolsheviks in the Baltic Provinces.

**British Air Service** A striking illustration of the fulfilment of the poet's vision of "the nations' airy navies" was afforded in the British Parliament on March 13, when General

Seeley introduced a bill appropriating \$112,000,000 for aviation service for the coming year, saying that if the war had continued the request would have been for three times as much. It was planned to maintain an aerial service of 79,670 men. During the war 8000 enemy aeroplanes were destroyed by the British, and 2800 British planes were missing. At the close of hostilities British factories were turning out 1000 aeroplanes a week, and the Government had 200 squadrons of them in commission.

Great Britain is again threatened with serious industrial and economic troubles. The "Triple Alliance" of railway men, transport workers and miners will decide before the end of this month whether to accept mediation in the controversies with capitalists, or to stick to the demand for nationalization of those industries even at cost of a general strike. The railway men want the increase of wages in war time permanently confirmed, shorter hours of labor, a fortnight's vacation yearly with full pay, and an equal voice with the companies in the management of the roads. The transport workers want shorter hours without reduction of pay, and the miners seek similar advantages. All desire nationalization.

Meantime Sir Eric Geddes, Minister without Portfolio, reports that save for the street railways the transportation system of the United Kingdom is badly demoralized. Railroads and canals were being operated at a loss. Roads which cost the country \$100,000,000 a year were earning practically no income. The entire railway system was costing the country a loss of more than \$1,250,000 a day, and the Government was pledged to continue its guarantee to the roads for two years more.

The Last Loan's Secretary of the Treasury Glass has announced that the Fifth Liberty Loan drive, to be known as the Victory Loan, will open on Monday, April 21, and that the canvass for subscriptions will last for three weeks. The amount of the loan and the rate of interest have not yet been announced but the character of the loan is changed from the long-term bonds of previous Liberty Loan issues to short-term notes. Since the rate of interest on bonds is limited by law to 4½ per cent and since they would be subject to supertaxes and profit taxes, the flotation of the Victory Loan in short-term notes is planned by the Secretary of the Treasury to make it a more attractive proposal to investors.

Under the Victory Loan act of March 3, 1919, one of the last bills passed by the Sixty-fifth Congress, Secretary Glass was given authority to issue short term notes to the extent of not over \$7,000,000,000 and it was left to his discretion to fix the conditions and the rate of interest. In announcing the Victory Loan, Secretary Glass gave particular emphasis to the need of the people's support:

It would be a most unfortunate occur-

(Harris & Lucero, from Paul Thompson)

**FLOOR LEADER OF THE NEXT HOUSE**  
Representative Frank W. Mondell, of Wyoming, elected by the Republican caucus floor leader of the House of Representatives in the Sixty-sixth Congress. He has been a member of the House for twenty years.

rence if the people of the United States failed to take these notes, thus placing the burden of subscriptions on the banks. The business of the country looks to the banking system for credit wherewith to carry on its operations, and if this credit is absorbed to a large extent by the purchase of Government securities, there will be many limitations placed upon the supply of credit for business purposes.

Our merchants and manufacturers need ample credit for setting the wheels of industry in motion for peace time production and distribution, and the wage earner is directly interested in seeing that these wheels are kept moving at a normal rate, in order that full employment at good wages may continue.

I therefore ask the American people once again to give their support to their Government in order that this great loan may be made an overwhelming success by the widest possible distribution.

**Crippled by Congress** The harm that will be worked by the lack of legislation in the closing days of the Sixty-fifth Congress became evident first in the plight of the railroads, forced to borrow money under difficult conditions for their maintenance. It has extended now to the work of the United States Employment Service, which for lack of funds was forced on March 22 to discontinue a large

part of its work, closing all but two of its twenty seven branch offices in Greater New York, for instance. The New York service placed about 100,000 persons in jobs during the last two months. The record of the employment service thruout the country last year showed that jobs had been found for 2,400,000 persons at a cost to the Government of \$1.33 each.

When it was realized that the Congressional failure to supply funds would cut off 85 per cent of the Government's ability to help discharged soldiers and sailors find jobs, private and local agencies were asked to help alleviate the danger of an unemployment crisis by carrying on the United States Employment Service's work. The Council of National Defense stepped into the breach with the formation of an emergency committee on employment for soldiers and sailors. The chairman of this committee, Colonel Arthur Woods, special assistant to the Secretary of War, sent out an appeal to mayors thruout the country asking civic coöperation in placing discharged soldiers in jobs and offering any possible aid on the part of the War Department. On the committee also are Franklin D. Roosevelt, Assistant Secretary of the Navy; Chairman Hurley, of the Shipping Board; Nathan A. Smyth, of the Labor Department; Assistant Secretary Christie, of the Department of Agriculture; Chief B. S. Cutler, of the Bureau of Foreign and Domestic Commerce; Matthew Wool, of the American Federation of Labor; Elliot Goodwin, General Secretary of the Chamber of Commerce of the United States, and other men of importance in the employment field. The emergency committee will try to arrange for the continuance of the employment bureaus especially valuable in placing returned soldiers and sailors.

The War Risk Bureau, too, is threatened with paralysis because Congress failed to appropriate the funds necessary for its maintenance.

The General Deficiency bill carried an item of \$4,500,000 to meet current expenses of the War Risk Bureau from March 1 to July 1. Without this money there are no funds to make the allowances to families and other dependents of soldiers, sailors and marines, or even to continue the salaries of the clerical force of the bureau. Secretary of the Treasury Glass has asked President Wilson to set aside \$3,000,000 from his War Emergency Fund for the immediate continuance of the War Risk Bureau's work.

Partizan Politics "There's so much bad in the best of 'em, and so much good in the worst of 'em" that it is very difficult to get a clear-cut idea of the issues that divide them nowadays. The party chairmen made a definite attempt in speeches on March 7 and March 15 respectively when they sounded the 1920 keynote. But whether the people accept these definitions of the "keynote" or not remains to be seen. Chairman Will H. Hays formally opened the Republican campaign in St.

Harding in Brooklyn Daily Eagle

SEEIN' THINGS

Paul, Minnesota, on March 7 with the statement:

While we seek earnestly and prayerfully for methods lessening future wars and will go far indeed in an honest effort to that end, we will accept no indefinite internationalization as a substitute for fervent American nationalism.

Senator Frank B. Kellogg endorsed heartily the League of Nations principle but urged ex-President Taft's proposals for such a League instead of the covenant drawn up at Paris.

The League of Nations was announced as the 1920 issue of the Democratic campaign by Chairman Homer S. Cummings and by Secretary of the Navy Daniels at a rally in New York on March 15. Chairman Cummings poured contempt on the obstruction offered by Republican senators to the Administration program. "I tremble to think," he said, "what would happen to the Lord's Prayer if it were submitted to the Senate for ratification."

In the organization of the next Congress steam-roller tactics seem to have bound up the Republican majority to its least progressive element. Representative James R. Mann, of Illinois, defeated as leader of the House, is virtually head of the Republican forces there. By invoking the principle of seniority the Old Guard puts its supporters in most of the committee chairmanships. The floor leader, Representative Frank W. Mondell, of Wyoming, is also classed as a reactionary.

The downward trend of prices **Straws** was one of the outstanding conditions of business and industrial readjustment as shown in the answers to a questionnaire recently sent out by the Federal Reserve Board to manufacturers and dealers.

A typical example of the reports from industrial districts is shown in the following questions and classified replies from business concerns in the Philadelphia Federal Reserve district:

Are the quantities of materials, sup-

plies and goods as shown by your last inventory larger than usual? Yes, 114; no, 129.

Are they principally for war or civilian businesses? War work, 20; civilian business, 221.

Have the prices of your product been lower recently from the high prices prevailing during the war? Yes, 148; no, 93.

Is labor more abundant? Yes, 225; no, 21.

Is labor less restless? Yes, 147; no, 91.

Is there less reemployment? Yes, 106; no, 62.

Is labor more efficient? Yes, 90; no, 142.

Has there been any lowering of wages? Yes, 17; no, 228.

Are you paying less for raw materials? Yes, 131; no, 89.

Is the supply adequate? Yes, 212; no, 16.

Do you anticipate making any extensions or repairs to your plants which will necessitate the purchase of building material or equipment? Yes, 42; no, 203.

Have you a satisfactory amount of orders on hand? Yes, 81; no, 150.

**No More Latin, No More Greek** The trend toward reconstruction and reform in these after-war days has made its mark on even the traditional strongholds of the college curriculum. Yale University announced

on March 18 that it had done away with Latin as a required subject, either for entrance or for a college degree. Courses in American history and government, on the other hand, are henceforth to be required of all Yale undergraduates who cannot give satisfactory evidence of adequate knowledge of these subjects.

The meeting of the Yale Corporation which adopted these changes voted also to increase the salaries of instructors 25 per cent and to give a \$500 increase to the salaries of assistant professors. Under the new provision instructors in Yale University receive \$1250 the first year. The Yale Corporation also decided that greater attention should be paid by the university to matters connected with student extra curriculum activities, morale and discipline.

At Princeton University on March 18 it was announced that Greek will no longer be an entrance requirement, tho Latin will be retained and Greek will still be offered as an undergraduate elective course.

**War Veterans' Organization** About five hundred officers and enlisted men of the American Expeditionary Forces met in Paris on March 15 to form an association of veterans of the war similar to the Grand Army of the Republic which was formed after the Civil War in the United States. At a second meeting on March 17 the organization was named the American Legion and a tentative constitution was adopted. A committee was appointed to confer with British and French soldiers, with a view to international organization, and it was made plain that one of the objects of the organization was to perpetuate the peace of the world. It was decided to call a national convention in the United States, at some place yet to be selected, on November 11 next, the anniversary of the armistice, by which time it is hoped that the American forces will be demobilized.

International Film

#### A NEW KIND OF SHIP BUILDING—"PUFFED BRICK"

At a San Francisco yard these two 1500 ton oil tankers are being made of "puffed brick" ground into cement and poured into standardized molds. The "Faith," our first concrete ship, proved by successful voyages the practical value of the theory of "stone ships." This new process is intended to improve upon the "Faith" by a gain of about 40 per cent in the lightness of the ship's walls. "Puffed brick" is made like ordinary brick of a peculiar clay containing a low percentage of silica. Subjected to intense heat, the brick puffs like popcorn. The product looks like and is as light as cork. After having been puffed the bricks are ground to dust and mixt with cement. The ship's forms are built in standardized sections and hinged with bolts so they can be forced up and put out of the way when the concrete hardens. After launching, these forms can be put back in place, steel rods installed and in a few days the pouring of another ship can be begun. The two concrete ships building on Government Island, off San Francisco, will be launched broadside to the water, in order to minimize the strain.

Amid the red turmoil of war the Czecho-Slovak Republic was proclaimed without bloodshed or the clash of arms. The very identity of that event emphasized its dramatic quality. The Viceroy in ancient Prague was notified, at an appointed moment, that the Czechs no longer acknowledged the dominion of his monarch, and that the Slovaks of Hungary had repudiated the Hungarian crown; and then palaces and cathedrals and dwellings blossomed abruptly with the flags of the Entente and

with the Star Spangled Banner. Streets and bridges and the seventy towers of the city rang with cheers, and from the long hills sloping to the Moldau the names of Masaryk and Wilson echoed and reëchoed. Thus was a new state erected in central Europe, while around it fell the fragments of the hotch-potch Austro-Hungarian autocracy.

How Czecho-Slovak armies were formed in Allied countries, from nationals originally conscripted into Austro-Hungarian armies, is by this time well known. How Czecho-Slovaks abroad, everywhere, at once began an unrelenting fight against Austria-Hun-

# THE BIRTH OF THE CZECHO-SLOVAK REPUBLIC

BY CHARLES PERGLER

*The new republic aims to include all the shaded area, where the Czech language or the kindred Slovak is chiefly spoken. This territory comprises Bohemia, Moravia and part of Silesia from Austria and Slovakia from Hungary*

gary is also well known. But not so familiar is the struggle of the Czecho-Slovaks at home, especially their opposition to the Austro-Hungarian Government, even at a time when German arms appeared victorious. Yet from the first day of August, 1914, to the days which witnessed the final disruption of Austria-Hungary the Czecho-Slovak peoples waged bitter warfare against the Dual Empire, their age-long oppressor. During the first three years of the conflict the heavy hand of Teutonic and Magyar despotism prevented expression of the nation's opinion. Austrian and Magyar jails were crowded with Czecho-Slovak patriots, and executions for political offenses were the order of the day. But as soon as it dawned on the Central Powers that the war might not end with a complete victory for them, the nation was able to breathe again; and at once it gave to the world a series of manifestoes which demonstrated clearly that the chasm between the Austro-Hungarian rulers and the Czecho-Slovak nation was unbridgable.

The first of these was a declaration of 150 Czech authors and artists in April, 1917, calling upon the political representatives of the nation in the Austrian Parliament to stand steadfastly for the program of complete independence. This was followed, on May 30, 1917, by a declaration of the Czech Union of Deputies in the Parliament that nothing short of independence would satisfy their people. During the summer of 1918 these pronouncements reached their height in strength and audacity. Thus on July 22, 1918, Dr. Stransky declared in the Austrian Parliament:

We regard Austria as a century-old crime against the liberties of humanity. The removal of this crime is not a question for us. It is our highest national duty to betray

Austria whenever and wherever we can. We shall hate Austria for all eternity. We shall fight her, and, God willing, we shall in the end smash her to pieces.

In October, 1918, it became clear that the last hour of the Dual Monarchy had struck. On October 2, Mr. Stanek, President of the Czech Union of Deputies, declared on the floor of the Austrian Parliament that the sympathies of the whole Czecho-Slovak nation were with the Czech army on the side of the Entente, and that Austria must negotiate with the repre-

sentatives of this army and not with the Czech leaders in Bohemia. Soon thereafter the Czechs left the Reichsrat in a body and severed all ties with Austria-Hungary. On October 14, 1918, basing its action upon these declarations, and upon previous proclamations and agreements of the Allies, the Czecho-Slovak National Council, with headquarters in Paris, constituted itself a provisional government, and again declared formally that Czecho-Slovaks had thrown off the Austro-Hungarian yoke.

*Prague, the principal city of Bohemia, has been selected by the Czecho-Slovaks as the capital of their new republic*

28. On that day Svehla, Rasin, Soukup and Stribny, members of the National Council of Prague, called upon the Viceroy, Count Coudenhove, and informed him that Austrian rule in Bohemia had come to an end, and that the governing body from that time on was the National Council, which they represented. At the same time, control of the police was assumed by the Council, and Dr. Scheiner, president of the famous Sokol Societies, was appointed commandant of the city of Prague.

There were tremendous demonstrations in the streets of the capital, but there was no violence. When the crowds appeared before the German theater, the leaders declared from the stairway of the edifice that the Germans need not fear reprisals, but that they could continue the performance unmolested. For once the Germans understood the magnanimity of their opponents, and greeted the statement with cheers.

There was no time for the election of a National Assembly; but on the basis of the number of votes polled by the various political parties in the last election of the Austrian Reichsrat, all the political parties sent a proportionate number of representatives to this body, which almost automatically became the supreme legislative organ of the republic. In the cabinet are represented all parties, from Social Democrats on the one side, to the most conservative Catholics on the other.

The first session of the National Assembly took place on November 14, in the ancient building of the Bohemian Diet, with an attendance of 249 members. The session was opened by Dr. Kramar, who, among enthusiastic applause, thanked the leaders abroad, led by Professor Masaryk, for their work in behalf of Czecho-Slovak independence. Dr. Kramar, who is Prime

Minister in the new cabinet, especially thanked the Czecho-Slovak armies in France, Italy and Russia for their heroic conduct. He expressed profound thanks to America, France, Great Britain and Italy for their favorable attitude and the practical help they had extended to the Czecho-Slovaks, and he dwelt with emphasis upon the friendship existing between the Czecho-Slovaks, Poles and Jugoslavs. The Russians, he continued, had the sympathy of the Czecho-Slovak people in their fortune and misfortune as well.

The Premier assured the Germans that Czecho-Slovaks would be just to all minorities in the state. Finally, he declared, that the Czecho-Slovak state would be an independent republic, with Thomas G. Masaryk as its first president. This declaration was unanimously sanctioned by the Assembly, and thereupon the deputies took their oath of fealty and allegiance.

One of the speakers at this session was Dr. Bela, who voiced the sentiment of the Slovak branch of the nation, declaring in its name that the Slovaks were at one with the Czechs, that there was no Slovak liberty except it be Czecho-Slovak liberty, and that the Slovaks had forever severed their connection with Hungary.

The very first act of the National Council was a proclamation to the Czecho-Slovak people, which is worth recording here:

Your long cherished dream has become a reality. The Czecho-Slovak state has today become an equal of other European states. The National Council, clothed with the confidence of the whole Czecho-Slovak people, took over the Government of your state as the only authorized and responsible factor.

The Czecho-Slovak people will henceforward act in every respect as a free member of the great family of other independent nations. New deeds are inaugurating a new history for our people.

You will not disappoint the confidence imposed in you by the whole world, which is blessing your splendid deeds and the immortal bravery of our gallant armies on the western front, in Italy and in Siberia. The whole world is watching your entry into a new life, and you must therefore keep up the high moral standard of your army. Never forget to obey national discipline, and remember that as citizens of a new state you have not only your rights, but also your duties and obligations.

At the beginning of a new era the National Council, henceforward your Government, desires that your behavior and joy should meet the dignity of the occasion. Our liberators, Masaryk and Wilson, must not be disappointed in their belief that they won liberty for a people able to govern themselves.

No act of violence must disturb the present glorious time. Nobody must commit any act which would defile our revolution. Every one must respect his neighbor's rights. The liberty of persons and property must not be interfered with. Comply exclusively with the orders issued by us.

The first legislative act of the new government declared that until further action all laws theretofore in force would remain in effect. This was to insure continuity of administration. Since then the Assembly has passed a law establishing the eight-hour day throughout the Republic and abolishing all titles of nobility. It is worth noting that eight members of the Assembly are women, among them Dr. Alice Masaryk, daughter of the President, who upon the outbreak of the war had been imprisoned in an Austrian jail for nine months.

There can be little doubt that the government of the Czecho-Slovaks is the most stable in mid-Europe, well organized and democratic. Thanks to its central position, its rich resources, the people's sense for organized action, and their warm gratitude to the Allies, the new state can be of genuine service to the cause of democracy throughout Europe.

# THE GREATEST PORT IN THE WORLD

A few weeks ago the New York ferries were paralyzed when a strike of sixteen thousand marine workers stopped the transportation of freight or passengers thru the harbor. As an incidental piece of news there appeared in the papers of March 5 the following:

No food will reach this city over the fourteen railroads with Jersey termini. There will be no rerouting on these lines back to the Poughkeepsie Bridge for passage down the east side of the Hudson over the New York Central's lines, it was announced at the office of Regional Director A. H. Smith.

The map accompanying this article shows that all the trunk lines, other than the New York Central, reach Manhattan by ferry or car float. In Ernest Poole's "The Harbor," Dillon, the engineer, having some imagination, looks down upon the harbor of New York and sees its tremendous possibilities and its present imperfections. It is and ever will be the greatest port in the world. But as with everything else in America, we progress cataclysmically. The meter to which we set our thinking is catastrophic. Accordingly, we wait until there is a tie-up of the harbor of New York, or the small matter of a great European war, before we begin to plan a modern and efficiently working port. To the credit of New York and New Jersey let it

be said that at least as early as 1917 the two states had arrived at the common determination to make a scientific study of the entire port problem. An authority on current historical events says that is "the greatest single investigation of any single port problem" and "includes all the recognized phases of the port and terminal problem." The New York, New Jersey Port and Harbor Development Commission told the legislatures of both states frankly that the data available could not be obtained at a cost of less than four hundred thousand dollars, and that the work would require at least two years. The appropriations for the first year have been made by each state, and at the present writing the Governors and the legislative representatives of both states, it seems likely, will approve the continuance of the work. The report of the commission will go into every phase of the port problem, will give the costs of operation, the methods of operation, and will lay out a "comprehensive plan." This plan will be forward looking enough to provide at least for the next fifty years.

But the problem is a matter of *legal* organization. It presents one of the most interesting legal problems facing the modern bar. The Port of New York lies in two states, each a sovereign in its own right. Traffic between the two states is interstate commerce under the control of another sovereign, the Fed-

BY JULIUS HENRY COHEN

eral Government. Every modern port has a single port authority. How shall we bring about a single port authority of New York? New York and New Jersey were not always friends. Prior to the negotiations of the Treaty of 1834, there was a good sized row between the two states as to the terri-

on the map. Within this district, as a regulatory and administrative agency of the two states, there is to be erected the Port of New York Authority, which is to function as "a body corporate and politic." It is to be made up of six commissioners, three from the State of New York and three from the State of New Jersey. At least two from New York are to be resident voters of the City of New York, and at least two from New Jersey are to be resident voters of New Jersey. The Port Authority will have power to purchase, construct, lease or operate any transportation or terminal facility within the district, and for that purpose to own real or personal property and to borrow money and secure the same by bonds or by mortgages upon the property held or to be held by it. *It may not pledge the credit of either state except by and with the authority of the legislature thereof.* It may be asked, How is the money to be raised for the purpose of making the great developments at the port? Terminal and transportation facilities of the kind contemplated for the improvement of the Port of New York should, in the main, be "self-supporting enterprises," and in the modern conception should be publicly controlled if operating under a franchise from the state. Assuming the self-sup-

torial dividing lines. Charles II, in 1664, granted to James, Duke of York, who in turn granted to Lord Berkeley and Sir George Carteret the territory now known as the State of New Jersey, but bounded it on the east "by the main sea, and part of Hudson's river," and the New York lawyers of the early nineteenth century contended that this gave to New York the whole of the Hudson River up to low water mark on the westerly shore. In 1834 the controversy was settled by the so-called New York-New Jersey Treaty, approved by the Congress of the United States, by which (submarines having not yet been invented) title to the land under water was—speaking roughly—equally divided between New York and New Jersey, while jurisdiction for quarantine laws and other purposes was vested in New York, up to low water mark on the New Jersey shore.

Taking this treaty as the basis, the Bi-State Port Commission has now presented for public discussion a proposed agreement modifying and amending the Treaty of 1834 in the following respects: First, the two states are to pledge "faithful coöperation in the future planning and development of the port of New York, holding in high trust for the benefit of the nation the special blessings and natural advantages thereof." To this end they agree upon a "Port of New York District," which is embraced within the territory indicated

porting character of any enterprise, ordinarily the municipality would borrow the money with which to construct the facility. In the City of New York the borrowing capacity of the city is limited to 10 per cent of its total assessed valuation. This is what is known as the "constitutional debt limit."

New York City is like the old lady who lived in a shoe; she has so many children she doesn't know what to do. She has to spend millions for schools, millions for subways, millions for water supply, millions for docks and ferries, and all the children come crying for shoes at the same time. Unlike the smaller ports, it is not able to concentrate in any one year wholly upon port improvements. What is true of New York City is also true of the other municipalities within the port district. The Port Authority, therefore, offers the opportunity to the municipalities, thru coöperation, to secure the great improvements necessary. The careful survey made by the New York, New Jersey Port Commission will furnish the "economic proof" of the potentially self-supporting character of port enterprises and it is confidently believed that upon the presentation of such proof capital will be made available with which to build and finance such enterprises.

Besides, once the comprehensive plan is laid down, private owners will themselves go [Continued on page 449]

# BON VOYAGE

BY MAY PRESTON SLOSSON

*O stars, beam kindly on my lad  
A sailing on the sea,  
Thru happy nights serene and glad  
Guiding him back to me.  
O sea winds sweetly, softly blow  
Across a quiet sea,*

*To kiss his cheek and whisper low  
A little word from me.  
Impatient tides, that pace the strand,  
O wide and sundering sea,  
A pathway make from that far land,  
Leading him home to me.*

## SATISFYING OLD SAM ADAMS

*Dr. Barton—who is pastor of the First Congregational Church of Oak Park, Illinois, and the author of some fifty books, chiefly on historical and religious subjects—wraps up in a readable bit of history here several timely comments pertinent to present-day discussion of the proposed League of Nations*

BY WILLIAM E. BARTON

IN 1776 there was an alliance of thirteen small states, who fought a German king then reigning in Great Britain, in order to make one corner of the world safe for democracy. That war came to a successful termination, and then the question became a pressing one whether democracy was safe for the world. For several years there was a situation closely akin to anarchy. A Revolutionary general proposed that the army become Bolsheviki and march to Philadelphia and attack Congress; and Colonel Loammi Baldwin stopped discovering his famous apple long enough to head his troops and prevent a rebellion at Concord, just where the Colonial troops had met the British at the old bridge. After several years of uncertainty and near-anarchy, it was decided to try the experiment of creating a league of thirteen small nations, banded together to preserve peace and promote the common welfare. In order to secure these ends, the Federal Constitution was prepared and submitted to the States; the same instrument which constitutes the model for the proposed League of Nations.

If we take a seat in the gallery and look down on the Constitutional Convention (from whose sittings, however, we should have been excluded had we been living then) we shall be impressed by the dignity and high character of the men who compose it. Washington was there, and Franklin, eighty-one years of age, had returned from France with high honor and been made "president" of the republic of Pennsylvania. James Madison and Alexander Hamilton were there, and did more than any other two men, except possibly James Wilson, to give us our constitution. There were fifty-five men, all men in high standing, and of them twenty-nine were university men.

But some men were absent who might well have been there. Thomas Jefferson, who wrote the Declaration of Independence, and John Adams, who

secured its adoption in a three days' debate, were both in Europe, and returned each to sit as president of the new League of Nations, and to die on the same day, just fifty years after the adoption of the Declaration which made America safe for democracy but did not make democracy safe for America. Samuel Adams ought to have been there, but he did not believe in it. Patrick Henry ought to have been there, and so ought Light Horse Harry Lee, but they both believed that it was dangerous for Virginia to let New England tell her what to do. Alexander Hamilton was there, but New York saw to it that his intrepid spirit was chained with a ball on each leg, for his two associates were both reactionary men, determined that New York should not go one inch farther into such a league than should appear to her own advantage; so Hamilton was never able to cast the united vote of his state for any constructive measure while discussion was in progress. That was why Hamilton did not exert a larger influence in the convention; he was too great a man to be a fit representative of his state.

The Constitutional Convention met in Independence Hall, with George Washington in the chair. The meetings were held in secret, and what was done was not revealed for fifty years, when the journals kept by James Madison were published. It is well that the people did not know from day to day what was happening. It is well that the three great states of Massachusetts, New York and Virginia did not know how their precious liberties were being tampered with, or they might have called their delegates home. It was felt by the convention that if the discussions were secret, the delegates could wrangle with perfect freedom, and if they came finally to agreement the thirteen states would have only the agreement to consider and not any of the material of the debate. That was fortunate. If the thirteen states, and especially the three or four largest ones, had been able to fling into the faces of their returning delegates some of the things which they had said on the floor, saying to them, "Why did you vote for an instrument of which you yourself said this?" the thirteen colonies might have

gone to the how-wows and the Bolsheviki.

Finally, the Constitution was adopted by the convention, and submitted to the thirteen states.

And they all saw what a noble instrument it was, and hastened to adopt it?

Not quite in that fashion.

But the great states were first to see how great an instrument it was?

Not exactly.

When George Washington went back to Virginia and submitted the fruit of his toil, Patrick Henry rose in heat and shouted, "Even from the man who saved us by his valor, I will demand a reason for his conduct. Why does this instrument say, 'We, the people'? Why does it not say, 'We, the states'?" And Patrick Henry was not alone in his demand.

How did the Constitution of the United States get itself adopted? On its merits? Well, hardly. Its adoption was the result of a number of compromises and of sops thrown to Cerebus.

First of all, the favor of the Southern states was secured by giving them more than their share of delegates in Congress. They were permitted representation not only on their free citizens, but a representation, in reduced proportion, on their slaves. That insured the favor of the Carolinas and Georgia, and Virginia acted as a kind of stakeholder in that arrangement; for Virginia, while a slave state, was represented in the convention by men who earnestly desired the end of slavery. The three states south of Virginia were determined never to accept the Constitution unless they secured representation for their slaves, and without those three states the Constitution could not have been adopted. So they were first won over by this compromise. Five slaves were permitted to count as many as three white men, and Georgia and the Carolinas became advocates of the Constitution.

The next thing was a bargain between New England and the South by which the new Federal Government might make trade regulations for the entire country in exchange for permission to keep the slave trade going till 1808. It went hard with some of the states to give up the right to impose import duties on shipments from

other states. New York was determined to make every Connecticut farmer pay import duties on every dozen eggs he brought to the city to sell, and Connecticut retaliated by refusing to ship any firewood to New York. The privilege of having little scraps like this was very precious to the thirteen free and mighty independent states, and this mean compromise was adopted to make it possible for the National Government to take over commerce regulations. To her everlasting honor, Virginia voted against the compromise, and did it on the ground of the iniquity of the slave trade. It is almost the only large-minded and righteous act of any of the greater states in the convention. George Mason said, "Every master of slaves is a petty tyrant. They bring the judgment of heaven on a country. As nations cannot be rewarded or punished in the next world, they must be in this. By an inevitable chain of cause and effect, Providence punished national sins with national calamities." That was what Virginia said about slavery in 1787. But New England and the far South made the bargain, and it went thru against the protest of Virginia. The convention hoped that in twenty years slavery itself would end.

But still the Constitution could hardly have been carried. And so an arrangement was made to secure the favor of the smaller states by giving them equal representation in the Senate with the larger states and making legislation impossible without concurrent action of both bodies. That bought over Rhode Island and Delaware and other small states (tho Rhode Island backed out of the bargain), and without this nothing could have been accomplished. For our noble Constitution could not have been adopted by the far-seeking and unselfish leadership of the great states. All the states, large and small, were too petty, too jealous, too selfish, too prone to ask how their local interests would be affected.

So the proposed Constitution was submitted first of all to Congress. Whose voice was first raised regarding it? That of Richard Henry Lee, who eleven years before had moved the adoption of the Declaration of Independence. Did he move to adopt the Constitution? He did not. He organized the forces to oppose it. Who stood next to him? Nathan Dane, the able leader of the delegation from Massachusetts. And who next? The solid delegation from the great State of New York. They were not going to have any league of nations.

For eight days the three great states of New York, Massachusetts and Virginia tried to obstruct the measure, and they were past masters in all the arts of obstruction. But at length the Congressional vote was taken and the Con-

stitution was transmitted to the several states.

Pennsylvania was first to approve it for submission to the vote for a Constitutional convention. She carried it by a vote of 45 to 19 in her Legislature, which had but one house. As 47 were necessary to make a quorum, and the minority determined to defeat the Constitution by staying away, two members of the minority were taken violently from their rooms and forcibly held in their seats in the Legislature, where, muttering and using bad language, they were compelled to sit during the brief space of time required

And how was the new government to work? There would have to be a president, doubtless; and what was a president but a puppet king?

If one of the states got into trouble must another state get her out? If Rhode Island continued to muddle matters as she always had done, must Massachusetts stand responsible? If Delaware went to war must New York send soldiers to defend her?

Pennsylvania had been first to approve the Constitution for submission to a convention. But it was done, as will be remembered, against the protest of two gentlemen held forcibly in their seats and fifteen others locked in their rooms and refusing to come out and vote. These protestants organized a vigorous opposition, and Richard Henry Lee, of Virginia, became the leader of it; for Pennsylvania would be the first state whose convention would vote. Then rose James Wilson, whom we have almost forgotten, and met the filibustering and obstructive measures with calm reason and skilful parliamentary procedure. While Pennsylvania was held up in this fashion Delaware hurried a vote and approved the Constitution, and New Jersey followed; but not till Pennsylvania, forced to a vote, adopted the Constitution by a two-thirds vote of 46 to 23. Only nine states out of the thirteen were needed, and one-third of them approved in December, 1787.

To be sure, James Wilson was hanged and burned in effigy for what he did, and the almanac for 1788, containing the text of the new Constitution, was publicly cursed and burned with due ceremony in divers and sundry places in this free and enlightened land.

Georgia, already committed to the measure by her slave representation and the privilege of importing negroes for twenty

years, ratified the Constitution on January 2, and Connecticut, grateful that New York could not tax her potatoes and that she had as many senators as Massachusetts, followed just a week later.

Massachusetts was the first of the large states to come in. She came with great travail of soul! In her constitutional convention were, among others, twenty-four ministers, and to their everlasting honor they were among the most intelligent and progressive men there. But it is doubtful how the matter would have gone had not old Sam Adams changed his mind. He sat for three weeks in the convention and never opened his mouth, and when he finally spoke it was to utter three words, "I am satisfied." On February 6, 1788, Massachusetts ratified the Constitution by a very narrow vote of 187 to 168, becoming the sixth state to ratify.

Maryland came in on April 28, and New Hampshire's convention met, but timidly ad- [Continued on page 453]

Darling in New York Tribune

Inspecting the new baby

You can't always tell, tho. Our forefathers said the same thing when Uncle Sam was born

for the vote, which went thru, 45 to 2. In this dignified and far-visioned manner did the first State Legislature go on record in favor of the new league of nations.

Then followed stump speeches, pamphlets, caricatures and vilification, which is more instructive than edifying to remember. What need had the Thirteen Colonies for a new Constitution? Were not the Articles of Confederation good enough for us? Had we not under them whipped Great Britain? And who were these men who were trying to cut the Thirteen Colonies loose from their well known policy and send them to certain wreck in their folly? Washington—who was Washington? A good general, maybe, but what did he know about politics? There were not lacking those who openly denounced him as an old fool. As for Hamilton, he was a believer in monarchy anyway. Franklin was an old dotard, who had come back from France to bring us into bondage to European ideals.

# THE NEW BOOKS

## Modern Europe

THE old-fashioned way of studying history as the only one particular nation were concerned in it has got to give way to the modern conception of world history. The various countries have always been connected, but now they are combined. They have hitherto reacted together. Now they are beginning to act together. Professor Schapiro's *Modern and Contemporary European History* is quite in the new vein. It is a history of Europe as a whole for the last century, and very wisely the author does not keep within the confines of his title but covers also the expansion of the European powers into Asia, Africa and the Pacific. It is not merely, like the old, a political history, for it deals largely with industrial forces and movements and even includes something of the progress of literature, science and sociology.

The whole is packed into a single volume, not too heavy to be held in the hand, and not too condensed to be readable. It is, in fact, just the sort of a book that the average person needs to give him a background for the interpretation of the day's news and the origin of the factors involved in the Great War and in the present peace making. A well prepared bibliography gives the clue to the literature of each topic. The volume comes down to last June and we all remember what has happened since. This is no hasty compilation to meet the present demand for a European history but is the result of many years work and wide research. The author has been peculiarly successful in putting the result of his labors into plain language and understandable form.

*Modern and Contemporary European History*, by J. Salwyn Schapiro. Houghton Mifflin Co. \$3.50.

## The Story of the Pilgrims

WITH the approaching tri-centennial anniversary of the founding of Plymouth Colony in 1620, Roland Usher's volume on *The Pilgrims and Their History* takes on a special interest. The book covers the history of this group of dissenters from 1606, when they first gathered for devotional exercises in the chapel of a Manor House at Scrooby in northern England, thru their sojourn in Holland and their emigration to the New World, to the absorption in 1691 of their flourishing colony by the more powerful Massachusetts Bay Colony. The account is an accurate historical narrative rather than a vivid personal reconstruction of the period.

The author is thoroly sympathetic toward these tenacious and iron-willed men who, he claims, imprint a whole nation with the seal of honor, steadfastness and independence. He clings to the old theory that the Pilgrim fathers are the progenitors of the American nation. But with ample use of documents he throws new light on many interesting points. The original group of Pilgrims who left England for Holland were not driven forth by any active persecution of Church or State but merely by the nagging and annoyances of their neighbors. Furthermore, the significant achievement of the Pilgrims was not the emigration itself but the final establishment of economic stability after the years 1621-1627, when the fur, fish and lumber trade with England, upon which they had count-

ed, failed them. It also appears that the Plymouth colonists were more tolerant and their social life less austere and comfortable than is generally supposed. Instead of the drab-suited Pilgrim fathers of tradition, there is ample evidence, after the first decade of privations, of "red broadcloths, French serges and green aprons" in the community.

Mr. Usher describes his book as:

the fifth in a series of related monographs which I am attempting to write on the constitutional and administrative history of the Tudor and Stuart periods in English history. . . . I have been able to place the older material in relation to the more recent evidence concerning English Church History, and have as well utilized for the first time the Plymouth First Church records and many Plymouth wills, which contain much of great value in economic and social history. No further accessions of evidence is now probable and it is therefore an important fact, tho due to no merit of mine, that the narrative presented in these pages possesses a certain aspect of finality.

*The Pilgrims and Their History*, by Roland G. Usher. Macmillan Co. \$2.

## The Biologist Peacemaker

IN 1915, while Dr. Nicolai was confined in the German fortress of Graudenz by the German Government because of his protest in 1914 against the invasion of Belgium and because of his antagonism to the manifesto of the Ninety-three German Intellectuals in support of the war, he wrote *The Biology of War*. On account of his hostile attitude to the war he was degraded from his professorship in physiology in the University of Berlin and suffered confiscation of property and imprisonment. The circumstances of his escape to Denmark in a German aeroplane are well known.

The author treats biology, as applied to war, in its broadest sense, including its philosophical and moral, as well as its physical aspects. Only during the primitive period of man, he says, has war played any important part in the development of the human race, and there it arose in connection with the idea of possession of property. In the lower animals different groups of the same species do not war with one another, excepting among certain hive-possessing insects. War in savage races developed in connection with its main objects, enslavement, robbery and cannibalism, factors which have, or must become, obsolete in modern civilization. In its present monstrous form, war can, less than ever, benefit the human species in any economic or physical way. The enormous losses must outweigh gains, both to victors and vanquished. The law of selection, so far as it operates, is reversed; the weaker individuals survive to breed the race and the less fit economically have opportunity to gain the places of the abler who have gone to the battlefield. The sum total of war activities hinders the proper battle of man—the conquest of nature and the better understanding and utilization of natural forces.

In a spiritual way, no less, war works, according to Dr. Nicolai, against the evolution of the race. Modern methods of communication are making possible the attainment of the organic ideal, the universal state. This cannot be attained forcibly by the domination of a single nation, it must develop freely thru peaceful methods. So far as Germany is concerned, war must hinder the growth of the highest ideals of her

philosophers and statesmen, both within and beyond her boundaries.

In all, says the author, we must keep to the proper viewpoint. War is not to be regarded as something inevitable in the course of nature, like an earthquake, but as a human affair and within the control of man, like slavery or cannibalism, evils which man may abolish. At best war is an anachronism, a being which, like the mastodon, has developed such an unwieldy bulk that it cannot much longer survive in its present environment.

*The Biology of War*, by G. F. Nicolai. Translated by Constance A. and Julian Grande. Century Co. \$3.50.

## Far Away and Long Ago

READERS who have loved the exquisite art of W. H. Hudson, in "The Purple Land," "Green Mansions" and other South American books, will welcome the story of the author's early life, told as surely no other could. The Argentine pampas; the house where he was born, quaintly called "The Twenty-five Ombu Trees"; his white and gaucho neighbors; Buenos Aires in the forties; the development of a rare naturalist; the dramas of those early days: all suffused with an atmosphere which one despairs of conveying in other words than his who has written one of the few great autobiographies.

The revelation of a sincere and gifted spirit is worth pondering as well as reading. Hudson is much more than a mere observer, he is a psychologist, a philosopher, an artist, a poet, and a dreamer with the priceless gift of conveying the essence of his dreams.

*Far Away and Long Ago*, by W. H. Hudson. E. P. Dutton & Co. \$2.50.

## The Education of Henry Adams

IN 1907 Henry Adams printed privately and sent to his friends a remarkable book, a curious combination of autobiography and philosophy. The author himself compared it to the confessions of Augustine and Rousseau but it is really unique, reminding one more of Amiel's Diary in its air of aloofness and disillusionment. Now, six years after the author's death, it is made accessible to the public by the Massachusetts Historical Society.

*The Education of Henry Adams* is a book to be owned and loved, to be read and returned to. The author called it in his subtitle "A Study of Twentieth Century Multiplicity," but it is more a study of the multiplicity of Henry Adams; bits of geology, diplomacy, politics, gossip, travel, history, metaphysics, journalism, art and mathematics, all interwoven in fascinating fashion by the charm of his personality and the gracefulness of his style. Tho written in his old age he manages to revive the vividness of first impressions. A man who could be the intimate friend of such diverse characters as John La Farge, Henry Cabot Lodge, Clarence King, John Hay and W. C. Whitney and the admirer of Willard Gibbs, Charles Lyell, Karl Pearson and Charles Darwin, must have a multifarious disposition. He is conspicuously lacking in the egotism common to autobiographers. He says little of his own work, of his nine

# The Greatest Home Library in the World

How It Made Me an Authority on Good Literature Thru an Occasional Hour of Pleasant Reading by My Study Fire

By THE PRESIDENT OF A NEW YORK CORPORATION

**I** CONSIDER my chance discovery of this wonderful library of only 30 volumes the most important single event of my career of self-education.

In the most delightful evening hours I have ever spent—next to the hours with my wife and three boys when reading is “against the rules”—I learned to know with the least possible effort the literatures of all nations.

I acquired an intimate acquaintance with the thousand greatest authors of all time.

It was a revelation to me, who had always longed to really know literature and to be able to talk about it intelligently.

My English literature course in college had proved an invaluable asset to me in my career thus far,

but still I felt that I was away below “par” when I got into a company of people who really *knew* literature.

I have a library much larger than the ordinary, but I had never discovered just what to read and what not to read.

My wasted hours in reading unimportant works to find the real gems of literature could have been spent with immensely more profit.

Suddenly, and to my great joy, I found the “open sesame”—the key to this vast treasure.

It was The Warner Library of the World’s Best Literature. At once it unlocked for me the door into a new world of unexplored wealth.

There I found the gems of the world’s literature; only the really great authors; and only the best of their writings; only the enduring examples of their work; and all interpreted to make them illuminating and easily understood by the average man.

My weary toiling thru collected works was at an end.

From that time my reading of the world’s master literature became an easy and delightful pastime—rather than the time-consuming task it had been before.

The benefits I have derived from this compact and practical library have done remarkable things for me in my social life and in my business.

It has done much the same for our whole family.

It has enabled us to talk on a plane of intelligent equality and understanding with the most highly educated people with whom we have come in contact.

In conversation not long ago with Frederick Houk Law, Ph.D., who since his graduation from Amherst College has risen to a high place as an authority on English and Public Speaking, I mentioned The Warner Library.

He was all enthusiasm on the instant. Let me put down here Dr. Law’s tribute to the Library just as he gave it to me:

Twenty-two years ago when The Warner Library was first published, I subscribed for it immediately, before any of the volumes had been put into print. Then as the volumes were printed I received them a few at a time until at last I had the entire set.

At that time and ever since I have rejoiced in the possession of such an extraordinary set of books. My library contains several thousand volumes but of all of these volumes the books of The Warner Library are without question among the most valuable that I possess.

From year to year I have read in The Warner Library with increasing delight. The books have introduced me to scores of authors in whom I should not otherwise have become interested. They have led me on to further delightful reading and have given me pleasure and inspiration for which I cannot be too thankful. I rejoice in the careful, appreciative biographical comment that precedes the readings from every author.

Indeed the spirit of loving appreciation permeates the entire set. Thru these books I have been able to reach out into the literature of other lands and languages.

I have brought The Warner Library to the attention of thousands of young students who have found in it an introduction to the great body of the world’s literature.

Any man who possesses The Warner Library has in it a friend who will open the door to the finest expressions of human thought that the world has known.

Dr. Law and I had the same welcome experience in discovering the hitherto buried treasures of literature.

This rich inheritance of inspiration and education and knowledge, The Warner Library, was gathered together under the personal editorship of Charles Dudley Warner, the most distinguished literary figure of his day.

Associated with him in this world-famous task was a group of men happily described as "the Supreme Court of Literature"—headed by Hamilton Wright Mabie, Edwin A. Alderman, Benjamin Ide Wheeler, Brander Matthews and others.

Probably not for many years will such another group of men "happen all at one time."

The complete list of those who helped Charles Dudley Warner to crystallize the world's enduring literature and to interpret the outstanding literary works of all nations and ages constitutes a roll-call of practically every literary man and woman of *first rank* in the United States at that time.

Is it surprising that The Warner Library should have always been considered by discerning critics the most successful and practically useful work of its kind?

Its achievement in intrinsic importance to the American home today might well be said to rank with the King James translation of the Bible, the plays of Shakespeare, Webster's Dictionary, and the Encyclopedia Britannica.

The idea on which The Warner Library was constructed might be imitated in certain of its features. This has been attempted already. But the work itself can *not* be successfully imitated any more than can the plays of Shakespeare, because the combination of authors who did this work cannot be duplicated for many years to come.

### The Warner Library Re-Born

And now, in the most momentous year of history—in the hour of victory, at the time when the world looks forward to its greatest triumphs in the process of civilization—comes The Warner Library in its new garb and with its record of literary achievement brought up to the minute.

The new University Edition, in

thirty volumes, printed on Bible paper, demands a place—and merits it—in every American home which aspires to intelligence and knowledge and a true understanding of the thought and character of the nations.

The new University Edition of

CHARLES DUDLEY WARNER  
Creator of The Warner Library of the World's  
Best Literature

The Warner Library has been prepared under the editorship of John W. Cunliffe, Professor of English in Columbia University and Associate Director of the School of Journalism, and of Ashley H. Thorndike, Professor of English and Chairman of the Department of English at Columbia University.

### The Interpreter of the Nations Today

The Great War, which has now been so gloriously won, had its beginnings in prejudice, jealousy, and lack of understanding between nations.

The terrible but natural result has been hatred, distrust, conflict, shedding of human blood, killing by the million, disaster, famine, misery.

Just think! Twenty-one languages are spoken in Europe. Each has its own poets, novelists, historians, philosophers, thinkers.

Can you wonder that in this modern Babel the literature of any one nation is read scantily or not at all in other lands, and is imperfectly understood beyond its own confines?

Were it not for the literature of

these alien lands a barrier would divide one people from its neighbors that would reach higher than the walls of ancient Babylon.

Only a few scholars, only a few well-trained students—a pitiful minority—are really acquainted with the writers of other nations than their own.

The great mass of the people—the majority on whom national achievement depends—know little or nothing of the literature beyond their own borders.

What a pity! What a lost opportunity!

When literature is the one vehicle by which national character and national ideals can be conveyed to any real extent, why do not the ardent men and women who strive to solve the world's problems and to adjust their differences seek more often and more intelligently the truth that lies in the writings of the nations—where the heart speaks thru the printed page?

Blood is thicker than water. But there is something thicker still and that is printer's ink. To read the soul of a nation you must read its heart so set forth in its literature.

Only by such a general understanding of the writings that express the real thought of nations can the success of a workable League of Nations be even faintly hoped for.

Until there is a universal language there can be no satisfactory means of reading the literatures of foreign lands except thru such an international enterprise as The Warner Library. Here is the printed page that makes the whole world akin.

In this work, as in no other that I can recall, all the nations reveal themselves to us—vividly—in their writings.

The new University Edition of the Warner Library is in truth an "Interpreter of Nations," for it brings into the medium of one speech all the diverse tongues of Europe. There is not an American family which, by a few minutes' reading each day, cannot get a first-hand acquaintance with the genius and the ideals of the peoples of Europe, and thus place itself in a better position to understand the problems of reconstruction now facing the world.

It is a national blessing that this new, revised, and enlarged University Edition of The Warner Library, carrying Charles Dudley Warner's dream to its noblest fruition, should become available at this crucial time in the life of our nation and of the world.

This "Interpreter of the Nations" appears just at the hour when America's interests and her destiny have, by a gigantic stroke of fate, been bound together with the tangled problems and politics at the other side of the world.

This amazing Library of the World's Best Literature, "from China to Peru"—which has meant so much to so many

—comprises one thousand authors of all ages and nations, from the day of the chiseled records of Egypt and Assyria to the history-making messages on world peace of Woodrow Wilson.

These foundation stones of literature are presented and ably interpreted by four hundred famous critics and teachers of our own time—university specialists and men in the public eye.

Each author is placed in his proper historical setting, against a background of the life of his age.

Only the really characteristic readings from his works are given.

You see, The Warner Library is not only an epitomized history of human thought; it is also a repository of the biographies and the greatest writings and utterances of the greatest men and women.

### The Pageant of History

Here is a moving picture of the lives of the nations and of the deeds of great men from the dawn of history to the present day.

Here are their romances, their history, their songs, their tragedies, and their triumphs, all recorded in the carefully chosen words, all living for us today in the words of their own great writers.

Milestones that we pass in this great pageant of history are:

**BABYLON**, whose name recurs so often in the Old Testament as a symbol of heathen magnificence and power—a land of barbaric magnificence and hanging gardens where lived Nebuchadnezzar, who conquered Jerusalem and warred with Egypt. On palace walls and sun-dried clay cylinders we read today the history of the Jews and one of the earliest stories of Creation.

**EGYPT**, land of obelisks, tombs, pyramids, highways, irrigation systems, and effective police regulations. First user of gold-foil in dental work. From the papyri found in tombs have been translated stories that were told before the time of Moses, and songs and hymns from *The Book of the Dead*, which was buried with each mummy.

**PERSIA**, the home of Zoroaster, founder of the Parsee religion, the land of Omar, the Tent-maker.

**INDIA**. Mysterious and populous land of the immemorial East, the spoil of western conquerors resplendent with precious gems, yet often swept by famine, the home of Buddha, the philosopher of old, and of Rabindranath Tagore, the poet of today.

**ARABIA**. Once a mighty empire "in the days of good Haroun al Raschid." The mission field of Mahomet, whose Koran is still the Bible of millions, a land formerly of scientists and lyric poets.

**CHINA**. The land of Confucius, of dignity and peace, of idols and temples, of strange music and fire crackers, where movable type and paper and gunpowder were first used. The writings of Confucius have for many centuries been

the classic textbook of the Chinese youths.

**JAPAN**. A land of ancient feudalism where every one is a poet or an artist; a land of cherry blossoms and Geisha girls, of Samurai and Hari-Kari. The spirit of the Japanese manifests itself in poems as delicate as Japanese prints, and in gentle meditations and vagrant reveries.

**GREECE**. The cradle of western civilization, land of enduring culture, noble architecture and sculpture. The home of the classic drama of Sophocles and Euripides, and of the author of the Iliad and Odyssey, reflecting with perfection the life of a whole people.

**ROME**, the Immortal. The centre of the ancient world still living in the midst of a new day. A city of permanent roads and bridges and aqueducts. The monument of an enduring past. Its civilization underlies the institutions of today. Its poets are still read by the modern schoolboy, and its language is still used by educated men.

**ITALY**. The home of the Renaissance. Magnificent in art and in crime in ancient days. The home of Dante, Petrarch and Boccaccio, of Michael Angelo and Machiavelli.

**SPAIN**. Pioneer of the New World. Once a great empire ruled by a proud and adventurous people. Land of Queen Isabella, Columbus and Cervantes, who gave the death-blow to mediaeval chivalry.

**FRANCE**. Land of the Bourbons and of Napoleon, of religious toleration, liberty and revolution. A land of great fighters and of great battlefields. Famous in tragedy, in fiction, and in poetry. The home of Voltaire, Dumas,

Hugo, Zola, de Maupassant, and Ros-tand.

**THE NETHERLANDS**. Thrifty and independent little countries. A land of canals, dikes, and windmills. The home of Maartens and Maeterlinck, the writer of *Monna Vanna*, *The Blue Bird*, and *The Betrothal*.

**GERMANY**. Land of Bismarck, Prussianism, autocracy, militarism and atrocity. A land of philosophers and medical men. The home of Goethe, Schiller, Hegel, and Kant.

**RUSSIA**. Land of extremes, of corruption and intrigue, of idealism and mysticism, of realism and social unrest. The land of Tolstoy, Dostoevsky, Turgenyeff, and Gorky.

**SCANDINAVIA**. The land of rugged independence, grim determination, self-reliance, and of supermen. The land of the Eddas and the Sagas. The home of Swedenborg, Ibsen, Björnson, Hans Christian Andersen, and Selma Lagerlöff.

**ENGLAND**, on whose empire the sun never sets; a land of manufacturing and world-wide trade, of great statesmen and great authors, the home of Shakespeare, of great romantic poets and incomparable prose writers.

**AMERICA**. Land of freedom, of opportunity, prosperity and high ideals in national life. Land of Franklin, Poe, Bryant, Irving, Cooper, Emerson, Longfellow, Whittier, Holmes, Hawthorne, Thoreau, Harte, Whitman, Hale, Mark Twain. Land of Washington, Lincoln, Roosevelt, Wilson.

### Try to Answer These Questions

You will find the answers to them, and to many thousand more, in The Warner Library.

Who wrote "Tam o'Shanter"?

Is "Puck of Pook's Hill" a book for children or grown-ups?

Who is the author of the poem "O Captain, My Captain," written on the death of Lincoln?

Who was "Sordello"?

Who wrote "The Song of the Shirt"?

Which was the poet and which the philosopher—Herbert Spencer or Edmund Spenser?

Who was the author of "The Rosary"? "Beside the Bonnie Briar Bush"?

Where can I get a list of poems suitable for children?

What was George Eliot's real name?

Who wrote "The Harp That Once Through Tara's Hall"? "My Country, 'Tis of Thee"?

Who was Aesop? "Uncle Remus"?

What were the chief plays of Euripides? In which century did he live?

What author should one read to get a good idea of contemporary European literature?

Did Cervantes live before or after Shakespeare?

What are some of the best poems inspired by the Great War?

Joint-Editor, University Edition, The Warner Library; Professor of English in Columbia University and Associate Director of the School of Journalism.

ary of Authors," "The Reader's Digest of Books," and "The Student's Course." They are easy for reference and pleasant to read. One of the volumes contains the biographies of over 6,000 of the writers of the world and gives the names of the books they wrote and when the books were published. In the second volume, the gist of over 2,000 of the great books of the world is given in clear summaries, accurate and well-proportioned. The third gives outlines of the great literatures of the world with clear and specific directions how to read and study in order to master an author, and understand his plan in the development of human thought. No other reference work includes just this material.

These handy volumes are invaluable to supply a name, a date, a fact of history, or to point the way to new reading and to suggest the most enjoyable excursions into the field of great literature.

### The Editor of This Work

Charles Dudley Warner was peculiarly well fitted to plan and captain an enterprise of such breadth, significance, and helpfulness.

He was a scholar, an eminent critic of both literature and life. A seasoned teacher, he numbered literary acquaintances and friends all over the world. His delightful style, his fondness for nature, his shrewd judgment, his quiet humor, gave a worldwide reputation.

He had broad interests and cultured tastes. He had the ability to "see thru," to organize, and to command. In these thirty volumes he has marshaled the great authors of all time into a company of immortals.

### This Was the Great Idea

To provide for American homes a library of good reading.

This library was to contain only *good* literature.

This good literature was to be chosen from the literatures of *all nations*.

This work was to contain only the *cream* of the world's greatest writings.

This work was to express the thought of men and women *from the beginning*.

This work was to interpret the real lasting literature of the nations, in essays by the scholars, authors, and critics of *undisputed authority*.

ASHLEY H. THORNDIKE  
Joint-Editor, University Edition, The Warner Library; Professor of English and Chairman of the Department of English, Columbia University.

### The Only Thing of Its Kind

The originality of this idea, its systematic and intelligible arrangement of the literatures of the nations, its close touch with the problems of humanity, its careful provision for amusement, instruction, and entertainment, give to the new Warner Library a distinction which sets it off from any other work in English literature of modern times.

Now do you wonder that Dr. Law wrote as he did about the unique value of this great work to him? Do you wonder that any educator will endorse his decision?

Are you surprised when I call this "the greatest home library in the world"?

Are you skeptical when I tell you that The Warner Library made me an authority among my acquaintances on the world's best literature with a comparatively small outlay of time?

All I suggest is that you try it yourself. I predict that *your* dividends, in increased power to think and act and converse, will be enormous, and that you will be satisfied with the work and with yourself.

Where can I find the words of "There's Nae Luck About the House"?

Who was the author of "Home, Sweet Home"? "Annie Laurie"?

Did Smollett ever write anything besides fiction?

What is the story of "The Playboy of the Western World"?

Who wrote "The Lady or the Tiger"? "The Rhyme of the Rail"?

Who drafted the original Declaration of Independence of the United States?

Who are the chief poets who have written during the last ten years?

Who wrote "The Man Without a Country" and for what specific purpose was it written?

What is authoritatively known about the life of Shakespeare?

Do you need The Warner Library? Can you afford not to have it?

### A Reference Library

Three volumes especially in The Warner Library are priceless for the busy and ambitious reader or student who wishes to make the most of his time. These are "The Reader's Diction-

By special arrangement with the publishers the Wanamaker Stores are able to supply sets of the New University Edition of The Warner Library, for a short time, at about **half the price of the First Edition** and on **easy monthly payments**. volume, "History of the United States," which cost him many years of labor and \$60,000 of money. He is concerned with getting the proper viewpoint on the universe, in short with acquiring an education which was not completed when it was interrupted by his death at the age of seventy-four. He is contemptuous of his schools. They failed to give him "all he asked of education, the facile use of the four old tools: Mathematics, French, German and Spanish." Of his Harvard course he says, referring to himself as he does thruout as "the student":

The four years passed at college were, for his purposes, wasted. . . . Beyond two or three Greek plays, the student got nothing from the ancient languages. Beyond some incoherent theories of free-trade and protection, he got little from Political Economy. He could not afterwards remember to have heard the name of Karl Marx mentioned, or the title of "Capital." He was equally ignorant of Auguste Comte. These were the two writers of his time who most influenced its thought. The bit of practical teaching he afterwards reviewed with most curiosity was the course in Chemistry, which taught him a number of theories that befogged his mind for a lifetime. The only teaching that appealed to his imagination was a course of lectures by Louis Agassiz on the Glacial Period and Palaeontology, which had more influence on his curiosity than the rest of the college instruction altogether. The entire work of the four years could have been easily put into the work of any four months in after life.

But when at Lowell's instigation he went to Germany he found the universities and schools much worse but he learned something from the people, as the following passage shows:

Even after Berlin had become a nightmare, he still persuaded himself that his German education was a success. He loved, or thought he loved the people, but the Germany he loved was the eighteenth-century which the Germans were ashamed of, and were destroying as fast as they could. Of the Germany to come, he knew nothing. Military Germany was his abhorrence. What he liked was the simple character; the good-natured sentiment; the musical and metaphysical abstraction; the blundering incapacity of the German for practical affairs. At that time every one looked on Germany as incapable of competing with France, England or America in any sort of organized energy. Germany had no confidence in herself, and no reason to feel it. She had no unity, and no reason to want it. She never had unity. Her religious and social history, her economical interests, her military geography, her political convenience, had always tended to eccentric rather than concentric motion. Until coal-power and railways were created, she was medieval by nature and geography, and this was what Adams, under the teachings of Carlyle and Lowell, liked.

His wider education came from his experiences in diplomacy and politics. He was in London when his father, the Minister, foiled the attempts of Palmerston, Russell and Gladstone to destroy the United States. As his father's private secretary he penned the famous ultimatum to Earl Russell that a continuation of the British policy meant war. To repair the blunder of "backing the wrong horse" in 1862 cost the British Government \$20,000,000, but fortunately the breach was healed.

He was in St. James's Hall when John Bright defended the American republic and denounced kings, nobles, courts and established church in terms that nowadays would be called Bolshevism.

He was in Washington in 1870 when Senator Sumner foiled Grant in his effort to annex the Danish West Indies and intended to force England to cede Canada.

He was at the side of John Hay when Hay set to settle vexed questions with England and were thwarted by the Senate at the instigation of the German and Russian Ministers. What the Secretary of State said about the difficulty of getting thru the Hay-Panama treaty is timely quoting here:

"A treaty of peace, in any normal state of things," said Hay, "ought to be ratified with simplicity in twenty-four hours. They wanted no more than twenty-four hours, and ratified it with the same simplicity. We have been no more than twenty-four hours in getting it done."

# Old as the Hills

## Perfect Water Softener

For years man sought a thoroughly practical means to soften water for commercial and home uses.

He used strong soaps and sodas—chemicals of various kinds; he tried distilling the water.

But these "processes" proved costly and troublesome, ineffective at the best. It seemed a satisfactory water softener must remain for a future generation. *Then Nature revealed a secret.*

In the Black Hills of South Dakota there is a deposit of mineral which is now known as Refinite. It was discovered that this mineral collects the elements which make water hard and gives off softening properties in exchange.

It softens water Nature's own way—a water softener as old as the hills from which it comes. Man merely devised a filter system to use this mineral.

**REFINITE**  
RIVAL OF THE CLOUDS  
TRADE MARK

The Refinite water softener is the only one using the *natural* Refinite mineral. It requires no technical knowledge to operate. Compact—Quickly Installed—100% Efficient.

Refinite water softening systems are used and approved by textile mills, laundries, steam power plants, hospitals, hotels, apartments and private homes in all parts of the country.

They are producing water of no hardness at the lowest cost of operation.

Refinite users are most enthusiastic. There is one near you. Write any district office for booklet, or to

## The League of Nations

Whether you favor a league or not you want to know what has been said, recently, for or against it.

No one book, no one magazine, can give as comprehensive a view of the problems and difficulties incident to the formation of such a league as the Handbook, A LEAGUE OF NATIONS.

Into its 350 pages, Miss Phelps has collected 70 of the most important speeches and writings which appeared in books, magazines and newspapers and has grouped them under the plan they advocate or condemn. The third edition (just off the press) includes the twenty-six articles of the proposed Constitution and President Wilson's explanation of them.

The Handbook, A LEAGUE OF NATIONS, is priced at \$1.50 so that every good American can own a copy. Order direct from publisher.

Other Titles in Handbook Series:

Americanization, \$1.50 Monroe Doctrine, \$1.25  
Russia - - - 1.50 Prohibition - - 1.25

them all, honorably and advantageously to our own side, and I am assured by leading men in the Senate that not one of these treaties, if negotiated, will pass the Senate. I should have a majority in every case, but a malcontent third would certainly dish every one of them. To such monstrous shape has the original mistake of the Constitution grown in the evolution of our politics. You must understand, it is not merely my solution the Senate will reject. They will reject for instance, any treaty, whatever, on any subject, with England. I doubt if they would accept any treaty of consequence with Russia or Germany. The recalcitrant third would be differently composed, but it would be on hand. So that the real duties of a Secretary of State seem to be three: to fight claims upon us by other states; to press more or less fraudulent claims of our own citizens upon other countries; to find offices for the friends of senators when there are none. Is it worth while for me to keep up this useless labor?"

But in this struggle Hay triumphed tho it cost him his vitality. He saved China and united England and America. But in the larger synthesis that would have prevented the Great War he failed:

Hay had been so long at the head of foreign affairs that at last the stream of events favored him. With infinite effort he had achieved the astonishing diplomatic feat of inducing the Senate, with only six negative votes, to permit Great Britain to renounce, without equivalent, treaty rights which she had for fifty years defended tooth and nail. This unprecedented triumph in his negotiations with the Senate enabled him to carry one step further his measures for general peace. About England the Senate could make no further effective opposition, for England was won, and Canada alone could give trouble. The next difficulty was with France, and there the Senate blocked advance, but England assumed the task, and, owing to political changes in France, effected the object—a combination which, as late as 1901, had been visionary. The next, and far more difficult step was to bring Germany into the combine; while, at the end of the vista, most unmanageable of all, Russia remained to be satisfied and disarmed. This was the instinct of what might be named McKinleyism; the system of combinations, consolidations, trusts, realized at home, and realizable abroad.

With the system, a student nurtured in ideas of the eighteenth century, had nothing to do, and made not the least pretense of meddling; but nothing forbade him to study, and he noticed to his astonishment that this capitalistic scheme of combining governments, like railways or furnaces, was in effect precisely the socialistic scheme of Jaurès and Bebel. That John Hay, of all men, should adopt a socialist policy seemed an idea more absurd than conservative Christian anarchy, but paradox had become the only orthodoxy in politics as in science. When one saw the field, one realized that Hay could not help himself, nor could Bebel. Either Germany must destroy England and France to create the next inevitable unification as a system of continent against continent—or she must pool interests. Both schemes in turn were attributed to the Kaiser; one or the other he would have to choose; opinion was balanced doubtfully on their merits; but, granting both to be feasible, Hay's and McKinley's statesmanship turned on the point of persuading the Kaiser to join what might be called the Coal-power combination, rather than build up the only possible alternative, a Gun-power combination by merging Germany in Russia. Thus Bebel and Jaurès, McKinley and Hay, were partners.

*The Education of Henry Adams*, an autobiography, with an introduction by Henry Cabot Lodge. Houghton Mifflin Co. \$5.

## Out of the Silences

THIS new book by Mary E. Waller, author of "The Wood-Carver of Lympus," will be welcomed by all those who enjoy good fiction. *Out of the Silences* is a present day romance with its principal scenes laid in Canada, just over the Dakota border, and its final scenes in the hills of France. Such a novel, carefully and leisurely told, with characters fully developed and sharply individualized, comes as a relief after many slovenly written stories of today.

Bob Collamore, the central character, is an American boy, who at the age of nine is left in the charge of William Plunket, a saddle-maker of sturdy qualities and quaint philosophy. Bob grows up with McGillie, Plunket's stepson, their numerous dogs and the children of the Cree Indian tribe. McGillie and Bob both fall in love with Kinni-kinnik, a little Indian maid, but

Bob's love for her passes, and later, when he leaves the mountains and the forests for the civilized world, he renews a romance with Alison Doane, who crossed his path early in life.

The author evidently is thoroly versed in Indian lore and is deeply sympathetic with Indian traditions and ideals. In fact, such passages as these almost lead one to believe that the novel is a camouflage plea for the freedom of the Indian—these are excerpts from one of Bob's letters to Alison:

It's curious; I see Chum and Kinni-kinnik's brothers side by side with white men in this struggle—there has been no segregation of the Indians; they are in the battalions just like the rest of us doing the same stunts, and doing them even better; heart and soul in this work of warring; seeing daily enemy acts that even in the days of their race's utmost savagery were never equaled, for savagery is not civilized brutality; dependable, helpful, faithful, quiet, mostly silent, trained—and I marvel at the change in the Indian status.

These men represent the longing and desire of their race. They are fighting for their freedom as well as for ours. They deserve well of their country, and the nation that refuses to them freedom, citizenship, and the same protection of the common law and the appeal to it that is given to the white race, will write its name black on the nation's honor roll, after this here to which I bear witness.

*Out of the Silences*, by Mary E. Waller. Little, Brown & Co., Boston. \$1.50.

## Where the Sea Eats In

DOWN on Cape Cod, where the old New England folk and the immigrant Portuguese work together to earn a livelihood from the grim, encroaching sea. Wilbur Daniel Steele has found his material for a group of intense, interest-compelling stories. *Land's End*, the title of the collection, strikes the keynote of them all—the realization, unconsciously attained, that homes and people and the work and dreams of every day must be ever dwarfed by the impending shadow of a gray wave about to break. Sometimes this sense of human futility forces itself into hot passion, sometimes into sordid happiness, sometimes into grim resistance. The characters of these stories have plenty of force and individuality of their own, but thruout the pattern of their lives runs always the gray of the sea.

*Land's End*, by Wilbur Daniel Steele. Harper & Bros. \$1.35.

## Books That Are Different

UNDER the pleasant title of "The Penguin Series" the publishers of the Modern Library have inaugurated another noteworthy sequence of books that have been previously out of reach of most American readers. The Modern Library, already grown to sixty-eight volumes, offers in inexpensive and convenient form, the works of such authors as Ibsen, Oscar Wilde, Thomas Hardy, H. G. Wells, Balzac, Tolstoy, Dunsany.

The Penguin Series, only slightly more expensive, publishes in attractive print and binding, new books of especial literary appeal. The first four volumes indicate the character of the series: *Gabrielle de Bergerac*, one of the earlier novels of Henry James; *Iolanthe's Wedding*, four stories by Hermann Suderman; *Karma* and *Japanese Fairy Tales*, two collections of sketches and stories by Lafcadio Hearn. In *Karma* is published for the first time some of Mr. Hearn's best work: a love story with the delicacy and charm of a softly-toned Japanese print, and an essay on "China and the Western World" that is written with remarkable insight into the future of international relations.

*Gabrielle de Bergerac*, by Henry James; *Iolanthe's Wedding*, by Hermann Suderman; *Karma*, by Lafcadio Hearn; *Japanese Fairy Tales*, by Lafcadio Hearn. Boni & Liveright. \$1.25 each.

# THE GREATEST PORT IN THE WORLD

(Continued from page 436)

ahead. They will know that their particular development will bear a definite relationship to the whole plan of the district. The principle is merely a wider application of the modern zoning principle. In order to safeguard all of the municipalities within the new port district, the proposed agreement expressly provides that none of the property of any of these municipalities is to be taken without their express authority or consent, and the powers granted by the treaty are not to be exercised until both states approve of the comprehensive plan. The vital feature of the new treaty is the pledge of the two states, first, that they will coöperate in the development of the port; second, that they will agree as soon as practicable upon a plan for comprehensive development of the port; third, that for the purpose they will create a Port Authority; and fourth, that they will support it with sufficient appropriations (such sum as shall be recommended by the Port Authority and approved by the Governors of the two states, not exceeding for each state the sum of \$100,000) to keep the Port Authority going. This is a step in the direction of organized, systematic development of the greatest port in the world.

## Pebbles

There are few persons with courage enough to admit they haven't got it.—*Life*.

Old Brown, sadly (at his first revue)—Ah! everything is different from what it was in my young days.

Old Smith—Except the jokes, Brown—except the jokes.—*London Opinion*.

"Want to buy a mule, Sam?"

"What ails de mule?"

"Nothing."

"Then what are sellin' him fo'?"

"Nothing."

"I'll take him."—*Boston Transcript*.

The great detective stood before the rich merchant, waiting for his instructions.

"It's this way," began the merchant. "I have been robbed of hundreds of pounds. A rascal has gone about the country pretending to be a collector of ours. He has simply coined money. Why, in a week he collected more than all our travelers put together. He must be found as quickly as possible. Spare no expense."

"Right," said the detective. "Within a week he will be in prison."

"Prison! What do you mean?" cried the merchant. "I don't want him arrested; I want to engage him."—*Tit-Bits*.

In a baseball game at Constantinople between Turks and the crew of the "Scorpion," an American navy boat, the score was tied.

With two men out in their half of the ninth inning, the hopes of the Turks centered on their star batter.

As he came up to the plate, he raised his bat before his eyes, pointing it to high heaven, and with uplifted glance he murmured: "Oh, Allah! Give me a good eye!"

"One strike!" shouted the umpire, as the Turk missed the ball.

Again the Turk raised his bat toward the sky. "Oh, Allah! Give me nerve!" he supplicated.

"Two strikes!" shouted the umpire as the Turk missed again. A third time the Turk held his bat pointing upward. "Oh, Allah! Give me strength!" he begged.

"Three strikes! You're out!" said the umpire.

An American sailor came up to bat. He too raised his bat before his uplifted eyes. "You know me, Al!" he murmured fervently.

And then he knocked the home run that won the game.—*Everybody's*

## SERVICE

Get the longest, best and *easiest* service from your sewing machine by oiling it regularly with 3-in-One Oil. Put a drop in every single bearing from top to treadle. Then run the machine swiftly. This works the 3-in-One in and old caked grease and dirt out. Wipe off this greasy dirt and re-oil.

Put in some work and see how smoothly and easily the machine operates. You will hardly recognize it. You won't have to break your back and tire your legs any more.

3-in-One also prevents rust and tarnish on the bright metal parts; polishes the painted metal; restores the beautiful finish of the wooden case. Even eliminates all surface scratches.

All this is worth trying, isn't it? Make that 3-in-One trial today.

At all good stores. East of the Rocky Mountain States, 15c, 25c and 50c in bottles; also in 25c Handy Oil Cans.

# Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

**Insures against marine and inland transportation risk and will issue policies making loss payable in Europe and Oriental countries**

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured  
 property to the value of.....\$31,728,420,851.00  
 Received premiums thereon to the extent of.....\$319,356,442.45  
 Paid losses during that period.....\$157,034,362.32  
 Issued certificates of profits to dealers.....\$100,230,470.00  
 Of which there have been re-  
 deemed.....\$94,086,050.00  
 Leaving outstanding at present  
 time.....\$6,144,420.00  
 Interest paid on certificates amounts to.....\$24,838,024.95

On December 31, 1918, the assets of the company amounted to....\$16,823,491.34

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## INSURANCE AND THE "ACQUISITION COST"

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT  
 INSURANCE SERVICE

SEVERAL years ago I made mention in this department of the establishment by the legislature of Wisconsin of a life insurance fund to be owned and operated by that state. My record of the innovation was devoid of enthusiasm for several reasons; nor did I entertain a doubt that as an effort to be a better life insurance company than any other life company doing business in the state, it would disappoint the expectations of its creators. I deprecated the experiment because the service undertaken is not a proper one for any government to assume; and also because there is nothing in the history of the life insurance business which would permit the conclusion that it could secure applications for its policies without the active assistance of agents.

There are a few institutions of this kind in the world which continue in existence from year to year, writing a small amount of new business that goes to them as the result of press advertising or on the recommendations of policyholders who are sufficiently interested to lend their assistance to companies in which they are themselves insured. But the annual gains—when there are any—are as small as the number of such non-agency companies are few.

The American people are now carrying about thirty billions of life insurance in incorporated companies and associations which are conducted by aggregations of citizens. This takes no account of the insurance on soldiers and sailors issued by the Government.

Since the carrying of this immense volume of life insurance by the people relieves us of the task of proving its necessity, it, on the other hand, confronts us with the inconsistency arising out of the employment of agents. If we believe in it as we do, why do we not voluntarily secure it without incurring the expense incident to the use of intermediaries?

The question seems to be closely related to certain ineradicable infirmities of human nature. There are many duties to ourselves and, thru ourselves, to others whose lives our conduct affects, which we postpone definitely and indefinitely. It is not our settled intention to fail in their performance, but it is our nature to defer those which involve inconvenience or self-sacrifice.

Of the thousands of men with whom I have discussed the necessity of life insurance, I am quite sure that not as many as one hundred denied it. But a strange feature of my experience rests in the fact that of the number who did contend against the value of its use to them, very few were open to any argument I was able to make in its favor. Nearly all these men were certain that they were sufficiently established, financially and physically, as to render the protection of life insurance a superfluous expenditure of their means.

The vast majority, however, are ready not only to concede its necessity but in most cases to admit they are not carrying a sufficient amount of it to safeguard their dependents. This does not mean that they are then and there prepared to repair the deficiency. As a matter of actual fact they are not, and but for the agent's willingness to invest his time persistently in the effort to get them gradually prepared mentally and financially, to apply and pay for additional insurance, few of them ever would do so. Of the thirty billions of life insur-

 Independence Square Philadelphia

ance in force in the companies and associations of this country, a few hundred millions may represent the voluntary acts of policyholders.

I will now return to my first statement—that related to the organization of the Wisconsin state life insurance fund. This institution was the product of an insurance commissioner of socialistic tendencies. This state life insurance company commenced business in 1912 and, according to its authors and sponsors, would revolutionize life insurance in that corner of the country. Among the advantages it possessed was the savings to be made on premiums in the shape of commissions to agents. The state fund would employ none of these "parasites." Let us observe the results.

In 1912, the first year of its existence, the Wisconsin fund issued 239 policies for \$147,500; in 1914, 83 policies for \$82,800. In 1915 there was a small decline under 1914 and in 1916 a slight gain; but in 1917 the new business amounted to little more than 20 per cent of that of 1916. During 1918 only eleven policies for small amounts were issued. At the close of 1918 there were 461 policies in force, aggregating in outstanding insurance \$379,700, and these figures represent seven full years' results. The total assets were \$55,676. The death rate in 1918 was 40 per cent in excess of the expected.

Governor Phillip of Wisconsin, anticipating the end indicated by the sharp fluctuations in mortality resulting in a few years in impaired reserves and insolvency, recommends that the institution be wound up and reinsured in some good life insurance company.

This is the achievement of an agentless life insurance company, enjoying such advantages as the prestige of a great commonwealth can bestow. It is a pitiable achievement. Says Governor Phillip in his recommendation to the legislature last January:

This fund is based upon the theory that desirable life insurance risks voluntarily seek insurances. That theory is unsound—they do not do so. If this enterprise is to prosper and grow, as it must to have a normal experience, it must have an organization for soliciting business. If the expense of such an organization is incurred the fund can offer no inducement not offered by privately managed life insurance companies and fraternal societies.

The experience acquired in this venture into government life insurance should be worth something to people who are not committed to the doctrine that certain public and semi-public utilities should be operated by the state. Here we have conclusive evidence, on a seven years' trial of the matter, that the much boasted "acquisition cost" is impossible of elimination and that the amount it represents can be kept in the pockets of policyholders. As the Governor of Wisconsin has found, the theory that men will apply for life insurance and save the cost of agents persuading them to do so, is unsound.

It will be principally due to the fact that there are no agents to attend to the business—to prevent lapses and to "convert" the present "Term" policies on the lives of the soldiers and sailors that that mass of forty billions will rapidly evaporate. strenuous efforts will be made by the officials to keep it in force, but nothing so impersonal, so lacking in human force as stereotyped official bulletins will stem the tide of withdrawals. Each single policy must be kept in force by a physical man acting as an agent in contact with the man owning the policy.

The effort to eliminate the "acquisition cost" of insurance will continue, but it will not succeed until the lawgiver shall have found a way to compel a man to do for himself that which he now requires some other man to do for him.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## A TALK TO INVESTORS

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

### Protecting 20,000,000 Bondholders

**T**HE war finance policy of the Government created approximately twenty million bondholders in this country whereas before we entered the war we had less than half a million. Unfortunately, this has given the swindler and the fake promoter a new field to work in where they have found many victims. The field has been a very profitable one and the strange feature of the situation is that the Government has assumed an attitude which has actually aided the swindler in his effort to mislead the patriotic purchaser of Liberty Bonds. For the swindler has been furnished with a good argument which has resulted in small investors exchanging sound Government bonds for worthless stocks.

The Government's finance campaigns have raised eighteen billion dollars, a great part of which have come from working people who had never previously seen bonds of any kind and who did not know what the word meant. Many of these people were foreigners, aliens, and could not speak English. They had purchased the bonds at the solicitation of their countrymen—Italians, Poles, Russians, Rumanians, Serbs, etc., who used the argument that America went into the war to save the world from that militarism and autocracy which had caused many of them to leave their native land. Millions of these people bought bonds in denominations of fifty and a hundred dollars each.

It was a great achievement for the War Loan organization to float enormous issues, particularly because they were working in a new field. But having sold the bonds at par, does it not seem strange that no effort to maintain the bonds at par, or at a very slight discount from par, has been successful? The policy of the Government with respect to stabilizing the price of its bonds is to be sorely regretted, of course, but it surely should be criticized. If the bonds of this Government cannot be maintained at par, or at a price very near to par, then the interest rate should be adjusted to current market conditions.

Only false pride can be pointed to as the reason for keeping the interest rate on our Government bonds at a point where it cannot fail to result in depreciation in the market value of the bonds. British Government 5½s due in 1937 are selling at a little above par, while other British short term securities have sold at prices to yield a little better than 6 per cent. If our 4½ per cent bonds do not sell at nearer par it is because money is worth more than 4½ per cent. It is therefore reassuring to see that the next issue will be composed of short term notes maturing in five years, rather than long term bonds. At this writing the rate of interest has not been fixed, Secretary Glass having stated that the rate of interest will have to depend upon conditions existing immediately prior to the opening of the campaign.

But, to go back to the original thought, the holder of a fifty dollar bond is easily persuaded to part with it when he is told that for what he now receives 4½ per cent he can secure a stock which will pay him 10 or 20 per cent and at the same time afford him the opportunity of doubling or

trebling his money! The salesman offering questionable shares will nearly always call attention to the fact that a few hundred dollars originally invested in this or that prominent motor or industrial stock have grown to an investment of several thousands, or have made the owner independently rich. That is the argument used by the swindler, and, as he is talking to a man who has seen his Government bonds decline seven points without an explanation, his advice is often taken.

When we stop to consider how many millions of dollars in bonds are held by small investors, we can readily see how much harm this does to the Government as well as to the investor. The owner of a Liberty Bond who has been persuaded to part with it on an argument that seems plausible is absolutely lost as a prospective purchaser of the next Victory Loan. As the war is over, the appeal to patriotism which has been made will most probably be lost to the winds. If we create an investor on the argument that he must be thrifty and then not only allow his bond to depreciate seven points but permit wholesale flotations of worthless stocks to be made thru the mails, and offered in exchange for Liberty Bonds, the Government is the loser.

The New York Stock Exchange recently requested its members to warn investors against get-rich-quick schemes and a number of advertisers have used appropriate slogans in their advertisements calling attention to the stock swindler. This is very commendable, but it is not enough. I wish that every community could have a meeting at which some one well versed in finance could give a talk on this subject before the Victory Loan is launched.

### Railroad Finances

From the attitude of the press one would think the public has been led to believe that the responsibility for the railroad finance situation is squarely up to the last Congress which failed to pass the General Deficiency bill. This bill carried an appropriation for \$750,000,000 which the Director General of Railroads stated was required to replenish the revolving fund of half a billion dollars which was practically exhausted. With the failure of Congress to appropriate funds to take care of the requirements of the railroads, it has been suggested that the War Finance Corporation could be utilized as the instrument to provide for this. Our readers may remember that last summer it was suggested here that a bond issue of a billion dollars should be provided to take care of the needs of the railroads.

The latest wrinkle in railroad finance is quite extraordinary. The equipment companies to whom the Railroad Administration owes funds are to be paid by permitting them to draw drafts upon the Director General for the amount involved. The Director General has been assured by the Federal Reserve Board that the Federal Reserve Banks would be allowed to re-discount ninety day drafts for member banks. While the method of meeting payment of railroad bonds about to mature has not yet been decided upon, it is expected that a conclusion will be reached very soon.

At the best, this is makeshift finance

ing. It is the same sort of financing which will assure the railroads a continuance of the state of financial discredit which they are now suffering from, unless the security holders of the country take an intelligent interest in their properties. It looks to me as tho the railroad situation would come out of the chaos because the best minds in the country are being utilized in studying the problem, after the Government-appointed financiers have failed to solve it because of their incompetence. That these minds are being utilized is due very largely to the fact that the war is over and intelligent criticism of the Government is not looked upon as *lese majeste*.

The railroad problem is largely one of finance and a solution of the finance question will inspire the confidence of the people in the most important public utility system in the world and restore its securities to their rightful place in the world's financial markets. I mean to say that railroad securities can be expected to come into their own very soon.

SATISFYING OLD SAM ADAMS

(Continued from page 441)

journed till June to see what the other states would do. South Carolina ratified in May, and New Hampshire met again in June and ratified, Virginia following after a long and bitter debate, making one more than the necessary nine states. Most bitter was the controversy in New York, where Hamilton won a belated victory with a small majority of 30 to 27 on July 26.

Petty as were the large states, the small ones, which had most to gain by the union, proved even more petty. North Carolina did not ratify until George Washington had been President for some months and Rhode Island became one of the United States of America May 29, 1790. Had she waited just a little longer Vermont, which was not one of the original thirteen, would have gotten in ahead of her. For a year and more it had been *Rhode Island uber alles*; but Rhode Island came in, with many misgivings for her precious rights, having so many sacred interests to guard that she needed two capitals, Providence and Newport.

The value of this look backward is to be found in the discovery that there is nothing now being said against a League of Nations that was not said in 1788 with equal cogency, bitterness and fear that the liberties of America were forever doomed if this thing should be done. Whoever desires to make a good speech against the League of Nations as it is proposed in the year of our Lord 1919 will find it already made for him in the year 1788. Those speeches are not very edifying as we read them now, but they appear quite as able, far-sighted and statesmanlike as some speeches now being made will appear in one hundred and thirty years.

In the whole history of the adoption of the Constitution the small states acted from small motives and the larger states from smaller motives in proportion to their strength and leadership. No state acted so badly as New York, except Rhode Island. But even Rhode Island did finally get in, and New York gave up reluctantly the power of taxing the potatoes and eggs that she imported from Connecticut, and assumed an obligation to assist in protecting from invasion a state as remote and ill-mannered as Rhode Island. By a succession of political miracles and much log-rolling that noble instrument was adopted which never could have been adopted on its own merits, and the United States became a nation, and a pattern for the United States of the World.

# INDEPENDENT OPINIONS

I like The Independent. It is always  
fresh, interesting and virile. What I am  
about to write is hardly in the way of  
criticism but more in the mood of thought-  
ful questioning.

In an article by Edith Day Robinson,  
"As Our Wounded Come Home," she  
quotes the remark of a sailor which con-  
veys a fine sentiment. "The ship was his  
for the asking an' by God he's rated it." In  
"How to Master Efficiency" Mr. Purinton  
remarks that "every man must work like  
hell to gain heaven."

These are two examples of profanity or  
coarse language to be found in the pages  
of The Independent within a few weeks.  
Other magazines are still more given to  
this sort of thing. Probably The Inde-  
pendent is one of the least offenders. Fic-  
tion is full of profanity nowadays. I was  
looking for a gift book for a small nephew  
of mine the other day and picking up a  
book for boys by a good writer found an  
oath on the second page. I threw it down  
again. I am not a descendant of the Puri-  
tans and I am fairly broad in my religious  
views, but I believe in the third command-  
ment just as I believe in the sixth and  
seventh. I teach it in my church and I be-  
lieve The Independent believes in it, too.  
I have no idea that "By Gods" and "hells"  
and "damns" are flung around between  
editors of your magazine during their hours  
of consultation over editorial policy. I pre-  
sume the war is responsible for a good  
deal of the profanity that one finds in  
print in these days. Its experiences have  
been so tremendous that people cannot find  
decent language to express them so they  
fall back upon profanity.

But I have been wondering whither all  
this tends. Are our standards of good usage  
in speech to be broken down? The pulpit  
does not swear yet, except in occasional in-  
stances. How long we shall be able to  
hold out as a body I do not know. But the  
press—the reputable press, the press with  
ideals and with an avowed mission, my dear  
Mr. Editor, how about it?

People of conscience and purpose in life  
like to read magazines like yours. We like  
to have our children read them except when  
we run across a bit of profanity or coarse-  
ness printed as a matter of course and  
without the batting of an eyelid. When that  
happens what shall we do other than sit  
down and unburden our hearts to the edi-  
tor and crave his pardon for our temerity.

EDWARD C. PETRIE

First Presbyterian Church, Cooperstown,  
New York

We accept this gentle rebuke in a  
proper Christian spirit, for we quite  
sympathize with its point of view. We  
will try to keep The Independent "one  
of the least offenders," but we cannot  
hope to check or altogether to escape  
the influence of the tide of profanity  
now sweeping over the land. It is one  
of the invariable and apparently inevi-  
table concomitants of the military life.  
The soldier's mouth in all ages has been  
"full of strange oaths." The ground  
where our men have been fighting is  
notorious as being infected with pro-  
fane germs as it is with tetanus. Uncle  
Toby, who was wounded at Namur,

said: "Our army swore terribly in  
Flanders," and a seventeenth century  
captain was not easily shocked. Even  
the impeccable Washington sometimes  
succumbed to the temptation of his pro-  
fession. Cromwell's "Ironsides" were  
the only troopers known to history as  
free from profanity and we imagine  
their unique reputation would have  
been impaired if any one had listened  
closely to some of their camp-fire con-  
versations. The pulpit is by no means  
immune. In fact some of the tallest  
swearing we have heard came from the  
mouths of Y. M. C. A., Y. W. C. A.  
and Red Cross workers returned from  
France and patriotic preachers who  
stayed at home.

\* \* \*

It seems that the common opinion  
that it is unconstitutional or improper  
for the President to leave the country  
is a survival of the old English law  
which the long ago abrogated in Great  
Britain still carries a traditional cre-  
dence in America. Our Naval Critic,  
Mr. Benjamin, cites the law and prece-  
dents on this point:

If the President of the United States  
may be regarded as the executive successor  
in this country of the Kings of England,  
the "leaving-of-the-realm" issue seems to  
have been settled six hundred years ago.

Because of the fruitless warfare waged  
by Edward II with the Scots, his illegal  
exactions, his subservience to the favorite  
Gaveston and generally his mania to imi-  
tate the despotism of the French monarchs,  
Parliament in 1310 resolved that the affairs  
of the realm should be entrusted to "certain  
persons of the prelates, earls and barons"  
known as the Lords Ordainers. The "New  
Ordinances" of 1311 enacted by this body  
to which, after a bitter struggle the king  
had to consent, contain the following:

9. Forasmuch as the King ought not . . . to  
go out of the realm but by the common con-  
sent of his baronage, for the many perils that  
may happen to him and his realm, we do ordain  
that the King shall not henceforth go out of  
his realm . . . without the common assent of  
his baronage, and that in Parliament. And . . .  
if it happen that the King . . . go out of the  
realm with the assent of his said baronage and  
it be necessary that he appoint a guardian in  
his realm, then he shall appoint him with the  
common assent of his baronage, and that in  
Parliament.

Eleven years afterward (1322) the "new  
ordinances" were repealed by Parliament  
on that great statute wherein is embodied  
the provision that all laws "concerning the  
estate of the crown or of the realm and  
people shall be treated, accorded and estab-  
lished in Parliaments by our Lord the  
King by the consent of the prelates, earls,  
barons and commonalty of the realm ac-  
cording as hath been hitherto accustomed."

Since then no bar to the king's journeys  
abroad appears to have been placed. The  
flight of James II. to a certain extent re-  
newed the question, and there was much  
debate over whether he had abdicated, de-  
serted or forfeited his office; but in the  
detailed enumeration in the Bill of Rights  
of his subversions of the laws and liberties

of the kingdom, absence or departure therefrom is not included as a separate item, altho there is a general charge of the king "having abdicated the government and the throne being thereby vacant."

Of course the activities of Edward VII on the Continent resulting in the Entente will readily be recalled as a marked instance of the present freedom to absent himself and even personally engage in diplomatic negotiations now enjoyed by the British King.

PARK BENJAMIN

New York City

\* \* \*

Your editorial on Brazilian students in the United States in your issue of March 1 recalls a second appeal for educational assistance which came to this country from Brazil about a dozen years ago. The President of Brazil requested President Roosevelt to send an expert to that country to create a series of agricultural colleges, one for each state, after the manner of the American system. Mr. Roosevelt discussed the matter with Secretary of Agriculture Wilson and others and recommended Prof. Clinton D. Smith, for many years professor of agriculture at the Michigan Agricultural College, because of his executive ability and courage. He accepted the offer, which was a most flattering one from several standpoints, and spent a half dozen years in the work of creation and expansion. He received the hearty support of the Government and the young men of the country, who soon came to regard him more as a father or a big brother than an educator of international fame, but he was seriously hampered by the Jesuit priests who had for several centuries enjoyed a monopoly of teaching the young men of that country. Their criticism was so bitter and their opposition so constant and underhanded that he finally relinquished his efforts and returned to this country, where he died soon after.

E. A. STOWE

Grand Rapids, Mich.

\* \* \*

They say you never really know a person until you have camped out with him. The French people seem to stand even this test of enforced intimacy under conditions calculated to show the seamy side of character, if we may judge from what an American "Tommy" writes to his home folks:

One of the most remarkable things about the French people is their inborn sense of equality. It matters not whether a raggedly dressed boy accosts you on the street, or a French officer addresses you in a restaurant and yourself only a "buck" private, you are treated as no more or less, an equal. The first considers he is doing himself no honor in accepting a "souvenir," the second, that he is suffering no degradation in conversing in intimate and personal terms—even to the extent of taking great pains in helping one to learn the finer distinctions of the French language. No interest is shown a stranger unless a friendly one—nothing is done by those old enough to know better, except to make a visitor feel perfectly at home. This is the kind of spirit which makes for democracy, and which conquers the world.

Both in the observation and study of French institutions and ideals, one becomes more and more impressed with the fact that they stand not for the domination of any particular race, or the conquest of any special territory, but rather for ideals of inborn and potential equality, personal liberty, intellectual freedom and expansion developed according to nature and guided by rationality.

## How to Avoid Loss in Investment

BY following certain fixed rules the investor can make himself secure against loss. These rules have been determined by definite experience, and are founded on fixed and immutable laws and principles of investment and finance.

In the purchase of first mortgage serial 6% bonds, safeguarded under the Straus Plan, the prudent investor may protect himself from loss and find security, freedom from care and an attractive interest yield. The best indication of the safety of these bonds is the record of this House—37 years without loss to any investor.

Write today for our "Questionnaire for Investors" (Fourth Edition). It shows how to test the safety of any investment and to distinguish between the sound and the unsound. It will protect you against loss. This invaluable investment book will be sent to any investor without charge or obligation. Simply specify

*The "Must Wear of a Nation"*

### DIVIDENDS

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Tuesday, April 15, 1919, to stockholders of record at the close of business on Friday, March 14, 1919.

On account of the annual meeting, the transfer books will be closed from Saturday, March 15, to Tuesday, March 25, 1919, both days included.

C. D. MILNE, Treasurer.

## United Shoe Machinery Corporation

The Directors of this Corporation have declared a quarterly dividend of 1½% (37½ cents per share) on the Preferred capital stock, and a dividend of 2% (50 cents per share) on the Common capital stock, both payable April 5, 1919, to stockholders of record at the close of business March 19, 1919.

L. A. COOLIDGE, Treasurer.

### THE ELECTRIC STORAGE BATTERY CO.

Allegheny Ave. & 19th Street,

Phila., March 5, 1919.

The Directors have declared a dividend of One dollar (\$1.00) per share from the net earnings of the Company on both Common and Preferred Stocks, payable April 1, 1919, to stockholders of record at the close of business on March 17, 1919. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

### THE J. G. WHITE MANAGEMENT CORPORATION,

43 Exchange Place, New York,  
MANAGERS

### THE MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION.

The Board of Directors of THE MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION has declared a quarterly dividend of One Dollar and Fifty Cents (\$1.50) per share on the Capital Stock of the Corporation, payable Tuesday, April 1st, 1919, to stockholders of record at the close of business Saturday, March 22nd, 1919.

T. W. MOFFAT, Treasurer.

### THE NEW YORK CENTRAL RAILROAD CO.

New York, March 12th, 1919.

Subject to the approval of the Director General of Railroads, a Dividend of One Dollar and Twenty-five cents (\$1.25) per share, on the Capital Stock of this Company has been declared, payable May 1, 1919, at the office of the Treasurer, to stockholders of record at the close of business April 8th, 1919.

MILTON S. BARGER, Treasurer.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

#### I. Bon Voyage. By May Preston Slosson.

1. Write a short, original story to explain the situation that is supposed to call forth the poem.
2. Show in what way the poem is founded upon current events.
3. What events called forth Milton's "Lycidas"? Tennyson's "In Memoriam"? "The Charge of the Light Brigade"? Holmes's "Old Ironsides"? Burns's "To a Mouse"? Lowell's "Commemoration Ode"? Whittier's "Barbara Frietchie"?
4. What recent event has deeply interested and impressed you? Write a sincere, emotional, and poetic prose paragraph concerning the event. Write verse, if you prefer.
5. Point out three distinct divisions of the poem.
6. Explain the syntax of the following words: sailing, guiding, tides, pathway, leading.

#### II. Satisfying Old Sam Adams. By William E. Barton.

1. What reasons led the author to give the article its present title? Give rules for the writing of titles.
2. Write five good titles for original school compositions.
3. In the first sentence of the article what allusions are made to matters of present-day interest?
4. Prove that the first paragraph is founded upon comparison.
5. What is the advantage of using comparison throughout the article?
6. Prove that the entire article is a clever example of argument.
7. Prove that the article is founded, in part, upon satire.
8. Prove that the article gives a good illustration of time order.
9. Write a single sentence that will express the principal thought of the article.

#### III. The Birth of the Czecho-Slovak Republic. By Charles Pergler.

1. Write a letter giving a vivid account of any scene connected with the proclamation of Czecho-Slovak freedom. Give specific, personal details.
2. Give a short, spirited speech in favor of the Czecho-Slovak Republic.
3. Select any long sentence that occurs in the article. Give the syntax of every word in the sentence, and the syntax of every phrase, and of every clause.

#### IV. The Greatest Port in the World. By Julius Henry Cohen.

1. Point out the principal proposition made in the article.
2. Point out the subordinate points that are presented in favor of the principal proposition.

#### V. The Story of the Week.

1. Give the derivation, and the meaning, of every one of the following words that occur in "The Story of the Week": perpetuate, budget, flotation, trend, adequate, curriculum, nominally, mediation, premeditation, accruing, atrocious, retaliated, brigandage, impending, cordon, imminent, questionnaire, project, integral, delimitation, comprize, relinquish, pillage, spurious, wanton, intimations, environs.
2. Read aloud "The Crimes of Germany." Afterwards, explain any terms that may not be understood by members of your class.
3. What recent events lead you to believe that The League of Nations will, or will not, be adopted?
4. Give a talk in which you explain the present relations of Germany and the Allies.
5. Give arguments for, or against, sending food to Germany.
6. Give a short, oral account of the work of the Peace Congress.
7. Explain why the United States and the Allies are fighting the Russian Bolsheviks. Follow this by giving an account of recent events in the contest.
8. Consult the article on "Poland" in any good encyclopedia. Give your class a résumé of interesting events in the history of Poland. Tell what is the present condition of Poland.
9. Write a circular letter designed to announce the last Liberty Loan.
10. Yale "has done away with Latin as a required subject." Give an argument for, or against, the study of Latin, or of Greek.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

#### I. The Peace Conference—Story of the Week.

1. What is the status of the proposed League of Nations as far as the Peace Conference is concerned?
  2. What additional military and naval guarantees have been added to the proposed treaty during the past two or three weeks?
  3. What are the latest proposals for the settlement of the various boundary questions which are before the Conference?
  4. Suppose that the German delegates should hold fast to the announced determination of Matthias Erzberger, what would be the result?
- #### II. The New European Nationalities—"The Birth of the Czecho-Slovak Republic." "Poland and Her Neighbors."
1. Note the three provinces which constitute the new Czecho-Slovak state. What relation did each of these bear to the former Austro-Hungarian Empire?
  2. Why does the author of the article refer to Austria-Hungary as "the age long oppressor of the Czecho-Slovak peoples"?
  3. "There can be little doubt that the government of the Czecho-Slovaks is the most stable in mid-Europe," etc. How do you account for this fact?
  4. "Meantime conflicts between Poland and neighboring states continue." What is the cause of these conflicts? How will they probably be settled in the end?

#### III. The League of Nations—"Satisfying Old Sam Adams," "The Lodge-Lowell Debate."

1. What is the significance of the title of this article?
2. In what sense is it true that our Constitution may be regarded as "the model for the proposed League of Nations"?
3. On the basis of this article summarize the history of the Constitutional Convention of 1787. The history of the ratification of the Constitution.
4. Justify the statement: "Whoever desires to make a good speech against the League of Nations . . . will find it already made for him in 1788."
5. What is the basis for each of Lodge's objections to the League of Nations? How far does Lowell answer him?

#### IV. Socialism vs. Individualism—"Blue Birds in the Bush," "Give the Individual a Chance."

1. In what respects are the ideas expressed in the two editorials alike?
2. Note that the writer of the first editorial asks a question in the fourth paragraph and answers it in the fifth. Does the answer satisfy you in every respect?
3. What does the figure of speech in the last paragraph of this editorial mean?
4. Weigh the advantages of "solidarity" against those of "individualism." In which scale of the balance does the advantage lie? What is the editor's judgment in this matter?

#### V. New York Harbor—"The Greatest Port in the World."

1. "It [New York] is and ever will be the greatest port in the world." Upon what facts does the author base this statement?
2. What are the legal problems which must be settled before the physical reorganization of New York harbor can be undertaken?
3. "All the trunk lines, other than the New York Central, reach Manhattan by ferry or car float." What are the disadvantages and the advantages of this condition?
4. Suggest some of the physical changes which will probably be made for the improvement of the harbor facilities in New York.

#### VI. Public and Private Finance—"The Investment Situation," "The Last Loan's Coming."

1. What have been the advantages and the disadvantages of the widespread subscription to the four Liberty Loans?
2. What steps, if any, could the Government take to stabilize the price of Liberty Bonds?
3. Why will short term notes be more attractive as investments in the Victory Loan than the long term bonds of the Liberty Loans?
4. Why would it be "a most unfortunate occurrence if the people . . . failed to take these notes, thus placing the burden of subscriptions on the banks"?

## Up-to-Date Methods and Modern Appliances

should be installed in every department of your business organization. If you are not acquainted with the ingenious devices which make for an efficient office, or if you don't know where to go for equipment, write for our "Check List."

Mark the items about which you wish information and return check list to us.

Try this service, or at least send for "Check List," and see what a wealth of information can be yours.

## THE NEW PLAYS

The revival of *The Honor of the Family*, in which Otis Skinner plays the blustering and forceful Colonel Philippe Bridau, is one of the most satisfying performances of the season. Flora is well played by Evelyn Varden. (Globe Theater.)

*Le Misanthrope*, Molière's most modern play, not seen here since Mansfield gave it, is the final novelty in the repertory of the Theatre du Vieux Colombier.

*The Kiss Burglar* is with us again. Marie Carroll in the leading role makes a charming and graceful Grand Duchess, surrounded by a very creditable cast, in which Denman Maley deserves especial mention. (Broadhurst Theater.)

If you like epigrammatic sentimentality in hoop skirts, *Molière* is the play for you. Written by Philip Moeller, acted by Henry Miller, Blanche Bates, Estelle Winwood, Holbrook Blinn—all in roles far removed from their past successes. (Liberty Theater.)

## JUST A WORD

How the army feels about the attempt to prevent the establishment of a permanent peace by means of the League of Nations is shown by the following letter to Senator Borah:

I attended the meeting at Boston which you recently address in opposition to the League of Nations. The full case was not presented. Sailors and soldiers who attempted to speak were denied the opportunity.

A mere soldier, one among four million, could not challenge a United States Senator; but as one so fortunate as to have been on the firing line when it was a question of the life or death of our nation, I ask permission to present at your meetings the case for the men who made the supreme sacrifice for a better world.

The American soldier believed that something mightily worth while would follow his sacrifice. He believed an organization would follow which would make peace more secure. He knew little of the details of a League of Nations; but from his every day life he could see the necessity of organization. He now believes that it is the business of a constructive statesman to say what that organization should be, and not merely to oppose the one suggested.

We have been too busy on the other side to know what has been going on politically at home. Possibly an appeal for party support was made where it should not have been made. Possibly, the Senate was not given full consideration. We do not know. But we do know that American soldiers have been dying for certain principles, and that these principles are too great to be discredited for the purpose of discrediting the man or the party which happens to uphold them. THOMAS G. CHAMBERLAIN, Captain U. S. Army.

Hotel McAlpin, New York City

## REMARKABLE REMARKS

JOHN GALSWORTHY—The French cook: we open tins.

FREDERICK C. HOWE—Revolutions travel on empty stomachs.

LLOYD GEORGE—I am a child of the House of Commons.

ROGER BABSON—No man ever hung the red flag over his own hearthstone.

GERALD STANLEY LEE—Nations sit and hold each other's hands in the dark.

SENATOR POINDEXTER—The way to drive Bolshevism out of the world is to shoot it out.

GUSTAVE LE BON—To gain the war, talent was necessary. To gain peace, genius will be necessary.

MAJOR GENERAL DAVIDSON—War is a most disgusting, barbarous and preposterous state of affairs.

PRESIDENT WILSON—Do you believe in the aspirations of the Czecho-Slovaks and Jugo-Slavs as I do?

ISRAEL ZANGWILL—The much trumpeted "Jewish National Home" seems to be neither Jewish nor National nor a Home.

DR. A. C. MCGIFFERT—Seldom, to its shame be it said, has the Church ventured upon new paths until common sentiment has pronounced them safe.

E. W. HOWE—I sometimes think Uncle Sam is the ugliest of all us Americans, and regret that the flag is not used oftener, and the picture of our noted relative less.

DEAN OF LINCOLN—If you ask if I believe in the Eden story as representing the origin of mankind I say I do not, nor do I believe in the historical truth of the Flood.

ELINOR MORDAUNT—The hand which rocks the cradle may rule the world—sentimentally speaking; but the hand which holds the purse string is more immediately efficacious.

CARL W. ACKERMAN—The first revolution resulted in the abolition of rank and turned men into citizens, but the Bolshevik counter-revolution resulted in turning them into animals.

G. K. CHESTERTON—Of all the monkey tricks of the modern materialistic sociology, that which sets a mark on it, almost more than anything else for me, is its detestable disrespect for old age.

JAMES HENRY THOMAS—The organized workers of Great Britain have made up their minds to obtain for themselves an increasing share of the wealth which their labor has produced and produces.

ARTHUR GLEASON—The British labor movement is an organic growth, which, like everything else in wartime England has gone thru in four years what would ordinarily have required twenty years.

WILLIAM TYLER MILLER—In addition to all that war has taught them, our soldier boys learned two things from Europe which they would never have got at home: respect for permanence and love of beauty.

OSWALD GARRISON VILLARD—Any introduction of universal military servitude in the western world would send a chill over the entire American continent and be viewed with alarm by the rest of the world.

# APPERSON

## The EIGHT WITH EIGHTY LESS PARTS

IN the foreground of such scenes of elegant life one finds the Apperson playing its role with dignity and distinction. Fitted by appearance to mingle with the most expensive of imported productions. Powered to ask no favors in a friendly brush on the road with the swiftest cars built. Equipped with the powerful, responsive Apperson 8 Motor—the 8 with 80 less parts.

## THE LEAGUE OR BOLSHEVISM ?

BY HAMILTON HOLT

**A**RE American people aware that Europe is on the verge of a volcano? No one, I think, can have visited England, France and Germany, as I have during the past three months, without realizing that this is the case. The Allies have won the war, but while the delegates at Paris are engaged in winning the peace, the Bolshevik cloud grows blacker and blacker on the horizon, till today it overshadows all Europe. As the hope of Europe turned to America in those dark days of April, May and June last year when the fate of civilization trembled in the balance, so again today the world looks to America to save her from perhaps a greater menace.

Owing to the inventions of steam and electricity which have annihilated time and space the world has become a small neighborhood in which what concerns one concerns all. It is only by concerted action, by a League of Nations that will substitute coöperation for competition in international affairs, that there can be the slightest hope of the future peace of the world. This is the belief of the soldiers who have fought, as well as of those who have stayed at home. Even the governments at last realize that no single nation, no matter how powerful and prepared, can guarantee its own peace, to say nothing of the peace of the world. Without a League Europe knows she must return to the old system of alliances, with its colossal armaments, secret diplomacy and mutual hates and suspicions. Once such a reversion to pre-war conditions is seen inevitable or even likely the people will revolt. The issue before the world therefore is a League of Nations or Bolshevism.

Everywhere I went men asked me if it were possible that America would refuse to join the League of Nations. They had heard that President Wilson did not have the American people unanimously behind him. Was it true? Would America fail the world now after autocracy had been dethroned and it only required patience and an unselfish will to inaugurate a new era of coöperation and peace on earth?

I did not meet a single man in Europe who thought a League could succeed for a moment if the United States was not a member. I met many who assured me that if America refused to join, revolutions would follow everywhere. Europe's foremost democrat, Premier Venizelos of Greece, told me that should our Senate refuse to ratify the Covenant, all liberal and humane men everywhere would despair. Ex Premier Bourgeois, France's spokesman on the Commission that drafted the Covenant, begged me the night before I left to make plain to the American people that Europe was lost if the United States would not continue to play its full part in saving civilization. The work so heroically begun by our boys at Seicheprey, Cantigny,

Chateau Thierry, St. Mihiel and the Argonne must not now be left uncompleted.

It was my great privilege to have been present at Paris when the Covenant was born. Colonel House was good enough to appoint me liaison officer between the American Peace Commission and the League to Enforce Peace. Consequently I saw the progress of the Covenant from day to day on its course thru the Commission. Had I been permitted to divulge what I learned when I learned it, I should have got many a "beat" on the thousand or more journalists assembled at the Conference.

It has been intimated by Senator Lodge and others that the Covenant is a British document. Nonsense. I read in advance the original English "secret" draft brought by Lord Robert Cecil to Paris, and while I must say that it was the most admirably worked out proposal presented by any delegation, the Covenant as it stands today is more American than English. I have taken the trouble to underline in red ink those portions of the Covenant whose words are taken bodily from the American original draft which I have in my possession, and my copy is streaked with red from beginning to end. And if I had underlined the American ideas as well as the precise words that were adopted the Covenant would be more red than black.

Of course political exigencies made it necessary that Mr. Wilson should carry a draft of the Covenant home with him in his pocket. Consequently the Covenant bears internal testimony of haste in its construction. Mr. Taft was quite right when he said, "Undoubtedly the Covenant needs revision. It is not symmetrically arranged, its meaning has to be dug out, and the language is ponderous and in diplomatic patois." I myself while on the sea voyage home was able to formulate what I believe to be forty-seven distinct improvements in the Covenant, most of them, of course, in the interest of clarity and precision, but some of them fundamental.

It is inconceivable that the Peace Conference will not amend the draft in many particulars. I am, consequently, quite sure that the Commission will be most grateful for any constructive criticisms from any responsible groups or individuals anywhere on earth. This is evidenced by the fact that the neutral nations have been officially invited to make suggestions. The neutrals have gladly availed themselves of this opportunity and already some thirty concrete proposals have been presented, many of which will no doubt be adopted. With the full approval of the various official peace Commissions a Conference was held in London on March 11 and 12 when representatives of the various League of Nations societies from the Allied countries assembled to discuss the Covenant article by article to see what improve-

sents those groups who have been giving most attention to the subject for the past four years might have to offer. I attended this conference as a representative of the League to Enforce Peace and many important suggestions were made there that I am sure will be useful to the Commissioners at Paris. Even Bourgeois of France and Venizelos of Greece, both framers of the Covenant, thought it important enough to leave their pressing work at Paris to participate in our unofficial conference.

On my return home I find a far greater amount of discussion going on in respect to the minutiae of the Covenant than was the case in Europe. There the disposition was to insist passionately on the establishment of a League of Nations, provided that it was a real League with "teeth in it," but to leave the technical details to be settled by the experts. The discussion here seems also more active and thoroughgoing. This is all to the good. The more criticism we can offer that will make the document simple, precise and powerful, the better. The activity of the Senators is to be praised, if not always their arguments. Not only is it the right of the Senators under the constitution to give advice, but it is their duty. On that we must all agree. But it is also the right and duty of the people to be heard. This is probably the first time in history, as President Lowell has well pointed out, when the people have been invited in to take part in such a discussion. The day of open diplomacy has at last arrived.

But what we object to is not the criticism that will help the delegates to perfect and strengthen the Covenant, but the criticism that would weaken and destroy it. Most of the senatorial criticism seems to be of the latter kind. It is apparently not the intention of many of our Senators to see what the United States can put into the League but what she can get out of it.

Our young men with all the ardor and idealism of youth crossed the ocean to offer their lives to save the world from autocratic tyranny. Our old men at home now urge their country to play safe. Luckily Woodrow Wilson has the spirit of youth. He would have the United States give its all, that in giving it may gain. I had an interview with him at the

Murat Palace while the Covenant was still in committee. He told me he would sign no document to which the Senate could "reasonably" object on constitutional grounds. Apparently if the Senate objected on other grounds he was ready for a fight.

The fact is that all the trouble at the Peace Conference, like trouble everywhere else in the world, is owing to human selfishness. The Peace Conference has been accused of "unconscionable" delays. The truth is that all the delays have been made by those blind reactionaries of Europe who are trying to avoid the obligations they assumed when they agreed to accept our President's fourteen points. Wilson and Lloyd George would have been measurably nearer the goal of peace today had it not been for the machinations of those selfish individuals, groups, classes and nations who have been trying to play at the peace table the old diplomatic game of getting something at the expense of the other fellow. And these reactionaries, I am ashamed to say, have of late dared to show their heads the more openly owing to the attitude of some of our Senators and public men who have left no stone unturned to divide our country on this greatest of all issues and to discredit the President.

As for the charge, that the drafting of the Covenant has delayed the signing of the peace treaty, that is without any foundation whatsoever. The Commission that drafted the Covenant is of course the one commission that has done its job extra expeditiously.

I hope to discuss the Covenant later in some detail, but here I wish to say that even without a single amendment it is unquestionably the greatest document since the Declaration of American Independence. It should be amended without doubt, but better not a syllable changed than that it should be emasculated at the behest of timidity, selfishness or partizan advantage. Our forefathers took no counsel of cowardice from the Tories of their day when they signed the immortal document that brought forth the United States of America. If now we take no counsel of cowardice from our senatorial reactionaries, but pledge "our lives, our fortunes and our sacred honor" to the Declaration of Interdependence so nobly championed by Presidents Wilson and Taft, and the host of great men in Europe and Asia, then the United Nations of the World will result.

## ITALY BECOMES A GREAT POWER

BY HAROLD HOWLAND

IT is a keen disappointment to find on my return from Italy that so many in America do not sympathize with the Italian position at the Peace Conference. In seven months of work in Florence with the Italian army I have come to have a great admiration and a real affection for the Italian people. But, what is more to the point, I have learned to understand their point of view, to comprehend their aspirations, to realize the justice of their claims. The lack of sympathy which I find widespread in America, among individuals as well as in the press, is due, I am convinced, to imperfect information in most cases, and in some to an erroneous conception of the principle to be followed in determining the readjustment of national boundaries in Europe in these days of reconstruction.

Italy is one of the five great powers which have conquered German militarism. I am glad to see that in the past few days, since the Italian delegation announced that they could not continue to take part in the Conference unless the Italian right to Fiume was recognized in the Treaty of Peace, there is more of an inclination to speak of the Big Four as the controlling element in the Peace Conference. Of course, Japan is also one of the partners in the enterprise completed with such astonishing thoroughness, but Japan's position is quite separate and apart, and no one recognizes it more completely than the Japanese. But

Italy's relation to the Alliance which defeated Germany is precisely that of Great Britain, France and the United States. Italy is one of the Big Four. There is absolutely no reason to consider Italy in these pregnant days in any different light. There has been too much tendency to speak of the "Italian-Yugoslav controversy" as tho both parties to it were outsiders, who must present their claims before the other Allies like litigants before a court. Italy is not a suitor at the bar of the Peace Conference; she is a member of the court—if there is a court. Rather, she is a full and equal member of the partnership that defeated Germany. Italy is one of the great powers, not only nominally but in fact; because in the Great War Italy bore the burdens and accomplished the deeds of a great power. The ambition to be recognized as a great power has possessed Italians for many years. It need possess them no longer. They have reached their goal. For in the Great War Italy became a great power by the only possible road, that of action and achievement. Italians are prone in these days to believe—and not without evidence—that one of their Allies is loath to have Italy recognized as a great power. It is lamentable if it is true. But, no matter who would have it otherwise, recognition cannot be withheld.

It would be well to recall the things that Italy has achieved in the great war.

When the war broke out Italy was a member of the

Triple Alliance, with Germany and Austria as partners. The line of logic and of least resistance—in those days and for many months thereafter one could easily have said, the line of worldly wisdom—would have been to cast in her lot with the Teutonic powers. But Italy instantly notified France that she would maintain neutrality. The notice permitted France to withdraw her troops from the Italian frontier—where they must inevitably have stayed if there had been any uncertainty as to Italy's course—and to use them in the fateful battle of the Marne. It is hardly too much to say that Italy saved France in those first black days. Incidentally it was the word communicated to the British Government by the Italian Ambassador which led Winston Churchill to hold together the British fleet—about to be dispersed after the great review at Portsmouth—until England actually declared war, to the intense discomfiture of Germany.

Italy entered the war after nine months of neutrality, just at the moment when the great German offensive against the Russians in Galicia was sweeping all before it. Allied stock was not high in those days, and again worldly wisdom would have seemed to dictate to Italy another course. But Italy came in, and not for what she could get out of it. That may have been the Government's view; it was not the people's view—and I maintain that what the people think and feel is more important than what a government plans and contrives. But that is another story, to which I shall return on another occasion.

For two years and a half Italy did well against the enemy, altho she entered the war in a state of unpreparedness comparable only to that of the United States when our time came. But Italy's great moment came in her blackest hour. Caporetto—when the German and Austrian forces, aided by bad Italian generalship and Italian treachery and cowardice, smashed thru the Italian lines and forced them back in almost headlong retreat—was enough to break the hearts and annihilate the resistance of a less great-spirited people. But the Italian army stopped that triumphant progress of the invaders. Stopped it almost without cannon, without guns, without ammunition, for vast spoils had been abandoned during the retreat. Stopped it with the bare bodies of Italy's youth, the class of 1919, the boys just from the training camps, hardly yet aware of the razor's touch upon their chins. Stopped it—the greatest marvel of all—on a line that was strategically impracticable to defend and hold, against the advice of their Allies, against the judgment of every military leader and authority since the barbarians first began to come down from the mountains into the fertile plains of Italy. They stopped that victorious rush upon the line of the Piave, a broad, shallow stream meandering thru a flat plain with never a hight to command the enemy's position, never a physical feature of the terrain to satisfy the strategist's requirements. It was madness, but it succeeded.

It was a titanic feat under any conditions. For a demoralized army retreating before a victorious enemy it was almost unbelievable. Moreover the stand was made by the Italians without help from their Allies. The help came later, but—do not be deceived—only after the stand had been made. Read what General the Earl of Cavan, who commended the British troops in Italy, said:

In 1917, in the terrible days which followed the disaster at Caporetto, I saw, just after my arrival at Venice, the Italian army in full retreat, and I became convinced that a recovery was impossible before the arrival of sufficient reinforcements from France and England. But I was deceived, for shortly afterward I saw the Italian army, which had seemed to be in the advanced stages of an utter rout, form a solid line on the Piave and hold it with magnificent persistence, permitting the English and French reinforcements to take up the positions assigned them without once coming in contact with the enemy.

Caporetto was a tragic moment for Italy. But it became a prelude for an achievement of amazing valor. It further brought the Italian people to themselves. That stand upon the Piave was the beginning of the utter defeat of Austria.

It was the beginning and the end of the defeat of the internal enemies of Italy herself.

Half a year later the Italian army met another Austrian offensive on the Piave and turned it into an Austrian defeat. It was the first of the Allied victories that ended with the crushing of the two Teutonic partners in crime. Of this brilliant action General Cavan said:

The defense of the Piave at the end of 1917 is an imperishable page in the military annals of Italy; but not less glorious was the victory of June, 1918, when the Italian army, attacked by the entire army of Austria-Hungary, which possessed a numerical superiority of eleven divisions, not only paralyzed the attack and recaptured the few positions lost during the first day, but reconquered an important tract of territory, and rendered Venice entirely safe.

Lastly, just as Italy was the first to begin the final and decisive series of victories over the common enemy, so she was the first to administer ultimate defeat. For weeks in the early fall of 1918 we were all asking, in Italy as well as in America, Where is the Italian offensive? The Italians, we said, must take the offensive or suffer heavily in prestige if not in honor. When the moment came, the offensive came with it—and the prestige and honor of the Austrians crumbled away before it. With fifty-one divisions of Italian troops, three of British, two of French, one of Czechoslovak, and one American regiment, General Caviglia attacked the Austrian army of sixty-three and one-half divisions, split it in two in the middle, drove it back all along the line, utterly routed it, and captured 500,000 prisoners. The defeat was complete; the Italian advance did not stop until the Italian flag was flying over Trent and Triest, the sacred cities of Italia Irredenta. Then Austria sued for an armistice and Italy had the honor of experiencing first along her front the cessation of hostilities. It was accomplished by the force of Italian arms and the power of the Italian spirit.

Italy has won her spurs. She has conquered by her own magnificent achievements the right to be one of the great powers. She is a small country compared to the British Empire or the United States, or even to France. She is a poor country, lacking in natural resources and with a population tightly packed within her narrow borders. But she has a great heart and an unconquerable spirit. In the contribution which she has made to the defeat of the Teuton powers—suffering privations and making sacrifices worthy to be set alongside those of France and Belgium—she has deserved well of the world, she has made civilization her debtor.

We cannot do otherwise than recognize Italy as an equal partner in the achievement that has been wrought, and to welcome her to an equal voice in the determination of the questions which confront the five great powers—more specifically the Big Four—in the peace to be imposed upon Germany.

This is what the Italian people want above all. They know that they are worthy to be ranked as a great power; they want the recognition of the fact by the world, more especially by the peoples with whom they have fought side by side in the Great War. There can be no question about the fact. The only question is whether Americans and Englishmen and Frenchmen will permit blindness, or self interest, or pride, or any other unworthy motive or circumstance to hold them back from awarding to the Italian people their rightful due.

This leads to the practical question, How shall the boundaries of Italy be redrawn in the great readjustment of the map of Europe. On this question I believe that American opinion, as I have seen it reflected in the press and in conversation, is in danger of making a serious mistake. The American people rightly have a fine sympathy with oppressed nationalities, with peoples aspiring to national self-expression. But we must not permit that admirable sentiment to blind us to facts. It must not make us Quixotic—especially when it is at the expense of others and not of ourselves.

# THE SECOND HUNGARIAN REVOLUTION

W AR, famine, revolution, anarchy, tyranny—such is the historic sequence. Disorders of the body politic have a regular course to run that is natural and not necessary. A malady of the human body likewise has a normal course that results ultimately in the destruction of the pernicious bacillus unless the patient dies in the process. But physicians have learned how to check or shorten the disease, alleviate its worst symptoms, avoid its after effects and prevent its spreading. The sociological physician is young at his business and has not got much beyond such primitive methods as blood-letting and shot-gun quarantine. For instance, he has not, like the doctor, come to realize the importance of feeding the patient well and the science of political sanitation has yet to be worked out.

What has happened in Hungary is, like what happened in Russia, what might have been expected, but we need not therefore regard it as inevitable and fold our arms in despair. A year ago we should have rejoiced to see Hungary in a state of collapse, but not so now. We are anxious—not from sympathy for her suffering, it is too soon for that—but because the patient has not yet made her will in our favor and because the disease is contagious.

Last year we were hoping our armies could get to Berlin and Budapest. Now we are hoping that they won't have to go there. To occupy an enemy capital while we dictate peace terms to a cowed and repentant people was a pleasant prospect, but to garrison permanently a country seething with anarchy is a job we naturally shrink from. Bolshevism is like the Great Boyg of Peer Gynt. It is intangible, pervasive and unfair in its fight. It gives way when pushed but crowds in on another side. We got along better when we were fighting the organized armies of the Central Powers, for then we could mark our progress by pins on a map. Our present embarrassment arises from the completeness of our victory. Never in the history of the world were such powerful enemies so utterly defeated and such vast territories at the disposal of the victors.

But the more new nationalities we have to indemnify the less territory there is to pay the indemnity. It is no wonder that the German and Austrian empires are flying to pieces like a grenade. The seceding sections not only want to escape the tyranny of German domination and the odium of the German name, but also the pecuniary penalties that are to be imposed upon whatever remains. Those that can't run away may go into bankruptcy, whether voluntary or not does not matter much to the creditors.

According to present plans 80 per cent of the Austro-Hungarian monarchy is to be taken away. That is all right. We are glad to see the old rickety, reactionary contraption go to pieces, but we cannot then hope to realize much out of the residuary real estate. The Czechs used to pay 62 per cent of the Austrian taxes. They produced 93 per cent of its sugar and 83 per cent of its coal. The Slovaks produced one-third of the iron, gold and silver of Hungary. Doubtless the Czecho-Slovaks will assume a certain share of the old national debt of Austria-Hungary, but it would be unfair to saddle upon the young republic the moneys spent in oppressing their own people and in a war to which they were opposed. To charge the Croats and Slovenes who have escaped the Austro-Hungarian yoke with a war indemnity would be robbing the Serbians, with whom they have united in a common Jugoslavia. The same thing is true for the Poles, Ruthenians, Italians and Rumanians. There is left then only those parts chiefly inhabited by Germans and Magyars who have a poison hatred for one another and could not be tied together.

The paring off process cut to the quick when the Rumanian frontier was brought up to the Theiss River only fifty miles from Budapest. This gave opportunity or excuse for

the Bolsheviki to get control. Bolshevism, as we have previously pointed out, can only succeed by being false to its professions. It defends itself by appealing to the principles it repudiates. Lenin and Trotzky profess not to believe in patriotism, but they might have fallen long ago if they had not been able to gain the support of their political opponents by calling upon them to defend their country from invasion. So also in Hungary the Bolsheviki appeal to the same motive as did the old Kaiser, the fatherland is endangered, tho we cannot see what difference it makes to a true internationalist how political boundaries are drawn.

But tho the latter end of Hungary be worse than the first we need not waste any tears over the overthrow of the Magyar aristocracy. It was class rule and race rule and minority rule all in one and did not have even the saving grace of efficiency. A few nabobs held one-sixth of the land of Hungary but produced only one-fifteenth of the crop. Seventy per cent of the people were peasants with little chance of anything better. With a better climate and a richer soil than Germany the yield per acre was 52 per cent of the German. Such factories as there were had mostly been established by Germans and as in Russia their withdrawal caused a collapse of the industry. Spartacus was able to make war on Rome as leader of a servile insurrection. The only safeguard against a Spartacan movement is not to have serfs.

The Karolyi Government was as good a transitional stage of administration as we could have hoped for, republican, orderly, moderate, reputable, not opposed to progress, not inimical to the Allies. If it could have remained in power something might have been made out of Hungary. But, as in Russia, the pendulum has swung over from autocracy to ochlocracy without stopping at the golden mean of democracy. It will, of course, swing back in the course of time by its own momentum, but it is our business to try to stop these violent political oscillations and bring the pendulum to rest as near its stable point of democracy as we can.

## HELP ARMENIA, NOW!

THE winter in Armenia and the Caucasus has been exceedingly severe, causing intense sufferings and great mortality among refugees. From Erivan, the chief city in Russian Armenia, cables report that 45,000 are absolutely without bread; even the Government has not a pound to give the troops or the orphans. In all the Igdir region there is no meat; not a single dog, cat, horse or camel is left alive. On March 14 relief agents saw refugee women with bare hands stripping flesh from a dead horse. "Another week will score ten thousand lives lost. For Heaven's sake hurry!"

To meet this crisis the American Committee for Relief in the Near East, Cleveland H. Dodge, Treasurer, 1 Madison Avenue, New York, has rushed flour and supplies to Black Sea and Caspian ports, and thence by rail; but deep snow hinders and funds are insufficient. Misery is still spreading; the number of destitute refugees in the Western Caucasus alone is now 330,000.

In Asia Minor the Turks are setting adrift an increasing number of Armenian women and children. The food and supply ships sent from New York recently have reached Turkey; and the first twenty-car relief train has left Constantinople for the interior of Asia Minor. The British, who now control the Bagdad Railway, will let the American relief workers now on the ground by hundreds, have whole trains to rush medical supplies, food, seed corn and farm tractors. The organization is excellent; but the question is whether America will give promptly and generously enough to save the survivors from the insistent wolf. It is a debt of honor.

# THE STORY OF THE WEEK

Revising League President Wilson and his colleagues of the Commission on the League of Nations took up in earnest on March 20 the task of revising the tentative Constitution of the League in the light of the comments, criticisms and suggestions which had been made since its publication a month before. There were taken into consideration the objections which had been made by various United States Senators, the suggestions of substitute provisions which had come from the same source, and proposals of amendments which had been made by neutral countries. Thirteen such countries participated in the day's proceedings, and one of them, Switzerland, alone offered no fewer than twenty-six suggestions of amendment, among which was a clause providing that nothing in the Covenant should be interpreted as containing anything contrary to the sovereignty of States excepting so far as the state itself by adhering to the Covenant should consent, and that the Covenant should not interfere with the internal affairs of any member of the League. This was supposed to be designed to protect and confirm the Monroe Doctrine.

Japan proposed an amendment to secure the equality of all members of the League regardless of race, and France proposed the creation of an international military staff. On March 22 the first seven articles of the Covenant were redrafted, and by March 24 the process had been extended to the first sixteen. The next day it was understood that amendments had been agreed upon which would safeguard the Monroe Doctrine, withhold immigration and other domestic matters from international interference, preserve the independent

## THE GREAT WAR

*March 20*—Allied troops advance at Cologne and Mayence to check Spartacans. Reds active in Ukraine.

*March 21*—Italians threaten to leave Peace Congress unless Fiume is given to them. French defeated in Ukraine.

*March 22*—Allied troops enter Hungary. First large parade of returning troops in London.

*March 23*—Hungarian proletariat proclaims Soviet government. Anti-American conspiracy quelled at Colblenz.

*March 24*—Russian Bolshevik and Czecho-Slovak armies both advancing upon Hungary.

*March 25*—Important revision of the League of Nations Covenant. All Egypt reported in revolt.

*March 26*—Civil war at Budapest. Peace Congress plans joint peace treaty for all enemy countries.

sovereignty of states, require, unless otherwise stated, unanimous vote of the Executive Council for effective action, and provide for withdrawal of states from the League at will.

**Revolution in Hungary** Revolutionary symptoms in Hungary caused the sending of Allied troops into that country, on March 20-22, to maintain order against bands of plunderers and agitators who were calling for the overthrow of the Government. Count Karolyi, the President of the Hungarian Republic, on March 23, announced the resignation of the Cabinet, and the formation of a Socialist-Communist government. This, he said, was done because of the invidious attitude of the Peace Congress toward Hungary, and he appealed to "the proletariat of the world" against that Congress.

Simultaneously, the formation of a Revolutionary Government of Workers', Peasants' and Soldiers' Councils was announced, with Alexander Gorbai, an "uneducated but intelligent" workman as President; Bela Kun as Foreign Minister, and Joseph Pogany, an orderly in the army, as Minister of War. This body issued a public declaration, that the proletariat of Hungary had taken all power into its hands, because of the decision of the Peace Congress to occupy that country, which made the provisioning of it impossible. It added:

The Council decrees the socialization of large estates, mines, big industries, banks, and transportation lines; declares complete solidarity with the Russian Soviet Government, and offers to contract an armed alliance with the proletariat of Russia.

The peasantry and proletariat of Rumania, Jugo-Slavia and Czecho-Slovakia were also invited to join the Hungarians in a general uprising against the aristocracy; and the workingmen of Austria and Germany were requested to follow the example of the Hungarians in breaking off relations with the Peace Congress. This latter utterance was regarded as tantamount to a declaration of war against the Allied powers.

This formidable movement had obviously been planned some time in advance, and probably in collusion with the Soviet Government of Russia. Wireless telegraphic communication was at once established between Budapest and Petrograd, at which latter place the news of the Hungarian revolution was received with enthusiasm. The mobilization of a large "Red" Hungarian army was begun, and there were reports of the movement of a Russian Bol-

BOTH SIDES OF THE FIUME DISPUTE

At the left a League of Nations meeting protesting against the Italian occupation of Fiume. At the right a demonstration of the Italian population of Fiume meeting that the city be restored to Italy. Fiume is the chief seaport of Hungary, a city of about 40,000 population.

shevik army toward the frontier of Galicia to join it. Meantime the Czecho-Slovak and Serbian armies moved against the revolutionists, and French and other Allied troops were hastened in the same direction. Martial law was proclaimed throughout Hungary, with prohibition of the liquor traffic, on March 25. Two British monitors proceeded up the Danube from Belgrade to Budapest, to protect the Entente Commission and other foreigners.

These doings in Hungary naturally had a serious effect upon Austria, where agitation arose for a similar revolution, and on March 25 it was announced, apparently on good authority, that plans had been formed for the transformation of the Austrian Government into a Soviet system, and for repudiation of the vote, recently given, for union with Germany, unless Germany would also become Bolshevik.

#### Italy's Demand for Fiume

A critical moment arrived in the Peace Congress on March 21, when the Italian delegation unanimously decided to withdraw from the Congress unless the Adriatic port of Fiume was assigned to Italy coincidentally with the signing of the Treaty of Peace. Fiume was the chief port of Hungary, and is surrounded by country inhabited predominantly by Jugoslavs. In the city itself, however, a majority of the population is Italian. What is more important, the civilization and the culture of the city are Italian. In fact, it is not too strong a statement of the case to say that Fiume is essentially an Italian city. The action of the Italian delegates is an expression of the overwhelming sentiment and will of the Italian people. The problem was a vexing one, the other Allies feeling bound on one hand to be loyal to Italy, to the understandings on which she entered the war and to her just and reasonable claims for Italian civilization on the eastern coast of the Adriatic, and at the same time

recognizing the necessity of providing the Jugoslavs with a suitable outlet to the sea. The matter was on March 22 referred to Colonel House, of the American delegation, in the hope that he could propose an arrangement which would be just and acceptable to Italy and at the same time would recognize sympathetically the aspirations of the Jugoslavs.

#### The Economic Commission

The Economic Commission of the Peace Congress formulated on March 22 the economic subjects which are to be dealt with in the Peace Treaty. These comprize the future status of the German commercial treaties with the Allied countries, all of which have been abrogated by the war; a tariff arrangement for the resumption of trade without discrimination among the Allied countries; a provision concerning German contracts made before the war with Allied countries and suspended by the war; provisions concerning the disposition of German property, patents, copyrights and trademarks in Allied countries; and a provision for the assembling of an international economic and commercial congress as soon as possible after the conclusion of peace.

#### The Problem of Reparation

The question of Germany's reparation to the countries upon which she has inflicted losses has been much discussed, particularly by the President and the British and French Prime Ministers. It seems largely to have been resolved into the question not what Germany should pay but what she can pay. The financial experts of the Commission on Reparation have reported that forty billion dollars would be about the limit of Germany's ability to pay, within any reasonable time. This is admittedly not nearly as much as she might justly be asked to pay. Indeed, it may do little more than pay

Harding in Brooklyn Daily Eagle

IT WOULD BE JUST LIKE HIM

for the property destroyed and confiscated, without touching the enormous war debts which the Allied nations have been compelled to contract and for which Germany is held to be morally responsible.

The view of the experts is that to demand more than about forty billions of Germany would so burden her as to impair her capacity for paying any considerable indemnity at all. If the forty billions were paid in yearly instalments during forty years, the total payments of principal and interest would aggregate eighty billions. It was reported on March 20 that the American delegates were in favor of reducing the amount to be paid by Germany to only twelve billions, believing that to be about all that could be raised.

#### The Solvency of Germany

The question of Germany's solvency is being much discussed at Berlin, perhaps with the object of inducing the Peace Congress to grant liberal terms in the treaty, but doubtless also because the question is really a serious one. Dr. Schiffer, the Minister of Finance, states that the national debt is now about \$42,500,000,000, on which \$5,000,000,000 will have to be paid each year for interest, sinking fund, etc. Before the war the debt was only \$1,250,000,000, and the entire yearly budget was not more than that. Apparently, then, the country must now raise at least four times as great a revenue as it did before the war, to say nothing of what it may have to raise for indemnity to the Allies.

#### Unrest in Germany

Much apprehension was expressed in Germany lest the revolutionary movement in Hungary should extend to that country and cause a more formidable renewal of the Spartacan outbreaks. This was so coupled with demands for food and for more liberal treatment by the Allies that there was

#### TWO LEADERS OF GERMANY

Gustav Noske (left) is known as "the iron man of the new republic." As Minister of Defense of the Ebert ministry he issued the order that all Spartacans captured by the Government forces were to be shot. At the right is the Food Secretary of the German republic, Robert Schmidt, one of the leading Socialists and a former member of the Reichstag.

some uncertainty whether the fear of Bolshevism was genuine or was assumed for a purpose. Excepting for strikes and riots at Stettin, Luebeck and Breslau, however, there was no tangible response to the Hungarian call for revolutionary coöperation. Karl Radek, the Russian Bolshevik agent, who went to Germany surreptitiously in the middle of February, supposedly to aid in the Spartacan insurrection led by Karl Liebknecht, and who had long been imprisoned, was released on March 24 by order of the German Government on the ground that there were no charges against him which would warrant his further detention.

Three Spartacan agents were arrested at Coblenz on March 24, who confessed that they had come thither to organize Spartacan forces for an attack upon the American garrison and seizure of the banks and railroads, in the hope of provoking a general civilian uprising against the American Army of Occupation.

President Ebert is reported to have declared publicly on March 23 that the German Government could not and would not accept any terms of peace which gave Danzig to Poland, or which robbed Germany of any part of West Prussia or Upper Silesia. He added that the Government would assent to the neutralizing of the Vistula River and the making of Danzig a free port, thus giving Poland access to the sea.

#### The President Amid the Ruins

President Wilson, accompanied by Mrs. Wilson and other members of his party, spent March 23 at Soissons, Montdidier, the Chemin des Dames, and elsewhere where the war raged and great devastation was inflicted. He declared afterward that the day had been very instructive to him, tho in many ways very painful because of the distressing character of the things which he saw. But he added

#### THE ONLY AMERICAN WOMAN ON THE RUSSIAN FRONT

Miss Marcia Dunham has charge of the canteen in the Y. M. C. A. railroad train that goes from point to point serving the American and French and British soldiers fighting the Bolsheviks in Siberia.

that it had enabled him to have a fuller conception than ever before of the extraordinary sufferings and hardships of the people of France in the baptism of cruel fire thru which they have passed.

#### Clemenceau's Assailant

Emile Cottin, the would-be murderer of M. Clemenceau, was on March 14 unanimously sentenced to death by the military court which had been trying him. The court found that he had formed the idea of committing the crime in May, 1918, during a strike of workmen in aviation factories, and at that time began target-practise with a pistol. Cottin was able to earn more than \$7 a day, yet considered himself oppressed and wished in resentment to destroy society.

Rarely, said the court, had a crime been accomplished with more sustained premeditation, more mature design, and more implacable tenacity. Expert medical opinion declared Cottin to be entirely responsible for his acts. During his trial the prisoner declared that if he had escaped arrest after his attempt upon M. Clemenceau's life, he would have repeated the crime at another opportunity.

#### The Future of Luxemburg

The future of the little Grand Duchy of Luxemburg, a country which has often been an object of contention in European diplomacy and wars, is still uncertain. The Parliament on March 19 voted to submit to a popular referendum the question of the future form of government; whether the present dynasty should be retained, a new dynasty established, or a republic created, and immediately thereafter unanimously adopted a resolution expressing confidence in the neighboring powers and their loyal maintenance of the treaties protecting Luxemburg, and declaring it to be the will of the people that Luxemburg should retain its independence and self-government.

#### Operations in Russia

The Bolshevik forces were reported on March 20 to be making a new and formidable drive at Archangel, and to be making some progress against the small Allied army. The coming of spring will presently open the Dwina and Vaga rivers to navigation, when numerous gunboats belonging to the Bolsheviks will come into operation. It will be some time later before the Allied boats at the mouths of those rivers, further north, will be able to move.

Meantime the Bolsheviks are reported to have changed their manner of warfare, abandoning the cruel and inhuman practises with which they have been charged.

Elsewhere there is considerable activity. The Bolsheviks were driven from Dvinsk, southeast of Riga, on March 20. They were also compelled by the Poles to retire from Pinsk, while Mitau, southwest of Riga, was captured by the Letts. In the Ukraine the Ukrainian forces under General Petlura were reported on March 21 to be making substantial gains and to have placed the Bolshevik forces in a precarious position. It was at the same time reported that the French troops were about to evacuate Odessa. This report was later declared to have been premature, tho it was admitted that the evacuation of Odessa was planned, leaving, however, an Allied garrison at Sebastopol.

News came on March 24 of important operations by the Siberian troops of the Kolchak Government at Omsk. These troops had passed the Urals and were advancing on a line from Perm to the trans-Siberian railway; they had advanced twenty miles on a fifty-mile front between Okansk and Osa; and had attained marked successes at Birsik, northwest of Ufa.

Russian police statistics report that smallpox, typhoid fever, "hunger plague" and other pestilences rage at Petrograd, where more than 113,000

The Quartermaster's depot at Treves has developed a simple system by this neatly charted board with movable pegs of keeping accurate account of the rations in all its warehouses and of being able to tell at a glance just how much of what is where.

persons, or more than 11 per cent of the population, died during the month of February. Similar conditions prevail at Moscow.

**The Polish Problems** The question of the boundaries of Poland continues to give trouble.

The Poles were well pleased with the proposal to give them the port of Danzig, with a broad strip of territory thru West Prussia connecting it with the mass of Poland. Germany, on the other hand, revolts against it, pointing out that there is a large and probably a majority German population in the territory which it is thus proposed to give to Poland. To this the Poles rejoin that, if such is the case, it is because that territory, historically Polish, was artificially colonized by the German Government with German settlers, in pursuance of Bismarck's policy of Prussianizing Poland.

The Peace Congress decided on March 25 to send home to Poland, to resist there the threatened Bolshevik invasion, the Polish troops who have been fighting in France. The German Government protests against their being sent by way of Danzig, on the ground that their passage thru West Prussia would "lead to an attempt bloodily to oppress the undoubted German majority" in that region. It was suggested that they be landed at Koeningberg, in East Prussia.

**British Strike Averted** The great strike of British miners, railway hands and trans-

port workers, which had been threatened for some time, was presumably averted on March 21, when all three bodies voted to continue at work, for a time at least, until the Coal Commission's report and other Government proposals could be carefully considered. The Coal Commission's report was presented on March 20, with a number of radical recommendations. These included the progressive reduction of hours of labor in the mines from

eight to seven, and from seven to six; an increase in wages; and the giving to the workers an effective voice in the management of the mines. It was declared that the present system of ownership and working was intolerable, and must be replaced by nationalization or by joint control by owners and workers. These recommendations, if adopted, would mean an increase of \$150,000,000 a year in wages. It was suggested that a penny a ton should be at once collected on all coal raised, to provide means for improving housing in colliery districts. This would produce \$5,000,000 a year.

It was announced in Parliament that the Government accepted and would act upon the report, and that this would involve the continuation of Government control of the coal trade for two years more, and a cost to the taxpayers of \$150,000,000 a year. It was chiefly because of this announcement by the Government that the three great labor organizations voted the next day to defer indefinitely the threatened strike.

The appalling need of reform in mining conditions and operations was shown in a supplementary minority report, which disclosed the facts that one-tenth of all the nation's children are born and raised in mining communities; that many families live in houses of a single room and a majority in houses of not more than two rooms; and that there are from 160,000 to 176,000 casualties a year, of which from 1500 to 1700 are fatal.

**Practising the Monroe Doctrine** Going back for its precedent to the Lodge resolution, adopted by the Senate in 1912 to prevent the purchase by Japanese interests of Magdalena Bay in Lower California, the State Department on March 21 issued a warning to the California-Mexico Land Company of Los Angeles that the Japanese purchase of American-owned land in Lower California will not be permitted by this Govern-

ment. The action of the State Department was based on telegrams from Senator Phelan of California reporting the alleged negotiations by Japanese interests to buy 800,000 acres of land in Lower California, just below the United States border. The State Department has had no other information concerning these negotiations and the Japanese Embassy denied having knowledge of any such attempts toward the purchase of Mexican land.

Senator Phelan made the affair an occasion for voicing California's protest against any proposal of the League of Nations to eliminate United States discrimination against Oriental immigration.

**The Mexican Puzzle** During the war Mexico dropt almost out of the news, except for sporadic

bursts of oil or German propaganda. But now the spotlight is swinging round to Mexico again and is bringing sharply into prominence the question: Can the Carranza Administration govern Mexico?

On March 15 a dispatch from Mexico City announced:

The State of Morelos is under control of Government troops after being overrun for ten years by bands commanded by Emiliano Zapata. A campaign conducted by Gen. Pablo Gonzales, commander of the Government forces, has been successful, Zapata and a few hundred followers being driven into the mountains near Puente de Ixtla, on the boundary between Mexico and Guerrero. His capture is expected almost any day.

Morelos is a state of Mexico on the south descent of the great plateau. It is extremely productive of coffee, sugar and grains and had in 1900 a population of about 162,000. The same dispatch that proclaimed the control of the state by the Carranza Government went on to say:

There is regular train service over the National Railway of Mexico between this city and Cuernavaca, the capital of Morelos. and colonists and artisans are being taken there free of charge by the Government.

Cuernavaca, which has been held by Government troops for several months, is rapidly approaching a normal condition, altho the Zapatistas during their occupation of the town stripped the place of almost every stick of timber and unroofed nearly all the houses and public buildings.

The country between Cuernavaca and Cuautla is dotted with looted sugar refineries representing investments totaling millions of dollars. They are surrounded by sugar plantations which were allowed to run to waste by the rebels. Every stick of timber and every pound of salable metal was torn from the refineries by Zapata's men.

The Government's program of reconstruction went at the land problem first:

dividing up the great estates among the people, with the cooperation of the proprietors. The Government is determined to eliminate the old system, under which the whole State of Morelos (2776 square miles) was formerly divided into twenty-eight estates owned by fourteen families.

Schools are being opened but their capacity is entirely inadequate to accommodate the hundreds of children seeking admission.

Except for the extreme southwest section, where Zapata has taken refuge, the whole state is quiet and there has not been a single skirmish reported in weeks.

Only three days after this promising report of Mexico's quiet progress came

another Associated Press dispatch, dated from Washington:

The American Embassy at Mexico City was instructed today by the State Department to request the Mexican Government to take every possible step to insure the protection of American citizens in the territory in Northern Mexico, where Villa bands again have become active.

The information available seemed to indicate that Villa was sounding out the attitude of the United States by raiding operations in Chihuahua and along the Mexican-Texan border. The capture of an American citizen, James Whitten, by Villista bandits, was reported at Las Cruces. The body of another American citizen, Oscar Wallace, who was kidnapped on his ranch near Progreso by Mexican bandits, was found on March 25. Three other Americans, similarly captured, were released by the bandits after the American Government had written the Mexican Government insisting upon their safe return.

Troops of the 8th U. S. Cavalry stationed at the border went into Mexico on March 23 in pursuit of Mexican bandits who had stolen cattle and horses from an American ranch at Nunez, Texas. The troops recovered the stolen property and in a skirmish with the thieves killed five Mexicans and wounded two.

Some of the strongest opponents of the Carranza Government, "men once prominent in the Mexican republic," united in a "National Alliance" organized in Los Angeles recently. The Los Angeles Times explains the alliance as follows:

The purpose of the alliance is to unite factions and interests opposed to the Carranza Administration and to work as effectively as possible thruout the United States for setting up a strong, constructive government in Mexico with men of ability and integrity at the helm. Members of the alliance say the Carranza Administration is an utter failure and must be replaced by an abler one if Mexico is to be rehabilitated.

#### THE DANGER PAGE

Taxpayer: "Here! For goodness' sake, stop! We passed the warning post nearly four months ago, and there's danger ahead!"  
Government: "Yes, but I can't stop the old machine!"

[The war expenditure is still costing the nation approximately seven millions a day, nearly \$200 a minute. Daily press.]

**Satisfying Everybody** The Fuel Administration announced on March 23 that a plan to promote public welfare by more effective co-operation between the Federal Government and the coal industry had been submitted in referendum form to the members of the National Coal Association by officials of that organization. Producing companies holding membership in the National Coal Association represent an annual output of approximately 400,000,000 tons, or three-fourths of the country's bituminous production.

In this plan, which is the outcome of conferences called by Dr. Harry A. Garfield, in which coal operators and mine workers participated, it is proposed:

1. That all facts relating to the industry or any question touching it, such as the cost of living, the cost of production, labor conditions, transportation facilities, and other factors entering into the cost of coal, be officially and accurately ascertained by some of the regular Government

Hulladay in Providence Sunday Journal

#### THE BEST RECEPTION COMMITTEE

agencies, since the Government is the most appropriate representative of the public.

2. That the public is one of the parties at interest, the other two being capital and labor, and that no action affecting any of the findings of fact be taken until all three parties, thru their duly qualified representatives, shall have had an opportunity to consider and discuss the proposals.

3. That the determination of facts, as outlined, and the formulation of administrative policy are two separate and distinct functions, and therefore should not be performed by the same agency of the Government.

4. That the findings of facts, thus proposed, should be submitted to a permanent department of commission of the Government. In this connection it is pointed out that the plan does not contemplate the creation of new agencies, but proposes to utilize existing permanent governmental organizations.

5. That the President designate some Cabinet officer, or other appropriate official, to represent the public in considering any policy proposed, and that as advisers to the commissioner there should be an equal number, say three, of representatives of operators and miners. The function of the commission would be the consideration of all the problems affecting the industry, and the formulation of policies to deal with such problems, the commission being a purely advisory body.

6. That the commission shall make recommendations to the President, who would thus be placed in close relation with the industry and all factors entering into it making for its prosperity or retarding its development.

Orin in Chicago Daily Tribune

#### THE AMERICAN LAOCOON

Dr. Garfield also suggested that such a plan, modified to suit diverse conditions, might be adopted not only by the coal industry, but by other basic industries of the country as well, in which event the Government would be placed in possession of intimate facts, figures, findings and recommendations in meeting industrial problems relating to any industry as such problems might arise.

**Custing the Owner** The dispute that began when government control gave to Postmaster General Burleson the administration of the telegraph and cable facilities reached a new climax on March 22 when the Postmaster General ordered Clarence H. Mackay, president of the Postal Telegraph and Cable Company, to resign from "all duties incident to supervision, possession, control and operation of said telegraph and telephone system." The reason given by Mr. Burleson for his discharge of Mr. Mackay and two other officials of the Postal Telegraph and Cable Company was practically sabotage. The Post Office Department officially explained:

The order removing the president of the Mackay Companies, Clarence H. Mackay; its general counsel, W. W. Cook, and its secretary, William J. Deegan, from the operation of the Postal Telegraph and Cable Company's land lines under Government control is made necessary by the fact that since the Post Office Department refused to grant that company the compensation asked for by them the officials have refused to follow out the instructions of the department in the management of the properties, and failed to put into operation promptly the wage schedule and the eight-hour day, and in various ways endeavored to embarrass and discredit the Government operation of the wires.

In place of Mr. Mackay, Postmaster General Burleson has appointed A. F. Adams, president of the Kansas City Home Telephone Company.

The Mackay companies have a suit now pending, contesting the authority of the Federal Government to take over their property. Their grievance against Postmaster General Burleson's administration is based upon his alleged unfair discrimination against the Postal Telegraph, and it was said that in appointing the directors of the service he practically put the Mackay lines into the hands of their competitors.

# THE RIGHTS OF RESIDENTS

BY WILLIAM JENNINGS BRYAN

*The question of what to do with the alien minorities that unavoidably will be included within the national boundaries now being drawn is one of the most perplexing before the Peace Conference. At a meeting held in New York on February 8 in behalf of Armenian independence Mr. Bryan, in the course of an eloquent speech, suggested a solution for the problem of Armenia that may be of general application and at our request he has elaborated it for The Independent*

c Harris & Ewing, from Paul Thompson

*The former Secretary of State in Washington*

“I entrust to the friends of Armenia an idea that has been growing in my mind for several years and which seems to me to be especially applicable to the present situation. The doctrine of self-determination is founded on the highest conception of justice, but its application is often rendered difficult by a mixture of races. The just administration of the government by the dominant element over large minorities of different racial characteristics is almost as difficult as it is for one nation to deal justly with another subject nation. No matter what boundaries are fixed to the Republic of Armenia the territory set apart for the new nation will, necessarily, be occupied by representatives of many races, and as the Armenians are scattered over a very wide area it is not possible for all of them to be included in any geographical division. It is to remedy this difficulty that I venture to make a suggestion. It is this: That the government of the Armenian Republic agree to purchase, at its present value, all the property, real and personal, belonging to any one of another race who does not desire to live under the new government. In the case of Armenia, this will have several advantages. In the first place, it will permit those to leave, without financial sacrifice, who, being unfriendly to the new government, would be discordant elements if they remained, and the property thus purchased could be sold to Armenians in other parts of Europe who would be drawn back to their home land by the promise of freedom and progress. Such a plan would not involve any net loss to the government because it is inconceivable that property should fall in price under the new conditions and any advance in price would make the transaction profitable to the government. It is entirely probable that most of the representatives of other races would prefer to remain, partly because of business advantages, partly because of intermarriage, but largely because they could find nowhere else so bright an outlook for the future. If they remained, criticism would be silenced; having the privilege of leaving without loss to themselves they could not complain that the change in government did them any injustice. I believe that the adoption of such a policy by the government of the Armenian Republic would not only be of very great value to it but that it would give to the world a just principle of universal application and make easier the adjustment of territorial disputes in every part of the world.”

The statement given above presents the subject as it was submitted to the guests assembled at the dinner recently given in the interest of Armenian Independence. The basic principle involved is that human beings, living upon land transferred to a new sovereignty, do not pass with the land, but have rights independent of, and superior to, the soil. The matter was brought to my attention some years ago when I was dealing with a boundary dispute between two of the smaller Latin-American republics. As is usual in such of the cases the decision, being in the nature of a compromise, was not fully satisfactory to either party. A part of the disputed tract was awarded to one nation and a part to the other. Each side complained of the injustice brought upon residents who were, without their consent and against their will, transferred to a new sovereignty. It occurred to me that the equities in the case might be adjusted by the application of the principle announced at the Armenian banquet; that is, that the government which extended its jurisdiction over these unwilling citizens could both protect itself and do justice to persons unwillingly brought under its jurisdiction by an offer that would enable them to remove from the land without financial loss. If the resident can dispose of his property without loss and remove to some other place, and thus be free to choose a residence in harmony with his desires and interests, the ground for complaint is largely reduced, if not removed, and the government at the same time protects itself by avoiding the complaint of one who, if he remained against his will, coerced into remaining by the pecuniary loss that he might suffer if he attempted to dispose of his property in haste, would naturally be dissatisfied. In the case that I had in mind, the purchases would not amount to much, and the

amount spent by the government interested would be approximately equal, and each government could sell what it bought to citizens of its own government who would desire to withdraw from the ceded territory.

As I revolved the thought in my mind the plan was developed until I saw in it an idea that seemed of universal application, but having no opportunity to use it, it lay dormant until the conclusion of the World War and the assembling of the Peace Conference in Paris. When I read reports of proposed boundary changes, and especially when the various groups pleading for the right of self determination made their statements showing a puzzling mixture of populations, the plan was recalled as a thing imperatively needed now.

Greece is asking for territory in which the inhabitants of Greek blood form the predominating element, but in each case there are large minorities of other races. It would greatly assist in the settlement of these disputes if in each case the new government announced its willingness to assist by the

proposed plan in the redistribution of population according to the desire of the residents.

Likewise, in the establishment of the new Republic of Poland. It will be made up of territory withdrawn from the sovereignty of Germany, Austria and Russia—territory in which Polish blood predominates, but in which there are considerable minorities unfriendly to the aspirations of the Polish people. It would make the work of the Polish Government much easier if it announced its willingness to buy out those desiring to remove to other countries.

Alsace-Lorraine returns to French sovereignty after being under German rule for nearly half a century. While it may be said with justice that Germans ought not to have taken advantage of their nation's wrong and made investments in a land torn from France by violence, still in this practical world we deal with situations as they are and not as they should be, and an offer by France to purchase the property of German investors who came into Alsace-Lorraine during German occupa-

tion, would relieve the French Government of many difficult problems, and at the same time would enable the French Government to furnish homes to those of its own people who will be glad to take the place of Germans who retire across the Rhine.

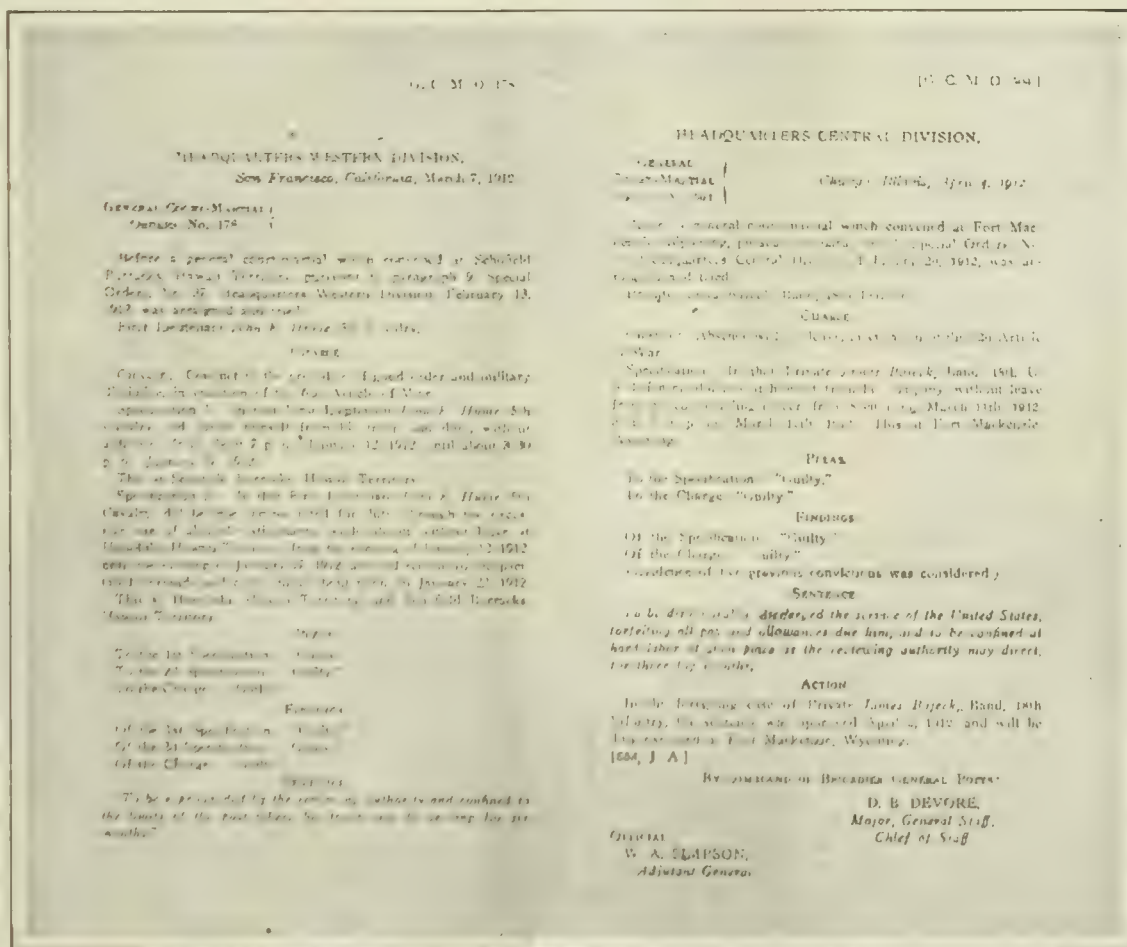

But beyond the immediate advantages to government and to individuals is the fact that it is a step toward justice in international affairs. The old ways are being abandoned and new ideals are being adopted. Ruthlessness is on the wane; the doctrine of brotherhood is gaining ground. Nations, instead of inquiring what they have the power to do, are asking what they should do. A world conscience is making itself manifest, and that conscience is challenging the methods that rest on force. Is it right? is the question upon which increasing emphasis is being placed.

The world longs for peace; the League of Nations is proof positive of this universal desire. The recognition of the rights of residents when their lands come under a new sovereignty will promote peace.

Mr. Post fought in the United States army as a private and later as a lieutenant during the Spanish War and for several years after was one of the officers directing military instruction in the Coast Artillery of the New York National Guard. When he wrote his series of articles for Harper's Weekly in 1914 on the injustice of the United States army court-martial system, Mr. Post had made an intensive study of court-martial law and of the cases in the official records of the War Department. The abuses he discusses here were recently brought to the attention of Congress by former Judge Advocate General Ansell. Secretary Baker has since started an investigation of military law

# WHAT IS A CRIME?

BY CHARLES JOHNSON POST

From Harper's Weekly

## FACSIMILES OF COURT-MARTIAL ORDERS

On the left is the case of a first lieutenant who was absent, drunk, for five days. Somebody else was paid for doing his work. He was merely reprimanded and confined to the limits of his post for a few months. A post is a complete social community in itself, so the hardship is purely rhetorical. To the right is the result of a court-martial punishing an enlisted man for being absent thirty-two hours without leave. All pay and allowances due him were forfeited, he was dishonorably discharged and sentenced to three months at hard labor.

WHEN Secretary of War Newton D. Baker recently stated that "during the time of peace, prior to the war, I do not recall that our system of military law ever became the subject of public attack on the ground of its struc-

tural defects," it indicated that he was probably the only official connected with the regular establishment of the War department who was not familiar with the exposure of the structural defects, abuses and inhumanities and injustices to American soldiers—amply

Crowder, all corroborate the shocking abuses in the administration of justice by the Judge Advocate General's Department in its court-martial system, and which I had previously attacked in exposures in Harper's Weekly.

Secretary of War Baker's statement

supported by unchallenged evidence from the War Department's own official files—under the court-martial system of the Judge Advocate General's Department, published in Harper's Weekly in 1914.

The recent arraignment by the president of the American Bar Association of the Judge Advocate's court-martial system and horrible injustices, the resolutions adopted by the American Bar Association, the scandals of the court-martial system revealed by the United States Senate Committee on Military Affairs, and the courageous position taken by General Samuel T. Ansell, Acting Judge Advocate General of the Army—since demoted and attacked by Judge Advocate General

aside from the fact that he might defend it on the ground that he had no personal recollection of the exposure of court-martial scandals—logically suggests in General Crowder's defense, that any abuses and conflicts made public by General Ansell and the Senate were incidental and temporary confusions merely due to the tremendous pressure of the war, and that in peace times prior to the war, Judge Advocate General Crowder's court-martial department was a model of fair, humane and American justice.

This, most emphatically, is not so.

Judge Advocate General Crowder's department of court-martial administration needs a drastic overhauling and revision; it needs a new system, a new heart, a new enlightened American principle and a Judge Advocate General at the head who is in sympathy with the modern concepts of justice and who has, in the field of American ideals, an understanding of our national spirit that makes us warlike but not military, and that demands a square-dealt justice for American soldiers.

Every effort is being made by General Crowder and the friends of bureaucratic militarism to make it appear, by absolutely ignoring the facts of the outrageous scandals and oppressions of the court-martial system, that the whole issue is nothing but a personal attack by General Ansell. On the contrary, it is an issue between justice and humanity on the one side and an outworn, surviving autocratic, military bureaucracy on the other—and Judge Advocate General Crowder defends the latter in his Judge Advocate's department.

For under our court-martial system the common soldier, volunteer or drafted, can be convicted and sentenced to ferocious terms of imprisonment without the right of appeal, or any orderly legal channels for securing justice even against the most shocking oppressions.

It is the common American soldier in the ranks, who is inarticulate and cannot protest, whom General Ansell is defending.

This is the issue; and to make this plain is what moves me to set forth the facts of the past and the present.

Secretary of War Baker said there had been no public attack of the "structural defects" of the court-martial system. Therefore it is interesting to refer to my five articles in *Harper's Weekly* on this point. I charged:

Offenses may be important or trivial at the unchecked whim of an officer; adolescent ignorance may persecute ability, unrestrained and unpunished.

The discipline of our army and the very life of an army is its discipline—is operated under a rambling, shambling collection of laws and regulations that defy coherent analysis or logical operation, but which shields incompetence and abuse.

Minor infractions are dragged out into pompous proceedings; the high-priced time of officers is devoted to the solemn weighing of the niceties of the dancing class; . . . while in the case of desertion—a peculiar and interesting class in itself—the ordinary decencies of common sense and of humanity are continually outraged.

The general court-martial, which is the military machinery for the administration of army law and its judicial processes, is a travesty on civilized justice which shelters favoritism and oppression. We will take up the instances shortly, and they can speak for themselves.

It (the court-martial) can try any offense from a dirty rifle to murder. It is responsible to no one for its acts. The only relief from any verdict or any sentence is by an appeal to mercy. Whatever flagrant wrong may have been committed, it is an uncertain charity alone, not justice, which can reach it. A court-martial can, and does, condone crimes and outrages in officers that saves them from justice; it can, and does heap oppressions and even illegal sentences upon the enlisted man from which only the accidents of charity or mercy can save him. (February 21, 1914.)

These were certainly public charges against the structural defects of the

Judge Advocate General's court-martial department. And I proved them by typical cases out of the hundreds shown in the official court-martial records.

Now listen to an army officer and his charge. On February 13 of this year, Acting Judge Advocate of the Army, Samuel T. Ansell, staked his professional army career in exposing the shocking injustice of the court-martial system during this war. He said:

The sentences imposed for slight offenses by the courts martial have shocked every sense of justice. They have reached the heights of injustice. The sentences in many instances bore no reasonable relationship to the offenses committed.

For forty years the army has been cursed with red tape in its courts-martial proceedings. Terrible injustices have been inflicted upon small offenders. The whole system is wrong.

I realize that I am arraigning an institution to which I belong. But I am doing it so that ample justice may be done the men in the ranks.

Could corroboration of my charges be stronger—General Ansell's condemnation is identical, except in its greater brevity.

I showed that a prisoner was not entitled, as a right, to counsel to defend him, but that it was permitted merely as a favor and that the interests of the prisoner were to be guarded only "so far as they are not inconsistent with military relations," this being the extract from the regulations governing the courts-martial. And the Senate Committee found that soldiers were given youthful, immature lieutenants to defend them from even the death penalty—one such officer-counsel naively advising the unfortunate soldiers to plead "guilty" to a charge in which a verdict of "guilty" meant death! I was peremptorily forbidden further access to the records of the department after it was discovered that these grave abuses were understood by me, in spite of the fact that the [Continued on page 40]

Judge Advocate General Enoch Crowder

**W**HEN Mr. McAdoo gave his famous slogan, "The Public Be Pleased," wings of publicity, he hobbled the Railroad Administration with a staggering handicap. He struck the wrong pitch for his associates to sing to; drew the wrong scale with which to measure their service. For "The Public Be Pleased" was not the point at all.

So, before nailing Government control of railroads to the cross with proofs of its failure as a "Public Be Pleased" campaign, wouldn't it be a good idea to recall just what the Railroad Administration really did start out to do, and then see how nearly it came to filling the order?

Notice how it strikes a nationally known railway executive now with the Administration but who, nevertheless, figures his bread buttered on the side of private control. He says:

"The expression 'The Public Be Pleased' was a misnomer that proved a high trump for our critics—and they have given it full orchestral accompaniments.

"But it wasn't 'The Public Be Pleased' with us—not for a split second! And the public discovered that in a hurry. It was 'Army and Navy First,' with Food Administration, Shipping Board, Fuel Administration and some hundred war industries next in line. After that we would do what we could for the public.

"The Government took over the railroads in order to win the war: not to improve their service to the shipping and traveling public. Therefore the only yardstick by which the efficiency of Government control can be measured is its actual service in this respect."

With this fact in mind the problem assumes another aspect. For the Administration to reduce passenger train service 47,000,000 train miles as fast as it could hack away was certainly a poor way to illustrate its "Public Be Pleased" theory. But, on the other hand, figures now available show that during the first ten months of 1918 our railroads had to transport over 6,000,000 troops, which required a total of 193,002 cars, including 167,232 coaches for draft and regular train movements. The special troop trains usually contained twelve cars and carried about 440 men. Add to this the fact that another 2319 of the passenger cars taken from public use were put to the daily task of transporting 205,587 workers to and from camps and industrial plants engaged in vital war work and you will understand why civilian travel felt the pruning knife.

It is one thing to remember that you were informed curtly by the Government that you could not ship your automobile to California for the winter

# A SQUARE DEAL FOR RAILROAD CONTROL

BY WILLIAM FLEMING FRENCH

*Director General Walker D. Hines, under whose administration the railroads may be able to live up to "The Public Be Pleased"*

and quite another to discover that the space it would have used was urgently needed in our drive against the Kaiser. For you know now, of course, that whether the Hun overran the world or not depended upon the United States Railroad Administration's ability to keep a steady stream of food pouring into the hungry mouths of waiting ships.

Just one year ago Britain issued her ultimatum: if the United States did not live up to the promises of its Food Administration the Central Powers would win the war. Everything depended upon the American railroads. If they failed to get sufficient foodstuffs to the Atlantic seaboard for shipment abroad the cause was lost.

The Railroad Administration replied by rushing empty box cars from all parts of the country to the Southwestern grain states, where they were loaded and shot, at express speed, to the seaboard. Within thirty-five days after receiving the Allies' appeal the Railroad Administration had stuffed the holds of every available ship with food and accumulated at North Atlantic ports an excess on wheels of 6318 car loads of foodstuffs, exclusive of grain on cars and in elevators.

To accomplish this, traffic of all kinds was sidetracked, engines being jerked off and attached to grain trains, while promises for empty cars were broken like Hun pledges.

"The Public Be Pleased"? Hardly; but the Kaiser Be Dammed without a doubt.

Many a shipper found it most distressing to have his cars tied tight

with red tape while freight train after freight train pulled past his door. And when he asked why his cars could not be attached to such trains the answer was invariably the same:

"Oh, that is impossible! Those are T. M. N.'s."

T. M. N. or B. V. D.; it was all the same, to the shipper. He only knew that he was getting rotten service—and a stomach full of Government control. The Administration could not explain the meaning of the mysterious T. M. N. then—but it can now.

T. M. N. really means Train Movement Notice; certainly an innocent little phrase in itself. But inasmuch as T. M. N.'s are issued only on solid train shipments of war materials and supplies to be given right of way over all else and to travel according to their own schedules, to the minute, T. M. N. became known to the railroaders as about as dangerous to monkey with as T. N. T.

A T. M. N. might be issued on a train of steel from the mills to the shipyards of the West Coast, it might be on airplane spruce from Oregon

to the factories of the East, or meat from the Chicago packing plants to waiting steamers or on munitions from the Ohio region to the Atlantic. But whatever it was on, that train got the right of way.

In these Train Movement Notices (copies of which went to the traffic heads of every road over which the trains were to move) were listed the car numbers, their destinations, the route they were to travel and the schedule to apply. And, in the case of perishables, reports of progress must be issued every few hours, from source to destination.

That is why passengers fumed on sidings while freight trains puffed past. And these solid trains were given the preference in routing, too, having the shortest and most direct routes picked for them irrespective of how many different roads they might carry them over. Once the trains were started not a car in them dared be disturbed or for so long as an hour be tied up in transfer yards, except for repairs.

Heroic measures, these—but consider the results. Taking the oil trains for example, we find that for the last six months of 1918, 981 special oil trains (25,034 cars) were run in the Eastern region alone, with the result that the oil cars were made to show a 90 per cent increase in the mileage traveled. This means that under the solid train plan each oil car was made to perform practically twice its ordinary amount of work. And our munition industries, our navy and the navies of our Allies, were all dependent upon our oil supply.

By shipping via the shortest and

most direct route and doing away with terminal and transfer yard jams the Administration has saved months of time, millions of dollars, thousands of cars and engines and the toll of an army of workers.

As an illustration of how this works out let's follow a shipment of airplane spruce from Portland, Oregon, to an Ohio port. This was first saved 141 miles of travel by taking the shortest route from Portland to Chicago and then saved approximately eight days time by being transferred from the western to eastern lines via the "outer belt line" (the E. J. and E. railroad, which circles Chicago at a distance of thirty miles from the heart of the city) instead of reaching the jam of the transfer yards and one of the inner belt lines.

Under the old régime each railroad insisted upon hauling its traffic every mile possible before turning it over to "foreign" lines, and so the road bringing that shipment from the West to Chicago would have carried it into the Chicago yards, letting it there take its chances in the jam.

To transfer a car via the outer belt line costs approximately \$14 and twenty-four

hours' time; via the inner belt \$1.50 and about ten days time. Hence it was Hobson's choice with the carrier in the old days. But the Railroad Administration will have none of that now. Transfer jams are avoided irrespective of the miles of haul lost to the initial carrier.

In the matter of routing the shipper is considered not at all. But the Administration points to the saving it has effected on the ore cars of the Lake Superior and Lake Michigan districts alone, where it re-routed 64,770 cars with a net saving of 3,557,464 car miles. The re-routing records for the Eastern and Northwestern regions alone show a total of 16,863,633 car miles saved, which spells fuel conservation to the tune of about seven million dollars, besides increasing the efficiency and service of America's 2,500,000 freight cars approximately 28 per cent. This equals the addition of seven hundred thousand new cars.

In the table at the right are a few of the new routes and the savings, as taken from the Administration's files.

A train of fifty cars shipped from Chicago, Illinois, to Little Rock, Arkansas, via the short route of 633 miles instead of the long route of 1277 miles results in a haul shorter by 32,200 car miles, which spells a coal saving of about \$3100 and a time saving of approximately thirty five hours.

When such schemes for saving equipment, time and fuel were worked out the convenience of the public was not the primary consideration at all. It wasn't supposed to be. The railroads of the United States had one big job, to transport food and materials in such quantities and with such speed as to make possible the successful prosecution of the war. And to what degree

public welfare. Yet the railroads continued to handle our peace-time traffic.

This was made possible by compelling the elimination of non-essentials in shipping, by making the shipper cut out frills and fancies. Pointed hints dropt to manufacturers induced them to limit their output of fancy goods and cut down the number of styles of their products. The Administration even went so far as to suggest that the number of sample cases being carried by traveling salesmen be limited. High-handed? Very likely, but we are told that these little eliminations released some fifty thousand box cars for the transporting of food for our fighters and allies. It would require a generous

stretch of imagination to see this as public service, but it was certainly winning the war.

Then there is the Permit System—a plan as popular with the shippers as the toothache. It's a wonderfully effective little scheme that works in this way: A shipper has, let us say, ten cars of potatoes to ship from Minnesota to the markets of Chicago. After considerable delay the cars are awarded him, but before he can load he must get a permit. Nothing

unreasonable in this.

But suddenly, out of a clear sky, comes an order from the Regional Director's office in Chicago refusing that permit. Gently the local agent breaks the news, explaining that terminal conditions will not permit of the shipment.

Never such a thing as that was pulled in the old days! Certainly not, but whole trainloads of potatoes have frozen solid in the outer yards of Chicago, waiting a chance to reach the terminals or be transferred to other roads.

The Permit System, however, eliminates this possibility, or certainly in case the terminal is jammed with cars. Some conservative individual has estimated that five thousand carloads of foodstuffs were ruined in the famous terminal jam that kept New York coal-

less last winter. During that traffic knot, which had its source in the Northwestern states, 150,000 cars were "locked" thruout the country, the [Continued on page 38]

"Within thirty-five days of the Allies' appeal, the Railroad Administration had accumulated at North Atlantic ports an excess on wheels of 6318 carloads of foodstuffs"

Government control has been successful can be measured only by the extent to which it has carried out this program.

To do this the railroads of this country had to deliver at docks foodstuffs and munitions enough to load a thirty thousand ton ship every ten minutes—which means, roughly, 150 cars of freight per ship, or fifteen cars a minute.

"The Public Be Pleased!" The public that expected to be pleased under such conditions ought to be in straight jackets. In order to keep the right of way open to the steady string of trains loaded with foodstuffs and war materials that streamed toward our ports, civilian traffic had to be sidetracked.

To supply the necessary cars to carry these goods the demands of the civilian shipper had to be subordinated to the

## WHILE MILLIONS CHEERED

*It was the greatest military parade the United States has ever seen. And it was the proudest day in New York's history. For the men who marched were the returning veterans of the 27th, the division made up of the old New York State Guard, who went overseas last summer and on September 29 went forward in the Allied attack that broke the Hindenburg line. The service flag with 1942 gold stars, carried at the head of the parade, showed what those battles cost. And behind it for nearly an hour before the marching men came by there was a steady procession of automobiles filled with the 27th's wounded. Then came the parade proper—25,000 veterans in tin hats and full equipment. At Madison Square had been erected a great triumphal arch and line of columns gay with fluttering colors and symbols of victory*

TEN LITTLE PRUSSIAN'S WHOSE WARDROBES ARE PATCHED OUT WITH DISCARDED ARMY CLOTHES

# ARE YOU FIT TO BE A FRESHMAN?

**W**HEN we went to college the entrance examinations, painful tho they were, were simple in their implications.

We hazarded little pieces of Latin or Greek, feverishly wrestled with geometry, sprayed callow criticism over selected English "masterpieces," and prayed for an air of authority in our halting French or German. If we had good memories and had applied ourselves with reasonable diligence in school, and were not given to hysterical lapses, we passed. Otherwise we failed.

The examinations served very well to indicate whether we had learned, temporarily or otherwise, an assortment of desirable facts and processes. But they were faulty in that they asked the question, "What have you learned?" instead of the more pertinent one, "What can you learn?" As a rough approximation of one's fitness to go on learning, they were helpful, but they were unsatisfactory in two important respects. They tended to limit candidates for admission to college to boys and girls of a rather stereotyped preparation; and they failed after all to throw much light on the fundamental qualities of intelligence which really determined the answer to the question, "Is this boy or girl really worth teaching, since we can at best teach only a picked minority? Is he likely to pay dividends to the community on the cost of the education he seeks?"

The examination system, in other words, was at once too exclusive and too catholic. It discriminated geographically against students of the Western states, who find the college entrance examination outside the normal educational scheme of things in their home states, and often let the fear of it stand in the way of their free choice of a college or university. It is a good thing for boys and girls to go afield for a college education; that makes for national solidarity and intersectional sympathy. Such an artificial barrier to the interchange of students ought not to remain if some equally or more effective way can be devised to separate the promising candidates from the lame ducks.

The examination system does not perform this sifting process any too well. A sharp line is drawn, in school ethics, between honorable cramming and dishonorable cribbing, but one

BY GEDDES SMITH

is about as destructive as the other to the significance of an examination. Candidates stuffed with dates are bad for the digestion of any college, but the examination does not strain them out.

So Columbia has established a four-fold test of fitness for admission to the undergraduate college for men. A candidate is judged by

1. His school record, which must show how well he has handled the everyday job of learning such fundamentals as English, mathematics, "a foreign language, either ancient or modern" (how the fathers would snort at that!), science and history.

2. His character and promise, as indicated by his school record, personal recommendations and, whenever possible, an interview with the admissions officer or his delegated representative.

3. His health record, and

4. "A test of mental alertness and power."

How measure mental alertness and power? The entrance examinations were a crude approach to a test for these qualities, and for the present the college will accept them in lieu of a newer test. But the example of the United States Army, which made itself a huge psychological experiment station incidentally to beating the Kaiser, pointed the way to the better plan, the "intelligence test," which candidates for admission next September may elect.

When psychologists first began to try to measure intelligence they believed it could be done only inferentially, so they measured nervous reactions — both sensory and motor — by sticking compasses into the back of one's hand, and timing the subject while he speared contiguous squares with a lead pencil, and various other interesting experiments which yielded a lot of not very relevant statistics. No doubt general intelligence was likely to be accompanied by nervous delicacy — but that was about as far as they could go along that line.

But Alfred Binet, of the Sorbonne, attacked the problem more directly in 1905. He believed that tests arbitrarily devised to reflect such aspects of intelligence as familiarity with normal phenomena, plentiful and well-defined concepts, a rationality adequate to cope with every day choices and detect fallacies, and a serviceable memory, could be so standardized by repeated trial that a scale of mental proficiency could be established. Accordingly he worked out a set of graduated tests for children and adults, shifting them back and forth until he had distributed them in such a way that the results at any age were in accordance with the laws of probability. Thus he was able to determine borderland cases of both subnormality and genius with an accuracy unknown before. Other psychologists have extended and modified the tests, and now that they have served to detect feeble-minded children, and potential corporals in the draft army, they are to be applied to sub-freshmen.

## PAGE 1 OF THE ARMY'S ALPHA TESTS

*Below is the key which shows how new soldiers were expected to show their mental qualifications thru quick answers to the puzzles on the chart.*

*Imagine it before you on a desk in a room with 500 others, and here is what you would be called upon to do with the above chart:*

1. "Attention!" says the examiner. "Attention" always means 'Pencils up.' Look at the circles at No. 1. When I say 'Go!' but not before, make a cross in the second circle and also a figure 1 in the third circle—'Go!' (Five seconds to do this.)

2. "Attention! Look at No. 2, where the circles have numbers in them. When I say 'Go!' draw a line from Circle 2 to Circle 5 that will pass above Circle 3 and below Circle 4—'Go!' (Not more than five seconds for this.)

3. Make a figure 1 in the space which is in the triangle, but not in the circle or square, and also make a figure 2 in the space which is in the square and the circle, but not in the triangle. (Ten seconds.)

4. Cross out the letter just before D, and also draw a letter before the second letter before I.

5. Notice the three circles and the three words. Make in the first circle the last letter of the first word; in the second circle the last letter of the second word, and in the third circle the third letter of the third word. (Ten seconds.)

6. Cross out each number that is more than 30 but less than 40. (Fifteen seconds.)

7. Notice that the drawing is divided into five parts. Put a 3 or a 2 in each of the two smaller parts and a number between 4 and 7 in the part next in size to the largest part. (Fifteen seconds.)

8. Draw a line thru every odd number that is not in a circle and also thru every odd number that is in a circle with a letter. (Twenty-five seconds.)

9. If 6 is more than 4, then cross out the number 5 unless 5 is more than 7, in which case draw a line under No. 6. (Ten seconds.)

The army tests, fragments of which are reproduced on the preceding page from the *New York Times*, were given to the men at many of the cantonments chiefly to aid

In the discovery of men whose superior intelligence suggests their consideration for advancement.

In the prompt selection and assignment to Development Battalions of men who are so inferior mentally that they are suited only for selected assignments.

In forming organizations of uniform mental strength (or of superior mental strength) as needed.

In the army, of course, use must be made of all but the very lowest mental types, and it was an interesting application of these tests to form well-balanced units—that is, units which had no more than their share of keen-witted men and their full share of dull ones, so that the leaven and the dough should be divided share and share alike. The officers of an engineer regiment reported a year after the companies had been evened up in this way, with the help of psychological tests, that the efficiency of the whole organization had been increased 100 per cent. At college, the aim is different. The lame ducks go into outer darkness, for the usefulness of a college is limited by its endowment and it must make maximum returns on the community's investment.

The Columbia tests will naturally be more exacting than these. Of all the army tests, they most resemble those for aviation officers, which, like the present series, were the work of Prof. E. L. Thorndike, of the university. There will be no advance announcement of their exact content—there is to be no ill-advised "boning" for them—but their general character may be gleaned from the various intelligence tests now in print. Professor Terman, of Leland Stanford, gives a whole series of modified Binet-Simon tests in his book on "The Measurement of Intelligence." The Columbia tests will be similar in their general character to Professor Terman's, but they will be different in many particulars. They will not involve a detailed knowledge of subject matter, but will show the candidates' facility in dealing with everyday ideas and situations such as form the common fabric of school and college study—his ability to detect a fallacy, or to handle generalizations such as are involved in a fairly complicated series of inequalities, and the like.

Prof. Adam Leroy Jones, who has been standardizing and rationalizing admissions at Columbia for ten years,

is sponsor for the plan. He experimented with similar tests when Columbia was picking students for its S. A. T. C., and believes that while the present ratio of admissions to applications (about five to six) will not be materially changed, the sifting process will be much more accurate in its results. Boys deterred from applying at all, under the old system, because of tardiness in

Are you fit to be a freshman—on such a basis? Or do you even claim to be a "superior adult?" Borrow some of Professor Terman's tests and try yourself out.

First for vocabulary. Take a small dictionary and try to define the first word on every third page, say. Figure out your percentage of successes, and multiply the whole number of words in the dictionary (if the editor happens to tell how many there are) by that percentage. This, very roughly, gives your total vocabulary. There should be at least a hundred words in your list, and if your vocabulary figures out at 13,500 words or thereabouts you qualify on one count for a "superior adult."

Second, for "constructive visual imagination." Get some one to fold a square of paper in half, and then fold it again in half, and cut a nick in the side of the folded paper where there is only one fold. Now, while the paper is held in that position against the wall or table, without unfolding, take a pencil and another sheet and draw exactly what the paper will look like when it is unfolded.

Third, for memory of digits. Have some one read to you, a little faster than one per second, eight digits well mixt up. Repeat them in the same order as soon as he has finished. Try three different series. You should be able to repeat one whole series without error.

Fourth, for comprehension of abstract passages. Have your interlocutor read you a couple of thoroly abstract paragraphs of eight or ten lines each, and see whether you can repeat, in any words, the chief ideas in approximately their correct order. Here is a sample passage:

Tests such as we are making are of value both for the advancement of science and for the information of the person who is tested. It is important for science to learn how people differ and on what factors these differences depend. If we can separate the influence of heredity from the influence of environment, we may be able to apply our knowledge so as to guide human development. We may thus in some cases correct defects and develop qualities which we might otherwise neglect.

Fifth, memory for digits reversed. Have some one read three series of seven digits each, just as in the third test, and try to repeat each series, as it is completed, in reverse order. About half the "superior adults" who were tested by Professor Terman could get one series right.

Sixth, ingenuity test. Solve these problems: [Continued on page 37]

*This test is not a speed test but one of quality. Half an hour is allowed. The average eight-year-old can just do the first two; the average nine-year-old the first four; the average ten-year-old the first six; etc., up to the average college freshman, who can just do the whole test. This is known as Trabue's Completion Scale A*

shaping a preparatory school program toward the requirements of the examinations, or because of unfamiliarity with the whole scheme of entrance examinations, will find the opportunity to prove their fitness less formidable. And the lame duck will be unable to hobble in with the aid of a crammer.

Quick, clear thinking, with nimble fingers, is essential to complete success in such tests as these. Necessarily they will all be written, and they will be so standardized that they may be given thruout the country. It has been suggested that the meditative boy whose mental processes are slow but fruitful may be at some disadvantage under the system, but at the worst his interests are protected by the complementary entrance requirements, and it may be questioned whether he is any worse off in such a test than in the hasty scribbling of the ordinary examination room.

## PLANNING THE OUTDOOR ROOM

BY HAROLD A. CAPARN

THE average small suburban or country place is a kind of outdoor room with one large and dominant piece of furniture. In the indoor room this is likely to be a table or grand piano. In the outdoor room, it is the house. The garage might represent a secondary piece of furniture, say, a sideboard. The chairs, sofas and so forth become shrubs and trees out of doors as far as the effect of furnishing goes.

Not only this, but the walls of the room themselves with their paint, papering, hangings and pictures are translated into the terms of outdoors by shrubs and trees. The carpet out of doors is, of course, the lawn, the ceiling the sky and the windows the openings between the planting.

Indoors there is always some kind of order, due to the fact that the room must be livable, and for this, one must be able to move about in it comfortably. This means that the large table must be placed so that people can get around it easily, and the chairs and sofas, in a general way, are relegated to the sides.

Because of this, people have gotten used to the look of a room arranged in an orderly way, and almost every housewife and housemaid knows, more or less, how to place the furniture to good advantage.

More than that, many people know not only how to place furniture well,

but how to choose it for its harmonizing with other furniture. Few of us would buy a new chair, table, settee, picture or curtain without considering how it would go with the other furniture, or whether there was a good place to put it.

Consequently there are many well furnished indoor rooms. But there are relatively few well furnished outdoor rooms. This is because the same kind of economy of space does not seem necessary to most people out of doors, and because they have not learned, in a general way, what to look for.

Thus, tho there may be plenty of neatness in the outdoor room, there is probably little real order. Trees, bushes and flower beds are put around, not where they will best contribute to the ensemble and enhance the beauty of each other, but because people love trees, bushes and flowers and put them in wherever an open space appears. The net result is one of more or less disorder, with the open spaces spoiled, both from the point of view of utility and beauty.

Broadly speaking, a lawn should be kept open with the planting along the boundaries. This is because you can neither use nor see properly a lawn space that is cluttered and because a lawn, to be effective, must have a frame or setting.

The arrangement

1. Catalpa Bungei, Box, or Bay Tree. 2. Rhododendrons or deciduous shrubs. 3. Scarlet Oak. 4. Small-leaf Linden. 5. American Elm. 6. Viburnum plicatum (Japanese Snowball). 7. Iboia Privet. 8. Fragrant Honeysuckle. 9. Philadelphus coronaria (Syringa). 10. Magnolia stellata. 11. Dogwood. 12. Norway Maple. 13. Upright Honeysuckles. 14. Large Growing Weigelas. 15. Viburnum tomentosum. 16. Spiraea Van Houttei. 17. White Fringe Tree (Chionanthus). 18. Deutzia Lemoinei. 19. Aralia Japonica. 20. Hydrangea p. g. 21. Euonymus alatus (Cork Barked Euonymus). 22. Oriental Spruce. 23. White Spruce. 24. Colorado Blue Spruce. 25. Austrian Pine. 26. Weigela, Eva Rathke. 27. Rose rugosa. 28. White Birch. 29. Forsythia viridissima (Golden Bell). 30. Pyrus floribunda (Flowering Crab). 31. Acer palmatum (Japanese Maple). 32. Lilacs. 33. Halesia (Snowdrop Tree). 34. Magnolia Soulangeana. 35. Magnolia conspicua (Yulan Magnolia). 36. European Mountain Ash.

of an outdoor room is a good deal like that of an indoor room, with the principal features, the buildings, set where they can be reached to the best advantage, and where they will best permit the other features, the lawns, gardens, etc., to serve them, and with the other furniture and decorations disposed along the sides.

To give some idea of how this works in actual practice, we print a plan of a suburban place of about three-quarters of an acre, as nearly typical of such places as may be. Many lots of such dimensions can be found in towns and suburbs. The house is set near the street to give as much privacy and free space in the rear, where it will do most good, and to give up as little of this valuable area as possible to arid, dusty and expensive roads and paths. The garage and kitchen entrances are not much more than fifty feet apart, but this is not

dodendrons, shrubs of moderate growth such as berberis Thunbergi, spiraea Van Houttei, or Lemoine's deutzia may be used.

Nothing brings a house into the picture and into relation with the ground so well as trees. Nothing else is really in scale with it. So we put trees on either side of it, which will serve to screen the garage and kitchen, and on the west side of the house

*The Vale of Cashmere in Prospect Park, Brooklyn, is a famous example of shrubs and trees grouped for an ensemble*

*Here is an arrangement of shrubs that produces real scenery*

a serious objection compared with the economy of space and convenience of layout obtained thereby.

To begin our planting scheme at the front entrance: We will assume that the front lawn is to be used as a foreground to the house and seen from the street. With a symmetrical house like this, a pair of sentinels, box, bays or catalpa Bungei, would be appropriate. Box and bay are expensive, box is of uncertain hardiness, and bay must be taken indoors in winter, while the catalpa is cheap, hardy and rapid growing. Despite its naturally formal shape it needs to be pruned every two or three years.

Low growing foliage along the front porch would look well, and unless there is lime in the soil, and if there are trees on the street to cast some shade, rhododendrons would be very suitable. Instead of the

to frame the vista thru the property. One tree, a Norway maple, goes into the middle of the circle. Some day it will crowd out all the bushes and furnish the whole turn. Another, an elm, set into the corner, will occupy almost no space on the ground, but a great deal overhead, and will shade and help to screen the garage. All those shrubs toward the front of the place

are put there to help set the house, to make a frame for the front lawn and to screen the drive, kitchen porch, turn and garage from the front of the house. They are in the nature of undergrowth, and will tend to disappear as the trees come to maturity and crowd them out.

The drying yard is surrounded by lilacs set about three feet apart. They will grow in-

frame the large lawn back of the house. In doing this, the difficulty is to avoid sameness and tameness, the general look of a single or double band of bushes all around. Also to avoid the appearance of shrubbery patches, which is common enough and may be as bad, or worse.

So as we sit on the back porch in reality, or in imagination, we decide that we want an irregular border of planting, and that the projections should be in such and such places. In these places we will put evergreens, pines or spruces, because of their striking forms, and their green foliage in winter. Every one likes to see the snow on the evergreens. Two of these accents are in the far corners, where they will help to give a generally concave form to the skyline along the far boundary.

Supplementing the evergreens, we use some small trees, dogwoods and flowering

*It is trees that really bring a house into the proper relation with its grounds and that determine the scale of the setting*

*The most effective lawn is open, with plants along the boundaries*

to a handsome untrimmed hedge, and become part of the general shrubbery frame.

Two magnolias are placed where they will do the most good as accents on either side of what we will call the rear house front. Some smaller bushes behind them will furnish the base of the house and set off the magnolias.

We now have to

crabs to give mass and solidity. The intervening spaces are filled with shrubs, singly or in groups, chosen for their size and habit of growth to suit their location. In a general way, of course, the taller ones go at the back, tho not invariably. Shrubs like weigelas and forsythias are used for their roundish forms, viburnums for their uprightness, and all are arranged to produce variety and picturesqueness of grouping without eccentricity or restlessness. A note of striking variety in deciduous foliage will be given by the aralia Japonica (Devil's Walking Stick). Taller planting appears on the projections, lower in the recesses, not around the projections as is often done, which is really a negation of the projection. Two trees are set in the lawn. Seen between them, and [Continued on page 39]

# SUMMER CLOTHES FOR THE HOUSE

BY AGNES FOSTER WRIGHT

It is curious how much more enthusiastic and interested women are to do their summer furnishings than those for winter. I presume it is because the gay colorings which begin being displayed in late February are so bright and fascinating, and because the decorators by then have a thousand and one new ideas and combinations with which to allure you—ideas that had never entered your head, accustomed as you are to drab Holland covers as the mark of summer's arrival. Holland covers, American walnut of the 1860s, body Brussels—we endured these horrors in our childhood, but Heaven save us from them now!

With the advent of Easter week we should put up our new summer hangings and put on our summer slip covers. It is a shame to delay making up the covers and curtains 'way into June, when the weather is hot and inertia takes the place of the energy of March and April. Even if we plan to close the winter home and go to the shore or the country house, it is well to start early with the summer furnishings when one has the pick of the first importations and time to try out two or three combinations of materials to get those best suited for the summer home.

First let us plan for those who refurbish winter homes for summer use. Put the hangings and heavy covers away. There are the formal ornaments to be packed on shelves and their place taken by vases for flowers and plants. Eliminate everything possible both because it will afford the refreshment of change and because space gives a cool feeling to a room.

Next decide what is needed for curtains and slip covers. Sometimes one set of curtains will do, but I find an economical and attractive scheme is to have inexpensive scrim made up for glass curtains all over the house and to be used just for summer as protection against dust and glare and to make the house look more homelike. Uncovered glass is so hard and unattractive. Over these scrim curtains, which may be used year after year to replace our fine net or gauze, we can put up simple side draperies of cretonne. There is no economy in getting a cheap quality, as it will not launder nor will it hold its color, and the same amount of labor is put in as for a really good quality of imported chintz or linen. While it is richer and wears better than cotton cretonne, linen has to be lined and thus is rather an expensive proposition, for summer hangings only. Lovely cool flowered chintzes are the best value. A French design in a formal repeat makes a fine dining room summer hanging, and the same material can be used for chair seat covers and for little half slips over the tops of the backs. This protects our clothes in the heat of summer and gives a fresh, cool appearance to the room. The bottom should be scalloped and edged with

a tiny cotton fringe, and snapped on at the back. The same scalloped fringe should be used on valances for the curtains.

A cool cream and blue glazed chintz would be attractive for the dining room, with the chintz made up into roller shades to replace the Holland shades. With a long, thin, stunning tassel and a valance,

pattern. This will save having to use new pattern material with each chair.

Do not use a fine stitch on upholstery or curtains; the long, loose stitch does not pucker.

For the living room, where we need a plain material for curtains and where denim and sateen are too cheap looking, an excellent effect is gotten by canton flannel dyed a lovely shade of dull reseda green or mahogany, and using an under curtain of cotton casement cloth in beige edged with a mercerized fringe of the over curtain color. This looks well from the street and it is quiet and dignified for any library or living room.

Sateen seems to me to offer great possibilities if the upholsterer's soft quality is used. Dress sateen has too much surface finish. There is a Parma satin of such good quality and pliable texture that it can be used wisely for permanent slip covers and even upholstery. This is an excellent material for summer home covers when one wishes to introduce

design only in the curtains. Pick out in the cretonne at the windows two of the colors which you want to emphasize in the room. Try old rose sateen covers, corded in mauve, and use crisp, soft, yellow cushions or lamp shades. In rooms where the walls and woodwork are ivory this scheme ought to work out very well.

Voile, as well as sateen, should be more used. It requires a finish—like ribbon binding—to give it style. Also, there is a silk and cotton georgette which has great possibilities. Peacock blue under curtains with sapphire blue sateen over curtains with a deep, machine hemstitched hem, would make a cool, unusual living or dining room. A touch of deep yellow and heliotrope is needed to brighten up the combination.

For bedrooms, little checkered or striped ginghams or percales are full of possibilities, when combined with pipings of one plain color. Dotted grenadine makes the best bedroom under curtains. These can be edged with a tiny rose ruche in a room where a combination of rose and yellow gingham are used as bed cover, dressing table, slip cover and chair seats.

On the sun porch and breakfast room I think the best material made is linen gauze, as it can be seen thru from inside, and protects one absolutely from outside. Used in conjunction with a linen, the most interesting effect is had by putting on the edge of the curtains a short, full worsted fringe in blocks of three or more colors of the cretonne. Use the cretonne or linen for short shaped valances and edge them with the fringe. For curtain pulls make long tassels of the worsted. Use the cretonne for upholstered covers for the wicker or reed furniture and edge the odd round or oval cushions with the fringe. And if one adds a painted piece or so, get the colors from the fringe.

"Flowered chintzes are best for covering, giving the room a fresh, cool appearance"

edged with sateen to hide the unattractive roller, and chair back covers, a dining room would be quite smart and cool.

A fresh curtaining is to have muslin made with a wide, quilted ruffle; hang the curtains so that they cross over at the top, and use muslin tie backs. These have to be laundered at least once a season, tho, unless one lives in a very clean spot. The double thickness of muslin protects us somewhat from that disagreeable strong top light. If this curtaining is used, the furniture should not be shabby, such fresh curtains requiring that everything be spic and span. An English white glazed chintz with a small design can be used as slip covers, or a black glazed chintz cover would look well in such a room. There is a smart crispness to glazed chintz that is very charming, and it is particularly adapted to summer curtains and covers. A blue chintz with a tiny taffeta binding of deep purple would be good looking, too.

There are many charming little block designs for summer bedrooms. These can have the edges scalloped and bound with gingham and the slip covers corded with the gingham. One good combination would be gray and yellow block with a tiny bouquet, and bound with yellow; or gray and rose piped with bright blue sateen; or plum and yellow with a tiny band of green. All these combinations add interest to the room for summer.

For the amateur slip cover maker I should advise the following. Get strong, unbleached muslin and fit the largest chair or couch by careful pinning and readjusting. Then lay the perfected pattern on the cretonne and cut out the slip cover, either binding, cording or French-seaming the edges. I should advise the first, as it is easiest and gives a chance to introduce a contrasting color. Then take the next smaller piece and fit that with the muslin

# WHEN YOU PLAN TO BUILD

BY EUGENE CLUTE

EVERY one who contemplates building a house probably has a vision of it as a place of comfort and cheer. But unless a number of practical things that are often overlooked are kept in mind, this vision will not be realized.

It does not take many faults in the planning to mar seriously the owner's enjoyment of the new home, and they may easily be faults that will not wear off with the newness of the building, but will last as long as the house stands, becoming more and more annoying as time goes on.

Fortunately these troubles can be avoided by a little attention to certain details during the planning.

One is very likely to give the necessary thought to the effect of the main rooms, to planning for, say, a living-room that will have an air of spaciousness and quiet, homelike dignity; for a hall that will produce a favorable first impression; for a dining-room that will add to the geniality of the family gathered about the table and give a sense of hospitality to guests.

Such details as the graceful ramps of the stair-rail, the fan-light over the front door and the design of the mantel in the living-room are of absorbing interest, and rightly so, for they have much to do with the pleasure and pride the owner takes in his home.

But if the kitchen is so badly planned that the mistress of the house is worn out every time she attempts to prepare a special dish, or the cook is in an ill temper that she takes little pains to conceal by the time dinner is served, who knows or cares whether the proportions of the panels on the dining-room wall are right or whether the built-in china closet in the corner has leaded glass doors. If the interior architecture of the room is harmonious, not one of the occupants is conscious of the fact after the nervous irritation generated in the kitchen has been communicated to the family group. Matters are often made worse by a badly cooked dinner, a thing it is difficult to avoid, housekeepers say, when the kitchen is hard to work in.

Still it is a comparatively easy matter to have a well-planned kitchen. The principles of good arrangement and their application are simple enough.

Efficiency in the kitchen, so far as the room and its equipment are concerned, is largely a matter of arranging the different fixed and movable pieces of kitchen equipment in such relation to each other that all the principal operations can be performed by the worker without retracing her steps too often, without stooping or reaching and without walking any farther than is absolutely necessary. The basic idea is to apply to kitchen work a principle widely adopted in manufacturing plants, namely, that of continuous travel of the product. This simply means taking in the raw material at one end of the factory and passing it always forward as it goes thru the successive processes, until the finished product is delivered at the other end. This does not mean that a kitchen should be long and narrow. The line of travel may follow around

the walls of an approximately square room, so long as it is always forward.

Any housekeeper can analyze the processes of preparing the different kinds of food and of washing the china and cooking utensils, and putting them back into their appointed places.

There is no ideal arrangement suitable for all kitchens, so simply study your kitchen plan with this principle in mind. This should be done before the building is begun, for the placing of windows and doors must agree with the arrangement of the equipment, in order that there may be a good working light where it is needed, that there may be unbroken wall-spaces of the right length at the right places, and that the doors communicating with the pantry or storeroom, with the serving pantry and with the entry containing the ice-box may be at the proper points on the system of circulation about the room.

It is not intended to suggest that an arrangement of equipment shall be decided upon arbitrarily and the architectural openings made to conform to it. In that case, a stereotyped scheme of arrangement applicable in all cases might be presented. What is suggested is that where a study of the plan reveals obstacles to good arrangement, all possible adjustments on either hand be made while the whole scheme is still only on paper.

Is the kitchen on the cool side of the house? Are the windows and doors so placed that there may be a free circulation of air to keep it cool in summer? Is there a place for the ice-box outside of the kitchen where it will not be reached by the heat from the range and where the ice can be put in without entering the kitchen? These are things to consider.

From the kitchen to the front hall is quite a jump, but does the front door swing the right way? Does the visitor have to walk around the maid to get into the room? If so, it is awkward. Or, when she steps back, is the way clear for him into the reception-room and partly blocked toward the family living-room?

Speaking of doors, do the bedroom doors swing so that the whole room is exposed to view when the door is partly opened? If two doors are close together in any part of the house, are both of them hung to

swing the same way, so that they will not interfere?

If any part of the house extends over a porch, provision should be made to keep the cold from coming thru the floor of the room, unless the house is in a part of the country where there is practically no winter weather or is only for summer occupancy. Filling between the floor beams with mineral wool is a good way to stop the cold.

Is the proposed heating plant of ample capacity? It should not be necessary to force it even on the coldest days. Are the inlets for heat or the radiators placed on or near the cold side of the room in every instance? They should be so placed.

It is well to make sure that the bedrooms permit a satisfactory arrangement of furniture. Cutting out small pieces of cardboard of the dimensions of beds, dressing tables, etc., in the same scale as the house plan, and arranging them on the plan, is an expedient that has been found helpful by some home builders.

Are the windows so placed as to provide a circulation of air thru the rooms? In order to insure greater quiet, clothes closets are sometimes placed between bedrooms, one opening into each room.

An open fire can do more to make the living-room cheerful during the months when people are indoors than any other one thing, but if it sends smoke into the room and gives out little or no heat, as many open fires do, it is merely a source of annoyance. A great many people seem to be resigned to the belief that this condition is unavoidable. But if the fireplace opening and the size of the flue are properly proportioned, the throat of the fireplace correctly formed and the chimney of sufficient height above the roof, an open fire need not smoke and can be made to give a great deal of heat, besides being a center of attraction on evenings at home. All chimneys, by the way, should be of sufficient height above surrounding roofs to avoid a down draft. Chimneys frequently are built too short.

Much annoyance is caused by rain-water and the water from melting snow leaking thru where dormer windows join the roof, where the roofs of wings meet the main roof and around chimneys. This is caused by poor flashing, the sheet metal used to make the connection at these points not being properly applied. This is one of the most frequently slighted parts of the work.

It is well to decide upon the designs of the electric lighting fixtures before the wiring of the house is done, in order that the outlets may be properly placed and necessary switches put in.

Chimneys should be vertical thruout their length, running straight from the footing in the ground thru the roof and should be free to settle at a different rate than the floors, something they are sure to do.

The aspect of the rooms should be taken into consideration, the points of the compass they face. Naturally a living-room is pleasanter on the sunny side of the house, and a dining room, if it is used as a breakfast room, should receive the first sunlight.

The well arranged kitchen saves retracing of steps by having all equipment and utensils placed in proper relative position to one another

*The second transplanting into pots is due at the first cradling*

**I**N garden making the point where other people's experience can be of use to the beginner only to a limited extent is reached when the time for actual planting arrives.

The art of planting, like so many other things, can be really learned only thru actual experience. One day's work in the garden with some one who knows how to garden will teach the beginner more about garden making than a whole bookful of instructions. There are, however, some things that can be taught by the written word—some in fact which a good many of those who have had only their own practical experience to guide them often do not know about.

It is possible, for instance, to save the gardener with a limited experience the loss and disappointment caused by putting in certain things too early in the season or by planting others at a time when they will not succeed or would not have time to mature before being killed by frost. It is also possible to explain pretty accurately how much seed of different things should be put into the foot of row in order to get a full "stand" without wasting seed or having to do a good deal more thinning out—which is very tedious work—than should be necessary. The accompanying table gives the results of actual experiments in sowing vegetable seeds. The amounts recommended are less than those mentioned in many seed-sowing tables, but they are ample where good seed is used

# GETTING THE GARDEN INTO THE GROUND

BY F. F. ROCKWELL

and the conditions of soil, etc., are not unusually bad.

One of the first things which the new gardener is likely to lack information on is just what is meant by the instruction on the seed packages or in catalogs for planting in "drills," "rows" or "hills." These terms have been used somewhat indiscriminately. In the following paragraphs planting in "drills" refers to the sowing of seed in a continuous row where the plants are only a few inches apart, such as lettuce, onions, beets, carrots, etc. Planting in rows means the sowing of seed or setting out plants at regular intervals in rows such as cabbage, cauliflower, celery, etc. "Hills" refers to planting in which the vegetables are planted at regular intervals usually several feet apart each way, as cucumbers, corn, melons, egg plant, etc.

With the advent of the wheel-hoe, which has so largely replaced the old-fashioned hand-hoe for garden cultivation, the practice of planting in hills has been more and more abandoned. Corn or cucumbers or pole beans or even melons will grow just as well in rows as in hills. In fact, as the plants are not crowded together as they must be in hills, there is more chance for the individual plant to develop, and less chance for insects or diseases to get a start without being recognized until it is too late to check them. Pole beans or tomatoes planted in rows and trained up to a trellis will give a much better yield than if planted in the old-fashioned way and trained to poles, as the bearing surface is very much more evenly exposed to the sun.

Of course the two most important operations in garden making are seed-sowing and transplanting. With both of these, as suggested above, the only teacher who can put on the real "finishing touches" is old lady experience. There is certain information, however, which will serve to guide one in the right direction and prevent the making of disappointing mistakes.

*Second transplanting means fruit as soon as the plants are set out*

The first thing to keep in mind is that planting, either of seeds or plants, should always be done on a surface that is freshly prepared. In last month's article directions were given for getting the entire garden forked up and raked and ready to plant as soon as the condition of the ground would allow. Any soil that has lain for a few days after being prepared, no matter how mellow and clean it may look, should be thoroughly raked over again just before planting. There are several reasons for doing this. The first is to kill every weed seed which may have sprouted, and there will be thousands of them in the cleanest soil you are likely to find; the second is that moisture is one of the things required to effect quick germination and only fresh, moist soil should be covered in over the seeds or placed about the roots of plants. Ground that has been lying, even for a few days, will have dried out on the surface and if this dry soil is filled in directly over the seeds or placed around the roots of the plants, it may serve as an insulating layer between them and the moist soil with which they must come in contact to sprout or to take root.

The importance of having perfectly straight rows is often overlooked even by those who have had considerable gardening experience. Getting your rows straight is not merely a matter of good craftsmanship—altho that alone would justify the slight extra trouble required to do it. Every time you use a wheel hoe in your garden a

*The transplanting from seed bed into hills*

*On hot days shade the newly set plants*

*Press the soil down to hold the roots firmly*

Opening the furrow to receive the compost

crooked row will mean loss of time, poor work and injury to plants that would have been obviated by the slight trouble required to make your rows straight.

The depth to which seed should be covered is another thing which proves a problem to most garden makers. Nature can afford to be wasteful with her seeds, where the gardener cannot, or should not. And the gardener who has some object in his work other than producing a certain number of pecks of beans, or dozens of green onions, will find a most absorbing study in the way things happen in his garden. And from being a student of Nature he will find himself becoming, almost unconsciously, a successful side-partner; will find himself beginning to acquire that "magic touch" in growing things, that he may have wondered at, and envied, in others.

That seed should not be covered very deep is one of the first things which the observer in Nature's workshop will discover. An examination of some of the weeds which will begin to sprout in a few days on any piece of ground that is dug up and raked over will show the seeds very near the surface, altho they may have been lying for months or even years in the soil before it was disturbed. So you can't take a hoe and open up a furrow and plant small vegetable seeds and then expect them to come up properly, no matter how good that seed may be. Most packets of seed bear instructions as to proper depth of planting; but you must be very careful with small seed, or that depth will be exceeded, maybe doubled or trebled. And if your soil is wet or rough and lumpy you cannot possibly cover the seed lightly and evenly, which is just as important. It is much easier to rake the surface over three or four times, if necessary, to get it perfectly smooth and finely pulverized, than to plant in poorly prepared soil and have to plant over again later or be satisfied with a poor crop.

Cabbage, cauliflower, Brussels sprouts, carrots, lettuce, onions, radishes and turnips are all small seeds and should be covered about a quarter of an inch deep, not over a half. Celery and parsley are not only very small, but very slow to germi-

For a clean surface rake the bed smooth

Mix the fertilizer thoroly with the soil

nate and should be barely covered, preferably with light, sifted soil; soaking the seed for two or three days before planting will help to secure quick germination. Beets, chard, okra, parsnip, salsify and spinach form a third group, a little larger in size than those in the first, which should be covered a half inch to one inch deep. Cucumbers, muskmelons and small-seeded watermelons and squash require about a half inch, while pumpkins and large-seeded squash and watermelons should be put down about an inch; in heavy soil an extra precaution may be taken by putting them pointed edge down. Beans, corn and peas are the strongest growing of the vegetable seeds and may be covered some two inches deep. Lima beans and the English "broad beans" should be put on edge, *eye down*.

As covering the seed properly is such an important part of right planting, great care must be taken in making the drills or furrows in which the seed is to be sown. For the smallest seeds the end of a hoe or rake handle may be used, but a pointed stick is better, as it makes a narrower mark and the depth can be kept more even. For medium sized and large seeds, a furrow is opened with one end of the hoe blade. The "Warren" hoe, with a heart shaped blade, is made especially for planting. Or a furrow can be struck out with a cultivator tooth, or the hoe attach-

QUANTITY PLANTING TABLE

Vegetable	No. of Feet in Row 1 oz Will Plant	No. Seeds to Plant per Foot
Bean	15	5 to 7
Bean, pea	20	7 to 9
Bean, lima, large	8	3 to 4
Bean, lima, small	20	4 to 5
Bean, lima, horticultural	20	4 to 5
Beet	75	15 to 20
Beet, sugar	100	10 to 15
Cabbage	—	—
Carrots	350	30 to 40
Corn, 1 oz	25	4 to 5
Corn, salad	750	15 to 20
Collard	300	25 to 30
Cress	500	30 to 40
Cucumber	200	6 to 8
Endive	500	20 to 25
Kale	400	15 to 20
Kohl	400	15 to 20
Lettuce	500	30 to 40
Melon, Musch	200	6 to 8
Melon, Water	200	3 to 4
Mustard	1500	20 to 100
Okra	75	6 to 8
Onion	200	25 to 35

Salsify	100	25 to 30
Spinach	100	20 to 25
Squash	150	2 to 3
Szech Chard	100	10 to 15
Turnip	300	25 to 30
Willoop	500	20 to 25

Test the drill on a board before planting

ment on the wheel-hoe. In either case a perfectly straight row should be marked off with the garden line first. Large gardens are usually planted with a seed drill, which performs the several operations of opening the drill, dropping and covering the seed, rolling down the soil over the seed, and marking for the next row, all at one time. Last year a new combination drill and wheel-hoe, designed especially for the small home garden, was put on the market and has given excellent satisfaction.

The condition of the soil and the season of the year should be taken into consideration in planting. Very early in the spring the seed should not be covered as deeply as it may be later on. If the soil is at all dry when planting, it is very important to press the earth down firmly over the seed; this can be done with the back of a hoe, "tamping" gently along the row after the seed is covered.

Transplanting is, next to seed sowing, the most important accomplishment in successful garden making. Transplanting is the art of taking a plant from where it is growing and transferring it to another location. When you have learned to do that so successfully that the plant doesn't know it's been moved—or at least feels happy enough about it to go right on growing—then you may consider yourself eligible to the World Fraternity of Gardeners. Transplanting, as an art, like seed sowing, must be learned by practice. There is a certain feeling you will get in your finger-tips when you are master of the art, a sort of sixth sense by which you will know just what can be done and how to do it, in each transplanting problem that arises.

In the first place, no matter how gently the operation may be attempted, there is a tremendous shock to the whole plant system. A large part of the roots will be broken and torn off, including practically all of the delicate "feeding" roots; and the flow of nourishment is stopped. Under favorable conditions a new set of feeding roots may be established in two or three days. But meantime the greatly depleted root-system cannot support the whole leaf surface it did formerly. If it is forced to attempt it, the [Continued on page 33]

# What to Do in April

A GARDEN GUIDE BY HUGH FINDLAY

## NORTH Flower Garden

Locate your flower garden in a sunny spot where the soil is a garden loam and well drained. Apply a heavy coating of decayed horse or cow manure to the soil, and mix in a little fine bone meal. Allow the manure to stand in the soil 1 to 2 weeks before planting. Never use fresh manure or manure mixt with shavings or sawdust.

After the soil is fit to work, plant **Bulbs** out the dormant lily of the valley pips. Remove all the litter from bulb beds. Plant out gladiolas the last of the month in a rich loam. Bulbs should be set from 4 to 6 inches deep. If the month is open and the soil fairly dry, plant dahlia bulbs about 8 inches deep. Mix a little sand with the rich garden loam before planting. Plan to set out more crocus and snowdrops on the lawn this year. It is not too late to plant bulbs. Don't plant shriveled bulbs. Plant out cannas, dahlias and gladiolas the last of the month.

**Sweet Peas** Dig a trench 12 inches deep and the width of the spade. Fill in 6 inches of decayed cow manure, shredded, decayed sod and a little sand. Spade this into the trench and fill in with fine garden loam. Sow the seed about 4 inches deep.

**Perennials** Do not apply lime to the lupin bed. In digging in a little of the manure and litter applied last fall, be careful not to injure the crowns of the perennials. Seed of perennials sown this month will bloom by next fall. Separate and transplant all clumps of perennial stock before the buds begin to grow. Help to make the countryside beautiful by giving away all surplus roots.

**Roses and Shrubs** Remove all winter protection. Prune all hardy roses. Dig into the soil considerable decayed cow manure and coarse bone meal. Spray the roses with whale oil soap by the end of the month. Keep on hand Bordeaux mixture to spray for fungus. Prune all fall flowering shrubs. Don't prune early blooming shrubs. A little pulverized chicken manure is of greatest benefit to early flowering shrubs.

## Vegetable Garden

**Seedage** As soon as the severe frosts have passed and the soil is workable, sow the seed of celery, carrots, beets, endive, lettuce, leeks, onions, parsley, parsnips, radish, salsify, spinach, turnips, Swiss chard, smooth peas, cauliflower, Brussels sprouts and cabbage.

**Roots** Plant out the new roots this month. Dig over the surface soil of the old bed about 4 inches deep. Work in some pulverized manure and bone meal. Break off the stalks near the surface. In cutting them, many of the shoots close by are destroyed. Cultivate between the rows. Coarse salt applied to the rows will keep the weeds down. Plant out rhubarb roots in a rich, deep soil. Remove all litter from the old plants and dig in a little manure around the plant.

**Greens** Remove the straw from dandelions and spinach. Cut out the largest plants and allow the small ones to mature. If the plants are frozen, thaw in cold water.

**Plant Out** The last of the month, transplant a few early cabbage plants to the garden, providing they have been hardened off.

**Diary** Start this month to keep a businesslike diary. Keep a record of all garden costs and returns, the weather conditions and the comparative

value, in flavor and production of the crops grown. Keep all rows labeled with date of planting and name of variety.

## The Greenhouse

### Hardwood Plants

Keep moist the soil of hydrangea, azalea, lilac, pot-roses, genista, etc. Spray the wood if the buds have not opened. Keep the walks moist and the house warm if the bloom is to be rushed for Easter.

### Roses

Keep the red spider in control by spraying with a strong force of clear water. Rose plants in benches for next year should be allowed to rest. Allow the soil to dry and remove all leaves as soon as they drop. Increase the ventilation. Fumigate after sundown, and preferably on damp evenings, by burning tobacco stems. This will keep in check the green and white fly.

### Vegetables

Sow the seed in the greenhouse or hot-bed of egg-plant, tomatoes, peppers, celery, lettuce and cauliflower. Sow in strawberry baskets, paper pots and earthen pots, cucumbers, corn, snap-beans and melons to be transplanted after all danger of frost has passed.

### Repot

Shift cyclamens to a larger pot and keep in a cool house. If placed in the frames, put a floor of ashes coated with lime before placing the pots. This will prevent the action of earthworms and snails.

### Cuttings

Continue to put in cuttings of coleas, antirrhinum, geranium, abutilon and other bedding plants. Shade the glass or bed. Keep the house well ventilated. Make cuttings of the late varieties of chrysanthemums now.

### Vegetable Crops

Top dress the cucumber and tomato beds with pulverized sheep manure. If the cucumbers are of a poor quality and poorly shaped, apply an application of  $\frac{1}{2}$  pound of nitrate of soda dissolved in 7 gallons of water. Tap the wires to aid in fertilization before the morning watering and while the plants are dry.

### Palms and Ferns

This is the month to wash the palms and ferns with whale oil soap. Never use oil to make the foliage shine, since this fills up the breathing parts and causes the plant to smother to death. Keep the beds and walks moist. Shade the glass by coating it with a little clay and lime mixt.

## Fruit and Berries

**Pruning** Last call for pruning before the buds start. Remove all dead wood and sufficient branches to allow a free circulation of air. Smooth the wounded edge of the large limbs with a sharp knife so as to aid the healing. Paint over all wounds over  $1\frac{1}{2}$  inches in diameter. Prune the peach, cherry and plum very little.

### Spray

Use the first summer spray on the apple tree when the bud starts to show the pink, to destroy the codling moth. Mix lime sulfur solution for scab, 3 pounds of arsenate of lead paste to 50 gallons of lime sulfur. Spray or cut down the hawthorn, Japanese quince, wild plum and wild rose with lime sulfur. This is to destroy the San Jose scale that infests the fruit trees. The solution should be 1 part lime sulfur to 8 parts of water.

### Cultivation

Remove all weeds from the wire guards about the young trees. They only encourage pests. Cultivate the orchard where it is practical. Keep the grass short on hill side orchards. A little coarse bone meal worked into the soil will be of great benefit to the trees. Never use chicken manure or nitrate

of soda. These two fertilizers cause a rapid and weak growth which encourages fire blight.

### Planting

On planting out young fruit trees, prune back the tops and cut off all injured root. Never crowd or bend the roots. Fit the rich soil about the roots and place the poor soil on the surface.

### Strawberries

Cultivate freely. The last of the month place the straw mulch under the foliage. An application of tankage or pulverized sheep manure will show in forming healthier plants and larger berries.

### Blackberries and Raspberries

Plow a furrow, throwing the soil toward the canes. Prune back and cultivate freely. Do not remove the winter covering, but dig or plow it into the soil. Remove all dead wood and burn. Tie up before the buds start.

## SOUTH

### Upper South

Virginia, North Carolina, Northern Georgia, Northern Alabama, Tennessee.

### Middle South

Lower South Carolina, Southern Georgia, Middle and Southern Alabama, Mississippi.

### Far South

Southern Louisiana and Florida.

### Upper South

Plant the early Irish potatoes (Irish Cobbler). Sow in the open ground the seed of cabbage, lettuce, beets, carrots, celery, onions, parsnips. The latter part of the month, plant out early corn, snap beans and the wrinkled variety of peas. Plant out asparagus and rhubarb roots. Artichokes may also be planted in the open. If protectors are used, put out the last week in April, cantaloupes, cucumbers, melons and squashes. This is a good time to set out a new strawberry bed. The soil should be rich and free from weeds and witch grass. Plant in well-drained soil the gladiola bulbs. For fall bloom, sow aster seed and transplant after the third leaf appears. Most of the flower garden seeds may be sown now. Pansies may be set out. Spray peaches,  $2\frac{1}{2}$  pounds of arsenate of lead to 50 gallons of water.

### Middle South

Plant out in rich soil, bush, pole and lima beans. Plant the broad beans with the eye down to a depth of from 2 to 3 inches. After all danger of frost has passed, set out egg-plant, tomatoes and peppers. Apply a little nitrate of soda about lettuce, cabbage and cauliflower plants just before a rain. Cultivate freely after this application of fertilizer.

Plant out Swiss chard, as it makes a very good summer green. Sow the seed of summer lettuce (Hanson's Improved). Sow a succession of beans, corn, peas, beets, etc., so that there will be a supply of fresh vegetables thruout the season. Arrange for a homemade irrigation plant. Plant out petunia, verbena, geranium, nasturtium, zinnia and sweet alyssum.

### Far South

Sow the seed of radish in a cool, moist place. With the planting of watermelons and cantaloupes, put out some popcorn and peanuts. Sow the seed beans, corn, celery, endive, mustard, summer lettuce, melons, squash, pumpkins. In spraying potatoes for blight with Bordeaux mixture, add 2 pounds of paste arsenate of lead to destroy the potato beetle.

Keep your roses cultivated, and spray for the rose bug (chafer), with  $\frac{1}{2}$  pound powdered arsenate of lead to 10 gallons of water. Spray after cutting off the bloom. Put your fruit, berries, vegetables and flowers on the market in an attractive form.

The South as well as the West should have a standard grade and standard pack.

# Which Way Do You Iron?

**C**OMPARE these two ironing methods. The difference between them is the difference between the two women who are using them. One woman is old-fashioned—wasteful. The other is up-to-date—thrifty.

For not only is the Simplex a wonderful

convenience which saves time and conserves human energy, but in many homes it actually saves more than \$100 a year in fuel, help and laundry bills.

No housewife, (no matter what the size of her family or home) can afford to get along without a

## SIMPLEX IRONER

"THE BEST IRONER"

It is a mark of intelligent housekeeping to possess a Simplex.

Completes an average ironing in one hour at total cost of 3c. Irons everything except dresses and shirt waists.

Electric—Power—and Hand Power Simplex in suitable sizes and prices. Sold on Easy Payments.

Write for Illustrated Descriptive Literature.

*We also make ironing machines and laundry equipment for laundries, hotels, institutions and factories*

TRADE MARK REG. U.S. PAT. OFF.

## A Logical Question Answered

A logical question of war-ridden housewives is—"What shall I buy to replace the faded and worn out carpets and rugs which tho an eyesore I have endured in order to economize and save?"

For every floor that needs new rugs buy CREX. Use them the whole year round. You'll save money and be well satisfied. Durability and sanitary qualities are features well known. Put them to the test.

### *De Luxe Weave*

An exclusive patented fabric. Unusually smooth—beautiful soft tonal effects. A rare achievement in grass rugs. Primarily for indoor use.

### *Herringbone Weave*

Also patented and exclusive. More durable than any other woven grass rug. Ideal for porches—made to stand severe wear.

### *Regular Weave*

For twenty years the unquestioned leader in popularity. The "people's" common-sense, inexpensive floor covering. Unrivalled for value.

### Patterns—Colorings—Sizes

Wide variety of patterns to choose from in harmonizing colors to suit all tastes. Sizes range from small mats to large rugs.

### Imitations and Substitution

Beware of imitations. Genuine CREX rugs have the name woven in edge of side binding. Don't take any substitutes.

### Free Color-Catalog

Write today for beautiful color-reproductions of all CREX patterns. Suggested room treatments and rug sizes also shown.

### Your Dealer

If your dealer hasn't in stock the pattern, size and color you want write to us giving full particulars.

## NEW FLOWERS TO GROW

### MALMAISON CARNATION

Over three inches in diameter, this new French carnation (now grown here on imported French soil) can be had in purple, yellow, white and half a dozen shades of pink. These carnations are gorgeous in coloring and make a striking display when arranged in a vase by themselves, or they add strength of color and variety of form when in combination with other blooms. Having, too, a strong lasting quality and pleasant fragrance, the Malmaison is high among florist's favorites.

### PREMIER ROSE, PINK PERFECTION

A real American-raised rose, this, parented by Ophelia and Russell. In color it follows Russell, and in quick growth, free habit and splendid foliage it resembles Ophelia. This rose has great promise of popularity as it becomes more widely known. Its delicate pink tint insures it a welcome place in gardens and the rich deep blush of blooms grown under glass give it an enduring winter existence.

### ENCHANTRESS, A PINK ASTER

This glorious aster, which has resemblance to a chrysanthemum in some ways, produces immense flowers, four to five inches in diameter, on strong upstanding plants that all gardeners will take pride in. In tint it is a charming delicate pink which does not lose or fade out. Seeds may be planted from July to September. Don't over-enrich the soil, as, if you do, you are likely to increase disease among your plants. Lime and wood ashes are good for aster beds.

### SWEET PEAS, TRUE BLUE

For your 1920 sweet pea bed, you will be able to get seed of this early True Blue bloomer. This is a shade not too common among these fragrant flowers of early summer. It would be possible to make a good red, white and blue sweet pea bed with other colors of allied suggestion combined, but mostly sweet peas grow in friendly fashion without class distinction—just a jolly romping riot of colors.

### FIERY CROSS CANNA

Well named—this large flaming flower of burning red and yellow that stands stately on strong stalks and by its showiness compels attention and admiration. Not so long ago the canna was grown in masses for its foliage, the blossom being but little considered, but of late the blossom has been developed rapidly and now we have truly remarkable cannas that in groups of three or four or even singly can give a very good account of themselves.

## THE POULTRY YARD IN APRIL

BY E. I. FARRINGTON

IT is an undoubted fact that our grandmothers raised chickens on corn mash and other soft mashes, but how they did it is a puzzle to modern poultry keepers. Undoubtedly there must have been a great many losses, but in those days all poultry keeping was carried on in a happy-go-lucky way, and losses were taken for granted. The up-to-date way of raising chickens is to use dry feeds entirely. A much larger proportion of chicks can be grown to maturity, and they will be more likely to begin laying early if systematic feeding is begun at the start and persisted in thruout the season. It is a common plan to use hard boiled eggs for the first meal, but stale bread soaked in milk and squeezed dry is better.

As a matter of fact, tho, the chicks will get along very well if given a finely cracked commercial mixture from the very first. The use of a dry mash containing buttermilk or skimmed milk is recommended. One prime cause of disaster is overfeeding. It is best to keep the chicks always a little on the hungry side. The food must be clean and sweet, and is best given in a hopper which the chicks cannot easily climb into.

Fresh air is even more important for growing chickens than it is for human beings. The brooder house must have good ventilation. On the other hand, dampness is likely to be fatal. It is better not to try to raise chickens at all than to keep them in a damp house. When a hen is being used to brood the chicks, it is most important to keep her confined, altho the chicks themselves may have their liberty.

If you are raising chickens with a hen, keep a close watch for vermin. You can keep the hen free from lice by using lice powder, and a bit of lard on the head of each chick will subdue the large head lice, which are particularly troublesome. Often, tho, especially after the weather gets warm, red mites collect in great numbers on the inside walls of the coop, and crawl upon the chicks and the old hen at night. The best way to avoid this danger is to paint the inside of the coop with carbolineum, or some similar material, the moment the mites are discovered.

If you are using a brooder be sure that your chicks are not crowded at night, for if they get too hot and then become chilled you are likely to lose them. You may find it necessary to separate them with the hand after nightfall. Use some kind of litter in your brooder; cut clover or alfalfa is good. Chaff from the barn loft is to be avoided because fine particles get into the eyes of the chicks and cause trouble. The ideal litter is composed of dried peat, and is to be found on the market under various trade names.

Get rid of all your roosters as soon as you have broken up your breeding pens, unless you have a bird which you consider valuable enough to carry over another year. It isn't necessary to have a male bird with the laying hens in order to get a good egg yield. On the contrary, the eggs will keep much better if they are non-fertile. By getting rid of the surplus males you will save on your grain bill.

Be sure that your poultry yards are kept in a sanitary condition. This is made possible only by plowing or spading them. It is often a good plan to work in a covering of lime. The ideal plan is to have double yards in one of which you can grow a crop of rape, oats or rye while the hens are using the other.

## GETTING THE GARDEN INTO THE GROUND

(Continued from page 27)

leaf tissue, which continues to evaporate water, collapses: that is, the plant "wilts." Wilting is not always fatal, but it always does mean a severe check or setback to the plant, which it will take several days at least to recover from. And if dry weather or other unfavorable conditions arise, the plant may die. If, on the other hand, the leaf surface is reduced in proportion to the roots, wilting may to a great extent be avoided; and the chances of success are greatly increased; and growth is resumed.

For these reasons the delicate, gloved handling which most beginners, and especially women, give to plants in the operation of transplanting, is all wrong. What is needed is a quick, sure, severe treatment.

But everything you can do to make conditions favorable for a quick recovery should be done. First, have the plants in the best of condition, free from weeds, well thinned out, so they develop sturdily; and perfectly clean—if aphids or any other insect or disease appears, keep well sprayed. Second, give a thoro watering several hours before transplanting—long enough ahead so the dirt won't be sticky.

Of course plant development depends upon food supply. As the object of transplanting is to secure stronger growth, we can do something special in the way of food supply by using fertilizer or compost directly where the plant is to be put out. Make holes with a hoe where the plants are to be set, or open up a deep furrow. Then *mix thoroly* with the soil at each place a small handful of bone, or tankage and bone mixt together; or a good sized handful of compost. Then cover with fresh soil, and everything is ready for setting the plants.

Take up the plants with care—but not too gingerly!—securing as good a ball of roots as possible with each. Very long, straggling roots are better cut off near the plant. Cut back the larger leaves a third to a half. This is not so necessary with potted plants where the roots are disturbed comparatively little, but even with such plants it helps.

Plant as soon after taking up as possible, before the roots get dried out in wind or sun. Plant firmly! Loose, delicate fingered, lady-like planting is the cause of more failures than any other one thing! Unless the soil is very moist or heavy, it is better still to firm the earth even more by pressing it down with the feet about the newly set plant. If the soil is very dry, use water in the bottom of the hole before setting the plant—not, as is usually done, to make a puddle on the surface, after planting. In very hot, dry weather, or with large plants that may show a tendency to wilt badly even when cut back, shading from the sun for a few days after transplanting will help greatly to reestablish growth quickly. It is often impossible to prevent wilting just after transplanting, even with every precaution; but the leaves should have "picked up" by the following morning, if all is going well. It is much better if the work of transplanting can be done on a showery, or at least a cloudy day; otherwise, do it late in the afternoon.

Follow the suggestions above as closely as you can; but remember that, after all, you cannot be taught gardening—you have to learn it! To make your gardening absorbingly interesting as well as more successful, get into the habit of watching and studying the results of everything you do or that your neighbors do. And experiment continually, but on a small scale only with each new thing at first.

## An Easily Cleaned Home!

Every home may become an easily cleaned home if an ARCO WAND Vacuum Cleaner is installed. The ARCO WAND eliminates the drudgery and labor of dusting, beating, and sweeping. It saves time and strength and gives leisure to the housewife for recreation.

### ARCO WAND VACUUM CLEANER

Solves the help problem—makes maids easier to get and easier to keep by its quick and efficient work.

The ARCO WAND Vacuum Cleaner is a permanent, valuable improvement to any property. It is always and instantly ready for cleaning carpets, rugs, mattresses, curtains, upholstery, clothes, etc. Costs about a penny a day for current. The dust and dirt are piped away into the sealed dust bucket of the machine. Now reduced in price to encourage early buying!

### Easily put in any building, New or Old

The ARCO WAND Vacuum Cleaner is sold by our dealers everywhere. Terms of partial payments may be arranged at your convenience.

Send today for an illustrated catalog, "The ARCO WAND," which fully illustrates and describes its many labor-saving uses

Department C-9 **AMERICAN RADIATOR COMPANY** 816-822 S. Michigan Ave. Chicago  
Makers of the world-famous IDEAL Boilers and AMERICAN Radiators

Machine is set in basement or side room. A suction pipe runs to each floor. ARCO WAND Vacuum Cleaners, hose, and tools are sold by all Heating and Plumbing Trade.

### 1200 TO 1 BEAN.

A Gigantic Wonder—over 200 pods have been grown on a single plant—all well filled, producing over 1200 beans from 1 bean planted. Plants grow strong and erect, branching out in all directions, bearing pods up well from the ground, which literally load the plants; beans being pure white and of best quality.

Plant in your garden or any good soil, after danger of frost, any time up to June 15 only 1 Bean in a hill, and it will mature a crop in about 80 days, ripening very evenly, and the growth and yield will simply surprise you. My supply is limited and I can offer only in sealed packets, each containing over 60 Beans with growing directions. Order early to be sure of them.

Sealed packets 10c each; 3 pkts. 25c; 7 pkts. 50c; 15 pkts. \$1 postpaid. My New Seed Book is filled with High Grade Garden Seeds at lowest prices. It's mailed free. F. B. MILLS, Seed Grower, Dept. 35, ROSE HILL, N.Y.

# THE NEW BOOKS

## Why We Went to War

HERE is a book that is even more interesting now than the war is over than before. *Why We Went to War* gives us an opportunity to review the causes of the war and to see in the clearer light of retrospect how logical were the successive steps that led to our final participation in the world conflict.

Certain "fundamental antagonisms" of German and American thought existed in the beginning—the opposing and irreconcilable forces of autocracy and democracy which "are not differences which admit of present or peaceful adjustment. The gulf which divides the United States and Prussia is too deep and too wide to be easily bridged." Going on from these basic differences, Professor Gauss traces the causes, remote and immediate, direct and indirect, of the European conflict and then shows with the utmost lucidity the various occurrences that made it impossible for us to stay out of the war, from the earliest hostility of thought and action on the part of the German people to the final challenge of unrestricted submarine warfare.

Many have argued that we stayed out of the war too long, but Professor Gauss shows most convincingly that the scant two years between the "Lusitania" episode and our entrance into the war was a short time indeed to allow for the complete upheaval in American sympathies and the entire change in viewpoint which were necessary before we could wholeheartedly and sincerely cast in our lot with the Allies. We were bound by a thousand ties to the traditional Germany which we confused with the far different Prussia of the present. The leaders of our economic and philosophic thought were German-trained; there was a predominant German and German-sympathizing element here and, finally, in our idealism we were unwilling to believe that a nation from whom we had learned so much of good could be guilty of such depths of perfidy as the Germans. Two years for us to get into the war—but every single episode of those years was necessary so that, in the end, we should go in as completely a unit as was possible in a heterogeneous country such as ours.

This is a book of abiding worth—one of the best short accounts of the causes of the war that has been written. Of the greatest interest to the general reader, it can be used with advantage by the student on account of its bibliography of original sources.

*Why We Went to War*, by Christian Gauss. Charles Scribner's Sons. \$1.50.

## Industrial Democracy

THE world is well on the road toward political democracy. The next thing upon the nations' program is industrial democracy. The industrial problem is immediate and pressing. We must solve it at once. This is no time for theory. We must have a practical and speedy solution.

Industrial democracy—not as an idea or even an ideal, but a practical plan for labor adjustment—is what John Leitch offers. It is practicable. He has made it work. In twenty-odd plants he has stopped strikes, gotten from 30 per cent to 300 per cent increased production, secured larger wages for labor and larger profits for capital, and finally has made labor and capital

friends instead of hereditary enemies. This sounds like an industrial fairy tale instead of cold facts, but his method has been comparatively simple. He has taken the ideal of political democracy and applied it to industry.

This then is what I call Industrial Democracy. The organization of any factory or other business institution into a little democratic state, with a representative government which shall have both legislative and executive phases.

In other words, give labor a voice in the business, make it feel a personal interest in the profits, teach it to work *with* capital instead of *for* it and achieve industrial democracy!

A Cabinet of the higher executives, a Senate of subordinate executives and a House of Representatives of the workers, the three working together on the same principle as the legislative and executive bodies of the Government—economic dividends to the worker of 50 per cent on the saving effected by the new plan and finally constant striving on the part of both employer and employees to get each other's point of view; this in brief is industrial democracy.

We have been slow to realize that the unrest of labor was due to the same instinctive causes that led to the French Revolution and the successive political uprisings of the nineteenth century. Capital has dealt with labor as an autocratic monarch with his subjects, generously often and wisely but on a fundamentally wrong principle. The results have been disastrous. Why not try out really democratic principles in industry and see what happens? John Leitch has done it. So can others.

*Man to Man. The Story of Industrial Democracy*, by John Leitch. B. C. Forbes. \$2.

## Psychology and Efficiency

PSYCHOLOGY has begun to come out of the box labeled "Research for the Sake of Research." The distance it has come and the distance it still has to come is shown in Swift's new book on the more useful side of the applications of psychology. The vocabulary is largely technical, with many of the idioms peculiar only to this science. Yet the thought is clearly set forth in a manner which the lay reader with an extensive grasp of words will enjoy.

The book shows definitely the effectiveness of science to lighten human abilities, giving examples of everyday procedure, and of the better type which is necessary to progress in human affairs.

When we ask what determines the selection of the plan or method of meeting difficulties that arise in business or in the professions, we come upon an important fact in human psychology. The obstacle that confronts us must be overcome, and the method employed is commonly the first one that promises to attain the desired result. The situation is urgent and there is always a tendency to meet it with an economical use of energy. Now it is significant for efficiency that the method unconsciously adopted, in the unreflective adaptation of which we have been speaking, is not always the best.

This mode of overcoming obstacles is the "trial-and-error" method. The term was first used to designate the manner in which animals attack a problem. They do not stop to think the matter over, but go right at it, trying one way after another in rapid succession until they either obtain the desired result or become discouraged and stop. The trial-and-error method is not without results. It is the means, as we have said, by which the experience of the race has been achieved. The amazing advance of the natural sciences during the last quarter of a century is due to a new plan of campaign. Scientists no longer wait for the tedious, unintelli-

gent elimination of mistakes. They set definite problems, study the conditions, and then plan their investigation so that the errors of earlier workers may be eliminated. But the scientific plan has not been generally adopted.

Psychology is not commercialized in this book. Nowhere, perhaps, does Swift's position between the older embalmer of psychological discoveries and the new spirit of practical commercial usage show itself more clearly.

The later chapters epitomize a good deal of the work which has been going on recently. The presentation here is new and very attractive. Some titles are "Testimony and Rumor," "Our Varying Selves" and "The Psychology of Digestion." The last is especially important in war-days when economy is the war-cry which outcalls most of the gentler pleas. We find here a way to make economy not only productive but graceful. The book will prove absorbing to any one whose interest in psychology, in efficiency, or in modern human development has been awakened.

*Psychology and the Day's Work*, by Edgar James Swift. Charles Scribner's Sons. \$2.

## Bird Men and Women

A formal review of Algernon Blackwood's latest novel would be like breaking a butterfly upon a wheel. *The Promise of Air* is pure fantasy, light as a bit of this-tledown blown by a fairy's breath. "The New Age" is to be the "Age of the Air": we are to live as the birds do, care-free, winging our way, unconscious, full of joy in mere living and at last:

Death is nothing more or less than slipping back into your own subconsciousness, and so becoming greater and finer and more active—more useful, too, and with grander powers—than we ever had in our limited imperfect bodies. Life is nothing but an episode in our universal life. . . . Death is just a change of direction then, really; that's all.

cries the bird-like little Jean, who is the central figure of this curious story. The metaphor of flying is strained to the breaking point and reiterated to wearisomeness—but man's partial conquest of the air makes the simile an arresting one.

*The Promise of Air*, by Algernon Blackwood. E. P. Dutton & Co. \$1.50.

## The Mirror and the Lamp

WE have learned to expect serious work from the author of "The Guarded Flame" and "Mrs. Thompson." W. B. Maxwell, in his latest novel, *The Mirror and the Lamp*, shows no trace of his experiences on the fighting front in France, unless the very avoidance of the war is an indication of how deeply it has seared into his consciousness. The struggle of his clerical hero, an orthodox product of the Anglican Church, dropt into one of the foulest slum districts of London, is a conflict of the spirit, rather than a material one. Loss of faith and courage seem to have been inevitable with a youth so reared in the narrowest of circles; so blinded by his great love for his mother to her selfishness and bigotry; so sensitive to beauty; compelled to live amid squalor and unspeakable brutality. His faith was so much of a hot-house flower, it could not endure the harsh outside air.

Mrs. Churchill, the mother, is marvelously well drawn, her refinement that made such an appeal to her sons, and her narrowness and snobbishness that they could

not see, are not exaggerated, but indicated by masterly touches, so that the reader is ready to cry: "Heaven defend men from such mothers!" and yet be able to see why Edward loved her. The defects of the English marriage and divorce laws are shown by the unnecessary wreck made of three lives, mitigated by a slow redemption; altho perfect social rehabilitation would be impossible in real life, however abstractly just it may seem. It remains to be seen how long the new England will leave the unjust law upon her statutes.

*The Mirror and the Lamp*, by W. B. Maxwell  
Dobbs Merrill Co. \$1.75.

## The Story of Westinghouse

THERE is romance enough for a dozen novels in the biography of *George Westinghouse, His Life and Achievements*, by Francis E. Leupp. From his six-year-old tantrums that always got him what he wanted, to the answer he made at sixty-eight to a friend who accused him of never knowing when he was beaten: "Oh, yes, I should have known if I ever had been beaten, but I never have been!" Mr. Westinghouse proved triumphantly the theory that nothing succeeds like success. The story of how he invented the Westinghouse automatic air brake, proved it by hard tests, had to fight for years against stupidity and prejudice to gain it recognition, and yet by the time he was thirty-five had established manufacturing plants thruout Europe producing enough air brakes to equip 300 locomotives and 1200 cars every month, is an inspiring example of achievement. But Mr. Westinghouse never rested on his laurels. Experiments with natural gas, the use of electricity for street lighting, improvements in turbine engines, railroad electrification were all undertaken and worked out during his busy lifetime. "Westinghouse was a strong believer in the virtue of having his own way"; but he was exceptional in having his results justify his belief.

*George Westinghouse, His Life and Achievements*, by Francis E. Leupp. Little, Brown & Co., Boston, \$3.

## Battle Cries and Litanies

A faculty for friendship and a taste for the trail, responsiveness to the lure of the sea, the woods and the wilds, with a quickened heart-beat for the gallant line, the courageous stand, must characterize the man who would search out, and preserve, and gather into a book, the splendid virile verses that make up *Songs of Men*. It is a little book, and friendly; its home is the pocket, or the wallet. With it one forgets the weary train journey, the evening alone, the stormy night. He who reads will be led Up the mountain, down the valley to the sleepy harbor-side. Where a score of eyes are blinking and a schooner waits the tide—

and so adventuring companioned by Romance and Reality, he fore-akes the sentimental, to take unflinchingly the bullets of a rough way, with its calls to joy, its contrasts, its snarls and its mirth; he will meet lonely wanderers and gaily pilgrims; he will land within low walls, he will sleep beneath the stars, he will face the prairie tree, but all the time his heart will sing.

Here is one of the poems that vibrates with understanding, with the human note. Then give ear the clear blue sky overhead, and the lone road to my feet.  
And a dog to my side, and a brother  
travels to meet.  
And the years may take their toll of me till I  
come to the weary West.  
And I look for good in the world's own inn,  
a wayfarer, waiting guest!

*Songs of Men*, an anthology by Robert Frothingham. Houghton Mifflin Co. \$1.75.

## The great American ailment is indigestion

RAPID eating, keeping the brain constantly at work during meal time, and bad cookery—these lay the foundation for the conditions that nine out of every ten Americans suffer from. The food is imperfectly masticated, there is an insufficient flow of saliva, and the inevitable result is seen in the various mild forms of indigestion with which we are all familiar.

To relieve these conditions there is nothing better than the routine use of my original pepsin chewing gum. It stimulates the salivary glands, insures sufficient saliva, relaxes nerve tension, and aids the digestive processes.

Thousands have obtained relief from their digestive troubles by the simple expedient of chewing Beeman's Pepsin Gum for ten to twenty minutes after each meal.

# THE BANNER YEAR OF TOURS BEGINS

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**I**t is spring to the motorist. Because of the mild weather conditions of the past three months it may well be considered the beginning of summer, especially in the case of the motorist who may now imagine the short trips that serve as a prelude to the more extended tours starting in June and continuing well into the fall.

The roads are now in the condition that they generally attain some six weeks later, after normal winter weather. What little frost there was in them has largely disappeared and warm weather and sunshine has dried them out. In fact the motorist in most sections will find better road conditions in the next few weeks than will be the case later, when extensive highway repairing work is undertaken. Then closed roads and numerous detours will be encountered not infrequently, because more work on the roads is scheduled for this year than has been the case heretofore.

Reports from touring bureaus of various automobile clubs and organizations indicate that 1919 will be a banner year for automobile travel. This prediction is based largely on the volume of requests already received for information on road conditions, desirable routes, when various resort hotels will open for the season and such data essential to the motor tourist in planning a trip.

It would seem that the majority of motorists are planning to make up this year the mileage lost during the touring season of 1918, when the patriotic impulse to curtail even health bringing pleasures brought a marked decrease in automobile touring.

Managers of touring bureaus not only report a noticeable increase in the tendency to tour by motor car, but a further inclination on the part of motorists to plan and undertake trips over considerable distances and to far-away points. Such traveling comes under the head of transcontinental touring, and in fact most eastern automobilists desiring to see new country and to travel far afield set out for the Pacific coast, while those of the West and Far West generally turn their cars eastward with some point, or even a tour, along the Atlantic seaboard as the objective. As an indication of the tendency to tour across the continent, A. L. Westgard, the veteran transcontinentalist now attached to the touring bureau of the American Automobile Association in New York City, states that on a single day recently he had ten different callers, each of whom was arranging and securing the necessary information for a trip this season to California.

**L**ONG distance automobile touring in the United States is also increased thru the fact that it will be impossible, this year at least, to tour thru Europe. It will be remembered that prior to the outbreak of the war hundreds if not thousands of motorists took automobile trips abroad each year. Now their field is largely limited to this country and parts of Canada, and this is helping materially to realize the slogan, "See America First." And incidentally many are learning that this country has no peer as a scenic playground. Not only can the United States duplicate practically everything in the way of mountains and lake scenery which is to be found in the Alps or the Highlands of Scotland, but it has many features of a more or less exclusive character.

For example, where in Europe is a replica of the far famed petrified forest in Arizona, or the prehistoric cliff dwellings which dot that section of this country? The Grand Canyon of the Colorado River, the geysers of Yellowstone Park and the glaciers of Glacier National Park are unequalled abroad. And is the Arab a more interesting study than our native Indians on their western reservations, or the Slavic races than our Mexican neighbors?

Another thing which is serving to popu-

*A party of tourists that has made one of the beautiful national parks its objective*

larize transcontinental touring with motorists is the growing realization that there are no real difficulties to be met in traveling by automobile thru the sparsely inhabited regions of the West. The proof of the pudding is in the eating and hundreds made the long journey last year without unusual trouble.

As to personal safety there are a score of cases where women have made the trip without male escort. The motorist taking a trip across the continent for the first time will be more surprised by the amount of good road found in the unsettled regions than he will be by the difficulties of negotiating some of the bad stretches.

There are three main routes across the continent. Each has its eastern terminus

in New York City, the Lincoln Highway running to San Francisco by the way of Philadelphia, Pittsburgh, Chicago (there is at least one other equally good route to this point), Omaha, Cheyenne, Salt Lake City, Lake Tahoe, and Sacramento; the National Park Highway, which leads to Seattle via Chicago, Minneapolis, Yellowstone Valley, Yellowstone and Glacier national parks, and Spokane; and the National Old Trails, which terminates in Los Angeles, and passes thru Pittsburgh, Columbus, Indianapolis, St. Louis, Kansas City, Trinidad, Santa Fe, Albuquerque, Flagstaff and Needles. The three include a wide variety of climatic, scenic and historic conditions, and of hunting, fishing and camping.

The reports show that there is also a marked increase in the number of motorists who camp out on long tours instead of stopping at hotels. The growth of this kind of automobile touring is especially prevalent in the West and many cities and towns have provided free camping sites within their confines for the nomadic motorist. For example, Denver, Colorado, has made such provision in one of its parks, and on a single night last summer there were four hundred automobile tourists camped there, whose routes led them the next day to every point of the compass. On such a camp site running water, electric light and adequate sewerage are provided.

**I**N considering the three best routes across the continent for a summer tour the inexperienced automobile traveler will at once shy away from the National Old Trails. He follows on the map the southern route thru New Mexico and Arizona and multiplying the July heat of his northern home at least tenfold, exclaims: "No furnace jaunt for me."

As a matter of fact this route is the coolest of the three thruout the entire summer, and mosquitos are almost unknown. West of the Mississippi River the National Old Trails route crosses a plateau averaging some 7000 feet above sea level, while the other two routes dip down thru the river valley where the summer heat is felt most. Also the crossing of the desert is shortest on the southern route, where it is a run of only 160 miles, always made at night, when it is cool. It is a graded road all the way across, well marked, so there is no chance of losing one's way.

It is along this route that the motor tourist encounters the picturesque Indian tribes of the great Southwest, the Mexican living in his native environment, the rarest colorings of landscape, and many historic ruins of a civilization antedating the discovery of America.

The White Mountains of Arizona, said to be one of the best hunting and fishing grounds in the entire United States, can be reached by a side trip off the National Old Trails of less than thirty miles.

There is one essential for the motorist who sets out to travel thru such parts of this country as those described briefly above, and that is accurate information covering every important detail. Such information is procurable at any of the six hundred clubs affiliated with the American Automobile Association, or at the main offices of the national organization in New York and Washington.

*Ask the Motor Efficiency Service anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is ready to give full and impartial information about any individual product*

## ARE YOU FIT TO BE A FRESHMAN?

(Continued from page 21)

You have two measures, a 3-pint and a 5-pint measure. You are sent to get exactly 7 pints of water. Using only these measures and without guessing at any quantity, how will you do it? Begin by filling the 5-pint vessel.

You have two measures of 5 and 7 pints, respectively, and you are to get exactly 8 pints. Begin by filling the 5-pint measure.

You have two measures of 4 and 9 pints, respectively, and you are to get exactly 7 pints. Begin by filling the 4-pint vessel.

To qualify you should be able to work out at least two of these in five minutes each.

These tests are stated very roughly, without the refinement and commentaries which Professor Terman gives them, but they will serve the purpose. Of course, if you *don't* demonstrate that you are a superior adult you can just blame it on The Independent for not quoting them exactly.

### Pebbles

"If life in these days of high prices

Is worth living," said Hannibal Horr,  
"Think of the bargain it must have been  
In the days before the war."

—*Boston Transcript*.

## SPRING, SUMMER, Fall and Winter, Chamberlin Strips are economic convenience

**EQUIP NOW** with Chamberlin strips and bar drop draughts, weather-street door and window seal that will readily impress through cracks around your windows. Lighten your heating. Protect your furnishings. Deaden outside noises. Prevent rattling and sticking of windows. In summer also keep out the heat when desired.

More widely used than all others—this proves them the best, simplest, most weather-tight and trouble free. Will outlast the building.

Guaranteed 10 years and installed by the oldest, largest, most experienced weather strip makers, with a quarter-century reputation for reliability.

The Chamberlin'd Window

Keeps out the cold, wind, dust, noise, and keeps in the heat. It is the best of the best. It is the only one that will last 10 years or more.

### Famous Chamberlin Users include

J. P. Morgan, Elton Root, Thos. A. Edison, E. H. Gary, Wm. G. Meadco, W. K. Vanderbilt, Henry Ford, Charles Dana Gibson, Chas. M. Schwab, Chauncey M. Depew, Harry F. Whitney and hosts of others.

## CHAMBERLIN METAL WEATHER STRIPS

"THE STANDARD FOR 25 YEARS"

Pay for themselves, by saving fuel, in four years or less. We equip doors, casements or transoms—wood or metal—in new or old buildings.

**WRITE** for illustrated, descriptive book and list of users in your vicinity.

## A SQUARE DEAL FOR RAILROAD CONTROL

(Continued from page 16)

congestion having cleared back and clogged the main lines of the Middle West.

But to get back to the pained potato shipper of Minnesota. One case I have in mind when permit to ship was refused was due to the fact that an extra urgent demand for flour was made by the Food Administration for delivery at the Atlantic coast at the earliest possible moment. It was found that a half dozen flour trains must be rushed from the Twin Cities with out delay. It was done, but had the effect of sweeping that particular district clean of locomotives, especially as grain trains were rolling into Minneapolis from the Northwest for immediate shipment eastward. In result, for several days traffic not directly connected with Government orders was at a standstill in the transfer yards of the Twin Cities. Consequently permit to load perishables for shipment to or thru that point was refused.

How many thousand times this system of controlling traffic at its source instead of permitting it to tie transportation in a knot at destination has been worked on the patient and long suffering shipper no one is prepared to say, but the Administration does tell us that to have permitted all sorts of traffic to come rolling down the narrow transportation lanes into the East would have settled once and for all our chances of fulfilling our food pledge to the Allies.

All this leads back to the original proposition: that you cannot judge the success or failure of our experiment in Government control of railroads from testimony furnished as to its service to the general public. To use the expression of one practical railroader: "The public got the leavings. But if they hadn't, Kaiser Bill would have."

There are certain little inside facts concerning Government control that the public in general has likely never dreamed of. Take the Administration's Scrap Utilization drive, for instance. The railroads of America sell yearly about seventy million dollars' worth of "junk," or worn out railroad materials. The Railroad Administration, however, set out to learn just what could be done toward reclaiming such scrap. They discovered that while two or three railroads were reclaiming and utilizing these materials, that others were selling them to the junk man. Instructions were issued concerning the proper methods of reclaiming and utilizing such scrap and each road was required to form a Scrap Reclamation Committee. The net saving from this work is now set at about eight million dollars a year. The most important consideration in this matter, however, is the fact that by repairing and putting back into use worn and discarded railroad materials our railroads have been able to bridge the dangerous shortage of steel, copper, zinc, tin, etc.

They went into the wood utilization question, too—appointing wood utilization experts and erecting timber and tie treating plants.

The consolidation and coöperation of purchasing departments also accomplished a material saving and secured better results all around.

In blowing its own horn the Railroad Administration points to economies of operation that total about \$100,000,000 a year for the seven regions, whereat the exponents of private ownership and control offer a few definite remarks concerning a net loss of something over that amount, to say nothing of increased revenues due to the raising of rates. Without becoming per-

## Shur-on EYEGLASSES AND SPECTACLES

Made in many attractive styles, with or without Shelltex Rims, Shur-on Mountings are comfortable, becoming, and when fitted with

sohal the Administration drops a hint or two regarding sweatshop labor and quotes the figures that during 1917 over 50 per cent of the railroad employees of the United States received seventy-five dollars a month or less, and that 80 per cent of them received a hundred a month or less, reminding also that it cost the Administration between \$600,000,000 and \$700,000,000 to increase the workers' earnings to a living wage.

But to compare the results and costs of Government control as against private control of railroads cannot be done fairly without taking into consideration the difference between wartime and pre-wartime expenses. The costs of railroad building and operating during the last year have increased from 15 to 60 per cent dependent upon the materials and class of labor used. For example, altho the railroads decreased their coal consumption by over 10 per cent, the cost of the fuel for the past year has increased \$140,000,000, while the cost of cross ties and lumber, upon which they have also economized, has increased approximately \$65,000,000. The cost of other materials have climbed proportionately.

Wages to the 2,000,000 workers of the railroads amount to about \$5,500,000 a day now, as against less than \$4,000,000 a year ago. This increase, plus the higher costs of materials, accounts for the \$9,000,000 a day costs now as against the \$6,500,000 of private control.

However, war service is not peacetime service and comparisons of the two can hardly be considered a fair basis on which to judge the performance of our sample of Government control.

## PLANNING THE OUT-DOOR ROOM

(Continued from page 23)

under their branches, the other planting would gain distance and variety.

This planting will not begin to group for two or three years after it is set out, and if quicker effect is desired, more plants of the same kinds could be set in between. But, as it is, the ultimate effect would be better, and each one having room to develop, preserves its individuality. In fact, this planting is arranged to show that shrubs and trees may be used for their own sakes, yet each one doing its bit toward the general effect.

The spaces within the waving line should be kept cultivated and free from weeds until the shrubs cover the ground. No attempt should be made to grow grass between them. None but the commonest material is used, as this is not a treatise on rare plants, but only a sketch of some general principles of shrubbery arrangement. A plan like this requires a minimum of upkeep, and an ordinary hired man can easily take care of it, his principal tools being a hoe and a lawnmower.

"What is that string around your finger for?"

"That is to remind me that I forgot something my wife tied it there for me to remember." — *Baltimore American.*

A pessimist is a man who believes that it will take centuries for the world to recover from the blow to civilization; and an optimist is a man who retorts that there will be plenty of centuries. — *Rochester Post Express.*

"Well," said Uncle Bruggins, after a solo by a fashionable church choir tenor, "if that ain't the roughest thing I ever saw. Just as soon as that young man began to sing, every other member of the choir stopped. But he went thru with it, and I must say I admire his pluck." — *London Opinion.*

## WHAT IS A CRIME?

(Continued from page 14)

court-martial trials were public and that the records thereof were undeniably public records which the public has a right to examine. But I had already secured the evidence.

I charged that officers were shielded from imprisonment for felonies when enlisted soldiers were sent to jail for identical crimes—not infrequently less flagrant. For example, a private soldier in the Philippines who had embezzled approximately \$14 was dishonorably discharged and sentenced to prison for one year. Another soldier who embezzled \$160 was given three years in prison. Then a certain Captain Augustus H. Bishop embezzled \$135 of the trust funds belonging to the soldiers of his company; he was tried by court-martial and merely dismissed from the army.

A private in the Coast Artillery refused to cut grass and he was sentenced to hard labor in prison for two years, and after his conviction it was found that when he had enlisted he had a wife and child, of which fact he had not informed the army authorities; and for this unrelated fact he was given six months additional imprisonment.

A soldier from the Third Battalion of Engineers committed an infraction of discipline for which, according to the army regulations, the punishment is \$12 forfeited pay and one month's confinement. He was sentenced to prison for two years.

A squabble between two non-commissioned officers, started by their wives, and which would have been settled by an ordinary justice with a reprimand, sent a sergeant of twelve years' faithful army service to prison for three years.

A soldier of the Fifteenth Artillery was sentenced to two years in prison for desertion. But while awaiting trial for that desertion he attempted to escape, changed his mind and surrendered himself. He was given an additional court-martial for the attempt and on two charges, (a) desertion (altho a prisoner!) and (b) attempting to escape; altho both of these charges were admittedly descriptions of the identical act. He was found guilty on both charges and sentenced to two years more in prison, or four years in all.

A soldier prisoner while serving a year's sentence attempted to escape. He was charged with abandoning his prison clothing and, because he used a boat in attempting the escape, with larceny of the boat. The maximum sentence under the regulations was five months for abandoning clothing and one year in prison for escape. The court-martial found him "not guilty" on the charge of larceny, but "guilty" of the specification of stealing the boat—an amazing verdict—and sentenced him to four years' additional imprisonment.

I charged that officers were shielded, and as a startling example cited the case of First Lieutenant Howard K. Loughry, of the Coast Artillery, who was tried for a violation of an important regulation regarding inspection of ammunition; he was found guilty and sentenced to the loss of ten numbers in his numerical grade—a delayed promotion of no particular seriousness. But there was not a whisper in the charges that a gun burst following such slackness and the corporal of the guard in charge of the gun was killed—yet that was what had actually happened. In civil law this is manslaughter.

Another officer, a Captain Reed, was court-martialed for being drunk when he, Captain Reed, was the presiding officer of a court-martial called to try soldiers for drunkenness and other offenses. He was found "not guilty" by his brother officers

on the charge of drunkenness, altho the fact was admitted that on the same night on which he was charged with being drunk in the court-martial, he had been admitted to the post hospital suffering from alcoholism.

Another officer who beat and tortured his men during a period of three weeks, tying them to posts in the sun of the tropics and forbidding any one to give them water or food, and tying a private in his company to a tree stump at the water's edge in such a manner that he had to stand on one foot, and that in the water, for hours, was merely dismissed.

A private soldier of the Twelfth Cavalry while drunk forged his lieutenant's name for ten dollars for further drink, intending to pay it out of the pay then due him. He was sentenced to two and a half years in prison. Another officer of the Ninth Cavalry uttered checks for \$300, assigned his pay to others and then collected it *himself*; and he was merely dismissed from the army.

These are simply a few cases that I quoted in illustrating the favoritism and injustice of the court-martial system of the Judge Advocate General's department. And those were peace times, just before the great war.

Now, then, for war times and the court-martial system. Acting Judge Advocate Ansell quoted to the Senate inquiry the case of twelve non-commissioned officers in the army who had been sentenced to dishonorable discharge and imprisonment of from ten years to twenty-five years each, for "a minor disagreement" in one of the army camps with some West Point officers. General Ansell, after going into the evidence, set the sentences aside and restored the men to duty.

General Ansell further cited the case of a boy who had been in the army but a few days and was assigned to kitchen duty. A lieutenant demanded that the package of cigarettes he had been smoking be surrendered, and the soldier refused. This boy was tried by court-martial, convicted and sentenced to dishonorable discharge and *forty years in prison!* The commanding officer, it may be said, as an act of great leniency, reduced this sentence to merely ten years in jail. This is General Ansell's own comment:

The facts must be considered as they were to get an insight into the matter. Here was a raw recruit, new to army life, in the turmoil of a kitchen, quite likely upset by a reproof that might have been harshly made and letting his temper get the better of him. For this he was sentenced to *forty years in jail*. In many instances—I am not citing exceptions—the same brutally excessive sentences have been imposed for trivial offenses.

Another instance he cited was that of a soldier who had deserted from the army at West Point, remaining away from duty for five months. He was sentenced to death. General Ansell found on the evidence that the boy had gone home fearing that things were not well and found his father dying from paralysis. "The day after," said General Ansell, "he reported back for duty." On General Ansell's investigation the death sentence was set aside.

Another soldier, from Alabama, with a wife and aged parents, and with an excellent soldierly record, went home on a three days' pass and found his father desperately ill. They were very poor and in extreme need. He remained until his father's death and two days thereafter returned to camp. He was sentenced to *fifteen years in prison*.

Four soldiers in France were court-martialed and sentenced to be shot, two for sleeping at post and two for disobeying an

order to drill. A second lieutenant, without any knowledge of law, was assigned to their defense. He permitted them to plead guilty to capital offenses, altho the two accused of refusing to drill made a plea to the effect that because of long exposure for many days to the cold of the mountainous sections of France they could not drill, and the other two charged with sleeping at their posts made the plea that for twelve hours each night for six nights in succession they had been on sentry duty in the front line trenches, that no sleeping could be had in the day time because their dugout was used as a place for chopping wood, and that they were physically exhausted. In spite of their extenuating circumstances, Judge Advocate General Crowder insisted on the death penalty and it was only by action of the President that these sentences were fortunately set aside.

The fact is that the present court-martial system is archaic and impossible of operation in conformity with the decent standards of American justice and American manhood. The court-martial was the first court in the United States. It was taken over in our Revolutionary days from the British army and has remained substantially unchanged even up to the present day. The court-martial was rigorous and brutal in those days because the armies of Europe were recruited by press gangs from the lowest scum of population and such recruits were beaten into the ranks and into a state of sullen discipline. Let me quote again from my court-martial exposure series in *Harper's Weekly*:

Then the gentleman and officer was as far removed from the common soldier as the human from the animal. From those days there has come down to the army of today neither arms, standards of equipment, tactics, nor men of like condition; the only things that have been preserved are the customs and abuses as archaic as the feeble black powder and the stone cannon ball. Under these formulas (court-martial) that are cherished by the army of today, men, young men, are tossed into prison degradation—not for crimes, but for infractions of discipline determined by a brutal age when the common soldiers of the army were recruited riffraff and the products of press-gangs.

Judge Advocate General Crowder has defended himself on the theory that he has not the power of review of court-martial cases. This is disingenuous. For the Judge Advocate General's department administers the justice and discipline of the army thru courts-martial under the organic law passed by Congress. Under the organic law, chiefs of great Government departments are empowered to promulgate such regulations as will assist in carrying out the purposes of the organic law.

Therefore, it is for the Judge Advocate's Department itself to decide whether it has the power of review or has not the power of review in these court-martial cases and in the inhumanities and injustices which they commit.

When Judge Advocate General Crowder says that he has not the power of review, there is no one to gain say him, and no one, if he should say that he has the power of review. Judge Advocate General Crowder, all pettifoggery and clouding of the issue turned aside, is simply stating that his opinions when once made are sacrosanct, even from change by himself, a position of stiff and pompous absurdity.

The fact is that General Crowder has proved himself, by his record, utterly out of sympathy with anything but the out worn and archaic customs of the army. In so far as I have knowledge, he has never denounced the question of the justice or inhumanity committed by the courts-martial of his department nor shown the slightest interest in condemning them—and his official record in the cases that I cited five years ago, and that General Ansell quotes, is absolute corroboration of this. He wants

"Makes Cooking Easy"

## This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

The Coal section and the Gas section are just as separate as though you had two ranges in your kitchen.

When in a hurry both coal and gas ovens can be operated at the same time, using one for baking bread or roasting meats and the other for pastry baking—It "Makes Cooking Easy"

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

The large oven below has the Indicator and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

Buy a Commercial Grapefruit Grove  
AT  
**LAKELAND HIGHLANDS**

A 10 acre grapefruit grove will provide an income equivalent to 5% ON \$50,000. The cost of a grove is only ONE-EIGHTH OF THIS SUM. Our Company conservatively estimates the net profits on a basis of only \$5 PER TREE or \$240 PER ACRE, which is only one-fourth of the maximum returns on good groves. Even \$5 per tree will NET 40% on the investment. The income on a grapefruit grove begins after the fifth year.

Our illustrated booklet answers all questions. Write for a copy and read it. Then, if you are in a position to finance a grove, visit the property and spend a week at the Country Club as our guest.

**W. I. HALLAM & CO., 225 5th Ave., N. Y.**

ed to kill where General Ansell stepped in and saved life not as a charity but as simple justice to a common American soldier and his family.

Over two million splendid, patriotic young Americans, volunteer and drafted, are now, on the threshold of peace, at the mercy of a feudal system of court martial discipline; a court martial system that gives them neither security from oppression nor right of appeal no matter how shocking may be the abuse.

The court martial system that holds the keys on our splendid American soldiers was born in a brutal, semi-feudal age, under political conditions that gave a common soldier rather less protection than any Board of Aldermen now gives animals—and none at all from the hereditary gentlemen officer caste that composed the court martial itself.

The court-martial system needs to be reorganized and revised, the reactionaries who would condemn American boys to a feudal bureaucratic militarism without decency or justice and which made of Germany a living horror must go root and branch—and it is to such thoro, humane, decent and just reorganization, on the basis of our American sense of justice and the square deal, that Judge Advocate General Crowder lends, and has lent, the energy and weight of his persistent opposition.

### Remarkable Remarks

**MR. HERTZOG**—What we Nationalists want is a free republic for South Africa.

**CANON HAY AITKEN**—I cannot repeat the Athanasian Creed without telling a distinct and definite lie.

**DR. I. NITOE**—Democracy is the predominant idea of the day and it is spreading with alarming rapidity.

**FRANK H. SIMONDS**—Britain has brought its ablest and its wisest and its noblest and its wickedest men to Paris.

**CANON MACLEAN**—In all the music halls a song is being sung, the principal line in which is "To hell with your creeds!"

**REPRESENTATIVE CONNALLY OF TEXAS**—The Irish question is one which liberty-loving people all over the world long to see solved.

**REV. DR. McELVEEN**—A Christian may be almost as much a missionary of God in the politics of America as in the jungles of Africa.

**MAJOR W. GUINNESS, M. P.**—Since the days of Mahomet no prophet has been listened to with more superstitious respect than has President Wilson.

**E. W. HOWE**—When with a party of ladies you don't know very well, do not criticize Christian Scientists: the chances are that at least two of them will be Scientists.

**GRAND DUKE ALEXANDER MICHAELOVITCH**—I thought I should find justice and sympathy at the peace conference, but I found only personal intrigues, party politics and national egotisms.

**MARGARET PROCTOR**—The successful business man has learned that the girl who lunches on an anemic jelly sandwich and a questionable cup of coffee 365 days in a year does not make a competent worker.

**SAMUEL GOMPERS**—No intelligent student of our time can or will dispute the great truth that all governments become cruel and autocratic in their character and bearing in the same ratio as one part of their people is elevated and the other deprest.

**SENATOR MANN**—If the only heritage which this generation gives to those who come after it is an indebtedness of billions of dollars for them to pay at least the interest on, and part of the principal, without at the end of the war doing something to prevent future wars, we will not in the future receive the blessing of mankind, but its condemnation.

## A FIGHTING PACIFIST

As our readers will have observed we have a preference for real pictures over the imaginary conceptions of an artist as illustrations for The Independent, and even in the case of a cover design. The photograph of the "Freckle-faced Yank" on our issue of March 22 may not have been so enticing as the paintings of the pretty girls and idealized soldiers that adorned some of our esteemed contemporaries, but it has an interest of its own, for it was taken on the spot and showed how a real hero looked. It makes you want to know more about him, and his former teacher tells us:

Perhaps you will be interested to know a little about the "freckle-faced Yank" whose picture decorates the cover of The Independent. He is Lieutenant William A. Dietz, of 114 North Seventh Avenue, Mount Vernon, New York. As his name indicates he is not many notches removed from the Fatherland. Despite which fact, he was never a neutral, but always intensely pro-Ally. April 6, 1917, found him a sophomore at Columbia, where he was working his way. He held decidedly pacifist views, but like many of the rest of us who still cling to that much abused name, he believed that the first step toward any kind of permanent world peace must be the crushing of the Hohenzollern. Almost immediately upon the declaration of war, he enlisted and like many of the early recruits was sent to fill a replacement in the regular army. As a private in the 7th Field Artillery he went across with Pershing's men, in the summer of 1917. After seeing active service in several places with the artillery, he was transferred to the 344th Tank Corps. He was at St. Mihiel and the Argonne. At Varenne he had a miraculous escape, wounded, from a baby tank, stalled on fire, and under bombardment from a nest of German machine guns. He not only made his "getaway" but brought in a captive Boche.

The photograph, reproduced on your magazine cover, was taken a few hours later by a military photographer. When exhibited by the New York Public Library it bore the legend, "Winged, but what of it!"

He returned to this country a few days ago and is now at Camp Merritt awaiting discharge after almost two years under the colors. He is now twenty-one years old. He chose the artillery because, like many another, he felt that if he ever shot a man and saw him fall, he could never shoot another. Transfer to the Tank Corps deprived him of even this small solace, and he had to learn, like the rest, to look upon the horror that his own hands had wrought, with steeled nerves. His comment upon the League of Nations was, "If you people here had the faintest notion of the hell we've been thru, you'd stop talking and ratify at the first chance."

CLARA FITZ GERALD MANN

Mount Vernon High School, New York

"I paint what I see," an art student once said to his master, complacently.

"Well, the shock will come when you really see what you've painted," said the artist. — *Boston Transcript*.

"Well, Bill, what are you going to do when you get demobilized?"

"Live on the pension, of course."

"You don't think yer goin' to get a pension from the Army, do yer?"

"No, not Army—Old Age Pension, I mean." — *London Opinion*.

## Your Children

### Will Love These Books

And These Carefully Graded and Selected Volumes Will Do More to Train Them and Develop Their Minds in the Right Way Than Almost Any Single Factor You Know Of

Do you realize that your children's futures may be affected by the kind of stories their young, impressionable minds are fed upon? Yours is a tremendous responsibility; see to it that your youngsters get good literature adapted to their ages—the sort of reading calculated to build character and instill high ideals. The compilation, by one of the oldest educational publishing houses in the country, of The Junior Instructor Library, makes this an easy matter for you.

## The JUNIOR INSTRUCTOR LIBRARY 200 Titles in Groups of 25 Volumes

Bound in Limp Cloth and Boxed as Per Accompanying Illustration.  
**Postpaid, \$2.50**

Represents a big vital idea in the entertainment and education of the child mind. Included in its 200 titles are Literature, Fables, Myths, Nature, Biography, History, Geography, Industries, Art, and the childhood classics every youngster has loved for generations. The authors represented are among the world's most famous writers. The Library is now used and approved by thousands of schools where its great value has been absolutely established.

### 25 Volumes in Limp Cloth Sent on Approval

Mail us the attached coupon today, giving the names and ages of your children, and we will send you postpaid for examination the group of titles suitable for their ages. If you consider them fully up to our description, send us \$2.50. If you are not satisfied, you may return the books to us.

Never before have you been able to secure such a collection of carefully graded and selected reading at such prices. Never before have these classics been available in such convenient, readable form. We simply ask you to look at the group we select as most suitable for your children. In sending for them you are under no obligation to buy. Fill out the coupon NOW and mail it to us. We are certain you will consider it one of the wisest things you have ever done.

### Description of Library and Contents

These little books have 32 or more pages, they are printed in clear, readable type on a good grade of paper; bound in limp cloth—durable—handy—convenient. Many of the volumes are profusely illustrated. Each group of 25 titles comes to you in a dust-proof Library Box as shown in the illustration.

#### Some of the Titles

Nursery Tales  
Kitty Mittens and Her Friends  
Little Red Riding Hood  
Adventures of a Brownie  
Little Wood Friends  
Four Little Cottontails  
Little People of the Hills  
Story of Washington  
Story of the Pilgrims  
Story of Robinson Crusoe  
Little Gandy Two Shoes  
Story of Coal  
Indian Children Tales  
Story of Joan of Arc  
Life in Colonial Days

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. The Story of the Week.

1. Imagine that you are a member of a club that meets regularly to discuss current events. You have been asked to give a talk on the following topic: "The Recent Work of the Peace Congress." Give the talk as you would give it at the meeting of the club.
2. Give a full explanation of the difference between punishment and reparation.
3. Point out examples of punishment in books that you have studied in your school course: "The Ancient Mariner," "Ivanhoe," "Silas Marner," "Julius Caesar," "Macbeth," and other books.
4. Write an impassioned speech in which you show that it is not possible for Germany to make full reparation for the evils inflicted upon the world.
5. Give a clear explanation of the reparation that it is possible for Germany to make.
6. Read the article entitled "British Strike Averted." Imagine that two men, in conversation, give each other the facts presented in the article. Write what each one says, use direct discourse, punctuate your work carefully, give the dialog coherence, and write it so that it will rise in interest.
7. Draw on the blackboard a map that will aid you in explaining the following words: Adriatic, Fiume, Hungary, Jugoslavs, Croats, Italia Irredenta. Give a full explanation of every word. Show the importance of the demand for Fiume. Make your talk illustrate the principles of good exposition.
8. Explain in what respects the revolution in Hungary is like the French Revolution as described in Dickens's "A Tale of Two Cities."
9. Write an original narration founded on the revolution in Hungary. Center your narration around two persons. Describe each of the persons sufficiently to make your readers interested in them.
10. Select the topic sentence of every paragraph in "The Story of the Week."
11. Point out examples of single words, phrases, or subordinate clauses that have been used in place of sentences, in order to give "The Story of the Week" in condensed form.
12. Write a short article concerning school news. Make a definite attempt to imitate the article outlined in accordance with the previous question.

#### II. Editorial Articles.

1. Write a single composition in which you give a short summary of every editorial article. Introduce your summaries by writing a formal introduction to the series. Close your article by writing a formal conclusion.

#### III. Are You Fit to Be a Freshman? By Geddes Smith.

1. Explain the derivation and the meaning of every one of the following words that occur in the article: implications, callow, lapses, approximation, stereotyped, catholic, solidarity, ethics, alertness, lieu, incidentally, relevant, fallacies, interlocutor.
2. Give an interesting talk in which you explain exactly what points the article makes.
3. Imagine that you are an examiner. Call three of your classmates to the front of the room. Give them some form of test that will show proficiency and quickness in the correct use of English.

#### IV. The Rights of Residents. By William Jennings Bryan.

1. Write a formal brief of the points made in the article.
2. Write an interesting biographical account of the author of the article.
3. Imagine that you are chairman at a meeting at which Mr. Bryan is to speak. Give the speech you would make in presenting Mr. Bryan.

#### V. What Is a Crime? By Charles Johnson Post.

1. Write an outline of the entire article.
2. Point out examples of specific instance. Explain the value of specific instance in an article of any kind.
3. Give a full explanation of the relation between discipline and efficiency in army life. In school life.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The Peace Conference—Story of the Week.

1. According to the news item what changes are apt to be made in the constitution of the League of Nations?
2. How will the economic problems which have grown out of the war probably be settled by the Peace Conference?
3. If Germany were required to pay all the Allied countries for war debts incurred could this payment properly be included under the head of reparation? Upon what basis will the amount of money to be paid by Germany probably be settled?
4. Why, in some ways, may the question of the disposition of Fiume be regarded as the most difficult problem now before the Peace Conference?
5. Suppose Germany and the other Central Powers refused to accept the terms offered by the Allied powers, what would be the result?

#### II. The Hungarian Revolution—"The Second Hungarian Revolution," "Revolution in Hungary."

1. Why is what has happened in Hungary "what might have been expected"?
2. "According to present plans 80 per cent of the Austro-Hungarian monarchy is to be taken away." Indicate on a map the facts which justify this statement.
3. What relation has the above fact to the Hungarian Revolution?
4. Comment on the next to the last paragraph in the editorial.
5. What are the plans of the new Soviet Government of Hungary as regards (a) internal affairs, (b) external relations?

#### III. League of Nations—"The League or Bolshevism?"

1. "The issue before the world therefore is a League of Nations or Bolshevism." Why?
2. Why is it absolutely essential that America join in guaranteeing the peace?
3. Why should the Covenant be adopted now without waiting for amendments?
4. Do you agree that "the Covenant is the greatest document since the Declaration of Independence"?

#### IV. Italy's Share—"Italy Becomes a Great Power."

1. How did Italy share in the war (a) in 1914, (b) in 1915, (c) in 1917, (d) in 1918?
2. Do the facts justify the statement: "Italy has won her spurs"?
3. What difference does it make whether Italy is recognized as an equal by France, Great Britain and the United States?

#### V. The American Court Martial—"What Is a Crime?"

1. Discuss briefly the controversy now going on in the War Department which led Mr. Post to write this article.
2. Do you agree with him that this is "an issue between justice and humanity on the one side and an outworn, surviving autocratic military bureaucracy on the other?" If so, what changes ought to be made?
3. What, according to Mr. Post and General Ansell, are the specific charges which can be brought against our present system of courts-martial?
4. What is the historic reason for the rigor of the system of courts-martial as they at present exist? Why is such rigor no longer necessary?

#### VI. Railroad Administration—"A Square Deal for Railroad Control."

1. Why, according to the author, was the slogan "The Public Be Pleased" a poor one for the period of the war?
2. "The Government took over the railroads to win the war." Give some of the facts that prove that in this the Government was successful.
3. Study the table of routes given at the bottom of page 16. What comments does this lead you to make?
4. Discuss some of the economies that were effected by the Railroad Administration. Would such economies be possible under private control?
5. How many of the war regulations could profitably be carried over into times of peace?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. Entered at the New York Post Office as second-class matter March 28, 1918, under Act of March 3, 1879. Copyright, 1919, by The Independent. ## REMARKABLE REMARKS

**JOHN CORBIN**—Will a cat eat meat at night?

**MARSHAL FOCH**—I have but one merit, that of never despairing.

**NIKOLAI LENIN**—Famine does not threaten us. It is here.

**BRANDER MATTHEWS**—We are all slaves of our personal equation.

**REV. KINGSCOTE GREENLAND**—Hating sermons is not a sign of depravity.

**LYOYD GEORGE**—I believe the House of Commons is the finest assembly in the world.

**ISRAEL ZANGWILL**—We in England have lived after Christ, but not in the Christian Era.

**VLADIMIR BOURTSEFF**—Every act of the Bolsheviks is full of lies! lies! conscious lies!

**BELA KUN**—The hour has struck in which the expropriator is being expropriated.

**J. G. HUNEKER**—The human sensorium is savagely assaulted at the twentieth century circus.

**AUGUST WINNIG**—Bolshevism in practice is no political system; it is politically organized crime.

**JOHN WACHHORN**—It is not Wilson's, or Lloyd George's, or Cecil's League of Nations, it is Christ's League of Nations.

**GEORGE ADE**—An American must go to England in order to learn for a dead certainty that he does not speak the English language.

**LUTHER BURBANK**—No one has ever told the truth, the whole truth, and nothing but the truth more faithfully than Upton Sinclair.

**COUNT KAROLYI**—What has happened is a natural result of the blindness and ill will with which it was sought to assassinate Hungary.

**MRS. M. FULTON**—There are three royal roads to happiness: a good digestion, a capacity for enjoyment, and a rooted distaste for settling accounts.

**GENERAL HOFFMAN**—Immediately upon signing with the Bolsheviks we discovered that we had been conquered by them, instead of having conquered them.

**FRANK H. SIMONDS**—Fundamentally this League of Nations which the English and the Americans are now agreed upon amounts to an Anglo-American Alliance.

**PREMIER HUGHES**—There can be no open door policy in German New Guinea. There should be a barred and closed door—with Australia as the guardian of that door.

**CORONEL ROBERTS**—The Russian people have the right to have the kind of government that the Russian people want and no government set up by foreign rifles will ever be maintained except by foreign rifles.

## THE TRUTH ABOUT POLAND

In the chaotic strife between classes, races and religions now prevailing in Poland it is very difficult to get at the truth from such fragmentary and conflicting news as comes thru the devious channels of communication. We are glad, therefore, to present to our readers this authorized statement from the Director of the Associated Polish Press:

With every appreciation of the hold which Poland has on the sentimental as well as the political hearts of the world, Germany has embarked on a campaign to create a feeling of distrust of the Poles, to visualize them as a warring, quarrelsome, imperialistic people, which, if successful, in a war-weary world will easily deprive them of public sympathy.

Only a few weeks ago Germany succeeded in spreading thruout the country a brutal report of a dispatch from the *Berliner Tageblatt*, describing pogroms in Poland. It was printed everywhere and did incalculable harm to the Polish national cause. Then after the harm had been done for the German side the pogrom stories were dissipated by the arrival of a number of French and English newspapermen on the field in Lemberg and other cities, who failed to find facts substantially describing the stories and who so advised their newspapers.

Germany is now making a new demonstration, and the Poles are now being accused of marching on Berlin and the worthy Germans are horror-stricken at the idea of this violation of what they consider the terms of the armistice. Perhaps one thought is worthy of being borne in mind at this time, that is, that French ships at the present time are transporting Polish troops to Danzig and that an English military commission accompanied Mr. Paderewski on his visit to Posen. Frankly, if the assertion of their nationality by the Poles in German Poland is a violation of the armistice, then both the French and English governments were cognizant of it and perhaps some of the disapprobation with which American newspapers are belaboring the Poles should be devoted to our cobelligerents who were assisting in this.

From advices received from abroad, it is now possible to advise the American public that what the Poles are doing is simply what the Germans did in Bavaria, what the young Queen has done in Luxemburg and what the German people have done in other former German states, in short, they have simply asserted their nationality and are planning their new government. In as much as the creation of a new and independent state has been pledged to them, not only by President Wilson but by the Allies, they surely can be considered within their rights.

JAMES C. WHITE  
Washington, D. C.

be up and doing, and to be of some real service to their generation.

**WILLIAM JENNINGS BRYAN**—The League of Nations is the greatest step toward peace in a thousand years. The idea of substituting reason for force in the settlement of international disputes is in itself an epoch making advance.

**BISHOP OF LONDON**—Let a bonfire be made on Peace Night of every book in America that is apt to give the young a wrong impression of the mother country and we will make a bonfire on Malvern Hills of any corresponding books here, if we can find them.

*Famous For Its Marvelous Motor*

## COMFORT AND STYLE IN EVERY SEASON

**N**O other type of car is so attractive and so serviceable as the convertible sedan. And this type is given its best expression in the handsome big Chandler Sedan.

Many purchasers of discriminating taste choose the Chandler Sedan as the car to be most preferred. When the skies are clear and the air warm, the windows of the car may be lowered away—all of them or part of them, just as you wish.

And in bad weather, rain and snow and cold, it furnishes snug protection to its passengers.

The Chandler Sedan is of dignified design and splendid workmanship, and most graceful in line. It is beautifully finished and upholstered, and seats seven persons in perfect comfort.

This body is mounted on the famous Chandler chassis, distinguished for its mechanical excellence.

## NOSE-COUNTING VERSUS CIVILIZATION

BY HAROLD HOWLAND

WHERE shall the new Italian boundary be drawn? That is one of the vexed questions of the Peace Conference. Last week I pointed out that in considering that question we have no right to look upon Italy as anything but an equal partner in the task of defeating Germany and Austria, and one of the four controlling spirits in the Peace Conference. That point of view seems by way of being completely accepted by the plenipotentiaries in Paris. The Council of Four is in active operation, with Premier Orlando on an equal footing with Mr. Lloyd George, M. Clemenceau, and President Wilson. Just what effect the assertion of the Italian delegates that they would leave the Peace Conference unless Italy's right to Fiume were acknowledged has had upon Italy's confreres has not yet been made clear. But Premier Orlando and his fellow representatives have behind them a people who are determined that the Italian city of Fiume shall be Italian in full fact. Unless England, France and America recognize and concur in Italy's demand it is difficult to see how a break with Italy can be avoided.

What is the justice of the Italian claims on the eastern shore of the Adriatic? What is the Italian case?

I do not refer to the Italian Government's case. That does not interest me greatly, for governments often fail to represent the best sentiment and opinion of the people they represent. Government representatives, also, are often constrained, or think they are, to rest their country's case on legal or technical grounds, instead of on the sounder and solidier, if not so easily defined, bases of international morality and the general welfare. The important question is not, What arguments is Orlando using with Lloyd George, Clemenceau and Wilson? It is, rather, On what convictions do the intelligent, high-minded, fine-spirited men of Young Italy base their demand for the extension of Italy's boundaries? Each country should be judged by its best. It is not so much the government's case that matters; it is the nation's case. This can best be learned, not from official declarations but from the exprest ideas and convictions of enlightened and convinced private citizens.

It matters little, therefore, in my opinion, that Great Britain and France are committed by treaty to uphold Italy's claims to Trent and the Trentino, to Trieste and Istria, to the northern part of Dalmatia with Zara and Sebenico and all the islands off the Dalmatian coast, to Vallona and its harbor in Albania, and to the islands of the Dodecanese.

It is true that treaty would seem to furnish a good reason why England and France should support Italy's claims

to the regions involved in it. For treaties are good things to keep rather than to tear up.

Unfortunately you will find everywhere in Italy a vigorous belief that the other parties to that agreement are not endeavoring in good faith to make the agreement effective. Especially France. There is a deal of evidence that the aspirations of the Jugoslavs have been encouraged and stimulated by the French in these latter days at the expense and to the detriment of the Italian cause. It is deplorable that there should arise among the Allies, after their great coöperative achievement of the defeat of the German idea, such conflicts and such jealousies. For it is openly and with conviction charged in Italy that France supports the Yugoslav ambitions because France does not want Italy to be strong and great, because France does not wish a neighbor made more powerful on her southeastern flank. The French, they say and believe in Italy, wants the Yugoslav nation as a counter-irritant on Italy's other side. There is evidence, too, that the belief is not ill-founded. Let me relate one incident that comes to me on good authority.

Shortly after the signing of the armistice with Austria, when Italian forces had assumed control under the terms of the armistice of the disputed lands on the Adriatic, a French warship came to Fiume. The French officers gave a ball on the vessel's deck, as naval officers are wont to do when the opportunity for feminine society presents itself. To this festivity were invited the Yugoslav ladies of the city, but not the Italians. A pleasant time, it is to be presumed, was had by all. When the ball had run its normal course, and the ladies came ashore, they wore cockades of the Yugoslav colors, gifts from their French hosts.

The Italian authorities engaged in administering the affairs of the city had decided in the interest of peace and good order, that no emblems of Yugoslav or Italian patriotism should be worn by individuals in the streets. They courteously requested the departing guests of the Frenchmen to remove their decorations. "It would be regrettable," they said, "if any overzealous or misguided Italian soldier should offer you affront because of those signs of your allegiance. We should deeply regret such an incident."

The cockades were removed; and now, to understand the next scene in the drama, we must return for a moment to ancient history. In the year 1912 Italy was at war with Turkey over the African colony of Libya, formerly known as Tripoli. I will quote the description of one incident of that war from an American observer, Mr. William Kay Wallace:

No untoward incident had marred the friendly relations of the two countries when, on January 16, 1912, the Italian cruiser "Agordat" stopped the French mail packet "Carthage," bound for Tunis, and took it into Cagliari, the Sardinian port, on the

pretext that it was carrying aeroplanes destined for the enemy. This action on the part of the Italian authorities aroused the anger of the French, who demanded the immediate release of the detained vessel, and public opinion was united in its support of the most energetic measures that the Government might deem necessary to take. Two days later, when the anti-Italian agitation was at its height, news reached Paris that another French steamer, the *Manouba*, also bound for Tunis, had been taken, in a similar manner, into custody by the Italians on the ground that twenty-nine Turkish passengers, who were traveling as doctors and nurses of the Turkish Red Crescent, were in reality Turkish army officials. The French believed this second incident to be a direct affront to their national dignity. The Government immediately demanded the release of the steamers. On January 20 the *Carthage* and *Manouba* were allowed to proceed. The next day the French Government required the release of the twenty-nine Turkish officials. M. Poincaré, then Premier and Minister for Foreign Affairs, speaking in the Chamber in answer to a number of violent questions regarding the incident, used what may be termed extremely firm, if not unfriendly language toward Italy. A week later the affair was liquidated. Italy was compelled to hand over the Turkish passengers of the *Manouba* to the French authorities, while it was agreed by both parties to refer the whole matter to the Hague Tribunal. In May, 1913, the Hague Tribunal rendered its decision. It sustained the Italian contention that neither incident could be interpreted as an act of intentional hostility toward France. No damages were awarded for alleged affront to the French flag. In the case of the *Carthage*, £6,400 were awarded, while for the detention of the *Manouba*, only £200 were assessed. This verdict virtually proclaims that Italian action was justified. This regrettable incident once again, at a critical moment, disturbed Franco-Italian relations when they seemed on the eve of becoming friendly. In Italy the conviction was widespread that the Italians had been browbeaten by the French, while in France, what seemed to the French the high-handed policy of Italy in the Mediterranean was keenly resented.

So much for the incident from ancient history. Now to return to Fiume. When the cockades presented to the Yugoslav ladies by French naval officers were examined by the Italians, they were found to bear on the reverse side the significant words, "*Carthage*" and "*Manouba*."

Is it any wonder that the Italians believe that the French are supporting the Yugoslav cause out of hostility to the Italian nation? Is it surprising that the Italians are resentful toward what seems to them the ingratitude and the gratuitous unfriendliness of the French in view of the sterling and effective coöperation of the Italian nation against the common enemy during the Great War?

But whatever obligation the Treaty of London imposes on England and France, forms no reason whatever why Italy should insist upon the addition of those regions to her territory—unless such a proceeding is just and right. Italy ought to ask, and to receive, what it is right that Italy should have. No more, and certainly no less.

During my eight months in Italy I had a splendid opportunity to learn what was the real spirit of Italy: the spirit that sent Italy into the war and held the nation steadfast and faithful, at a tremendous price, until the end. I heard Italy's case pleaded, intimately, and with utmost frankness, by many representatives of Young Italy. It is an interesting fact, and significant, that not one of them set forth the Treaty of London as the basis of Italy's claims on the Adriatic. They brushed aside Italy's technical rights because they were too much interested in Italy's actual rights. They based their insistent support of the Italian demand for new boundaries not upon the pledged word of Italy's allies, but upon the essential justice of Italy's case. They want a new and greater Italy because it is right that it should be so—right, they say, not only from the Italian point of view but from the point of view of civilization and the world's well-being.

The case which they present, the real Italian case, is twofold.

The first argument is strategic. It is the fashion nowadays to look askance at strategic considerations, especially among those whose hopes for a new world, where war shall be no more, tend to blind them to reality. But, viewed in the searching light of actuality, it is not only a national right but a national duty to look to the strategic security

of the nation's boundaries. This is a truth that it is all too easy for us in America to overlook. Our boundaries are strategically secure. We are exposed to attack from no great power. But for those countries which, like France and Italy, have been subjected for generations to invasion by ruthless neighbors it is quite another matter. We should try to put ourselves in their place. This is not the first time that the Italian people have experienced the descent from the mountains of Hunnish hordes. Italy has earned in the past four years, in blood and sacrifice, the right to a frontier on the north and east which will be easy of defense and difficult of violation instead of the contrary as has been the case till now. Italy should be not only permitted but assisted to assure her safety against the menace of future invasion.

For this purpose Italy needs two things: her northern frontier at the Brenner along the Upper Adige; and such control of the eastern shore of the Adriatic as will make impossible the use of any point on that shore as a basis of military operations against Italy's indefensible eastern coast.

Such strategic protection is Italy's indefeasible right. Not only her allies but the world should recognize it heartily and cheerfully. Austria and Germany, of course, will not admit the justice of the Italian claim; but many things must in the logic of events happen to Germany and Austria in this casting up of accounts that will not cheer or hearten those downfallen bullies.

The second argument for the justice of Italy's demand for redrawn boundaries is even more cogent and compelling. It is the argument of civilization and of culture.

It would be difficult to find, outside the borders of the Central Empires, any one so hardy as to maintain that justice should not be done to Italy in the matter of her frontiers out of consideration for the rights of the peoples of the Teutonic alliance. They tried to impose their will upon Europe and the world by force. The God of righteousness willed that they should fail. They must pay the price of their wicked and cruel presumption by having their neighbors, whom they sought to make their victims, made secure against any recrudescence of their evil designs. So far as Austria is concerned it is right and just that Italy's new frontier should be placed precisely where it ought to be placed, regardless of the *status quo ante bellum*.

But the fly in the ointment in the Italian problem is not the claims or the protests of Austria, but the ambitions of a newcomer among the nations of Europe. The Serbs, the Croats and the Slovenes propose to unite their territories into one nation, Yugoslavia. It is this new nation that contests with Italy the title to the lands on the east of the Adriatic. If the contentions of the extremist Yugoslavs were to prevail, Italy would not only gain no new territory to the east of her old frontier but would lose a part of what she now has. But extremist positions are seldom to be taken seriously, or indeed taken at all, except for trading purposes. So we may assume that the Yugoslavs would be content to let Italy stay as she is, and perhaps even to have Trieste. But Fiume Italy must not have, say the Serbo Croats, nor any of the Dalmatian coast.

What is the situation and what the just basis of the Italian claim?

On the eastern shore of the Adriatic, roughly speaking, the cities are Italian and the country Slavic. In Trieste three-fourths of the population is Italian, in Fiume more than half; Zara in Dalmatia is preponderantly Italian. But as one leaves the cities and enters the country, or even the suburbs, the Slavic nature of the population is instantly apparent. The condition is indisputable. It is practically undisputed.

To such a situation it is practically impossible to apply the theory of the "self determination of peoples." That is a fine phrase, and contains the germ of a splendid idea. But it is full of potential danger. For it instantly raises the

question, What is a people? Who can tell in a case like that we are considering? What, further, shall be the test to be applied to decide what that theory demands in the case of such a piece of territory as this on the Adriatic. The counting of noses? That is apparently the Yugoslav answer. In most of the territory desired by Italy, say the proponents of the new state, there are more Yugoslavs than Italians. Count them, and you will see. Therefore the territory must be Yugoslav. The counting of noses is a comparatively simple process, and hence attractive. But it is a serious question whether it will infallibly produce justice and promote the best interests of all concerned.

It will not, says Young Italy with vigor. There is a higher consideration than mere numerical preponderance—civilization and culture. Take the eastern shore of the Adriatic, it says, and tell us what is the civilization that is elevating the peoples there, what the culture that is the strongest life-force there?

Is it Slavic? No; it is Italian.

"Everybody knows," said the young Italian lieutenant, a famous writer and painter of the new Italy, over our cups of coffee in the just liberated city of Udine, "that the cities are Italian. Everybody must confess that outside the cities, the population is Slav. But even out there, if you find a school, it is Italian. If you find a theater, it is Italian. If you find an art-gallery, it is Italian. The culture, the civilization, is Italian. No one can doubt it."

Which will you prefer, asks Young Italy, the counting of noses or civilization?

Italian culture, too, is conquering the Slavic undevelopment. Slavs are choosing to become Italians. They keep their racial names, but they adopt the foreign culture. They become Italians. Even the Yugoslavs, somewhat naïvely, admit it. In a pamphlet of the Southern Slav Library, I find the assertion in regard to the 25,000 Italians in Fiume, that most of them "have only recently styled themselves Italians, and frequently have Croatian surnames." At Trieste I found another young lieutenant of the Italian army, a native of Trieste, whose father came from Dalmatia, and whose name was, quite Slavicly, Stupanich. When the war broke out he was in Florence. He instantly volunteered with many of his fellow Istrians—Austrian subjects all—fought bravely, earned his commission, was captured, suffered in an Austrian prison camp, and then came triumphantly back to his home in Trieste when Austria had been smashed. More fervent Italians than the family of this young Austrian subject from Dalmatia with the Slav name would be hard to find. Somewhere back along the line Italian culture had made this conquest. It is only a sample of what Italian civilization is doing all the while over there across the Adriatic.

It is a question then of civilization versus numbers. One or the other must prevail. You cannot separate the cities from the country. The tail must go with the hide, or the hide with the tail. You must have Yugoslavs under Italian rule, or Italians under Yugoslav rule. Which shall it be?

The Italians have an ancient civilization, with the finest history of any civilization in the world. Wherever Slavs have come in intimate contact with it they have yielded to its benevolent influence. There are Slavs within the boundaries of Italy who are as good Italians as any Roman, and who would not leave Italian rule if they were offered the way out. The Slavs in the lately Austrian cities of Trieste, Fiume and the others have deliberately chosen, in innumerable cases, to consider themselves Italians, even while they were under Austrian rule.

The Yugoslavs, made up of three different peoples, Serbs, Croats and Slovenes, have yet to produce a civilization to compare with that of Italy.

One has only to look at the history of the Balkan states to realize that there is a wide difference in point of development between the Slavic peoples of that turbulent caldron

and the Italians. We can all sympathize heartily with the aspirations of the triple group that propose to form the new Southern Slav nation. But our sympathy should not blind our eyes to the fact that they are not yet a nation, not even yet one people, and that their claim to be considered as one of the highly developed peoples of Europe and the world, from the point of view of civilization and culture, must be held in suspense until they have made it good by actual achievement. Italian civilization is a fact. Southern Slav civilization is still a pious hope. We all, including, I believe, the Italians, are anxious and perhaps confident that the hope will be fulfilled. But it is the future that must tell, not the past, or even the present. Italian civilization is historic, it is actual, it is living. The world knows what Italian culture can do for the territory whose political destiny is in question, for it has already done it. In spite of the years of Austrian rule, in spite of the strenuous efforts of the Austrian overlords to encourage the Slavification of the eastern shore lands as an obstacle and an offset to Italian influence, Italian civilization has conquered those lands and stamped itself indelibly upon them.

Is it any wonder that Young Italy refuses to countenance the turning over of the Italian population of that strip of country to a new nation whose culture has yet to be proved? The Adriatic cities are Italian, in atmosphere, in feeling, in all that makes up the best, the real essence of a community's higher life. The conquests, moreover, of Italian civilization and culture in those regions has been pacific. They have been the result of an irresistible influence, not of the imposition of a system by force or by guile. For it is not Italy that has ruled those cities, but Austria; and every effort of the Austrian overlords has been to minimize that influence and to counteract its effect. But the efforts have been in vain. The Italian culture has been too strong to be overcome; it has made itself good by its own innate power. It has won its way by its own inexhaustible force.

Which shall it be then, the Italian cities or the Slavic hinterland, that shall be given the ascendancy? In those lands—for the cities cannot be divided from the hinterland—large groups of people of one race or the other must be under the government of representatives of the other race. How shall the decision be made? By the crude arbitrament of nose-counting, or by the intelligent and enlightened evaluation of separate and distinct civilizations? Which method will produce the least injustice, which will be most likely to ensure to those territories, to Europe, and to the world the rapid and effective development of those lands and the mixture of peoples who inhabit them as an asset of civilization and a dynamic cultural force?

Which shall it be, nose-counting or civilization?

## SOUTH AFRICAN REPUBLICANS

THE arrival in New York of a deputation of the Boers on their way to Paris to plead for a republic calls attention to another embarrassing movement for the application of the principle of self-determination. The delegates had a hard time getting away from South Africa for no British steamer would carry them. They had booked passage for Europe on the "Durham Castle" but the unions of the seamen, the firemen, the stewards, the butchers and the bakers refused to sail with the Nationalists on board. It seems that the sea-power which Admiral Mahan taught us rules the world has passed into the hands of the Seamen's Union. Two years ago when the labor leaders of England wanted to go to Russia to consult the revolutionists and to Switzerland to attend an international labor conference the Seamen's Union prevented their going altho they had the approval of the Government.

But finally the Dutch freighter, the "Bawean," called at the Cape and the Boer deputation got away on that. It is headed by General Hertzog, who fought the British in the

war of 1899-1902 and was later attorney general and minister of justice and of education in the Orange Government. The other three provinces of U. S. A., the Transvaal, the Cape Colony and Natal, are also represented by Boer veterans and politicians of the Nationalist party. This party has of late been carrying on an open campaign for an independent republic and with this slogan has gained in the elections. Their best campaign literature consisted of ingeniously chosen quotations from the speeches of Premier Lloyd George and President Wilson. During the Boer War, Lloyd George made pacifist speeches and at one of his meetings narrowly escaped an angry mob by slipping away in the clothes of a policeman.

Last December General Hertzog cabled to President Wilson a message of congratulation from the Nationalists for his espousal of the principles of the restitution of injured rights and liberties and of the inalienable right of every civilized people to be free, adding:

While they take this opportunity of conveying to the President their sincere and deep felt gratitude and thanks for his strenuous and noble efforts in enforcing the adoption of these high and humane principles upon the will of the whole civilized world, they wish also to convey to him the assurance that they confidently rely upon the full application of those principles to the Cape of Good Hope, Natal, the Transvaal, and the Orange Free State.

The South African republicans when they get to Paris are likely to remind Mr. Wilson that his party also is pledged to their cause. In the Democratic convention of 1900 the following resolution was adopted:

We especially condemn the ill-concealed Republican alliance with England, which must mean discrimination against other friendly nations, and which has already stifled the nation's voice, while liberty is being strangled in Africa. Believing in the principles of self-government, and rejecting, as did our forefathers, the claim of monarchy, we view with indignation the purpose of England to overwhelm with force the South African republics. Speaking as we do for the entire American nation, except its Republican officeholders, and for all freemen everywhere, we extend our sympathies to the heroic burghers in their unequal struggle to maintain their liberty and independence.

But whatever truth there might have been in this Democratic view of American public opinion twenty years ago it is not true now. The African Nationalists like the Irish Nationalists have largely forfeited American sympathy by armed rebellion at the moment when England was fighting for her life, and for the civilization of the world. In both cases this stab in the back was delivered at a time when England was trying in the friendliest spirit to atone for the wrongs she had formerly committed. England was ready to give the Irish as much home rule as they could agree upon wanting and she had given to the Boers home rule of the most liberal sort. Within a few years after their crushing defeat the Boer leaders who had fought England were by British authority ruling not only their own people but the Englishmen of South Africa. There is no case in history of such generosity and confidence except the treatment of the southerners by the United States.

More than that General Botha and General Smuts have had a share in the governing of the whole British empire during the last few years. It is General Smuts who devised the ingenious mandatory scheme that obviated one of the chief obstacles to the League of Nations, and so secured for the African Government the administration of new territory nearly twice as large as the Union of South Africa. If Smuts had been like Kruger the president of an independent Boer republic instead of a member of the council of the empire he would not have been able to annex the German colonies, but on the contrary the Transvaal would have been in constant danger of becoming a German colony.

Americans can sympathize with the desire of the Boers, the Irish and others to discard the monarchy as an antiquated and fictitious form of government. When Mr. Long, the Colonial Secretary, was asked in Parliament to bring before the Peace Conference "proposals for the establish-

ment of a republican form of government in the dominions," he refused to do so. Yet the British dominions are represented at the Peace Conference and have a powerful voice in its deliberations. They are practically self-governing and do not hesitate to oppose and even frustrate the policies of the mother country. We cannot see how it would be to their advantage or of benefit to the world if they should break the British connection.

## THE IRISH SITUATION

THERE are three obstacles to the settlement of the Irish question—the Sinn Feiners, the Ulsterites, and the English.

The obstacles are immovable.

What force will prove irresistible enough to stir one or more of them?

There is one we should like to see tried—common sense.

But it would have to be applied not only to, but by the obstacles themselves.

An Irish situation, indeed!

## SHALL TOBACCO FOLLOW ALCOHOL?

ON July first alcohol is to make its final bow and retire gracefully from the American scene. Already we hear that plans are under way to convince the American people that tobacco should follow suit. What about it? Is it a parallel case? Ought we who have strongly favored the prohibition of the manufacture and sale of alcoholic drinks to use our influence also for the prohibition of the growing and sale of tobacco?

We do not think so. It is not a parallel case.

Who ever heard of a man committing murder or rape or felonious assault "while under the influence of—tobacco"?

Who ever heard of a man's children going without shoes because he spent all his money on—tobacco?

Who ever heard of a woman's ruin made possible because she had been "plied with—tobacco"?

Who ever heard of half a dozen men sitting round a table of an evening and each one of them compelled to smoke six cigars before he quit, in order that each one might have an opportunity to treat?

Who ever saw a man so much a slave to tobacco that if he smoked three cigarets in succession he was sure to go home—if at all—a reeling, befuddled imbecile because he could not control his appetite and stop smoking?

Who ever heard of a wife and children dreading the husband and father's return on Saturday night because he was sure to have smoked too much as soon as he got his pay envelope?

Smoking may be an unwise habit. It is unquestionably bad for the immature. The non-smoker may be healthier, more thrifty, more pleasing to the senses of his near associates, more efficient, longer lived. But we do not believe that taken by and large the smoking of tobacco is such a menace to society that the smoker's supply of "the weed" should be kept from him by the force of governmental action. That is precisely what we have believed—and do believe—about the drinking of alcohol. But not about tobacco. That is another story.

Arrangements are being made in England for hilltop bonfires and flares thruout the country on the night peace is concluded. The Boy Scouts will have charge of the illuminations and we may be sure they will enter into this congenial activity with enthusiasm.

The scope of the espionage act expands daily. It is proposed in the New York Sun to send to prison along with Debs those ministers who say that cigarets are bad for young soldiers.

What a mistake it was for Harvard to adopt a crimson banner!

# THE STORY OF THE WEEK

## THE GREAT WAR

**March 27**—President Wilson denied that League of Nations delayed peace. Foch and Pershing in council on Near East.

**March 28**—Rumanians and Czechs move against Hungary. American railroad troops reach Murman coast.

**March 29**—Trial of ex-Kaiser and others responsible for war crimes recommended to Congress by commission.

**March 30**—Single treaty of peace for four enemy nations proposed. Fiume declared in state of siege.

**March 31**—Hungarian Soviet Government sends delegates to Berlin. British House of Commons passed big army bill.

**April 1**—Blockade of Austria, Poland, Czecho-Slovakia, Turkey and Bulgaria raised. Martial law at Ruhrort, Germany.

**April 2**—Strikes in Berlin. Martial law in Stuttgart. German financial mission arrived in France.

## Peace League and Peace Congress

The widespread concern which is felt over the delay in peace-making at Paris, and the charges that such delay is due to the discussions and work over the League of Nations, moved President Wilson on March 27 to issue a public statement on the subject. In this he pointed out that the Commission on the League of Nations was the first of all the commissions to lay its conclusions before the plenary conference; that the conferences of that commission had invariably been held at times when they could not interfere with the general work of the Congress; that its members could therefore congratulate themselves on the fact that no part of their conferences had ever interposed any form of delay; and that at that very time the revised Covenant of the League was practically finished and was in the hands of a committee for final drafting.

## The President for Expedition

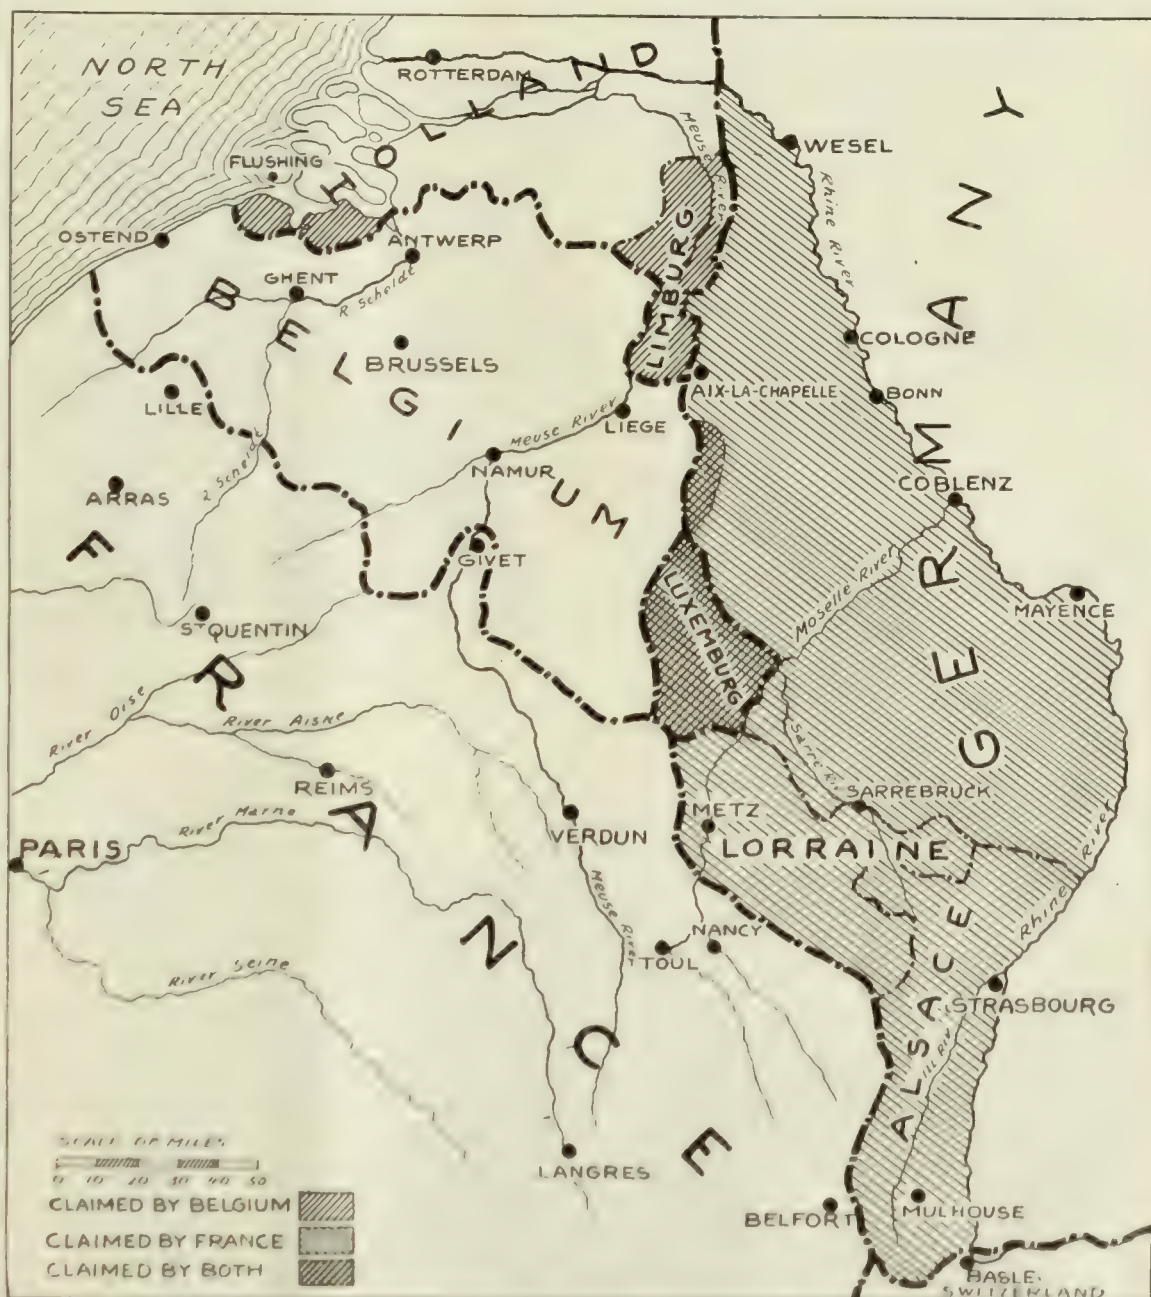

President Wilson is reported to have addressed his colleagues of the Supreme Council on March 31 in a grave and impressive manner concerning the need of composing all differences of opinion and transacting the business for which they had been sent thither. He pointed out the delays that had occurred in peace-making, and declared that the nations of the world were impatiently awaiting the completion of the work of the Congress, and that they had a right to expect early results. He laid special blame upon nobody for the delay, declaring that it was the fault of no one person or country, and expressing his willingness to bear his share of whatever reproach was due. But he insisted that the time for talk was past, and the time had come to show results.

## Dispute Over Reparation

The chief cause of delay in making the treaty of peace was said to be disagreement over the reparation to be made by Germany to the countries injured by her in the war, and particularly to France, the largest claimant. The proposal first made by France was that her boundaries should be restored as they had been fixed in 1814, together with the basin of the Saar River which contains immensely valuable mines; and that the German provinces west of the Rhine, while they might remain under German political autonomy, should have no fortifications and should not be occupied by any armed forces of Germany nor have their railroads under

German control. To this the British and American delegates demurred, whereupon the French suggested as a compromise that the Saar Basin should be occupied by France only until Germany had paid the full amount of her indemnity. This also was opposed, and the counter proposal was made that French occupation of the Saar Valley should last for only ten years. The French Foreign Office on April 2 declared unequivocally that there would be no receding from the demand for the cession of the Saar Valley.

There were also radical differences between the members of the Grand Council as to the amount of cash indemnity which Germany should be compelled to pay. It had been esti-

## DISPUTED BOUNDARIES OF THE RHINE FRONTIER

One of the obstacles that have been delaying peace is the conflicting claims on the western front. France claims Alsace and Lorraine because they were taken from her by force in 1871, and she refuses to allow the question to be referred to a vote of the population of these provinces. France also desires the Sarre (Saar) valley including Sarrebruck, because of its rich coal fields, and because it was held by Napoleon from 1801 to 1815, when it was given to Prussia. According to the secret treaty of February, 1917, Russia was to get possession of all Poland and France was to get Alsace-Lorraine and the Sarre valley and to be placed in control of all the territory west of the Rhine which was to be taken from Germany and neutralized. Belgium wants the Dutch territory lying on the left of the Scheldt to give Antwerp a free outlet to the sea, and the Dutch province of Limburg. In order to form a safer frontier against Germany, Belgium also claims from Germany a strip of land south of Aix-la-Chapelle, including the towns of Malmedy and Montjoie, which is inhabited by Walloons and was ceded to Prussia in 1815. Belgium also asks the restoration of Luxembourg, which was forcibly separated from Belgium by the powers in 1839. But the French would like to see Luxembourg turn toward them or at least remain independent. The people of Luxembourg are divided, some want to join Belgium, some France, and some neither.

mated that Germany thru the war had put the Allied powers to total expenses and losses of \$180,000,000,000. As that was about twice the entire assessed wealth of Germany, it was held to be quite out of the question that she should be required to pay it. The amount was accordingly scaled down to what it was supposed Germany would be able to pay within a reasonable time, some placing the figures as low as \$20,000,000,000. France urged insistence upon the highest possible figure, and regarded the low figures named as quite inadequate, while Great Britain and America favored a moderate indemnity.

Still another cause of delay was the dispute over the boundaries of Poland. In accordance with President Wilson's contention that the restored state should have free access to the sea, it was proposed to give her a "corridor" consisting of a strip of West Prussia, extending to the Baltic Sea and comprising the city and port of Danzig. This was of course vigorously opposed and denounced in Germany, prominent Government officials declaring that a peace treaty containing such a proviso would never be signed or accepted by Germany.

Whether because of this German opposition or for other reasons, Great Britain and America presently dissented from the "corridor" scheme, and proposed instead that the River Vistula should be internationalized and that the port of Danzig should be similarly treated, thus giving Poland at all times free access to the sea. It was pointed out that such grant of a Polish "corridor" might be contrary to the wishes of the inhabitants, and that it was a cardinal principle of the President's peace proposals that in such matters the popular will should prevail.

Marshal Foch went on April 2 to meet the representative of the German Armistice Commission at Spa, with full power from the Supreme Council to deal with the question of the landing of Polish troops at Danzig.

### New States Proclaimed

Bessarabia, the southern Russian province claimed by Rumania and occupied in part by Rumanian troops since the collapse of the imperial regime in Russia, has been proclaimed an independent republic by a directorate of Bolsheviks supported by Ukrainians, and military operations have been begun against the Rumanian forces. It is supposed that this is a step toward breaking thru Rumania and establishing direct intercourse between Russia and Hungary.

The Russian province of Georgia, in the Caucasus, has declared itself an independent republic and has asked recognition from the Peace Congress at Paris. Its representative at Paris is M. Tseretelli, who was at the head of the first Soviet in Russia, before the Bolshevik revolution, and he urges the recognition of Georgia as a true republic and a bulwark against Bolshevism in that direction.

The Kuban Republic has also been formed by the Kuban Cossacks in the Cis-Caucasian region, bordering on the

Sea of Azof, and is asking for recognition and for aid in its resistance to the Bolsheviks. In the struggle with the latter, one-third of the population of military age has been killed, and there are not enough able-bodied men now left to till the soil.

### Hungarian Bolshevism

The Bolshevik revolution in Hungary was naturally one of the foremost topics of interest. The Soviet Government took full charge of all civil and military affairs and began making radical changes. All industrial enterprises employing more than twenty workers were placed under the control of the workers themselves. Thus bank presidents became mere figureheads, while their clerks conducted the business. Rents were no longer paid to landlords, but to the janitors, who were agents of the Government. All stores were nationalized. At the banks nobody was permitted to draw out more than \$100 at a time, except for the payment of salaries. The Government also undertook the reorganization of the army, recruiting it from the ranks of the proletariat

and from among the soldiers and workingmen already mobilized, employing German officers formerly of Mackensen's army to direct the reorganization.

Nicolai Lenin, Prime Minister of the Russian Bolshevik Government, on March 27 sent a wireless telegraphic dispatch to Bela Kun, the Hungarian Bolshevik Minister of Foreign Affairs, asking for assurances that the new Government at Budapest was really communistic and not merely socialist, and warning it against such excesses as had been practised in Russia. "I am quite certain," he said, "that it would be a mistake for the Hungarian revolution to imitate our Russian tactics in detail."

Bela Kun declared to a correspondent on March 29 that the new Hungarian Government was not hostile to the Allies, and that there was no reason why it should not remain on friendly terms with them. It all depended, he said, upon the attitude of the Allies. The revolution had been hastened by the refusal of the Allies to send food and raw materials to Hungary. Had such supplies been sent promptly, the establishment of the Soviet régime would have been delayed, tho it would ultimately have been effected, because the war had convinced the people of the necessity of such changes.

### Strikes in Germany

The German Minister of Labor, Dr. Bauer, has told the striking coal miners that their demand for a six-hour day is entirely incompatible with Germany's economic welfare and cannot be granted. Hundreds of thousands of persons were, he said, out of work because of lack of coal for fuel in industrial establishments. Germany expects to pay for food with fuel, and therefore an increased production of coal is necessary.

The strikes continue, however, thruout the principal mining and industrial regions. In the neighborhood of Essen 30,000 men were reported to be out on March 29. Thruout Westphalia sim-

Hvepsen, Christiania

### CHANGING THE WATCH

War God (to Demon of Unemployment): "Take my place a while. I am going into the church to rest."

ilar conditions prevail. The strikers demand not only the six-hour day but also a 25 per cent increase of wages, additional bonuses, liberation of political prisoners, and withdrawal of all Government troops. It was announced on April 1 that the Government would proclaim a state of siege in the Ruhr district and send troops thither to maintain order. On April 2 a general strike was reported in Berlin; there were serious riots and loss of life at Frankfurt; and martial law was proclaimed at Stuttgart.

The Prussian Minister of Foreign Supplies has announced that the food received from abroad will be distributed first to the chief industrial districts, excepting those in which strikes prevail, and that these latter would receive no food until the strikes ended.

Strenuous action was taken on March 31 by General Dickman, commander of the American Army of Occupation at Coblenz, to meet and thwart a threatened strike of the German civilians employed under American supervision on the construction of supply depots. Unable to obtain sufficient volunteer labor, he had requisitioned 300 men thru the German civil officials. He gave warning to them that they were forbidden "to join in any conspiracy or plan to attempt or carry out any scheme to strike or abandon work," and that any violation of that rule would be punished by the American military tribunals.

**The Plight of Essen** In addition to the idleness caused by strikes at the mines in that region, the effects of the war have created at Essen one of the most impressive transformation scenes in Europe. The Krupp works there, which were formerly the world's greatest producers of military engines, are now all but abandoned. Miles of furnaces and workshops are deserted. In one corner of the vast establishment workmen are repairing cannon so as to make them acceptable to the Allies to whom they are to be surrendered, and that is all. During the war these works turned out 40,000 cannon, and for a considerable time produced 2,500,000 shells a month. Now nothing of the sort is being manufactured there. Doubtless it will be possible to resume industries of a peaceful kind. Before the war the vast bulk of the output of the Krupp works was non-military, consisting of railroad rails, car wheels and similar things. Moreover, it is pointed out that such work was more profitable than military work. The general manager reports that dividends of the corporation were 7 per cent in 1912, 10 per cent in 1913, 14 per cent in 1914, 12 per cent early in the war and 10 per cent later, and now nothing.

**For Trial of War Lords** The Commission on Responsibility for the War has reported to the Peace Congress that it should solemnly condemn the violation of neutrality and all the crimes committed by the Central Powers in the war; and that it should appoint a special international

tribunal to judge all those responsible for those crimes, including the former German Emperor.

Meantime the German Government is planning the creation of a court of its own to investigate, and, if necessary, to try those persons who have been accused of crimes during the war and who have requested investigation of their cases. It is also planned to enact a law providing a new court to try Bethmann-Hollweg, the former Chancellor; General Ludendorff, Admiral Tirpitz, Jagow, the former Foreign Minister, and others.

An investigation was actually begun at Berlin on April 2 of the case of Captain Charles Fryatt, of the British mercantile marine, who was put to death by German authorities in 1916 after a German court martial had convicted him of trying to ram a German submarine with his ship. This was undertaken by a German national court martial, with representatives of the British, French, Dutch and Norwegian governments in attendance.

**Beginning the Humbert Trial** Charles Humbert, a Senator of France and member of the Legion of Honor, was brought to trial on March 31 before a military court, on charges of having had illegal commerce with the enemy. He had been in prison awaiting trial for more than a year. He was associated with Bolo Pacha, and with the former Prime Minister, Caillaux, in some of their schemes. More than a year ago he was ordered by the court to return to Bolo Pacha the 3,500,000 francs which had been used for the purchase of *Le Journal*.

**Fighting in Russia** Hostilities continue in various parts of Russia. The long-awaited junction between the Siberian and Archangel forces was effected at Ust Kozva, in the Pechora district, and

was followed by increased activity against the Bolsheviks. On March 30 an attack of the Bolsheviks at Odzerskai was repulsed with heavy losses to the assailants. The Allied troops in that region include American, British, French and Russian forces, acting in harmonious coöperation.

The Lettish forces south of Riga have also been active. After a sharp struggle along the Mitau-Tuksum railroad on March 29 they defeated the Bolsheviks and occupied the towns of Kemmern and Kalnzem.

Meantime it was announced on April 2 that Karl Kautsky, a leading German Radical, is now in Moscow trying to negotiate a formal alliance between Russia and Germany, and that there had been laid before the Peace Congress at Paris a specific proposal from the Russian Government, signed by Nicolai Lenin, for cessation of hostilities.

**Our Troops Abroad** It is estimated that there are still about 1,400,000 American soldiers in Europe, including 900,000 combat troops and 500,000 engineers and others. Their morale is said to be good and their health excellent. They are desirous of getting home, and have no such patriotic zeal for warring against Bolshevism as they had for fighting Germany.

**Britain's Big Army** The House of Commons of the British Parliament on March 31 passed the third reading of Winston Churchill's Military bill, providing for an army of more than 600,000. Mr. Churchill argued that there was great national necessity for a large, strong army to combat the menacing influences which were already at work. He especially referred to the Bolshevik campaign and to the danger which threatened the small new states which have just been created. The Allies, he thought, could not afford to neglect or to sacri-

Russian provinces	264,000
Italy and elsewhere	10,000

Recruiting the Peacetime Army. Does your service abroad order mean, General March was asked, "that every man who enlists will see service in France?" Yes, he replied. "I promised definitely that we would give that character of service to say 50,000 men of the 175,000 authorized by the last Congress to be enlisted."

The call for these 50,000 volunteers was issued on March 29; it offers the opportunity of a single year enlistment to men who have already been in the service and a three-year enlistment to men who have had no military training. The men who are thus recruited will be sent to Camp Meade, Maryland, for concentration and training, and will be sent overseas as soon as possible in batches of 1000 men each to take the places of drafted men now overseas who have good reasons for coming back to the United States.

General March, as Chief of Staff, has made a detailed announcement of the proposed organization of our regular army in peace time, explaining that it will keep the traditions established by our battle divisions overseas and preserve to some extent their actual identity. There will be a 26th Division with headquarters at Camp Devens, Massachusetts, for instance, corresponding to the Yankee Division that fought at Chateau-Thierry; for New York's Own, the 27th Division, that broke thru the Hindenburg line there will be a 27th with headquarters at Camp Upton.

The peace time army is to consist of 500,000 men, organized in five army corps, made up of twenty divisions of

#### TRY THIS WHEN YOU GO SWIMMING

Writing a letter and swimming at the same time isn't as easy as it looks—and it doesn't look particularly easy. Mr. Keishimoto, whose special stunt it is, is one of Japan's most famous swimmers. And he has spent nearly seventy years perfecting his tricks

infantry and one cavalry division. The numerical designation of the seven regular army divisions now in France will be retained; the other divisional numbers will correspond to overseas divisions raised originally from the National Guard and National Army. The camps designated as headquarters for each one will be made permanent.

- First—Camp Pike, Arkansas.
- Second—Camp Dodge, Iowa.
- Third—Camp Lee, Virginia.
- Fourth—Camp Kearney, California.
- Fifth—Panama.
- Sixth—Honolulu.

Seventh—Philippine Islands, Alaska, and Mexican Border.

Twenty-sixth—Camp Devens, Massachusetts.

Twenty-seventh—Camp Upton, New York.

Twenty-eighth—Camp Dix, New Jersey.

Twenty-ninth—Camp Meade, Maryland.

Thirtieth—Camp Jackson, South Carolina.

Thirty-second—Camp Custer, Michigan.

Thirty-third—Camp Grant, Illinois.

Thirty-sixth—Camp Travis, Texas.

Thirty-seventh—Camp Sherman, Ohio.

Eighty-first—Camp Taylor, Kentucky.

Eighty-second—Camp Gordon, Georgia.

Eighty-ninth—Camp Funston, Kansas.

Ninety-first—Camp Lewis, Washington.

The 42d Division will be designated as the Cavalry Division and will be organized in the Southern Department. It will be drawn from all the states in the United States.

Aircraft will be given definite recognition as the fourth arm of the service under the new army organization. The plan is to have approximately 1700 airplanes in actual commission and a minimum available reserve of 3400 additional planes with an air service personnel of 1923 officers and 21,853 men.

The planes will be formed into eighty-seven service squadrons, assigned severally to coast defense, observation, pursuit and bombing. There are also to be forty-two balloon companies.

Investigating the Secretary Baker has paved the way for clearing up the accusations—and perhaps for clearing out the inconsistencies—that have focused criticism lately on the court-martial system of the army. He has asked President Page, of the American Bar Association, to appoint a committee of lawyers to investigate the whole question of military law, with a view to making recommendations for improvements in either the substantive law or the method of procedure and has put at their disposal all court-martial records. #### THE USES OF BOLSHEVISM

"HUSH! HUSH! HUSH! HERE COMES THE BOGEY MAN. BEWARE, MY LITTLE CHILDREN, HE'LL CATCH YOU IF HE CAN"

"THIS WILL MAKE YOU FORGET THE PEACE TERMS"

of Greensboro, N. C.; Martin Conboy, of New York City; Judge Andrew Jackson Bruce, of Bismarck, N. D., and Colonel John Hinckley, of Baltimore, are the lawyers appointed to the committee.

Two chief accusations seem to have prompted the investigation of the court-martial system. First, the testimony before Congress of former Judge Advocate General Ansell, who based his accusations on specific instances of injustice as he had seen them during his term of office and who urged a reform of the whole scheme of military justice. Second, a letter to the Secretary of War from Senator Chamberlain, of Oregon, who proposed a bill during the last session of Congress asking for thoro court-martial investigation and reform. Senator Chamberlain accused the Secretary of War of "attempting to uphold the present system of military 'justice' with one hand, while making just enough gestures toward reform as might be calculated to head off a Congressional investigation" and of "elbowing aside the one officer who had the courage to condemn the system and the prevision to point out its terrible results"—General Ansell, who was demoted to the rank of Lieutenant-Colonel shortly after his testimony in Congress.

Secretary Baker refused to make public a letter sent by Colonel Ansell to the War Department in support of his contentions, but the full text of the letter was nevertheless published three weeks after it was written, in the *New York Times*. Colonel Ansell supported with abundance of detail his indictment of the court-martial system, which, he says, does "gross, terrible, spirit-crushing injustice." A large part of the letter, however, is given over to Colonel Ansell's personal defense and accusations in the three-cornered controversy into which he says he has been drawn by Secretary Baker and Judge-Advocate General Crowder. His attempts to establish a revisory power to correct court-martial injustice were at first approved by General Crowder, Colonel Ansell maintains, but later General Crowder offered unexpected opposition to the same course and explained his change of attitude by saying

Ansell. I had to go back on you. I am sorry, but it was necessary to do it in order to save my official reputation.

**A League of Women Voters** To widen the sphere of woman's influence thru political action is the announced purpose of the Woman's Party, organized at the recent convention in St. Louis of the National American Woman's Suffrage Association. As yet the party has no detailed platform, but it has established a two-fold purpose: to further an approved program of forward-looking legislation in the twenty-four States where women may vote, and to support the campaign for woman suffrage in the twenty-four States that have not yet adopted it.

Woman suffrage has made more progress during the last year than at any time since the first State, Wyoming, gave women equal voting privileges

with men, just half a century ago. The full franchise has been won by the women of Oklahoma, Michigan and South Dakota; presidential suffrage granted in Indiana, Wisconsin, Minnesota, Maine and Missouri; primary suffrage in Texas, and the Federal amendment has passed the House of Representatives.

#### Mayor Thompson Reëlected

After the closest mayoralty race for many years Chicago has returned to office for another four-year term William Hale Thompson, Republican—the mayor who during the war referred to Chicago as "the sixth German city of the world" who refused to issue a municipal invitation to Marshal Joffre of France, when he was visiting this country, who promised the city's police protection to a pacifist mass meeting after America had entered the war. The elections this year in Chicago, like the city elections in New York in 1917, were clouded by party division and entangled in party machines. The Democratic vote was divided between Robert M. Sweitzer, County Clerk and the nominee of the regulars, and Maclay Hoyne, State Attorney and Independent Democrat.

WILLIAM TELL, REVERSED

Smith in Dallas News

REMEMBER WHAT HAPPENED TO THE ANIMALS LEFT OUT OF THE ARK

For the first time there was a Labor party in the field with John Fitzpatrick, president of the Chicago Federation of Labor, as its candidate for mayor. There was also a Socialist candidate, John M. Collins, and a Socialist Labor man, Adolph Carms. Mayor Thompson won by a plurality of about 16,000 over the next candidate, Mr. Sweitzer, who polled 240,288 votes. An unusual feature of the election day was the "general strike" called by organized labor to give the worker ample opportunity to cast his ballot.

#### Under Government Ownership

The Government has refused to accept its own "stabilized" prices. At least, that is the way it looks from the refusal of Director General Hines, of the Railroad Administration, to buy steel at the prices fixed recently in a conference between representatives of the steel industry and the Industrial Board, which was established as the Government price stabilizing agency. Director-General Hines's position is that the steel prices were established over his protest and that he does not feel the Railroad Administration bound to purchase at the market rates if it can do better. From the point of view of the Industrial Board which has so far succeeded only in establishing steel prices, the railroad administrator's refusal to accept them seems to jeopardize the whole purpose of the board. Secretary of the Treasury Glass summed up the situation in a statement to the press on April 2:

The steel prices approved by the Industrial Board of the Department of Commerce not having been accepted by the railroad administration, . . . the matter was recommitted to the board for further consideration with the railroad administration.

Which, translated picturesquely by the *New York Tribune* "meant that the two were politely directed to settle their row between themselves, the other departments and administrative agencies reserving front seats on the fence."

The railway steel prices fixed by the steel men in conference with the Industrial Board were \$45 for Bessemer steel and \$47 for open hearth steel rails, as against former prices of \$55 and \$57 respectively. The Railroad Administration has taken the position that the new prices are about \$8 or \$10 too high.

Telegraph rates in this country were increased 20 per cent on April 1 by Postmaster General Burleson, who is director of the operation of telegraph and cable companies under a war emergency ruling. The increase will be "barely sufficient," Mr. Burleson announced, "to meet the increased cost of operation, occasioned by wage increases now in effect, made during the last year." The order affects both commercial and Government messages but keeps the former special rates for press correspondence.

"I am personally opposed to Government ownership," said Chairman Hurley, of the United States Shipping Board, in presenting a plan to sell to private owners the 555 steel cargo ships now owned and operated by the United States Government, and the 1336 others

## THE NEW PRESIDENT OF COLORADO

Dr. George Norlin, who succeeds Dr. Livingston Farrand as president of Colorado University, has been on the faculty of Colorado for twenty years, first as professor of Greek, then as dean of the Graduate School, and during the past year as acting president while Dr. Farrand was in France directing the tuberculosis work of the International Health Board. Dr. Farrand was recently appointed head of the War Council of the American Red Cross

under contract. Mr. Hurley's proposals are presented fully on page 62 of this issue in "What Shall We Do with the Ships?"

The New York City the state senate voted unanimously on March 20 to appropriate \$50,000 and the Assembly passed the bill with only ten dissenting votes after cutting the initial appropriation down to \$30,000. Just what is meant by Bolshevism was the chief subject of the legislators' discussion of the bill; their definitions ranged from "universal social unrest" to "force, violence, and destruction let loose for the overthrow of capitalistic government." The milder definition was approved by the two Socialist members of the Assembly, and Assemblyman Solomon added:

If you want to stop the spread of what you have been pleased to call Bolshevism study the causes of social discontent and you will find them in the high cost of living, unemployment, inadequate housing conditions, and the intensity of the struggle for existence generally.

A committee of four Senators and Assemblymen is to proceed at once with the inquiry, coöperating with investigations began by the Union League Club, the American Guardian Society and the American Defense Society. Evidence has already been introduced attempting to show that Bolsheviki with headquarters in New York City were planning to overthrow the Government, that "many hundreds of thousands of dollars" were sent to the Bolsheviki here by the "Reds" of Russia to carry on their campaign, and that the United States Military Intelligence Bureau had intercepted more than \$600,000 sent to the Bolsheviki in New York City from their confederates in Russia, money which it is believed could be traced ultimately to German sources.

That Extra Because we moved the clocks one hour ahead from April to October, 1918, we saved a million and a quarter tons of coal, according to the United States Fuel Administration report, which points out also the relief that daylight saving will bring to the coal situation this year. Coal production in this country has been unusually low during the last five months; a very severe winter next year would tax our supply to the shortage point.

Daylight saving was adopted in the United States last year after its success had been demonstrated in Great Britain, France, Italy, Germany, Austria, Holland, Denmark, Sweden, Norway, Portugal, Australia and Iceland. The Canadian Parliament failed to reenact the Daylight Saving Bill this year by a vote of 51 to 105. The farming constituencies were the chief opponents of the bill. The Canadian Railway War Board had already decided to operate the railroads on the daylight saving basis from April 1 and stock exchanges and business houses in the big cities followed the railroads' example. The result in many instances was

# RUNNING RUSSIA BY WIRELESS

BY CARL W. ACKERMAN

*Mr. Ackerman is one of the luckiest journalists alive. He has a knack for monopoly in news. He came back from Berlin when America entered the war with inside information about Germany, and now he has come back from Siberia with equally valuable and exclusive knowledge of what has happened there. A country larger than the United States has been involved in the greatest revolution in history and we have heard nothing about what has happened except the scant and doubly censored dispatches from partizan sources*

**I**F there ever was such a thing as an abandoned ship of state, it is Russia. While the Bolshevik crew has been attempting to run the ship itself, thousands of friends of Russia, including Russians and Allies, have been attempting to direct the course of the ship from the outside, by giving constant advice and criticism in a sort of ceaseless, wireless communication. Experiments directing the course of a craft at sea from some firm point on land have not been limited only to ships—but have been extended to ships of state as well.

For considerably over a year, these experiments have been going on, but Russia is still on the rocks and all the efforts of the crew, in one direction, and the friends of the ship and the passengers, from another direction, have been unable to rescue it. It seems high time for those who are really interested in the salvaging of Russia to stop experimenting and to begin considering, first, the facts regarding the present situation in Russia, and second, practical means of launching Russia again on the sea of politics and commerce.

When I was in Vladivostok recently I saw a number of Russian warships lying at anchor in Golden Horn Bay. Since the counter-revolution of the Bolsheviks these ships have belonged to the crews and their families. Stokers and sailors alike, with their wives and children, have converted these former fighting vessels into floating residences, but they are never put out to sea. The ships rise and fall with the tide. Barnacles cover the hull, the gray coats of paint are scaling off, and the rusting craft is at the mercy of rigorous winters and sultry summers.

How typical this is of the Russian nation today! Russia is simply a huge

ship of state, taken over by the crew. It, too, is tossing in the sea of international political and industrial turmoil. All of the old officers, all of the leaders, all of the sane elements, have left the country for the safety of foreign shores. The friends of Russia no longer go near the ship, but stand on the shore and try to tell the Russian people how it should be run. The crew has not been successful either in managing the ship itself, or in steering it, and certainly those who have been experimenting from the outside and attempting to run Russia by wireless have not had much success.

There are certain pertinent facts about Russia upon which the future policy and action of the powers, or the League of Nations, must be based.

They are the following:

1. The Bolsheviks have now been in power nearly a year and a half.
2. The Czecho-Slovak troops in Siberia are now being withdrawn.
3. The Allied troops now stationed in Siberia and Archangel want to leave, and
4. Russia continues to disintegrate because none of the political parties of that country can unite upon a policy, excepting the Bolsheviks.

## THE MINORITY IN POWER

In spite of all the things which have been said against the Bolsheviks the cold fact remains that they are still in power, despite the collapse of Germany, which originally supported them, despite the apparent opposition of the Allies, and despite the increased disorder, confusion and suffering in the country itself. But these facts

American Red Cross Official Photographs, Copyright Press Illustrating

©, Underwood & Underwood

"In spite of all the things which have been said about the Bolsheviks the cold fact remains that they are still in power, . . . the people must either give tacit support to the Bolsheviks or be killed." Here is a group of workmen recruits being drilled by a Bolshevik leader. Few of these soldiers can read and write, so drawings on walls such as these take the place of text books

do not prove in themselves that the Bolsheviks really represent the sentiment in Russia. During all the time I was in Russia this winter, traveling back and forth between Vladivostok and Ekaterinburg, I gained the impression that the Bolshevik Political Party represented really only a minority opinion. I do not believe that any large mass of Russian people today believe in the practicability of the Bolsheviks' program, but they are faced by a dilemma. None of the other political parties are united upon a better program, and the people, who are in European Russia, must either follow and give tacit support to the Bolsheviks or be killed. Bolshevism recognizes no opposition. The Bolsheviks do not believe that there are two sides to any question. To them there is only one solution for Russia's difficulty, and that solution is Bolshevism.

So the Bolsheviks retain their hold upon the Government. I doubt whether any other nation has passed thru a period of revolution and been confronted by the misfortunes which stare Russia in the face. European Russia has been practically deserted by all of the former leaders, by most of the business men, by most of the educated and professional classes. The ship of state has been abandoned by all those former forces which directed it. It is said that there are fully ten million refugees from European Russia living in Siberia. In Tokio and Yokohama, in Peking and Shanghai, in the Far East; in Paris, London and Geneva, in Europe; in Washington, New York and Seattle, in the United States, there are hundreds of thousands of Russians, many of whom deserted Russia after the Bolshevik Revolution. Outside of Russia we find the leaders of practically all of the political parties, and, a goodly number of Bolsheviks' representatives, too!

This is a terrible misfortune for any nation, especially Russia, where the lack of education is not an exception but the ordinary condition.

#### WHEN THE DOCTORS DISAGREE

These citizens of Russia who are outside of the country have all become spokesmen for their country, which is a natural thing, but the counsel of these men is about as divided as the advice of any group of citizens might be as to the best solution for political and industrial problems. We find in Japan a group of Russians with ideas totally different from that body of Russian citizens in New York, for instance, or Paris.

This is one of the reasons it has been so difficult for the Allies to unite upon a Russian policy. Another cause has been that the interests of the various Allied nations in Russia are so totally different that they have not been able

Harding in Brooklyn Daily Eagle

#### A DANGEROUS DERELICT

to unite upon a program of joint action. Japan looks upon the Baikal District of Siberia as being her special sphere of influence. Most of the bonds of the Trans-Siberian Railroad were held by French interests. Several large British institutions are interested in mines and industries. England and France are also interested in Russia because of the trade routes from Europe to Asia, the mail and telegraph facilities, which link the Far East with London and Paris. The interests of the United States are almost wholly the interests of possibilities. Siberia and European Russia both possess possibilities of export trade, and the time may come, as the United States develops more and more into an industrial nation, when some of our food may have to come from that country.

The attitude of the United States Government, almost from the beginning, has been that the best solution of the Russian problem was economic rehabilitation. England, France and Japan have contended that Russia could not be rebuilt as a great power or even as an orderly nation without a strong army, and so far there has been no compromise on the part of any of the powers for the purpose of uniting upon a definite constructive program, with the possible exception of the recent agreement in regard to the operation of the Trans-Siberian Railroad, but even this agreement is not yet being executed.

#### HALF-HEARTED OPPOSITION

The result of all this has been that the Allies at no time have really effectively opposed the Bolsheviks. It is true that at one time the United States, France and England promised the Czecho-Slovak army in Siberia military

assistance, but this was given in such a limited measure that the brave revolutionary armies of the Czechs and Slovaks exhausted themselves in a lone fight with various Bolshevik armies. Today the Czecho-Slovak forces are being withdrawn gradually from the Ural front, because the men are discouraged and disappointed; because for them the war is over. Czecho-Slovakia is no longer a dream, but a nation, and they wish to return home. The Allied troops in Siberia and Archangel—Americans, British, French and Italians—have similar feelings. The war with Germany is over, and they want to go home.

#### MORE HELP AND LESS ADVICE

These are the main facts in the Russian situation today, while Russia, as an abandoned ship, is tossed about upon the stormy sea of reconstruction. The Bolshevik crew has not been able to run the ship or steer it. Lenine himself recognizes the failure of Bolshevism as a reconstruction policy, according to a recent Bolshevik

pamphlet circulated in this country, but he maintains that if he is given time, which is equivalent with eternity, he can rebuild Russia.

But neither Russia nor the world can wait forever. It is certainly within the interests of the Allies to get together upon some practical program, and stop experimenting. Russia cannot be reorganized, rebuilt or revitalized by long distance communication. It may be possible to direct some ships by wireless, but not a ship of state. Hands will rebuild Russia, not ideas. What Russia needs is more help and less advice.

Bolshevism is caused by industrial discontent, social unrest and the reconstruction problems which follow a great upheaval such as war. Bolshevism will not be eliminated until the causes disappear.

After all of the policies which have been tried in Russia have failed, there remains only one which is yet to be tried. Russia needs economic help, and the assistance of Russians all over the world. If the Allies, or the League of Nations, are unable to come to an agreement upon a policy of either opposing or cooperating with the Bolsheviks, it seems as if they might unite at least upon a program of actual assistance, cooperating with the Russian Coöperative Unions, which represent some twenty million Russian subjects, and control over ten thousand stores, factories and schools throughout the country.

There are representatives of these unions today in the United States and England seeking the coöperation of the Allies. I do not know that this would be a solution for the present Russian dilemma, but it certainly is a practical plan.

GENERAL O'RYAN, OF THE 27TH—THE ONLY NATIONAL GUARD GENERAL WHO WAS IN COMMAND OF HIS TROOPS THROUGHOUT THE WAR.

## OUR TROOPS IN RUSSIA

Brigadier General Wildes P. Richardson was assigned by General Pershing on March 30 to command all the American forces on the Murman coast and elsewhere in European Russia. General Richardson has had long experience in handling transportation problems in Alaska and in caring for troops in extremely cold climates. He took with him from London a group of U. S. engineers, sanitary corps officers and replacement officers to supplement the American Expeditionary Force in Russia now. It has been announced that these troops will be removed this spring.

#### THE NEXT SHIP FROM ENGLAND?

*The chances are that an airship will be dropping in on us from England before very long. The "R33" is a British airship, the largest of its kind in the world. On its first flight it reached an altitude of 2000 feet and stayed in the air three hours*

**T**HE United States Government now owns 155 ocean-going steel cargo ships. It has under contract 1336 others. If we go on with our steel ship building program without interruption or modification, there will be under the American flag next year nearly seventeen million tons of ocean-going steel cargo and passenger ships. This immense fleet will be the equivalent of almost half of all the merchant shipping of all the nations of the world today. The United States Government will own 70 per cent of this American fleet. The Government's share of it will comprize nearly nineteen hundred vessels.

What shall the Government do with the ships?

These are the facts and this is the question which the chairman of the United States Shipping Board set forth in a recent address in New York. It is a marvelous record that we made in ship construction, in response to the appeal of the British Premier, Mr. Lloyd George, for "Ships, ships, and more ships." In eighteen months we built 341 new shipyards with 1284 launching ways—more than twice as many yards as are owned by all the rest of the world together. We added to our merchant marine 619 vessels of wood and steel, a total of more than three and a half million tons. Mr. Hurley was quite right when he called it "a world record in construction."

But now that the ships are built and building, what do we propose to do with them? They must sail the seas to be of any use. Some one must operate them. Who shall it be? The Government, which owns them now? Private corporations, as in the old days before the war? Or who? Also how?

Mr. Hurley finds six possible plans for the solution of this great and pressing problem. They are these:

1. Government ownership and operation: Under this plan, title to all vessels now owned by the Government would remain in the Government, and their operation would be conducted by Government employees and agents. The adoption of this plan would necessitate the permanent establishment of a Government operating force with branch offices and agencies in every port of the world. Cargoes and passengers would be booked by the Government representative, and the accounts would be cast up at the central operating offices in Washington.

2. Government ownership and operation for the benefit of the Government thru the medium of a private corporation: This, in effect, does not differ from operation directly by the Government, except that under such a plan Government operation might be more easily administered, and some of the inertia inherent in governmental undertakings might be overcome.

3. Government ownership and private operation for Government account: Under this plan the Government would retain its ownership, but private companies would be employed as agents on a commission basis to operate the vessels for Government account.

4. Government ownership and private

*These merchant vessels nearing the English coast were photographed from a naval*

operation for private account: This would mean the retention of Government ownership under a leasing system by which the vessels would be leased or chartered to private steamship companies. After paying the charter hire to the Government, the operator would keep the rest of the earnings.

5. Ownership by a single private corporation: Under this plan title to all vessels would be placed in one large private corporation, the stock of which would be sold to the public, the Government, if it chose, guaranteeing a fixed return on the stock. This would entail the centralization of the ownership and operation of the ships now owned by the Government in one large unit. If the Government guaranteed a fixed return on the stock, the result would be that the machinery for the ownership and operation of the fleet would be practically identical with that suggested in plan No. 2, but with the modification that the Government would carry any losses which might be incurred without receiving the benefit of any profits which might be earned.

6. Private ownership and operation: Lastly, the vessels can be sold to private companies, to be operated by them entirely for their own account, the Government thus relinquishing all interest and control.

The plans resolve themselves into two groups, separated by a fundamental difference — Government ownership versus private ownership. There are arguments for both methods, and Mr. Hurley has set them forth with equal fairness. He said on the one side:

"The argument in favor of Government ownership and operation is that this great fleet, which has been created with taxpayers' money, should be used

## WHAT SHALL WE Mr. Hur

for national purposes; that the ships have not been built to earn profits as ships, but to become servants of the nation which built them. It is urged that they should be used to develop the commerce of the nation as a whole, and that they should, if necessary, be placed in trade routes which may temporarily prove unprofitable, but ultimately become of great value to the nation as an instrument thru which its foreign commerce can be increased.

"Private companies would not be disposed to serve the national interests in this way. The life of a ship is comparatively short. Its owner must make it pay today. He cannot be expected to take a loss today in order to build up a commerce which will become a source of profit only after the ship now engaged in that commerce has been scrapped. The great need of this country is that new trade routes should be established, and it is urged that Government ownership and operation should be retained as a guaranty that all ships will serve the nation as a whole and not a limited class of private ship-owners.

"A further argument in favor of public ownership and operation is that in case of a national emergency such as has just been experienced the Government would be in a position immediately to convert its merchant fleet into a military weapon."

On the other side of the question Mr. Hurley presented these considerations:

"The chief argument in favor of

ing them, and show how vessels crossed the Atlantic in convoy during hostilities

## WITH THE SHIPS?

### Answer

private ownership and operation is that a successful merchant marine depends not so much on ships, or money, or Government aid, as it does on the existence of a large class of expert, resourceful and energetic men engaged in the shipping business. Mere mechanical efficiency of ship and shore plant, added to sound financial backing, is not enough. The man who enters the shipping business enters a battle against the wits of the world. He must have genius for shipping. Fortunately the men now engaged in the shipping business in the United States are of that character. But there are not enough of them. We need many more. And it is clear that the number of such men can be greatly increased only under conditions of private initiative. The shipping business is a business of infinite detail and infinite technique; yet it calls for great courage and wide ranging imagination.

"The formalities necessarily surrounding Government operations are not suited to the successful conduct of a shipping venture, requiring quick decision, sudden reversals of policy, and the assuming of great hazards. The successful shipping man in an emergency consults no book of rules. He consults only his wits. So, it is contended, that only under private operation may we expect a further increase in the number of small, independent, skillful ship operators which we shall need more and more as the American merchant marine expands its activity upon the seas.

"Furthermore, the establishment of a merchant marine under the American flag must take into account the difficulty of securing return cargoes. If ships must be brought back in ballast, the business cannot be profitable. In order that a round trip may be made without a considerable portion of it being in ballast, it may be necessary to engage in a triangular or polygon voyage. In order profitably to carry a cargo from New York to Australia, it may be necessary to carry a cargo from Australia to Japan; thence a cargo to the Cape Verde Islands, with the short return trip in ballast to New York. Such operations require a degree of special negotiation and freedom from control to which Government operations are entirely unsuited. They cannot be standardized. No rule can be laid down which a Government employee could follow, for the conditions are constantly shifting, and in this tramp business the competition of the whole world must be met, facility with facility, and rate with rate."

A careful consideration of these arguments has convinced Mr. Hurley that private ownership and operation is the proper solution of the problem. But to accomplish that end a definite and wise plan of action is necessary, for the protection of the public interest is essential. "If we are to return to private ownership," said Mr. Hurley, "the transition must be made under such conditions as will completely safeguard the interest of the public. If this fleet, built at Government expense, were to be used now merely for the advantage of groups of ship operators, with sufficient capital to purchase the ships from the Government, I would unhesitatingly advocate the retention of the whole

fleet by the Government. The problem is quite as complex as the railroad problem. Its solution is vital to the welfare and prosperity of the nation. Private ownership unquestionably offers an inducement to American energy and skill, but one of the phrases of unrestricted private control, which caused me considerable concern, was the possibility that under such control ships would be over-capitalized as were many of the railroads. We want the initiative and skill of American ship operators, but we want no watered stock. We want to avoid the stagnation that sometimes comes from red tape and bureaucracy, but we want no profiteering or exploiting. . . . The operation of American ships will decline unless there is a profit for the men who invest their money. But whatever assistance the Government is willing to render, should be reciprocated by those who are benefited. . . . The ships built by the nation should never be made the basis for any stock-jobbing scheme."

The chairman of the Shipping Board, therefore, proposes that "the ships should be sold to and operated by American citizens under no restrictions other than the terms of the bill of sale and the fixation of maximum freight rates."

Mr. Hurley's plan is outlined by him further as follows:

"The ships should be sold at a price which fairly reflects the current world market for similar tonnage.

"Twenty-five per cent of the purchase price of each ship should be paid down, the remainder falling due and payable in graded annual instalments over a period not exceeding ten years. The Government should take and hold a mortgage for the unpaid balance, charging interest thereon at the customary commercial rate of 5 per cent. One-fifth of this interest, representing the difference between the customary Government interest of 4 per cent and the customary commercial rate, should be paid into a Merchant Marine Development Fund to be described hereafter.

"The purchaser should be required to agree to insure and keep insured with an American marine insurance company his equity in the vessel, and because the American marine insurance market has not at present sufficient resources to underwrite all the vessels the Government has to sell, the Government should carry in its own fund, as at present, but for the purchaser's account, hull and machinery insurance covering that part of the vessel for which payment has not been made. Our experience in operation shows that the Government can carry this insurance for at least 1 per cent less than the open market rate. However, it is proposed that the open market rate be charged, and that the difference be paid into the Merchant Marine Development Fund.

"It is understood that no transfer of a vessel to foreign registry should be permitted without express permission of the Government.

"Each purchaser who wishes to operate in the foreign trade should be obliged to incorporate under Federal charter, the [Continued on page 22]

# DE-GERMANIZING BELGIUM

BY SYDNEY BROOKS

**B**ELGIUM before the war ranked fifth among the industrial nations of the world. With an area less than a quarter of the area of New York State she supported in diligent comfort over seven and a half million people. Nowhere on earth was the population so thick on the soil. On every square mile of Belgian land more than 650 people swarmed and toiled. Were the population of the United States as relatively dense as Belgium's, America today would be nearly 2000 million strong. In proportion to her territory Belgium had more than twice as many people as the German Empire or Italy and over three times as many as France, Austria or Japan. And this close-packed population owed its maintenance in a diffused well-being to no special bounty of nature. The soil of Belgium is not exceptionally fertile. On the contrary, it discloses some of the worst characteristics of the great plain that runs across northern Europe from Calais to the borders of Russia. It is sandy and wet, deficient in lime, and with a subsoil of ferruginous stuff and gravel. Yet from their 4,000,000 acres of cultivated land—some three-fifths of the total area of the whole country—the Belgians were extracting every year \$400,000,000 worth of foodstuffs. No other people in the world obtained such a return upon their land resources or anything like it.

It was on this indestructible basis of an industrious peasant proprietary that the prosperity of Belgium was founded. One man in every six owned land; farms ran small; over half a million of them were less than two and a half acres; those of fifty acres and over numbered less than twenty thousand; the "rural exodus" that has denuded so many countrysides in the past two generations had no meaning in Flanders, where over 750 people lived on each square mile of the two provinces, and where scientific direction from above, a network of coöperative societies, low railway rates, numerous roads, the weekly fairs in the towns, and, above all, the spirit of sociability and mutual helpfulness which has penetrated the life of the Flemish villages since medieval times, not only kept the people on the soil but enabled them, in spite of a dubious system of land tenure and high taxation, to prosper.

But industrially as well as agricul-

turally Belgium was a standing instance of intensive cultivation. To catalog her factories and products would be to cover pretty well the whole field of modern industry. More, perhaps, than any country in or out of Europe, Belgium had preserved a happy equilibrium between her industrial and her agricultural development. No overpowering cities drained and dragooned the countryside. Less than two millions of the people lived in the towns, reckoning as a town any place with over 25,000 inhabitants; the remainder, some five and a half millions, were scattered in the 2500 villages and townlets that

tion in international finance. That is to say, one found Belgian companies working with Belgian money in an astonishing variety of enterprizes all over the world. A geographical position which made her the immediate neighbor of the Netherlands, of Germany and of France, and rendered her ports and her railways the natural channels for much of the commerce of Central Europe; the possession of the Congo; a considerable accumulation of wealth and the speculative energy of her people—brought them interests and opportunities that stretched far beyond their own borders, made the

stock exchanges of Brussels and Antwerp factors of real moment in European finance, and enabled Belgian finance to develop rubber, banking, mortgage, electrical power, railway, farming, cattle raising and many other undertakings in Europe, South America and the Far East.

But while the façade was imposing, it was also deceptive. Much that was Belgian in name was not Belgian in fact. There were many concerns operating with Belgian capital and apparently Belgian in character that were really run for the benefit of German interests. German "penetration" into Belgium was a hard fact. Always with an eye to the possession of Antwerp—the natural outlet for all goods going

overseas from the industrial districts of Germany and the most convenient port of entry for raw materials for the western and southwestern parts of the Empire—the Pan-Germans had pushed their propaganda in Belgium, had tried to exploit the Flemish national movement, and had done what they could to counteract French influence in politics and administration. Their efforts were ably seconded by the wealth, the business experience and the thoro methods that German financiers and merchants brought with them into Belgium. At the outbreak of the war there are said not to have been more than 60,000 Germans in the country. But these 60,000 formed a most powerful and cohesive group that influenced all and dominated many of the local financial, commercial and manufacturing interests.

Their stronghold was Antwerp. The great Belgian fort had become before the war, and from a business point of view, very largely Germanized. It was practically impossible to conduct

Belgian U. S. A. Official, from Underwood & Underwood

*Another example of German penetration into Belgium. These Belgian infantrymen have just liberated the village from the Germans, and had to demolish the buildings because they were infested with machine guns*

dotted the land. And these settlements were served by an admirable system of railway, roadway, waterway, telegraph and telephone communications. Education, moreover, was fairly well diffused; the cost of living was extraordinarily low; the public debt, almost all of which had been raised for and was devoted to works of public utility, and the interest on which was more than covered by the revenue from the state railways alone, was a burden scarcely felt; and a stimulating, and at times even agitated, play of public life and the temperamental differences between the Walloons and the Flemish perpetually whetted the popular intelligence. Belgium in 1913 sent abroad goods and produce to the value of over \$720,000,000; her imports amounted to more than \$900,000,000; and the two sets of figures, added together, gave her a larger foreign trade per head than any other nation.

Besides their agricultural and industrial activities, the Belgians before the war had taken a prominent posi-

trade there on a big scale against the opposition or without the coöperation, in some form or other, of the Germans. Virtually the whole of the Belgian trade with South America was in the hands of German or pro-German firms. They had an almost complete monopoly of the business in grain, coffee, seeds, wool, hides, meat extracts, foreign sugars, oils, cotton, nitrates, guano and other fertilizers, minerals, textiles, drugs, chemicals and petroleum. The greater part of the produce of the Belgian Congo was consigned to firms in Antwerp that were either German owned and managed, or under German influence. The transport business between Antwerp and the German waterways was controlled by them. In the metallurgical trades, especially in copper, zinc and lead, their influence was supreme. Thru their international syndicates they controlled the output and selling prices of window and plate glass, of steel and of many other commodities. The Belgian State railways carried large quantities of goods to and from Germany at a loss. The Schimmelpfeng Institute, the greatest agency of commercial intelligence that has ever existed in the world, gave the Germans a complete knowledge of all Belgian and foreign goods passing thru the port of Antwerp.

#### GERMANY'S INTERLOCKING DIRECTORATES

Many of the nominally Belgian firms, again, that carried on railway, mortgage, traction, lighting and banking enterprizes abroad, and especially in South America, were of German origin and under German management and operated largely in the interests of German traders and manufacturers, even tho most of the original capital on which they worked was Belgian. If they needed electrical machinery or equipment it was from Germany that they had to get it. If they were conducting a loan and mortgage business in South America or Canada, the farmer or planter to whom they extended accommodation bound himself to consign all his produce to a German firm at Antwerp. The German influence, while paramount, was rarely built up on any large investment of German money. It was much less a directly financial interest than the more subtle power they exercised as directors, managers and partners in a variety of interlocked undertakings.

Comparatively little of the capital that floated the banks and companies which they controlled was German capital. In about a hundred Belgian companies quoted on the Exchange, in which German money had been invested, only \$30,000,000 out of a total paid-up capital of \$200,000,000 was German. Even where they had put in considerable sums to start an enterprize their practice was to sell out gradually, when success had been attained, while keeping an active representation on the boards of management. About 15 per

cent of the directorships in the Antwerp banks were held by Germans or their nominees, all of whom systematically used their positions to further their commercial and industrial interests, and to obtain an exact knowledge of the local business possibilities. The big merchants, the big promoters, the big insurance firms in Antwerp were practically all German or in the closest alliance with German groups. The Germans owned most of the warehouses; their political influence, wielded in part thru the press, was very great; they formed a compact colony with their own schools and a high social prestige; they worked admirably together, presenting when the need arose so united a front that to attack or to antagonize one was to attack and antagonize all; and they naturally drew into their orbit and kept there by the strongest ties of self-interest large numbers of the most prominent and powerful Belgians in all walks of life.

#### 50,000 BUILDINGS TO BE REPLACED

Now the rebuilding of Belgium is a problem of many aspects. She is a drained and ruined land, her people on the edge of famine, her soil impoverished and deteriorated, her agriculture at its lowest ebb, her households short of or wholly lacking the first essentials, her stocks of merchandise and of raw materials exhausted, her trades and labor and manufacturing facilities broken and disintegrated, her whole industrial plant deliberately wrecked. There is not a farm or a home or a shop or a factory in the land that does not need to be restocked. Seeds, ploughs, fertilizers, livestock and all the other necessities of an agricultural people have to be supplied at once. I should judge that some 50,000 houses and dwellings have been destroyed. The Germans by their forced seizures have pretty well cleared the country and every dwelling in it of all articles containing copper, bronze, glass, leather, cotton and wool. Factories, quarries, mines and works are clamoring for new plant and machinery. Some 100,000 freight cars and 4000 locomotives have to be replaced and the permanent ways and the bridges restored and remade. And in addition and among the obvious requirements of the situation there are the telephone and telegraph systems to be reconstructed, the harbors and canals to be dredged, the lighting and power houses to be rebuilt, the docks and dams that need repair, the roads that must be relaid, the hundreds of tugs and the thousands of barges that will have to be supplied before the internal waterways, or such as are left of them, can come to life again.

It rests mainly with Great Britain and the United States, as the most industrial and least exhausted of the belligerents, to furnish these material needs, and I should like to see the two countries coöperating in the task in no niggardly or competitive spirit but with the same large confidence and absence

of self-seeking they have shown during the war. Great Britain, being nearer the scene and peculiarly concerned in seeing that Belgium does not again come under Germany's sway, ought to take the leading part in the work of reconstruction. But America should assist and support her at every turn. Why should not the British and American governments join together in extending whatever financial aid is necessary to enable Belgian officialdom and private Belgian firms to place their orders at once in Britain and the United States? Why should not an Anglo-American-Belgian financial group be formed to weed out German influence from the many banks, shipping and insurance firms, commercial houses, industrial companies and international syndicates in which hitherto it has been all powerful? Why should not German capital be supplanted by British and American capital and all German or pro-German interests be transferred to British, American and Belgian hands? Why should not an Anglo-American commercial group be organized not only to deal with the trades that before the war were carried on by Germans, but also to make provision for the supply of the raw materials—especially coal—and other essentials that Belgium hitherto has imported from Germany? Belgium, whose reserves of iron ore are rapidly diminishing, has built up her iron and steel industries almost wholly on imported ore and imported coal. She got the coal from Germany and Germany exploited the position to dominate all Belgian mining and metal activities. Nothing would more certainly revivify Belgium or deal a shrewder blow at German penetration than an arrangement by which the Belgian furnaces, receiving their ore from Luxemburg—which ought henceforward to be part and parcel of the Belgian state—and from the recovered ore fields of Alsace-Lorraine, would smelt it by the aid of British, instead of German, coal.

#### ENGLAND AND AMERICA MUST REPLACE GERMAN COOPERATION

But it will be no easy task to rebuild Belgian industries and commerce in freedom from German influence. The pull of neighborhood and of easy communications will be very great after the war as before it. The German and pro-German firms in Antwerp have done exceedingly well out of the war and are today practically the only firms with any considerable amount of ready capital. The work of effecting a new orientation of Belgium's financial and industrial interests is likely, indeed, to prove so complex and onerous, to demand from Britain and the United States such sustained and highly intelligent coöperation between bankers, manufacturers and the governments and such a smooth association of British, Belgian and American activities, that it is doubtful whether we shall be able to rise to the full height of it.

One may assume that with the re-

storation of Belgium's independence her people will desire to make a clean sweep of the Germans and of German influence. They will not do so without difficulty for the reasons that are implicit in what was said earlier in this article about the strength of Germany's varied interests in Belgium and the number of Belgians of high position in politics, the Government services, finance

and commerce who were identified with them. There will no doubt be considerable opposition to any proposals for liquidating Germany's assets in Belgium and expelling German directors from the management of Belgian enterprises.

There will be interested prophecies that any determined effort on Belgium's part to cut loose from German

participation in her commerce and finance will be foredoomed to failure, will be a struggle against the geographical and economic nature of things. None the less the thing will be done. But whether it is done effectively, will depend on the backing that Belgium receives from Great Britain and the United States.

*London*

## NOONDAY GRACE

BY JOHN CROWE RANSOM

My good old father tucked his head  
(His face the color of gingerbread)  
Over the table my mother had spread  
And folded his leathery hands and said:  
"We thank thee, Lord, for this thy grace  
And all thy bounties to the race;  
Turn not away from us thy face  
Till we come to our last resting-place."  
These were the words of the old elect.  
Or others to the same effect.

I love my father's piety,  
I know he's grateful as can be,  
A man that's nearly seventy  
And past his taste for cookery.  
But I am not so old as he,  
And when I see in front of me  
Things that I like uncommonly,  
(Cornfield beans my specialty  
When every pod spills two or three),  
Then I forget formality  
And pray along half-consciously.

Thank you, God, for dinnertime!  
Gladly I come from the sweat and grime  
To play in your Christian pantomime.  
I wash the black dust from my face  
And sit again in a Christian's place  
And hear the good old Christian's grace.

Thanks for my clean, fresh napkin first,  
With its faint red stain where the fruitjar burst.  
And thanks for plates with such blue roses  
And mother's centerpiece and posies,  
A touch of art right under our noses.

Mother is filling my tumbler now  
With sweet milk fresh from our Jersey cow.

Father calls for a golden yam  
And gives me a helping of country ham.  
He knows how fond of it I am.  
No one can cure it as well as he,  
And he won't tell the recipe,  
But God is in it, it seems to me.

I'm sure God made our garden grow,  
Because he certainly would know  
We loved the vegetables so.  
I did my part with rake and hoe

And mother boiled and baked them slow  
To her favorite tune of "Old Black Joe."  
For so he planned them years ago.

Pearly corn still on the cob,  
My teeth are aching for their job;  
Tomatoes, one would fill a dish,  
Potatoes, mealy as one could wish:  
Cornfield beans and cucumbers,  
And yellow yams for sweeteners;  
Pickles between for stepping-stones,  
And plenty of cornmeal bread in pones.

Sunday the preacher talked a lot  
About the question whether or not  
God is a universal friend  
And favors individual men.  
We pray for individual things,  
Give thanks for little happenings,  
But isn't the sweep of his mighty wings  
Meant for the businesses of kings,  
And not for pulling little strings?

He's infinite, and all of that,  
The setting sun his habitat,  
But the preacher and I, we say out flat:  
You can never compute his sympathy,  
His time and love reach down to me.

Like mother, he finds it his greatest joy  
To have big dinners for his boy.

My mother knows him like a book,  
In fact, he helps my mother cook,  
And steals to the dining room door to look,  
And when we are at our noonday meal  
He laughs to think how fine we feel.

An extra fork is by my plate,  
I nearly noticed it too late.

Mother, you're keeping a secret back!  
I see the pie-pan thru the crack,  
And strips of crust in gold and black,  
There's no telling what that secret pair  
Have cooked for me in the kitchen there.  
There's no telling what that pie can be,  
But tell me that it's blackberry!  
And long as I keep upside the sod  
I'll love you always, mother and God.

# A NUMBER OF BOOKS

BY EDWIN E. SLOSSON

IN an Annual Book Number it is customary to select for special consideration some particular group of recent publications, sometimes "the most important books of the year"—meaning by that the books we assume our readers will think they ought to read; or perhaps "the six best sells"; which are the books they will read—or in case we can find half a dozen volumes of similar sort we get up an article on "the new trend in literature." But this time I am going to cut loose from any such obligation and just talk about the books I want to talk about without regard to the taste of the reader or his conscience or unity of theme. I shall indulge in my favorite amusement of irresponsible browsing about among the books that have been laid lately upon my table.

The first volume I pick from the pile is Maeterlinck's *The Burgomaster of Stilemonde*, for I was curious to see what effect the war had had upon his sensitive temperament. I feared lest the patriot should have killed the artist as has happened in so many cases, as for instance in Kipling on one side and Hauptmann on the other. But Maeterlinck's serene spirit is not so easily perturbed. The wrongs inflicted upon his unhappy country have inspired him to outbursts of indignation and heroic defiance, but during all the stress of war he has never descended to vituperation or despair. And lastly comes this drama which seems impossible to have been written in the midst of conflict and by a Belgian, so fair-minded and fundamental it is. It bears the marks of permanency and will not vanish with the return of normal conditions like the plays and stories that have been written during the last four years to raise our hatred for our enemies to the boiling point. Maeterlinck has shown that it is not necessary to caricature a German in order to make him hateful. It is only necessary to portray him as he is. Otto Hilmer, the German lieutenant who consented to command the firing squad that shoots his beloved father-in-law, the Belgian burgomaster, is conscientious and courageous. But a conscientious and courageous German is the most dangerous kind. The cowardly and corrupt kind can be easily disposed of. The other characters—the burgomaster who refuses to save his life by the sacrifice of his poor gardener; Isabelle, the wife of Otto, who cannot endure the sight of him; Floris, the imprudent boy; Gilson, the *franc-tireur*; Baron von Rochow, the German major—all are equally consistent in character and therefore arises the inevitable conflict that is the essence of true tragedy.

Maeterlinck always sticks close to the Aristotelian definition of tragedy as the purification of our passions by pity and terror, and the German atrocities in Belgium provide these essentials in abundance. In this play, too, he sticks to the classical unities of time and place. The only scene is the burgomas-

ter's study. The first act is in the morning, the second in the afternoon, and the third in the evening.

It is curious to recall that Maeterlinck began his literary career at the age of twenty-four with a short story of atrocities in Belgium, "The Massacre of the Innocents," in which the Spanish soldiers played the part of Herod's executioners. The burgomaster's dying words to his daughter teach the same lesson as Arkel's closing speech in "Pelleas and Melisande," that the future belongs to the children and that the sins of the past must not be thrown upon them:

The child that is to be born must not become the last and most sorrowful victim of this tragedy. I know that, at first, life will be very sad for you and very difficult. Wait patiently. Listen humbly to what it says. Life is always right. It is full of indulgence and good will and very soon forgets what should be forgotten.

## I LIKE SEA YARNS

HAVING been born in the middle of the continent and being a poor sailor I have naturally a fondness for sea stories, and I am glad that we are getting some good ones again. If Joseph Hergesheimer keeps to the course on which he is now steering he is likely to overhaul Conrad. His latest novel, *Java Head*, brings him within hailing distance. The scene of the story is exclusively dry land, but every page is soaked with salt water as tho it were Masfield or Melville. It takes us back to the good old days of the fifties, when the Yankee skipper was seen on every sea and when Salem was one of the world's great ports. The heroine is a Manchu princess married to an American. You have read how the Princess Der-ling felt when she was brought back from Paris and introduced into the court of the old Dowager Empress? Well, this is the reverse event. How would you take it if you were Rhoda Ammidon and your brother-in-law, Gerrit, without warning, brought into your New England home a Manchu bride with all her war-paint on? This is how she took it:

As he spoke Rhoda saw the barouche draw up before the house. She had a glimpse of a figure at Gerrit Ammidon's side in extravagantly brilliant satins; there was a sibilant whisper of rich materials in the hall, and the master entered the library with a pale, set face.

"Father," he said, "Rhoda and William, allow me—my wife, Taou Yuen."

Rhoda Ammidon gave an uncontrollable gasp as the Chinese woman sank in a fluttering prostration of color at Jeremy's feet. He ejaculated, "God bless me," and started back. William's face was inscrutable, unguessed lines appeared about his severe mouth. Her own sensation was one of incredulity touched with mounting anger and feeling of outrage. The woman rose, but only to sink again before William; she was on her knees and, supported by her hands, bent forward and touched her forehead to the floor three times. Gerrit laughed shortly. "She was to shake your hands; we went over and over it on shipboard. But any-

thing less than the *Kú Von* was too casual for her."

She was now erect with a freer murmur of greeting to Rhoda. The latter was instantly aware of one certainty—Chinese she might be, she was, but no less absolutely aristocratic. Her face, oval and slightly flat, was plastered with paint on paint, but her gesture, the calm scrutiny of enigmatic black eyes under delicately arched brows, exquisite, quiet hands, were all under the most admirable instinctive command. Rhoda said:

"I see that I am to welcome you for Gerrit's family." The other in slow, lisping English replied:

"Thank you greatly. I am humbled to the earth before your goodness."

Never before had Rhoda seen such lovely clothes: A long gown with wide sleeves of blue-black satin, embroidered in peach-colored flower petals and innumerable minute sapphire and orange butterflies, a short sleeveless jacket of sage green caught with looped red jade buttons and threaded with silver, and indigo high-soled slippers crusted and tasseled with pearls. Her hair rose from the back in a smooth, burnished loop. There were long pins of pink jade carved into blossoms, a quivering decoration of paper-thin gold leaves with moonstones in glistening drops, and a band of coral lotus buds. Pierced stone bracelets hung about her delicate wrists, fretted crystal balls swung from the lobes of her ears; and clasped on the ends of several fingers were long pointed flagrees of ivory.

"Taou Yuen," Gerrit repeated shortly, with his challenging bright gaze. "That means Peach Garden. My wife is a Manchu," he asserted in a more biting tone: "a Manchu and the daughter of a noble."

## MA PETTENGILL IN GREENWICH VILLAGE

AFTER two such tragedies—for, of course, the Manchu-American marriage must turn out a tragedy—I feel that I need what the rhetoricians call "comic relief," and I find it in *Ma Pettengill*. If I like sea yarns because I don't know anything about the sea, I like Harry Leon Wilson's stories because I am familiar with their scene setting. I've been in Red Gap and know most of the people; the English remittance man, Cousin Egbert, Lon Prince the real estate man, Professor Pennypacker the geologist, Metta the burnt wood artist, and Lydia the porch wren. Vernabelle of Greenwich Village I did not meet until I came to New York. I'm not sure that I ever met Ma Pettengill, tho she seems to remind me of someone. But I can readily understand how she felt when she was ushered into Red Gap's Bohemia:

All the curtains was down, candles lighted, and the room not only hot but full of cigaret smoke and smoke from about forty of these here punk sticks that smoldered away on different perches. It had the smell of a nice hot Chinese laundry on a busy winter's night. About eight or ten people were huddled round the couch, parties I could hardly make out thru this gas attack, and every one was gabbling. Metta come forward to see who it was, then she pulled something up out of the group and said, "Meet dear Vernabelle."

Well, she was about Metta's age, a short thirty, a kind of a slaty blonde with bobbed

hilly—she'd been married here and aft—and dressed mostly in a pale-blue smock and no stockings. Nothing but sandals. I could hardly get my eyes off her feet at first. Very few of our gaily famous sex can afford to leave the public gaze without their stockings on. Vernabelle could ill afford it. She was skinny. If you know what I mean, lots of tendons and so forth, tho I learned later that Vernabelle called it being willowy. She had slaty gray eyes and a pale, dramatic face with long teeth and a dignified and powerful-looking nose. She was kind of hungry-looking or soulful or something. And she wore about two yards of crockery necklace that rattled when she moved. Sounded like that Chinaman with his dashes out there in the kitchen. I learned later that this was art jewelery.

Vernabelle greeted me with many confections like she was taking an exercise and said she had heard so much about me and how interesting it was to meet one who did things. I said I was merely in the cattle business. She said "How perfect!" and clasped her hands in ecstasy over the very idea. She said I was by way of being the ideal type for it. And did I employ real cowboys; and they, too, must be fascinating, because they did things. I said they did if watched; otherwise not. And did I acquire an ascendancy over their rough natures? I said we quickly parted forever if I didn't do that. Then she clanked across to the couch, where she set down on her feet. I give her credit for that much judgment. That girl never did just plain set down. It was either on one foot or on both feet, or she draped herself along the furniture to show how willowy she could be without its hurting.

She now lighted a new cigaret from her old one and went on telling the fish-faces about her, how little color she found here. She said we was by way of being a mere flat expanse of dull tints. But what could be expected of a crude commercialism where the arts was by way of being starved. Ah, it was so different from dear old Washington Square, where one was by way of being at the heart of life. It took me some time to get this by-way-of-being stuff, but the others was eating it up. Metta Bigler hovered round proud as Lucifer and trying to smoke for the first time in her life, tho making poor work of it, like she was eating the cigaret and every now and then finding bits she couldn't swallow, and holding it off at arm's length in between bites.

#### HISTORY CATCHING UP WITH FICTION

AS we can see, Red Gap is up-to-date or at least never more than six months behind on any new movement that bobs up anywhere. But the Wild West has not altogether vanished before the advance of sophistication, and at Red Gap and its like the bareback rider of the plains lingers long enough to shake hands with the barefoot dancer from Washington Square. The frontier where such extremes meet has always had a fascination for the fictionist, and at last the historian has discovered it. Those who used to write our history looked at the country thru the spectacles of New England—often, indeed, thru lenses imported from Old England—but a new school has arisen that is 100 per cent American, and in increasing percentage Western. I take from one of the new ten-volume boxes of the "Chronicles of America" series that entitled *The Passing of the Frontier*, by Emerson Hough, and read this on the second page:

The fascination of the frontier is and has ever been an undying thing. Adventure is the meat of the strong men who have built the world for those more timid. Adventure and the frontier are one and inseparable. They suggest strength, courage, hardihood—qualities beloved in men since the world began—qualities which are the very soul of the United States, itself an experiment, an adventure, a risk accepted. Take away all our history of political regimes, the story of the rise and fall of this or that partizan aggregation in our Government; take away our somewhat inglorious military past; but leave us forever the tradition of the American frontier! There lies our comfort and our pride. There we never have failed. There, indeed, we always realized our ambitions. There, indeed, we were efficient, before that hateful phrase was known. There we were a melting-pot for character, before we came to know that odious appellation which classifies us as the melting-pot of the nations.

The frontier was the place and the time of the strong man, of the self-sufficient but restless individual. It was the home of the rebel, the protestant, the unreconciled, the intolerant, the ardent—and the resolute. It was not the conservative and tender man who made our history; it was the man sometimes illiterate, oftentimes uncultured, the man of coarse garb and rude weapons. But the frontiersmen were the true dreamers of the nation. They really were the possessors of a national vision. Not statesmen but riflemen and riders made America. The noblest conclusions of American history still rest upon premises which they laid.

This is a new sort of history, this beginning with the open range and telling of roundups and homesteading, of the wars of the cattlemen with the sheepmen and of the settler with them both and of the Indian with all three. Mr. Hough tells the tale of the Sante Fe trail and the Oregon trail. He introduces us to Jim Bridger and Pike of Pike's Peak—I wish he had mentioned Noble Prentice's sketch of Colonel Pike.

#### STUMPS AND EMPIRES

PROFESSOR HUNTINGTON, of Yale, is a man with a hobby. It may be that he runs it into the ground—or rather into the air—but at any rate the hobby runs. A man who can read off the history of Rome from the stump of a California redwood is worth hearing. Yet there it is—Fig. 24—the lean and fat years as registered by the rings, indicating climatic pulsations. Whenever the big tree flourished Rome prospered. You can check your Ferrero by the Sequoia. From 450 to 250 B. C., when the redwood laid on thick cambium layers, the Romans were moral, healthy, industrious and contented. Then, as the rings on the trunk got thinner, the Romans got worse. Politics became corrupt, family life decayed, and finally the Spartan rising came. But the climate of Africa was deteriorating faster than that of Italy and so Rome conquered Carthage. The Golden Age of the Antonines were good years for the redwoods. Then set in the decline when Rome fell a victim to the northern nomads driven from their steppes by the increasing aridity. But after "that period of unfavorable climate which is known as the Dark Ages," the sap again began to flow freely in the big

trees, about 1325, and the Revival of Learning took place in Italy.

If any one thinks that these times are too remote to support so sweeping a theory he can turn to the chapters in *World Power and Evolution*, where Professor Huntington compares the American health curve—which is the death rate curve inverted—with the curve of prosperity and its component factors. When the health curve goes up the consumption of liquor decreases, the grades of civil service examinations rise, the school attendance is better, the bank clearings and deposits increase, prices rise, and immigration becomes greater.

The statistics from 1870 to the Great War show that a high death rate regularly precedes hard times, while a low death rate precedes prosperity. Health is a cause far more than an effect . . . and health depends largely upon the weather.

The places and the periods of the greatest development of intellectual activity have been where the air has been moist and the temperature variable, the mean ranging from 40 to 60 degrees in January and 75 to 85 degrees in July. Such optimum areas are today found in northwestern Europe, northeastern and northwestern United States, Japan, New Zealand and Argentina. The reason why Germany became so obstreperous and was able to hold out for four years against overwhelming hosts of enemies is because "no other nation in the world has so many people who live under a highly stimulating climate."

I am not competent to criticize Professor Huntington's hypothesis for I never was able to converse about the weather with the fluency of most folks. Even an ordinary Weather Bureau hy-lo map is a mystery to me. But Professor Huntington certainly does argue his case well. And he ends the volume practically by directions how to make a house-made humidifier so we will not have to live in the climate of Sahara all winter. But he does not tell us whether such improvement in ventilation will turn us into ancient Romans, Renaissance Italians or modern Germans.

#### A MOVING PICTURE OF THE REVOLUTION

IF you were writing the history of the French Revolution wouldn't you like to have a documented diary written by a member of the Jacobin Club? Well, that is about like what you get in John Reed's *Ten Days That Shook the World*. John Reed is a graduate of Harvard, but not "a Harvard man." He tells of the events that took place in Petrograd, November 7-17, 1917, all of which he saw and part of which he was.

I should not pick him out as an impartial and cool-headed historian. He is too good a writer. A few years ago I heard him give a talk on his experiences in the Mexican revolution from which—if I had quite succumbed to his eloquence—I should have been convinced that Villa was a George Washington, Wilhelm Tell and Oliver Cromwell rolled into one. But for vivid description and dramatic dialog he is hard to beat. How the future Carlyle of the

Russian revolution will rejoice in this picture of Lenin:

It was just 8:40 when a thundering wave of cheers announced the entrance of the presidium, with Lenin—great Lenin—among them. A short, stocky figure, with a big head set down in his shoulders, bald and bulging, little eyes, a snubish nose, wide, generous mouth, and heavy chin; clean-shaven now, but already beginning to bristle with the well-known beard of his past and future. Drest in shabby clothes, his trousers much too long for him. Unimpressive, to be the idol of a mob, loved and revered as perhaps a few leaders in history have been. A strange, popular leader—leader purely by virtue of intellect; colorless, humorless, uncompromising and detached, without picturesque idiosyncrasies—but with the power of explaining profound ideas in simple terms, of analyzing a concrete situation. And combined with shrewdness, the greatest intellectual audacity.

Now Lenin, gripping the edge of the reading stand, letting his little winking eyes travel over the crowd as he stood there waiting, apparently oblivious to the long-rolling ovation, which lasted several minutes. When it finished, he said simply, "We shall now proceed to construct the Socialist order!" Again that overwhelming human roar.

"The first thing is the adoption of practical measures to realize peace. . . . We shall offer peace to the peoples of all the belligerent countries upon the basis of the Soviet terms—no annexations, no indemnities, and the right of self-determination of peoples. At the same time, according to our promise, we shall publish and repudiate the secret treaties. . . . The question of War and Peace is so clear that I think that I may, without preamble, read the project of a Proclamation to the Peoples of All the Belligerent Countries." . . .

His great mouth, seeming to smile, opened wide as he spoke; his voice was hoarse—not unpleasantly so, but as if it had hardened that way after years and years of speaking—and went on monotonously, with the effect of being able to go on forever. . . . For emphasis he bent forward slightly. No gestures. And before him, a thousand simple faces looking up in intent adoration.

But even for the reader who is disposed to distrust such pictorial talent and to wonder how a man without an expert knowledge of Russian stenography could report verbatim so many conversations and discussions, the volume is of value, for a third of it consists of official documents, newspaper articles and posters, some of them in facsimile. These may be patent medicine advertisements for all I know. They look like them. But in the appendix and ingeniously interwoven in the narratives are translations of speeches and editorials both pro- and anti-Bolshevik, and the Bolshevik decrees prohibiting alcoholic liquor, advocating education, dividing the land, condemning the destruction of art works, providing for factory control, etc. Not the least useful chapter is the first, with its definitions of the Russian words for the various parties and organizations.

When my son Preston went over to Paris last November I told him to buy all the papers in the first kiosk he came to and to read and rummage the nearest bookstore for my benefit. And to repeat the process once a month. His latest bundle contained an assortment of those little freak journals in which France abounds, ranging in politics from ultramontane to syndicalist, and a half dozen new books, ranging from a treatise on the aborigines of Morocco to *Les Silences du Colonel Bramble*. The former I cannot talk about, for I really haven't had time to cut the leaves, but to make up for it I have been reading the latter to everybody I could buttonhole. The author, André Maurois, seems to be a sort of unofficial liaison officer, devoted to connecting the *entente cordiale* between the two governments into a real understanding between the peoples. He is an interpreter of the British character to his countrymen, accurate, witty and never malicious. The little volume consists of fragmentary conversations between the Colonel, the Major, the Chaplain, the Doctor and the Interpreter, interrupted by shell fire and the photograph. Here is a sample:

"We are a queer people," said Major Parker. "To interest a Frenchman in a boxing-match

## McCutcheon's Spring and Summer Catalogue Now Ready

This Catalogue is small but the Garments and Linens shown have been selected with the greatest care from our comprehensive stocks.

Not only is each illustrated article up to the usual McCutcheon high standard of excellence, but there is in each case some special reason for its appearance—an unusual design, exceptional quality or novelty, an especially moderate price, or perhaps it is all of these combined.

This special Spring and Summer Catalogue illustrates a choice selection in the following lines:

Pure Linen Handkerchiefs  
Fashionable New Neckwear  
Smart Veilings  
Silk and Ribbed Underwear  
Philippine and Domestic Lingerie  
The New Sweaters  
Silk, Lisle and Sports Hosiery  
French and English Val Laces  
Baby Clothes

Children's Suits, Dresses and Rompers  
Children's Underwear  
Art Novelties  
Damask and Fancy Table Linens  
Embroidered Towels and Pillow Cases  
Sheets, Blankets and Comfortables

Also, a page of selected haberdashery for men of discriminating taste.

It is a catalogue that will delight the shopper because it illustrates the newest and best of the metropolitan stocks at prices that are outstandingly moderate.

### For Easter Wear and Remembrances

You will find in this McCutcheon Spring Book dainty Handkerchiefs, Linens, Hosiery and Lingerie appropriate for the Easter season, for your personal use or for remembrances for your family and friends.

A copy will be mailed you gladly upon request.

**James McCutcheon & Co.**  
Fifth Avenue, 34th and 33d Streets, New York

# The Prettiest Place in Our Neighborhood

## An Object Lesson in Home Gardening

Told by Paul Riker

JACK GORDON had always been cooped up in the city and I was certainly glad when he hopped off the Saturday noon train to spend the week-end at our little home in the country.

After lunch I suggested a little stroll about town to show my old city friend some of the pretty homes and the gardens, which were in full bloom. We passed down one tree-roofed avenue after another but a passive "Quite Pretty" and "Very Nice" were Jack's only remarks. Finally we went through Evergreen Avenue to Bill Meade's place—and there Jack halted in spellbound admiration.

"Whose place is this, Jim?" he asked.

"That is Bill Meade's place. He planned it himself. Only been living there three years, yet he has made what the folks call 'the prettiest place in town.'"

"Not much doubt about that. Just look at that sloping hedge, Jim, and that quaint little terrace studded with roses. Why, if that stone garden seat were moved a half inch in any direction it would be out of place. See those small trees bordering the path, with the heaviest growth all at the top so as to make a perfect canopy right over the path. And just—"

"Wait just a minute now. Bill himself is just bouncing down in a chair on the porch. We will ask him how he does it."

\*\*\*\*\*

"Well," said Bill, after introductions. "It is the same old tale of picking up all the information you can and then adding to it your common sense. Most people when planting their home grounds might just as well dump all their different varieties of seeds, bulbs, and everything else into an old boiler, churn them around a while and then scatter the mixture all over the place. They put ferns and violets where the sun scorches most and leave sun-loving plants underneath the back porch. Some of their garden paths are a series of meaningless serpentine wiggles instead of soft, natural bends. They almost use a T square and triangle in laying out their shrubs, garden patches, and trees. But come on around the back of my place. I want to show you the vegetables."

The back grounds of Bill's place were just as pretty as the front. There, in neatly arranged plots were fine patches of cucumbers, radishes, lettuce, beans, peas, potatoes, onions, and other vegetables. On both sides of the house were bushes, fruit trees, and flowers, all tastefully and serviceably placed. Hyacinths, Tulips, Gladioli, Rhododendron, Hydrangea, Lilies of the Valley, Iris, Petunia, and Roses—each put forth its own little personality, unobtrusively and without undue forwardness.

"Allah's Garden reduced to 100x150," Bill's place was called. And everybody in the town was proud of it.

When Jack Gordon left for the city next day, although I was a little envious of Bill Meade's place, I was rather proud that my town could boast what this old city friend of mine had called, "Allah's Garden reduced to 100 x 150."

### How This Applies to Your Place

Just as a beautiful picture must be rightly framed to bring out its full beauty so, in a very much larger sense, does the beauty of your house depend upon the grounds and garden which frame it. It is hard to make your grounds as beautiful and artistic as you wish to have them unless you are familiar with the right methods and plans.

Heretofore, a landscape architect or a professional gardener was needed, but on small estates and suburban homes this has been proven impractical and is now unnecessary. The Independent Corporation,

in co-operation with the very capable Countryside Press, has now produced a simple little home-reading course in Home Gardening for those who wish to plan and plant their grounds as attractively and beautifully as a specialist would do.

For those taking pride in their homes and wishing to learn the knack and the little secrets of bringing out all the hidden beauty, this course will prove of great value. It will show you many new

plans and methods, telling you how to cultivate your grounds, serviceably, attractively, and with the smallest expenditure of time and money.

It will show you how to cultivate beautiful lawns, how to plant all varieties of flowers, and how to fight and overcome garden pests. It will tell you how to lay out and plant a vegetable garden, how to make a beautiful bulb garden, and how to make hotbeds and coldframes to cultivate flowers all year round. This wonderfully helpful little course will give you actual plans and suggestions on how to lay out and plan the grounds around your home so that your place will show to its finest advantage. Complete planting tables of flowers, bulbs, and vegetables are also given, showing when to sow the seed, depth to plant them, season of bloom, height of

full grown plant, and other miscellaneous information regarding the many varieties of popular plants. All phases and methods of home gardening are covered thoroughly but simply and without a dull paragraph.

Of course, it is impossible here to explain adequately all that this wonderful little course contains. The publishers realize this. And because of it they agree to send, without cost or obligation, the entire course of 6 handy little lessons for you to examine for yourself to see

just what service they will render.

### Examine Course—Without Charge

If you will mail the Free Examination Coupon printed below, the entire course in Home Gardening will immediately be sent for your free examination. Read it for 5 days, decide just what its true value to you will be. If you feel that it is worth its reasonable price of \$3, mail the publishers this amount at the end of the free examination period of 5 days; otherwise return the course and forget the matter.

The publishers feel that this is a worthwhile opportunity both for those who have estates and for those living in suburban homes. If you are your own gardener, this course will be an invaluable service to you in improving your grounds and in making your home more pleasant and attractive. If you employ a gardener, he will find in these lessons real every-day help.

Mail the coupon and examine this course. No obligation is incurred and you will enjoy seeing these beautifully illustrated lessons, telling you how to cultivate and beautify your home grounds and gardens in the shortest possible time and at the most economical cost.

### The Course in Brief

Lesson I. Planting the Home Grounds. Tells How to Plan and Plant Tastefully and Serviceably, Planting for Spring Bloom and Late Fall, Living Fences and Hedges, Best Ways of Making a Lawn, Slopes and Terraces, Exercising Originality in Planting, Planting for Succession of Bloom, Use of Vines and Trellises, Preparing the Soil, Planting a Small Area, and Other Helpful Instruction.

Lesson II. Making a Flower Garden. Tells about Bedding Plants, Geraniums, Cannas, Pansies, Sweet Peas, Roses, and Other Favorite Varieties. Plants for Edging, Transplanting Seedlings, A Busy Man's Garden, and Instructions for Growing It. Shrubs and Perennials. The Flower Garden Month by Month.

Lesson III. Making a Vegetable Garden. Gives Right Methods of Growing Lettuce, Beets, Melons, Beans, Peas, Tomatoes, Cucumbers, and Other Popular Vegetables. Planning and Planting, Preparing the Soil, Sowing and Use of the Seed Drill, Rotating the Crops. Supplying Plant Food. The Late-Started Garden. The Vegetable Garden Month by Month.

Lesson IV. Fighting Garden Pests. How to Rid Your Garden of Cabbage Worms, Tree Borers, Bag Worms, Goat Moths, Bugs, Beetles, and Other Pests. Methods of Spraying, and Other Means of Prevention.

Lesson V. Making a Bulb Garden. Giving Complete Instructions on Cultivating the Gladioli, Narcissus, Jonquils, Hyacinths, Madonna Lilies, Tulips, Tuberose, Cannas, Dahlias, and Other Favorite Varieties.

Lesson VI. Hotbeds and Coldframes. How to Construct Hotbeds and Coldframes. Autumn Work in Coldframes. Two Practical Small Greenhouses, Best Methods of Employing the Hotbed. Getting the Best Results from Your Coldframes. Full Directions on Using the Hotbed and the Coldframe to the Finest Possible Advantage.

it is necessary to tell him that his national honor is involved in it. To interest an Englishman in a war it is only necessary to suggest to him that it is a sort of boxing-match. Tell us that the Hun is a barbarian and we politely agree. But tell us that he is a bad sportsman and you rouse the British Empire."

"It is the fault of the Hun," said the Colonel sadly, "that war is no longer a gentleman's game."

"We did not imagine," replied the Major, "that such scoundrels could exist in the world. To bombard open towns is almost as unpardonable as to fish for trout with a worm or shoot a fox with a gun."

"Don't exaggerate, Parker," said the Colonel, coldly. "They have not gone so far as that yet."

The Frenchman, like some of the rest of us, is puzzled by the Irish question. This is how the Doctor explains it to him:

In the year before the war a Liberal member of Parliament visiting Ireland said to an old peasant:

"Well, my friend, we are going to give you Home Rule soon."

"Heaven help us, your honor," said the man. "Don't do that."

"What?" said the M. P., stupefied.

"Your honor," said the Irishman, "I will tell you how it is. You are a good Christian, your honor? You want to go to Heaven. So do I. But we don't want to go there this evening."

The clergyman asks Dr. O'Grady as an Irishman to explain to him why the Catholic chaplains have more prestige than the Anglican, and the Doctor answers by this parable:

A gentleman had killed a man. He was not suspected, but remorse made him wander sadly about. One day as he passed an Anglican church it occurred to him that his secret would be lightened if he could share it. So he entered and asked the vicar if he would hear his confession. The vicar was a young and ardent churchman, educated at Eton and Oxford. Delighted at this rare opportunity he hastened to say:

"Certainly. Open your heart to me. You can tell me all as to a father."

The other began:

"I have killed a man."

The vicar jumped up.

"How do you dare come to tell me that! Miserable murderer! I do not know but that it is my duty as a citizen to take you to the nearest police station. At any rate, it is my duty as a gentleman not to let you stay a minute longer under my roof."

So the man went away. Some miles beyond he came to a Catholic church. As a forlorn man he entered and knelt behind some old women who were waiting near a confessional. When it came his turn he discerned in the shade a priest praying with his head in his hands.

"Father," he said, "I am not a Catholic, but I wish to confess to you."

"My son, I am listening to you."

"Father, I have committed murder."

He awaited the effect of this frightful revelation. The solemn silence of the church was broken by the priest, who said simply:

"How many times, my son?"

This is one of the most serviceable anecdotes I ever got hold of. I have tried it on a devout Catholic, a fanatical Protestant, and Church of England clergyman, and each saw in it something that pleased him immensely.

Where his is her'n

And her'n is his'n"

—London Opinion

"Boys," said a teacher to her Sunday school class, "can any of you quote a verse from the Scripture to prove that it is wrong to have two wives?"

A bright boy raised his hand.

"Well, Thomas," encouraged the teacher.

Thomas stood up. "No man can serve two masters," he said proudly.—*Punch*

## "The Boy That Night Ate the Last Puffed Grain"

At a house where I visited the hostess said to the writer, "We love Puffed Grains in our home, but somehow we don't use a large amount."

"Let us see why," I suggested.

Next morning she served Puffed Rice for breakfast, and the last grain was consumed. At noon she served Puffed Wheat in milk, and not a kernel left the table.

In the afternoon the daughter used two cups of Puffed Rice in candy. And the boy that night at bedtime ate the last Puffed Grain in the house.

### That's All the Trouble

You will find that children eat all the Puffed Grains they get. The only hint when you serve them is the bottom of the dish.

These are airy, toasted bubbles, thin and flaky, puffed to eight times normal size. In form and flavor Puffed Grains are exquisite.

They are whole-grain foods—Puffed Wheat and Puffed Rice. And children need whole grains.

They are steam exploded, shot from guns. By this unique process of Prof. Anderson every food cell is blasted. Thus digestion is easy and complete. No other process ever known so fits grain foods to digest.

Don't you think it a vast mistake when such foods are served sparingly, and lesser foods take their place?

## WHAT SHALL WE DO WITH THE SHIPS?

(Continued from page 63)

necessary legislation for which should be passed by Congress without delay. Such a charter should provide that no stock shall be issued in excess of the money value actually paid in on vessel property, and that no stock can be issued or transferred to an alien.

"It should also provide that one member of the board of directors for each company shall be named by the Government. This director should draw no salary, either from the steamship corporation or from the Government. He should receive only the director's fee for each meeting he attends.

"The same legislation should provide for periodical meetings of these Government-named directors, in the city of Washington, where they will constitute an official body which will confer with and advise the Shipping Board, or other designated Government agency, upon problems arising in, or questions affecting the welfare of, the American Merchant Marine, including the administration of the Merchant Marine Development Fund.

"This fund, drawn from the sources previously indicated, should be used to relieve such financial difficulties as may be encountered in the development of an adequate and well-balanced American Merchant Marine. For instance:

"It is foreseen that a number of trade routes important to the immediate or future welfare of American commerce must be established and developed. Some of these routes may not yield steamship operating profits until their existence shall have attracted an increased volume or better balance of trade. Revenue derived from the carriage of mail, and possible fees for the training of seamen and cadet-officers, may partly compensate losses incurred on these routes. Still, in cases where the Government sells a ship upon condition that it be operated in a route which may not prove profitable at once, it will be necessary to provide for the payment of defaulted interest from the Merchant Marine Development Fund, at the discretion of the Shipping Board or other Government agency, upon recommendation of the board of Government directors, until such time as the route may begin to yield profit. When the ships in the route earn their annual interest rate and a profit, one-half the profit earned each year should be paid into the Merchant Marine Development Fund until all moneys drawn from the fund on account of the vessel in question shall have been replaced. The other half should go annually to the steamship stockholders.

"Such vessels cruising in routes which fail to prove susceptible of profitable development and which do not serve any purpose of the Government of the United States, may be transferred by the Government to other routes. However, should the Government become convinced that any vessel has failed to make expenses solely or chiefly because of incapable management, it may foreclose its mortgage thereon."

In conclusion, Mr. Hurley declared that this plan is "based upon profound convictions formed after a close personal study of conditions at home and in Europe, and after careful consideration of the best information I could obtain about what is going on in other quarters of the globe." His one thought, he said, was to "work out a plan which would be American in conception and adapted to the ideals, genius, temperament and business methods of the American people—a plan sufficiently elastic to serve the enormous extension of overseas trade we have in prospect without having to undergo disorganizing changes."

## WHAT ROOSEVELT DID

One of the best tributes to Theodore Roosevelt is that contained in the resolutions of the Boy Scouts of America. It is worthy of being put into eternal bronze:

"He was found faithful in a few things and he was made ruler over many. He cut his own trail clean and straight and millions followed him toward the light.

"He was frail. He made himself a tower of strength.

"He was timid. He made himself a lion of courage.

"He was a dreamer. He became one of the great doers of all time.

"Men put their trust in him. Women found a champion in him. Kings stood in awe of him, but children made him their playmate.

"He broke a nation's slumber with his cry, and it rose up. He touched the eyes of blind men with a flame and gave them vision. Souls became swords thru him. Swords became servants of God.

"He was loyal to his country—and he exacted loyalty. He loved many lands, but he loved his own land best.

"He was terrible in battle, but tender to the weak; joyous and tireless, being free from self-pity, clean with a cleanness that cleansed the air like a gale.

"His courtesy knew no wealth nor class. His friendship no creed, or color, or race. His courage stood every onslaught of savage beast and ruthless man, of loneliness, of victory, of defeat. His mind was eager, his heart was true, his body and spirit defiant of obstacles, ready to meet what might come.

"He fought injustice and tyranny, bore sorrow gallantly, loved all nature, bleak spaces and hardy companions, hazardous adventure and the zest of battle. Wherever he went he carried his own pack, and in the uttermost parts of the earth he kept his conscience for his guide."

## Pebbles

In the monarchical algebra "ex" equals nothing. *Arkansas Gazette.*

We shall beat our swords into plowshares and our corkscrews into button-hooks. *Brooklyn Eagle.*

An optimist looks at an oyster and expects a pearl. A pessimist looks at an oyster and expects ptomaine poisoning. *New York Evening Sun.*

"Laws, this war do open one's eyes, don't it? Fancy your son writing from Jerusalem. I always thought Jerusalem was in Heaven!" *London Opinion.*

Orpheus of old could make a tree or a stone move with his music; but there are piano players today who have made whole families move. *Boston Transcript.*

# The Teeth Problem Is Up to You

*All Statements Approved by High Dental Authorities*

## This You Must Decide

Do you think your present methods of teeth cleaning are sufficient to save your teeth?

We think you know they are not. Teeth still discolor, still decay. Tartar still forms on them. And most folks at some time, despite their brushing, suffer pyorrhea.

Statistics show that tooth troubles are constantly increasing, yet the tooth brush never was so widely used as now.

Science has found the reason. It lies in a film—a slimy film—which you feel with your tongue. That causes most tooth troubles.

That film is what discolors—not your teeth. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So that film is your teeth's great enemy.

You brush teeth and think you have cleaned them. But much of that film remains. It clings to the teeth, gets into crevices, hardens and stays. It is doing a ceaseless damage, while you ignore it, relying on tooth-brush protection.

There is now a way to combat that film—a way proved and approved by many high authorities. It is easily used and as pleasant as any other tooth paste, but it does what nothing else can do.

That way is called Pepsodent. We urge you to try it, then decide for yourself if you want it.

## A 10-Day Revelation

What we urge is a 10-day test. It will cost you nothing. Compare the results with your present results, and decide which you prefer.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it. Then, day by day, to prevent its accumulation.

The use of pepsin seems simple, but it long seemed impossible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. Today it is possible because science has found a harmless activating method. Five governments have already granted patents on it.

Dental authorities subjected Pepsodent to every form of clinical test. Years were spent in proving it before it was offered to users. Today its results are known beyond question, and dentists all over America are urging its adoption.

See what it does. Send this coupon for a 10-Day Tube. Use it like any tooth paste. Note how clean your teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—as the fixed film disappears.

Do this for your own sake. See the effects, read the reasons for them, then judge if you want them continued. A delightful surprise awaits you. Cut out the coupon now.

## SCHOOLS AND COLLEGES

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York  
FIFTY-SECOND YEAR

A School in the Heart of the Open Country For Boys from 9 to 19.

**LOCATION:** In the heart of the open country, 200 feet above sea level. Healthful, invigorating, and inspiring.

**WORK:** The school is a day school. The boys study in the morning and work in the afternoon. A variety of subjects are taught.

**ATHLETICS:** The school has a track, a swimming pool, and a gymnasium. The boys are encouraged to take part in all sports.

You are invited to come and see for yourself. Catalogue sent upon application.

ALVAN E. DUERR, Headmaster

## RANDOLPH-MACON WOMAN'S COLLEGE

Offers courses for A.B. and A.M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 31 states and countries. Address

LYNCHBURG, VIRGINIA

WILLIAM A. WEBB, Pres., Box 46

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## BOOKS FOR BOYS AND GIRLS

**BUGS AND WINGS AND OTHER THINGS**, by Annie W. Franchot. (E. P. Dutton & Co., \$1.50.) Crickets and ants and locusts and worms are humbler than some folks in these adventures of a little girl in insect land. There are lots of jolly pictures.

**THE BOY WITH THE U. S. NATURALISTS**, by Francis Rolt-Wheeler. (Lothrop, Lee & Shepard Co., Boston, \$1.35.) Much miscellaneous information on birds, and the reasons for their protection is hung on a slender story. Having glanced thru it, a thoughtful youth will set it aside for reference.

**TOM AND I ON THE OLD PLANTATION**, by Archibald Rutledge. (Frederick A. Stokes Co., \$1.35.) Tales of sport and adventure, simply and directly told. Sharks, crocodiles, bulls, boars, an enormous serpent, fire and accident figure in the stories in turn. A wholesome book, that every boy will love—and every tomboy, too.

**THE SECRET WIRELESS**, by Lewis E. Theiss. (W. A. Wilde Co., Chicago.) Up to the best standard of books of this class. Sound impressions are conveyed in a timely, moving story of considerable technical ingenuity.

**CARITA**, by Lucy M. Blanchard. (Page Co., \$1.50.) How Carita, a little American girl brought up in Mexico, becomes a patriotic American, by the author of Hildegard-Margaret series.

**THE MOVING HOUSE**, by Pauline Bradford Mackie. (Small, Maynard & Co., \$1.25.) Fanciful, full-of-fun story for young readers of a house that started on a wonderful journey; appropriately illustrated.

**A RIDE ON A ROCKING HORSE**, by R. A. Marshall. (E. P. Dutton & Co., \$1.50.) A story that the littlest children can read for themselves, with beautiful colored pictures on every page.

**THE STORY OF THE PILGRIMS FOR CHILDREN**, by Roland G. Usher, Ph.D. (Macmillan Co., \$1.25.) Authentic story of the Pilgrims, which, while adhering to the facts of history, is yet told with a charm and liveness of narration sure to interest children, 6 to 12.

**THE FAIRIES' ANNUAL**, by Cecil Starr Johns. (John Lane Co., \$3.) Jolly good stories of what the fairies have been doing lately, illustrated with lots of colored pictures.

**FAERY TALES OF WEIR**, by Anna McClure Snoll, illustrated by Katherine Pyle. (E. P. Dutton & Co., \$2.) The sleepy town of Weir has its own stories of the fairies who controlled the ventures of lords and ladies long ago.

**THE BOYS' LIFE OF THEODORE ROOSEVELT**, by Hermann Hagedorn. (Harper & Bros., \$1.25.) Biography with a dash, vigor—and sometimes an enthusiastic exaggeration—worthy of its strenuous subject. One need be neither a boy nor a "Roosevelt fan" to enjoy this story of a fearless man and the history that he helped to make.

**THE BOY'S OWN BOOK OF GREAT INVENTIONS**, by Floyd L. Darrow. (Macmillan Co., \$2.50.) A careful description, with diagrams, of the world's greatest inventions, explained in a way to appeal to the boy's inventive faculty.

**THE CHILDREN'S HOMER**, by Padriac Colum. (Macmillan Co., \$2.) The "Adventures of Odysseus" and the "Tale of Troy" retold for children in an intimate, spirited manner. Beautifully illustrated in color.

**DREAM BOATS**, by Dugald Stewart Walker. (Doubleday, Page & Co., \$1.50.) Histories of fairies, fauns and fishes. A treasure trove of elfin tales and fantastic pictures for all who believe in the land of Let's Pretend.

**THE SANDMAN'S FOREST**, by Louis Dodge. Illustrated by Paul Bransom. (Charles Scribner's Sons, \$2.) What happened to Giddy when he went to bed all by himself and the Super-stork took him to visit the dream-forest animals.

**HOME LIFE AROUND THE WORLD**, by George A. Mirick. Pictures by Burton Holmes. (Houghton, Mifflin Co., \$1.25.) Descriptive stories about people of many lands, including such unhackneyed subjects as Hawaii and Lapland. For children from eight to ten.

**THE SURPRISE BOOK**, by Patten Beard. (The Pilgrim Press, \$1.) The surprise is a novel and practical idea for an all-year-round Christmas gift with a special story for every month.

**LITTLE TALES OF COMMON THINGS**, by Inez N. McFee. (Thomas Y. Crowell Co., \$1.25.) Informal but informative conversations, explaining the "how" and "why" of everyday wonders like buttons, potatoes and raindrops. Illustrated with photographs.

**GIRLS OF '64**, by Emily Benson Knipe and Alden Arthur Knipe. (Macmillan Co., \$1.35.) A romance of love and mystery concerning an undetected Northern sympathizer in an ardent Confederate household.

**OUR WINTER BIRDS**, by Frank M. Chapman. (D. Appleton & Co., \$1.) A simple and inter-

## STOP THE LEAKS THAT KEEP YOU POOR

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

## NEW METHOD MAKES SAVING A PLEASURE INSTEAD OF A HARDSHIP

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT

119 WEST 40th STREET

NEW YORK CITY

esting explanation how to know and attract the birds. Illustrated with black and white plates.

**CLEMATIS**, by Bertha B. and Ernest Cobb. Colored illustrations by A. G. Cram and Willis Levis. (G. P. Putnam's Sons, \$1.25.) The story of an orphan girl who is taken to a home but later finds a real home and a grandfather.

**FIVE IN A FORD**, by Mary P. Wells Smith. (Little, Brown & Co., \$1.35.) Summer vacation adventures, with the aid of a brand new Ford, of a family in the northern Berkshires.

**ARLO**, by Bertha B. and Ernest Cobb. Illustrations by Charles Copeland. (G. P. Putnam's Sons, \$1.25.) Romantic tale of a boy who goes wandering with a fiddler and, amid perilous adventure, finds his unknown father.

**THE BATTLE SHIP BOYS ON SKY PATROL**, by Frank Gee Patchin. (Henry Aitemus Co., 50 cents.) Volume VIII in "The Battle Ship Boys Series," narrating their adventures in fighting the Hun above the clouds.

## With Great Musicians

**FACE TO FACE WITH GREAT MUSICIANS**, by Charles D. Isaacson. (Boni & Liveright, \$1.50.) Called by a famous woman pianist "the best musical book I have read." Informally written, impressionistic and personal sketches of great musicians, with emphasis on illuminating differences in their style and content.

**CONFESSIONS OF AN OPERA SINGER**, by Kathleen Howard. (Alfred A. Knopf, \$2.) Entertainingly told in the first person—the story of the student days and early career of the well known American contralto.

**CONTEMPORARY COMPOSERS**, by Daniel Gregory Mason. (Macmillan Co., \$2.) Studies of a modern group of composers to supplement former volumes dealing with the great masters from Beethoven down to the present time.

**THE LURE OF MUSIC**, by Olin Downes. (Harper & Bros., \$1.50.) Stories of composers and operas with references to the Columbia records of the music and pronouncing dictionary. Fifty composers included, but never a German among them. The musical boycott is evidently in action.

**HOW TO SING A SONG**, by Yvette Guilbert. (Macmillan Co., \$2.) Technique, interpretation, the interrelation of all the arts to achieve the one—a book for the student but even more for the layman who would appreciate this unique woman and her perfect art.

**THE BETHLEHEM BACH CHOIR**, by Raymond Walters. (Houghton Mifflin Co., \$2.50.) The history of the choir from its beginning one hundred and seventy-five years ago with a *Sing-stunde* in the town of Bethlehem, Pennsylvania.

## Plays and About Plays

**HORIZONS**, by Francis Hackett. (R. W. Hackett, \$2.) Informal essays of criticism that point out and clarify the instinct to progress in modern plays and novels.

**THE MIRACLE OF ST. ANTHONY**, by Maurice Maeterlinck. (Dodd, Mead & Co., \$1.50.) A one-act play of humorous satire on the contrasting attitudes of rich and poor toward spiritual things. Only in binding does it conform to Maeterlinck's usual style.

**THE SOCIAL PLAYS OF ARTHUR WING PINERO**, edited by Clayton Hamilton. (E. P. Dutton & Co., \$2.) "The Gay Lord Quex" and "The Lady of Lyons," with a critical preface to each, and a general introduction to Pinero's other plays.

**THE PEOPLE'S THEATER**, by Romain Rolland. Translated from the French by Rachel H. Goss. (Henry Holt & Co., \$1.50.) What a people's theater should and should not be. A plea more to France than here, where the theater is the true theater of the people.

**WHY MARRY?** by Jesse Lynch Williams. (G. P. Putnam's Sons, \$1.50.) A new edition of a play that is as witty and monochromatic as ever.

**THE FOURTEENTH OF JULY AND DANTON**, two plays of the French Revolution by Romain Rolland. (Henry Holt & Co., \$1.50.) Two historical plays by the author of "Jean Christophe," which are interesting not only from the literary standpoint, but also as a distinct contribution to the new theater movement in France.

**THE RETROGRADE**, a sequel to the Blue Bird, by Maurice Maeterlinck. (Dodd, Mead, \$1.50.) This has been considered as a play in The Independent of November 16, and its philosophy was discussed in the issue of January 12.

**LITTLE THEATRE CLASSICS**, Vol. I, adapted and edited by Samuel A. Eliot, Jr. (Little, Brown & Co., \$1.50.) Six plays ranging from Eschylus to Moliere, all unsurpassed in stage qualities and especially adapted for use in the modern little theater.

**THE MERRY GO ROUND**, by Carl Van Vechten. (Alfred A. Knopf, \$2.) Entertaining, witty essays by a famous musical critic on modern culture connected with music and the theater. "In Defense of Bad Taste" is comforting to common folk.

# You Cannot Go Back

Do you remember when the American First army met the war-worn French at Chateau Thierry and the French Commander besought them to go back.

The American Commander's laconic reply was "Go back—hell! We just got here and my orders are to go forward."

Has somebody said to you "The war is over. Now you can go back to your old life?"

Don't believe it. There is no going back. The old order has changed. What you learned from the war, what you did and thought and sacrificed for the war and during the war has become now your everyday life. You cannot help it.

When the armistice was signed, was that the end? Was that our goal? Was that what we had fought and saved and worked and suffered for—just to make Germany stop fighting, just to get an armistice signed?

"Go back now! We only just got here! The orders are to go forward."

What you did and gave during the war was only the beginning of what you will do and give from now on.

The Fifth—the Victory Liberty Loan—will soon be here. Don't think you will ignore it. You will not. Don't think you have lost your interest in it. You have not. Your honor—the honor of your country is bound up in it.

Men of vision—you cannot go back to the old unheeding way. You are called to take your stand with a regenerated world. So much of sacrifice and pain and suffering do not belong alone to the yesterday of war that is past. They are the foundation upon which the reborn world is building its future—its hope of happiness, its guarantee of prosperity and peace.

## NEW SMALL, MAYNARD BOOKS

### The Fighting Shepherdess

By CAROLINE LOCKHART

Author of "Mc-Smith," etc.

A story of the West, but by no means "an other Western story." Real and understanding action, this tale, writes S. D. Williams in the Boston Herald, "such action increases knowledge of life." Fifth printing.

Net \$1.50 (by mail \$1.65)

### Tam o' the Scoots

By EDGAR WALLACE

Author of "The Man Who Knew," etc.

"Whatever you don't read among the new books, make a point of reading 'Tam o' the Scoots.' Don't put it off. Get it, borrow it, but get it. If you steal it you can make rest for it afterward."—New York Sun. Six and printing.

Net \$1.35 (by mail \$1.50)

### The Bargain True

By NALBRO BARTLEY

Author of "Paradise Auction," etc.

"Not only an entertaining romance, but a big, broad and powerful novel which holds the reader with a gripping fascination and reveals itself as a finished piece of literary work."—Boston Transcript. Third printing.

Net \$1.50 (by mail \$1.65)

### The Best Short Stories of 1918

Uniform with "The Best Short Stories of 1915, 1916, 1917."

Edited by EDWARD J. O'BRIEN

"From every point of view 'The Best Short Stories' warrant an emphatic and unconditional recommendation to all."—Life. Third printing.

Net \$1.60 (by mail \$1.75)

### Keep Off the Grass

By GEORGE ALLAN ENGLAND

Author of "The Alibi," etc.

A book of rare American wit and humor that reflects the funny side of the regulations Mr. Hoover, Mr. Garfield and Mr. McAdoo were constantly handing out. With the text are illustrations which, in the language of the street, are a "scream."

Net \$1.00 (by mail \$1.15)

### The Firebrand of Bolshevism

By PRINCESS CATHERINE RADZIWIŁŁ

A fascinating true story of the Bolsheviks and the forces that directed them. "Very readable and very much what people want," says the Boston Post.

Net \$2.00 (by mail \$2.20)

### Victory

Celebrated by 38 American poets, brought together by

WILLIAM STANLEY BRAITHWAITE

Editor of "The Golden Treasury of Magazine Verse," etc.

"I am glad," wrote Theodore Roosevelt, "that there should be an effort to commemorate the great peace triumph which we have helped to win by collecting what our singing men and singing women have written concerning it." Net \$1.50 (by mail \$1.65)

### The Heart of Peace

By LAURENCE HOUSMAN

"A new collection of this distinguished Englishman's poetry. Mr. Housman has the appealing gift of fantasy, can create an atmosphere that has a kind of wizardry of its own."—Boston Transcript.

Net \$1.25 (by mail \$1.35)

## A BIRD IN THE BUSH IS WORTH TWO IN THE HAND

BY HARRY OLDYS

Mr. Oldys writes from many years of active experience in that branch of the Department of Agriculture which has charge of the preservation of the game and birds of the United States and the importation of live birds and mammals from abroad

THAT birds are helpful to agriculture is a fact that has received general recognition in civilized countries, but the extent of this service is not so widely known; and in this time of stress, when an excessive burden of supplying food for human needs has been thrown upon the shoulders of the United States and Canada, it is important to devote more than usual thought to the question of how much actual assistance birds render and how it may be increased.

It has been stated by a French ornithologist that were it not for the presence of the birds the earth would be uninhabitable within ten years. To a conservative mind this assertion seems, on its face, to be somewhat extravagant, and many careful students of the economic relations of bird and man have confined themselves to the milder view that were the birds all destroyed agriculture would be extremely difficult.

But the sweeping statement of this Gallic bird student seems to derive at least some degree of support from the experience of some colonists in the Illawarra District of New South Wales. In an exceedingly fertile and beautiful tract of thirty square miles, which form a table-land 1200 feet above sea-level, the birds were ruthlessly shot and destroyed until there was an almost total absence of bird life. This foolish extermination of the birds was followed by an invasion of a host of grubs, and in three years the lovely garden spot was transformed to a barren desert, and nine out of every ten of the families had moved away, to seek land on which they could support life.

Another example of this kind was furnished twenty-five or thirty years ago by the State of Pennsylvania. An ill-advised law placing a bounty on all hawks resulted in wholesale and indiscriminate destruction of these birds, many species of which are eminently useful in destroying grasshoppers and other insects. The actual result of this unintelligent legislation, which was designed to save a few thousand dollars' worth of chickens annually destroyed by the hawks, was an immediate and pestiferous outbreak of field mice. The law was promptly repealed, but not before grass and other crops had suffered a damage estimated at more than a million dollars. Incidentally the law cost the state nearly \$100,000 in bounty payments.

Such occurrences cannot fail to have a salutary educational influence, and we are slowly learning the unwisdom of hasty and indiscriminate warfare upon birds because of certain palpable damage they inflict. The evil they do is usually much more readily perceptible than their beneficial service; but the careful man or community will set the good and bad habits on opposite sides of the ledger and strike a just balance. If, as is usually the result of such judicial investigation, the balance is found to be favorable to the bird, it is only ordinary good sense to seek some means of protection from the birds' depredations that does not involve the destruction of the birds and consequent loss of their valuable aid.

We are learning this by slow degrees. Bounties are becoming less common and will ultimately become obsolete; protection of the birds is increasing in effectiveness; measures for securing the presence of birds in larger numbers are engaging more and more attention; and authoritative reports on the economic status of various species of birds, preëminently those of the United States Department of Agriculture, are received with a constantly growing respect and interest.

It is pleasant to an American to know and realize that the United States leads the world in both knowledge of the economic relations of birds to agriculture and practical application of such knowledge. Outside of Europe, Canada, Australia and New Zealand comparatively little interest is taken in this important subject, tho there is hardly a country in the world that is wholly indifferent to the part played by the birds in the general welfare. Not only are the laws of the United States more judiciously framed than those of any other nation, but the people of this country take a more general and more intelligent interest in the lives, habits and needs of birds.

One would suppose that Europe, the greatest agricultural region in the world, rich also in the experiences that its centuries of civilized existence have accumulated, could easily be our teacher in all questions relating to forces friendly and inimical to agricultural operations. But such is not the fact. Europe can and does learn of us how to regard and deal with the bird.

This is not to say that Europeans are indifferent to their birds. The many nesting boxes in the private gardens and public parks of England, the little bird houses on the sides of chalets and railway stations in Switzerland, the birds' Christmas trees of Norway—these and many like evidences of love of birds and interest in their welfare are to be noted by the observant traveler. But tho in a general way the people of Europe are interested in birds and are aware of the favorable influence on crops exerted by their presence, they have not made a careful and systematic study of the exact relations of birds and agricultural interests and so are not as well equipt as we to determine the extent and character of the service rendered by each species. In a region which, in normal years, produces nearly two-thirds of the world's crop of wheat, rye, oats and barley, nine-tenths of its potato crop, nearly a sixth of its corn, and more than two-fifths of its sugar this inferiority to a newer, less agricultural country like the United States is a matter for surprise.

The disturbing influence and unrest of international political complications are probably responsible for this condition. Isolated as we have heretofore been from these problems of international relationship that we have beset Europe and demanded so much attention we have been able to devote much more of our thought and time to domestic questions and so have stolen a march upon the inhabitants of our parental home.

Europe has, however, made a persistent effort to secure coöperative international protection for her birds. As long ago as 1868, owing to the palpable decrease of birds and increase of insects, a movement was begun which, in 1902 thirty-four years later culminated in the effecting of a convention, or agreement, between sev-

ally arises. If birds are all important to agriculture how is it that Europe can destroy her birds so recklessly and yet lead the world as a crop producer?

There are several reasons for this apparent anomaly.

In the first place Europe is densely populated and the denser the rural population the smaller the holdings. The smaller the holding the greater the human supervision available and the less dependence on birds.

In the next place the normal supply of birds is greater in Europe than in America, where settlement and clearing of land has been recent and rapid enough to disturb established conditions. On the other hand birds that are benefited by the settlement of the country, such birds as are usually found about farmsteads, have not yet had time to show the full benefit of the change. They are increasing in numbers constantly, but they have not yet nearly equaled the density of population of similar birds in Europe.

Again, it must be remembered that a certain standard once set, men will work harder to avoid dropping to a lower level than they will to rise to a higher level. The increasing proportion of insects to birds in Europe will be met by more arduous labor to maintain production at the accustomed point. There are, of course, many incidental factors that prevent the effect of the proportion of insects to birds from moving steadily and smoothly upward or downward—factors growing out of changes in agricultural implements, insecticides, methods of cultivation, etc.—but the general trend can usually be perceived despite these deflecting influences.

Again, in Italy, where one would think that agriculture would be at its lowest ebb, but where we find production taking fairly high rank beside the great fertility of its soil, the country abounds in insect-destroying lizards, which, to a certain extent, replace the absent birds. Nevertheless, it is reported that "legions of noxious insects fill the air and infest the dwellings" and "the country groans under a burden of insect life." From which we must conclude that Italy would be far more habitable and healthful a place of residence and would take much higher rank as a producing country if its inhabitants could be cured of their bird-destructive usages.

It must be confessed that Italy's productivity in the face of a greatly diminished bird population leads us to be cautious in accepting without reservation our French ornithologist's statement as to the uninhabitability of the earth within ten years of the extermination of the birds. However, Mr. James Buckland, of London, tells us that "the wholesale destruction of bird life in Jamaica has led to such an increase of the grass-tick that the keeping of most breeds of cattle has become impossible." It may be added that while the birds of a locality may be very quickly destroyed, re-instating them is an exceedingly slow process.

When one realizes the remarkable fertility of insects and considers at the same time the voracious appetites of birds it is not difficult to appreciate the urgency of retaining these volunteer agricultural assistants. It has been estimated that the ordinary potato beetle if no checks were encountered would in one season produce 60,000,000 descendants. There are, it is true, many checks of various kinds imposed by nature to prevent such multiplication of a single species, but the principal of these checks in the case of insects is found in the feeding proclivities of the birds, and with this check removed and in the ab-

sence of special conditions multiplication will be rapid.

In our present food campaign we are frequently reminded that it is the small savings multiplied by millions that count.

We are told that the saving of only one slice of bread a day by each family in the United States means the saving of 1,000,000 loaves of bread every day, or 365,000,000 loaves in a year. By the same process of thinking we can properly understand the enormous total of insects consumed by birds. The late Dr. Judd, a brilliant member of the staff of economic ornithologists of the Biological Survey, illustrated this mounting up of small items to an immense total in discussing the value to agriculture of the bobwhite. Estimating the number of bobwhites in Virginia and North Carolina (where they are very numerous) as 354,820

an allowance of but four to the square mile—and taking the amount of food eaten daily by each from an examination of many stomachs, he arrived at the conclusion that in the three summer months of June, July and August, when insects abound and constitute a large part of the diet of these birds, they destroy the tremendous total of  $3\frac{1}{2}$  tons of insects.

It is when they are feeding young in the nest that birds perform their most efficient service as destroyers of insects, for then they have to secure enough food for their broods as well as themselves. And the young are equipt by nature with enormous appetites in order to compass a rapid growth. Nestling birds consume food equal to their own weight daily, and all are fed, including the young of seed-eating birds, on soft-bodied insects, chiefly grasshoppers and caterpillars, a large proportion of the latter consisting of cutworms. It is therefore greatly to the interest of every farmer and gardener to encourage birds to nest on his place and to have as many as possible.

A practical demonstration of the large and immediate returns that may be derived from understanding and utilizing the important assistance of birds was given by Mr. E. H. Forbush, State Ornithologist of Massachusetts. One autumn Mr. Forbush attracted birds in unusual numbers to his orchard. He fed these birds thru the winter and spring and provided nesting facilities for them. The following summer witnessed an outbreak of canker worms and tent caterpillars in that region and a consequent total loss of the fruit crop of the township for every resident but Mr. Forbush and his adjoining neighbor, both of whom raised normal crops. Mr. Forbush did not spray his trees but placed his full reliance on the birds whose presence he had secured.

To draw from birds their best service it is not enough to maintain a merely neutral attitude toward them—we must ally ourselves with them and give them active aid. We must not merely permit them to pursue their lives unhampered by us, but must use intelligent measures to increase their numbers. Our settlement of the country and planting of millions of acres with vegetable crops increases the numbers of such of the insects as find those vegetables a congenial food. And altho this increase of insects supplies abundant food for birds, yet if we destroy the natural nesting places of these birds and fail to provide others, or if providing suitable nesting sites we do not add suitable protection from enemies, organic or elemental, the birds will gain in numbers far less rapidly in proportion than the insects and we shall find the fight for the crops growing continually harder.

It has been said that he who makes two blades of grass grow where there was

formerly but one is a benefactor of his race. Similarly it may be declared that he who makes two pairs of birds nest in place of one deserves the thanks of his country.

It should be recognized by all, that however much enjoyment may be derived from the beauty of song and plumage in the abundance of birds about the home, and whatever feelings of pleasure may arise thru altruistic motives in rendering kindly assistance to these little companions, yet caring for the birds and increasing their number is not a matter of pure sentiment but is dictated as well by practical common sense. It is greatly to our interest that birds should become more abundant; and at this time of close and careful calculation of every ounce of food, our attitude in this respect may mean the difference between comfort and privation.

### Pebbles

A Mr. Cobb has married a Miss Webb. He knew that they were meant to be joined as soon as he spied her.—*Tit-Bits*.

Narrow skirts are decreed, a Western cynic says, to prevent the girls from running after our returned heroes.—*Boston Transcript*.

New Mistress—How about the afternoon off?  
Norah—Sure, mum, take wan—I'm willin'.—*Boston Transcript*.

"The widow seems to take great interest in old Richleigh."

"Yes, she thinks that if she takes interest now she'll have the principal later."—*Boston Transcript*.

"I don't see why they are unhappily married. They went to school together."

"Yes, but not a little red schoolhouse. They attended a coeducational institution, where she studied sociology and he delved in metaphysics."—*Birmingham Age-Herald*.

"It's twenty minutes to one, and I've been waiting here since a quarter to twelve."

"What time did he say he would meet you?"

"Ten minutes to eleven sharp."—*Sydney Bulletin*.

"Hubby, if I were to die would you marry again?"

"That question is hardly fair, my dear."

"Why not?"  
"If I were to say yes you wouldn't like it, and to say never again wouldn't sound nice."—*Pittsburg Sun*.

A negro doughboy was clad in white pajamas one night when the camp was surprised by German bombers. Everybody leaped for his own dugout and Sam had some distance to travel.

"What did you do?" he was asked the next morning.

"Lass," he replied, "De good Lawd has ginned de bes' cammyfladge in de world. I drop dem pajamas right whar I stood an' made de res' o' de trip in my birthday capes."—*New York Times*.

A little girl was rather given to exaggerating and would tell wild stories of her adventures. One day after her walk in the park she ran to her mother, exclaiming:

"Oh, mamma, as nurse and I were walking in the park a great big lion sprang out and would have eaten me up if nurse had not pulled me aside."

"You naughty child," said the mother.

"Go to your room and ask your good angel to forgive you for telling such a naughty story about the lion."

Half an hour later her mother went up and found her looking very penitent.

"Well," she said, "have you asked your good angel to forgive you?"

"Yes, mamma," was the reply. "I did ask, and he said, 'Don't mention it. Mrs. Snuggles. I've often mistaken those big yellow peedles for lions myself.'"—*London Opinion*.

Independent, do hereby certify that the above is a true and  
correct statement of the ownership of the Independent, as  
required by the Act of Congress, approved October 3, 1917,  
for the registration of newspapers, and by the Act of Con-  
gress, approved October 3, 1917, for the registration of  
newspapers, published weekly at New York, N. Y., for  
April 1, 1919.

I, FREDERICK E. DICKINSON, Secretary of the  
Independent, do hereby certify that the above is a true and  
correct statement of the ownership of the Independent, as  
required by the Act of Congress, approved October 3, 1917,  
for the registration of newspapers, and by the Act of Con-  
gress, approved October 3, 1917, for the registration of  
newspapers, published weekly at New York, N. Y., for  
April 1, 1919.

1. That the names and addresses of the  
publisher, editor, managing editor, and busi-  
ness manager are: Publisher, Karl V. S. How-  
land, Editor, Hamilton Holt, Associate Editor,  
Harold J. Howland, Managing Editor, none, Business Manager,  
none, all of 119 West  
Fortieth Street, New York, N. Y.

2. That the owner is Independent Corporation,  
119 West Fortieth Street, New York, N. Y. Names and addresses of stockholders  
holding 1 per cent. or more of total amount  
of stock: Charles B. Alexander, 165 Broad-  
way, New York, N. Y.; Hamilton Holt,  
119 West Fortieth Street, New York, N. Y.;  
Estate of William B. Howland, 119 West  
Fortieth Street, New York, N. Y.; Madeline  
Howland, 107 Harrison Avenue, Montclair, N. J.;  
Karl V. S. Howland, 119 West Fortieth  
Street, New York, N. Y.; The Stadacona  
Company, 99 John Street, New York, N. Y., a  
corporation, the capital stock of which is  
all owned by the Estate of James Douglas.

3. That the known bondholders, mortgagees,  
and other security holders owning or holding 1  
per cent. or more of total amount of bonds,  
mortgages, or other securities are: none.

4. That the two paragraphs next above, giving  
the names of the owners, stockholders and  
security holders, if any, contain not only the  
list of stockholders and security holders as  
they appear upon the books of the company,  
but also in cases where the stockholder or  
security holder appears upon the books of the  
company as trustee or in any other fiduciary  
relation, the name of the person or corpora-  
tion for whom such trustee is acting, is given;  
also that the said two paragraphs contain  
statements embracing affiant's full knowledge  
and belief as to the circumstances and condi-  
tions under which stockholders and security  
holders who do not appear upon the books of  
the company as trustees hold stock and securi-  
ties in a capacity other than that of a bona  
fide owner; and this affiant has no reason to  
believe that any other person, association, or  
corporation has any interest direct or indirect  
in the said stock, bonds, or other securities  
than as so stated by him.

#### INDEPENDENT CORPORATION,

FREDERICK E. DICKINSON, Secretary.

Sworn to and subscribed before me this 26th  
day of March, 1919. JOSEPH J. KOELBEL,  
Notary Public, N. Y. County No. 318 New  
York County Register's No. 10,225.  
(My commission expires March 30, 1920.)

#### DIVIDENDS

### AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be  
paid on Tuesday, April 15, 1919, to stockholders  
of record at the close of business on Friday,  
March 14, 1919.

On account of the annual meeting, the trans-  
fer books will be closed from Saturday, March  
15, to Tuesday, March 25, 1919, both days  
included.

G. D. MILNE, Treasurer.

#### WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.

A Quarterly Dividend of 13 1/2% (87 1/2 cents per  
share) on the PREFERRED Stock of this Com-  
pany will be paid April 15, 1919.

A Dividend of 13 1/2% (87 1/2 cents per share) on  
the COMMON Stock of this Company for the  
quarter ending March 31, 1919, will be paid April  
30, 1919.

Both Dividends are payable to Stockholders of  
record as of April 4, 1919.

H. F. BAETZ, Treasurer.

New York, March 26, 1919.

#### DIVIDEND NOTICE OF THE

### AMERICAN LIGHT & TRACTION COMPANY

The Board of Directors of the above Company,  
at a meeting held April 1st, 1919, declared a  
CASH dividend of 1 1/2 Per Cent. on the Pre-  
ferred Stock, a CASH dividend of 2 1/2 Per Cent.  
on the Common Stock, and a dividend at the  
rate of 2 1/2 shares of Common Stock on every  
one hundred (100) shares of Common Stock out-  
standing, all payable May 1st, 1919.

The Transfer Books will close at 12 o'clock  
noon on April 12th, 1919, and will reopen at  
10 o'clock A. M. on April 28th, 1919.

C. M. JELIFFE,

Secretary.

### ENGLISH: LITERATURE AND COMPOSITION HISTORY, CIVICS AND ECONOMICS

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

#### I. A Number of Books. By Edwin E. Slosson.

1. What is the purpose of the article?
2. What means does the author employ to give the article an unusual touch of personality?
3. Point out examples of humor.
4. Write a character sketch of the writer of the article, basing your sketch on character revelations in the article itself.
5. Explain the sentence: "I feared lest the patriot should have killed the artist."
6. What rule for writing is referred to in the following: "He has never descended to vituperation."
7. Give a clear explanation of the following sentence: "Maeterlinck always sticks close to the Aristotelian definition of tragedy as the purification of our passions by pity and terror."
8. What is meant by the sentence: "He sticks to the classical unities of time and place"?
9. Do the following works have unity of time and of place: "The Merchant of Venice"? "As You Like It"? "Twelfth Night"? "Ivanhoe"? "Treasure Island"?
10. Explain the principle referred to in the following: "I need what the rhetoricians call 'comic relief.'"
11. Point out examples of comic relief in "Ivanhoe," in "Macbeth," and "Treasure Island."
12. Give your class information concerning every one of the following authors: Kipling, Maeterlinck, Masfield, Melville.
13. Write a somewhat similar article concerning the books that you have studied in school, or books that you have read outside.
14. In "A Tale of Two Cities" Dickens refers frequently to the Jacobin Club. Write a few pages of the diary referred to in the following sentence: "Wouldn't you like to have a diary written by a member of the Jacobin Club?"
15. Write a paragraph in which you use the following as a topic sentence: "Villa was a George Washington, Wilhelm Tell and Oliver Cromwell rolled into one."
16. Explain the following expression: "The future Carlyle of the Russian Revolution."

#### II. Noonday Grace. By John Crowe Ransom.

1. Write a single sentence that will express the principal theme of the poem.
2. Show in what way the poem is related to "The Vision of Sir Launfal."
3. Point out, and explain, examples of metaphor.

#### IV. What Shall We Do with the Ships?

1. Write a brief of the entire article.
2. Prepare an argument in support of any one of the six possible solutions.

#### V. Running Russia by Wireless. By Carl W. Ackerman.

1. Show how the entire article is centered around a metaphor.
2. Prepare a short summary of what the article says concerning the present condition of Russia.

#### VI. The Story of the Week.

1. Give a short talk in which you explain the recent work of the Peace Congress.
2. Explain in full what changes have recently taken place in the map of Europe. Make use of a blackboard map in order to make your explanation clear.
3. Prepare an argument for or against the trial of the German war-lords.
4. One of the news items says that "menacing influences" are at work in the world. Give your class a clear explanation of these "menacing influences," and suggest methods for counteracting them.
5. Write an original short story founded on the recent Bolshevik revolution in Hungary.
6. Prepare a list of subjects suitable for debate, basing your subjects on suggestions found in "The Story of the Week."
7. Prepare yourself thoroughly on any one subject mentioned in "The Story of the Week." Challenge your class to ask you questions on that subject.

#### VII. Pictures and Editorial Articles.

1. Give a clear explanation of any cartoon in The Independent.
2. Write a pleasing description of the illustration that you consider most beautiful or most interesting.
3. Show in what respects the title of every editorial article is effective.
4. Prepare a summary of the editorial opinions expressed in this number.

#### I. Progress Toward Peace—Story of the Week.

1. "But he [the President] insisted that the time for talk was past," etc. Show how the conditions in Germany, in Hungary and in Russia as described in the news items bear out this statement of the President.
2. What is the probability that the new states proclaimed in southern Russia will be permanent?
3. Why are the English and American delegates opposed to the French claims as described in "Dispute Over Reparation"?
4. Discuss the proposal to give Poland a strip of West Prussia as a "corridor" to the Baltic. Why is this proposal "vigorously opposed and denounced in Germany"?

#### II. Belgium After the War—"De-Germanizing Belgium."

1. "Industrially as well as agriculturally Belgium was a standing instance of intensive cultivation." Support the statement by describing as fully as you can the factors that made up Belgian prosperity.
2. "Much that was Belgian in name was not Belgian in fact." Summarize what Mr. Brooks says of the penetration of German influence in Belgian affairs. How was it accomplished?
3. "Now the rebuilding of Belgium is a problem of many aspects." Enumerate Belgium's material needs for reconstruction.

#### III. Russia and the Allies—"Running Russia by Wireless."

1. "All the old officers, all of the leaders, all of the sane elements, have left the country for the safety of foreign shores." Does this remind you of conditions in France between 1792 and 1797?
2. "There are certain pertinent facts about Russia upon which the future policy and action of the powers . . . must be based." How should these facts affect the action of the powers?
3. What are the reasons why "it has been so difficult for the Allies to unite upon a Russian policy"?
4. "What Russia needs is more help and less advice." What is the significance of this statement?

#### IV. Great Britain and Self-Determination—"South African Republicans," "The Irish Situation."

1. Review the history of the struggle during the nineteenth century between Great Britain and the Boer Republics.
2. Do present conditions in South Africa justify the movement for "self-determination" now being carried on?
3. Have the Boers lost anything by being under British rule? Have they gained?
4. How does the Irish situation differ from that of the Boers?

#### V. Problem of the Adriatic—"Nose-Counting vs. Civilization."

1. What are the two grounds of Italy's claim to territory formerly belonging to Austria?
2. What are the considerations that give strength to Italy's claim for enlarged boundaries on strategic grounds?
3. How is the population of the lands of the eastern coast of the Adriatic divided between Yugoslavs and the Italians?
4. What does the title of the editorial "Nose-Counting Versus Civilization" mean?
5. What has Italian culture and civilization accomplished in the lands under discussion?

#### VI. Our Future Shipping Policy—"What Shall We Do with the Ships?"

1. Arrange the six possible plans suggested by Mr. Hurley into two groups under the headings (a) Government Ownership, (b) Private Ownership.
2. Summarize the arguments (a) in favor of Government ownership, (b) in favor of private ownership.
3. "A careful consideration of these arguments has convinced Mr. Hurley that private ownership . . . is the proper solution of the problem." Do you agree?
4. What plans for the conversion of Government ownership into private ownership does Mr. Hurley recommend?
5. How does he propose to guarantee the development of temporarily unprofitable trade routes?

## JUST A WORD

The following is taken from a letter from an American soldier in France:

We can't make much of local politics at home from the tipsy-topsy-turvyness of the *melange* that comes to us through the continental extracts and delayed daily and weekly periodicals that come from America. But I think I am not misinterpreting the sentiments of a large number of fighting men when I say that, if the Republicans don't want to have the bells of the Democratic jackass hung on them by certain far-seeing gentlemen who are studying the world situation seriously and constructively, they will have to go the Dimmycrats "*one better*" and prove to their sisters and their cousins and their aunts, as well as to the boys who eventually hope to come home, that they are capable of looking forward for light, capable of letting the tail go with the hide, capable of following the plow to the end of the furrow, capable of hanging buck-passers to telegraph poles, capable of and ready to assume the new and world-wide responsibilities that are ours—on the high seas as well as inside our sanctified three-mile maritime zone limits. If the Republicans can't think up anything better than trying to flay Josephus Daniels for doing his durndest to win the war, even though it did cost us the inevitable price that an unprepared nation must pay, I expect to see said Republicans inherit one jingle-jangling jackass, and you will see the former burden carrying and venerable Republican elephant coming up the National Lincoln highway, ridden by a triumphant band-wagonload of canny ex-Democrats, flung constructive banners. Nothing is more terrible than an army with banners.

Is there a single publication in America attacking the coming problems of the League of Nations and our duties therein with anything like the concreteness of approach that a Foch must rehearse before he inaugurates a single big show? If there is one such publication, just one, I would like the privilege of reading it, for I come from the next state to Missouri. I can't see anything in the American press more urgent than the cry for demobilization with our duties inevitably tied up with unfinished jobs North, South, East and West. If I am wrong please send us some literature to convert us.

What I have failed to find in all the reading of American publications is the well stated intention to attack constructively the world's imperative need for construction. Thrift and close economy are of course vital following the world's greatest war, but we have won the greatest victory in the annals of war. And how better capitalize on that victory than by extending our enormous credits for well planned constructive purposes. This is looking forward for light. Without the intention to build there cannot be even a discriminat-

ing divergency of opinion on methods. The political party that will capitalize upon the victory by formulating and carrying on with the sanest, boldest constructive policy will be the legitimate winner, if America is awake to the world wide cry for constructive endeavor to heal the wounds of war.

J. A. SARGENT,  
Capt. Engineers, U. S. A., A. E. F.

## REMARKABLE REMARKS

**BARON MAKINO**—We are not too proud to fight.

**M. CLEMENCEAU**—All that I know I learnt after I was thirty.

**JAMES G. HUNEKER**—Caruso was in superb voice. (Touch wood.)

**GENERAL LUDENDORF**—The Kaiser and the Crown Prince are innocent.

**LOUIS S. SWIFT**—Moderate priced meat is what we want above all things.

**JOSEPH E. MCAFEE**—The churches are not democratic; are they Christian?

**REV. A. G. GUTTERY**—The church must go over the top and bear all things.

**UPTON SINCLAIR**—We should come to a working agreement with the Bolsheviki.

**J. IGNACE PADEREWSKI**—The Bolshevist idea is to kill the users of the toothbrush.

**ROSE PASTOR STOKES**—The Government is for the profiteers. And I am for the people.

**REV. KINGSCOTE GREENLAND**—Honestly, don't some of the church services bore you to tears?

**JOHN ARMSTRONG CHALONER**—The New York girl is charming, but God help her costume.

**LINA CAVALIERI**—That birdlike lightness of the body is a sure sign we are at our best.

**BEN TILLET**—The crazy creatures who have no country are the deadliest enemies of their own.

**SENATOR WILLIAM C. EDWARDS**—Canada will be annexed to the United States within the next ten years.

**MINNIE MADDERN FISKE**—I have not found managers inimical to the higher aspirations of the theater.

**BILLY SUNDAY**—The Red Sox are as impressive as a saint walking majestically thru a crowd of sinners.

**NORMAN HAPGOOD**—I have never seen Mrs. Fiske act that I did not feel I had a contribution to my mental life.

**EDMUND DUNN**—We may wonder why poets are so seldom invited to take the highest responsibility of the state.

**REV. JOHN HAYNES HOLMES**—Our churches today, like those of ancient Palestine, are the home of Pharisees and scribes.

**CHARLES EDWARD RUSSELL**—Better a 5 per cent dividend where formerly you got 10 than Bolshevism and no dividend at all.

**REV. W. T. McELVEEN**—Some people believe in a God of Abraham, Isaac and Jacob, but not in a God of Wilson, Clemenceau and Lloyd George.

**GERALDINE FARRAR**—By permitting Europeans to depend indefinitely upon our sympathy and generosity we will do them greater harm in the end than good.

**MAJOR GENERAL O'RYAN**—I believe that the soldiers themselves would prefer as a memorial something living possessing a soul rather than something stony and dead.

**ARTHUR BRISANE**—This is unusual. A gentleman in New York defending his wife's suit for divorce says she was extravagant. She teed her golf ball on a valuable watch and let drive.

*Shoot!* By this touch of the hand is *the machine gun of business* fired. Its rapid delivery of well-printed sheets makes the Mimeo-graph the highest-type equipment for front-rank fighting in the battle for better business. Every year it is saving thousands of dollars in thousands of commercial and educational institutions. Because it reproduces drawings, maps and designs by a simple tracing process, at the rate of five thousand perfect copies an hour, it enables many new kinds of advance work to be done—privately—quickly—easily—cheaply. It duplicates all kinds of forms and form-letters at lowest possible cost. A quick weapon of offense—and defense. Get booklet "E" today—from A. B. Dick Company, Chicago—New York.

## PEACE, PROMPT OR PERMANENT

BY HAMILTON HOLT

**I**N the course of a sermon on April 6 the Rev. Dr. Ernest M. Stires, rector of the rich and fashionable St. Thomas's Church of New York City, is reported to have expressed the hope that President Wilson would "permit no persistent personal preference to delay a righteous peace," and then to have added:

A prompt peace has been delayed by the urgent demand that a League of Nations be included in the peace treaty. The league can wait. Perhaps it would be better to wait. We cannot wait longer for a righteous peace. Much depends upon its coming quickly.

This charge that the inclusion of a League of Nations in the peace treaty has prevented a "prompt peace" is not a new one. I heard it repeatedly while in Europe, especially in chauvinistic and tory circles. But I know it to be absolutely without foundation.

In an official statement given to the press on March 28, President Wilson said in reference to the League of Nations Commission:

The conferences of the commission have invariably been held at times when they could not interfere with the consultation of those who have undertaken to formulate the general conclusions of the conference with regard to the many other complicated problems of peace. So that the members of the commission congratulate themselves on the fact that no part of their conferences have ever interposed any form of delay.

The President is correct. In the first place each nation at the Peace Conference has provided its official representatives with such a host of assistants and experts that even the largest Paris hotels cannot house any but the smaller delegations. These assistants and experts frequently act as alternates for the official delegates.

Mr. Samuel Gompers, for instance, is the chairman of the Commission on Labor. If all the various commissions should sit simultaneously no country's representation would be restricted in the least. Even the official delegates have so divided up their work that each committee is independent of the work of every other. The only men who must keep in touch with all phases of the progress of the conference are the President of the United States and the Premiers of England, France and Italy. But Lloyd George and Clemenceau have an alibi as far as the League of Nations Commission is concerned, because they are not members of it. In fact Wilson, Orlando and Chinda are the only delegates on the League of Nations Commission who are also members of the Council of Ten, which is the executive or supervisory committee of the Conference.

But as the daily sessions of the League of Nations Commission, which began on February 3 and ended with the framing of the Covenant on February 13, were held in the morning and the sessions of the Council of Ten were held in the afternoon, there was no conflict between them except on the last day's session when the League of Nations Commission sat morning and afternoon. Tho it was President Wilson's duty to preside over this Commission he absented himself from it on its final afternoon session in order to sit with the Council of Ten.

The truth is that the League of Nations Commission has been the most expeditious of all the Commissions at Paris. The others were organized at the same time, and tho they have been working arduously on the special problems assigned to them, such

## We Stand Together

By Leon Bourgeois

A MESSAGE GIVEN TO THE EDITOR OF THE INDEPENDENT ON LEAVING FRANCE BY THE LEADING FRENCH AUTHORITY ON THE LEAGUE OF NATIONS AND A FRAMER OF THE COVENANT

*Be at ease, dear friend. Nothing can separate, nothing shall separate the French people from the people of America, because our two democracies draw their life from the same principles and live for the same ideal, and because no one over here will be able to forget the magnificent spirit with which, in response to the appeal of your illustrious President, all the heroic youth of the United States threw itself into the crusade for liberty.*

*There are still matters that must be brought into true perspective before we can achieve the great Covenant of Nations; but who can be surprised that this is so when we are engaged upon a work without parallel in the past history of humanity and without equal in its consequences for the future of the world.*

*It is only a question of assuring more completely the well-being and the security of all, and that task cannot touch in any way the sovereignty or the constitution of any state.*

*Do not permit misunderstandings to arise. Those whose only interest is in creating and exploiting such misunderstandings are our common enemies.*

*The Society of Nations will be born, healthy, solid, powerful and fraternal, and will live in justice, in mutual respect and in peace.*

as labor, boundaries, reparations, etc., they are only now nearing the completion of their tasks. But as I have already told the readers of *The Independent*, the delays of the Conference have been due almost entirely to selfish individuals and nations who have left no stone unturned to wriggle out of President Wilson's fourteen points, and these in turn have been aided and abetted by American reactionaries, senatorial and otherwise, who have tried in every way to discredit the President at home, thus lending comfort to his enemies abroad.

It is evident, therefore, that the framing of the Covenant has in no appreciable way delayed the peace settlement. Yet I still find people asking why we should not make peace first any way, and then take up for discussion the League when the world has settled down to a peace routine and can examine the question free from pressure and haste.

The obvious answer, of course, to this is that if we don't get the League now we may not get it at all. It does not take a super-psychologist to discern that most of those who use the argument of delay use it in order to kill the League entirely and not for the purpose of having it scrutinized in the light of a calmer day. Once peace is agreed upon and normal conditions established it will be easy for opponents of the League to warn the war-weary people not to embark on the untried seas of a dubious internationalism and in general to let well enough alone.

An equally important reason for including a provision for a League of Nations in the Peace Treaty, is the fact that otherwise we shall have to make a far different kind of a peace. If, for instance, we sign a treaty without a League of Nations, the captured German colonies and occupied territories of Turkey and Austria-Hungary will be put into the grab bag for annexation by the rival powers instead of being administered under the admirable mandatory system of the League. Likewise there will be a hot contest for the acquisition and monopolization of raw materials such as wool, cotton, petroleum and rare metals. Already England has made arrangements for Government control of the palm oil of Africa, the rubber of the Malay States, and the wool of Australia, and in the absence of a League of Nations may cut off other countries. Under the Covenant all nations, large and small, will enjoy equal opportunities for procuring these primary necessities of modern industrial life.

But suppose we make a quick peace, and leave the question of a permanent peace to the future. Even in case we are lucky enough to get an acceptable League of Nations established in a year or two, who will vouch for the peace of the world in the interim? For it must not be ignored that until a Covenant is framed the world may and probably will have

1. Secret treaties.
2. Secret diplomacy.
3. No disarmament, but great standing armies.
4. Exploitation of backward and little nations.
5. Scramble for colonies.
6. Possible wars of aggression.
7. No international control of waterways and railways.
8. No equality of opportunity in obtaining raw materials.
9. No freedom of the seas.
10. No economic pressure to prevent war.
11. No permanent court or compulsory reference of disputes to arbitration and conciliation.
12. No agreement to improve labor conditions on an international scale.

In fine if no attempt is made to substitute coöperation for competition in international affairs in the peace treaty the world will run the risk of sinking back to the old system of alliances with its intrigues, mutual hates and suspicions, and colossal armaments, and if that takes place the seven million men whose blood crimsoned the battlefields of Europe will have died in vain.

Probably the wisest act of statesmanship Woodrow Wilson has ever done was to make one of his fourteen points the following:

A general association of nations must be formed under specific

covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small nations alike.

Certainly the wisest thing the Peace Conference has done was to pass on February 1 at its second Plenary Session a resolution in which it stated that

This league should be created as an integral part of the general treaty and should be open to every civilized nation which can be relied upon to promote its objects.

## STAND BY THE PRESIDENT

**W**OODROW WILSON is more than the President of the United States. He is Ambassador Extraordinary and Minister Plenipotentiary to the World's Court. He is more than a party leader. He is the leader of the liberals of all nations. He is trying to put a stop to the greatest war in history and to put into effect the greatest political conception that ever entered the mind of man. He has been placed in the position of arbiter of the destiny of a score of nations and of the happiness of untold generations. He is beset by conflicting claims, harassed and hampered by the most powerful of selfish interests. He is now at the critical point when all may be lost in a moment if those who believe in what he stands for do not stand by him.

No matter whether we like Wilson or not, no matter whether we belong to his party or not, no matter whether we think he deserves his high position or not, whether we think he is competent or not, he is there and if we want to see American ideals victorious and American principles prevail it is only by supporting him that this can be done. The armistice does not absolve us from our obligation of loyalty to the head of the nation. This is no time for personal spite, private mistrust and partizan politics to come into play. The President is carrying the American flag into foreign lands, into the future. He should have the united backing of the United States. Stand by the President.

## THE FUTURE OF THE PHILIPPINES

**T**HE Filipinos have sent a delegation to America to plead for their independence. They have been loyal to the United States in peace and war and their case deserves a sympathetic hearing from the American people. President Wilson himself has informed them that he hopes their aspirations may be realized.

We can see no reason why the Philippines should not be received into the League of Nations when formed, and henceforth nurtured under its protecting aegis. This would be a fitting act of generosity on the part of America to the Filipinos, an assurance of our faith in the League, and an example to other nations with dissatisfied subject populations.

Of course, if no League of Nations is formed, then it would be unwise to give the Philippines their independence, because they would not be able, unaided, to maintain it.

## KNOCKING OUT MENTAL PARTITIONS

**O**NE of the chief obstacles to education is the disposition of the student to divide up his brain into thought-tight compartments and stow away in them his acquired ideas so they will not get mixt. The English that he is taught is sacredly kept for use in the department of English and he does not allow his physics to influence his metaphysics. This tendency is unfortunately intensified by teachers who are sometimes inclined to resent the intrusion of ideas from a foreign field, even if—or especially if—they do not clearly comprehend them. It is annoying to the Greek professor to be told that he must study bacteriology in order to understand the cause of the decadence of Greece. It is disconcerting to the English professor to be reminded that he cannot teach Elizabethan literature with

out a knowledge of Elizabethan commerce. Scientists on their side are likewise too prone to parochialism altho some of the greatest discoveries have been made when a specialist jumps the fence and begins to cultivate another field. When a chemist like Pasteur strays over into bacteriology or a toxicologist like Moissan into metallurgy or a physicist like Helmholtz into physiology or a mathematician like Irving Fisher into sociology something new is likely to come of it. There are no lines in nature, say the artists. Boundaries, whether national or topical, are human inventions and not to be taken too seriously. The partition of a subject for purposes of pedagogy is as necessary and legitimate as the partition of a chicken for purposes of mastication. But one cannot get a very adequate idea of the original fowl by the inspection of a chicken croquet.

History suffers particularly from pedagogical partition for the history of the world is the history of the interaction of the various nations and in studying each of them severally we lose the essence of the whole. But the history of the United States, and the history of England and the history of France, have been taught as tho they were Crusoe countries. Other nations in so far as they were considered at all were seen thru the lens of the particular nation being studied, so it was at best a one-sided and alien view.

The University of London has waked up to the need of a new history. It was first proposed to expand the teaching of the old-fashioned history of England into the history of the British Empire. This was a sufficiently startling suggestion to the Little Englanders and we may judge of their amazement when the committee appointed to draw up a plan for "Imperial Studies" reported back that the field was not wide enough! This is how the point is put by a member of the committee, Graham Wallas, professor of political science in the University of London:

The whole range of historical teaching must be altered. The world has been so knit together that it is necessary to deal with the world. In teaching history greater prominence must be given to the period when the world has become organized and conscious of itself. We must boldly use the phrase "world history," as a subject of study. History must not be divided into economic and political history. We must recognize that economic facts like the invention of the telegraph and the steamship have become necessary to the understanding of political facts. At present most of the world would say that we have been fighting for the principle of nationality. But that principle, which has shattered the world and may shatter the Peace Conference in the next few weeks, needs closer examination. It is a force with evil effects as well as good. In dealing with political institutions we must alter the center of gravity. Things which have not been mentioned in text books, or have only been mentioned perfunctorily, are now seen to be important. There is no good English book on federalism. It will be necessary that men who speak for their nation shall acquire the habit of international veracity.

If the University of London follows the recommendations of its committee and succeeds in teaching its students "the habit of international veracity," that is, the art of seeing Things As They Are without the distortion of national astigmatism, it will put them in the forefront of practical statesmen. But why should London get ahead of us? If there is lack of a textbook on federalism surely the federal republic of America ought to supply it. The world is about to enter—with the consent of the Senate—upon a new era of planetary organization and new histories must be written based upon the novel idea that the earth is really round and that there are people living on all sides of it.

## SHALL WE FINISH THE JOB, OR QUIT?

**N**EXT week the campaign for the Victory Liberty Loan begins. There is plenty of pessimism over it. There are many to be found who declare that the American people will not buy the bonds of this final war loan unless they are made particularly attractive as investments and as bargains.

We do not believe it. We refuse to share the pessimism.

If the Victory Loan is not a success, it will mean that

Americans cannot stand prosperity—for if there is one thing that has come to us from the Great War it is national prosperity. It will mean that the flood of gold and of credits that has come our way during the past five years has sapped our spirit and slackened our moral fiber.

The failure of the Victory Loan would mean that Americans will start a job and refuse to finish it. It would stamp the American people as quitters.

But failure is inconceivable. It cannot happen that the people of the United States will put their hand to the plow and then turn back. What American believes that it can?

There is just one way to demonstrate our conviction that Americans are not quitters, to prove our loyalty to the spirit of disinterestedness and sacrifice in which America entered and fought the war: Subscribe to the Victory Loan.

## PROS AND CONS OF ZIONISM

**H**OW complicated and how perplexing are the questions involved in the proposition to convert Palestine into an independent and self-sufficient political state is every day being demonstrated by the conflicting utterances of the ablest spokesmen of the Jewish race and in a lesser, but not negligible measure by other declarations. To cite particularly interesting instances we have the opinion of Prof. Thomas Nickson Carver, of Harvard, that this is a propitious time for the establishment of a great Jewish commonwealth; and, in opposition to this Christian view, the warning put forth by that intelligent and cultivated Jewish scholar, Sir Charles Walston (formerly Waldstein) that radicalism alias nationalism (or racialism become identified with nationalism and leaning to Chauvinism) is the most dangerous force in the world today.

The Jews, Sir Charles argues, are peculiarly fitted to develop an international patriotism in behalf of the League of Nations. "Kinship," he truly says, "is not measured merely by blood, but by agreement in deeds and by pursuit of the same end." Jerusalem, Sir Charles believes, will be the proper abode for a great Hebrew school and university, a central library preserving biblical, Rabbinical and Yiddish literature, and a museum of Jewish antiquities and art, but it should not be the capital of a Jewish state. He more than hints that such a state would raise a question in the world politics of tomorrow not unlike the Irish question in the British imperial politics of today.

The consideration that most influences Professor Carver is the impossibility of maintaining racial distinctness where races are intermingled. Jews and Gentiles if intermingled must either intermarry and amalgamate or develop race hostility as a defense against amalgamation. To keep themselves distinct the Jews may resort to occupational separation, thereby avoiding economic competition with Gentiles, or they may perpetuate such partial territorial separations as the Ghetto and the Pale, or, finally, they may accept the complete separation of Zionism. The Pale is thoroly discredited, and occupational separation of races verges on a system of caste. Substantially, therefore, the alternatives come down to this, the Jews must accept Zionism or they must accept amalgamation.

These two opinions, we judge, are fairly representative of the fundamental conflict of views. On the whole the conservative Jews, who desire above all things to maintain the old Jewish faith and the Talmudic tradition, incline to be Zionists. The progressive Jews, the men who deprecate race distinction and hostilities and whose political and economic sympathies incline to nationalism, would prefer to see Jews intermarry and amalgamate with their Gentile fellow citizens in Europe and in America, and are disposed to discourage the Zionist experiment. Yet the Zionist movement has also attracted the support of many of the radical Jews who see in it an opportunity to found a semi-socialistic state for which the land and labor legislation of the Mosiac code affords a certain authority.

# THE STORY OF THE WEEK

At the Peace Congress

Never since the opening of the Peace Congress has a week been more filled with varying and contradictory reports. One day substantial agreement was said to have been reached, with an assured prospect of completion of the Peace Treaty within a week; and the next there was reported an apparently hopeless impasse, with indefinite postponement of the treaty; the third day there was harmony again, and on the fourth some of the powers were about to withdraw from a conference in which there could be no agreement. The President's order of April 6, that the steamship "George Washington," on which he travels, should proceed at once to the French port of Brest, created much sensation and was variously interpreted. On the one hand, it was held to indicate that the treaty would quickly be signed and that the President would return home at an early date with his mission accomplished. On the other hand, it was regarded as proof that the President was about to withdraw, or was threatening to withdraw, from the Congress, with the work unfinished. The situation was further complicated and obscured by the illness of both President Wilson and Mr. Lloyd George, which prevented them from taking full part in the deliberations of the Congress or of its Supreme Council, which has now become a council of four, Japan being the absentee.

The facts appear to be that the Council, despite inevitable and natural delays, has been making substantial progress on the chief topics of negotiation, and that the treaty is now approaching completion. This was made clear on April 9, when it was announced that substantial agreement had been reached by the Council of Four on the questions of reparation and responsibility for the war. This agreement was to the effect that the enemy countries must admit responsibility for all loss and damage to allied and associated nations and their citizens caused by the unjustifiable aggression. But in view of the inability of the enemy countries fully to recompense these losses, the clause states, an inter-Allied commission will assess the losses on a just basis for thirty years beginning May 1, 1921, with an initial payment of \$5,000,000,000.

Germany is to pay the entire cost of the commission and staff during the thirty years of operations. The first payment is to be credited against Germany's obligation to pay for the maintenance of the Allied troops in the occupied regions, and the second priority is for the payment of food relief furnished to Germany.

Concerning responsibility for the

war, it was agreed that the former Emperor should be tried by some form of international tribunal, some injured power, probably Belgium, being the prosecutor. The idea of imposing capital punishment upon him was, however, abandoned.

## ASKING FOR SOUTH AFRICAN INDEPENDENCE

General Hertzog has just come to this country on his way to England at the head of a delegation of Boers asking for independence from Great Britain. He fought the British in the war of 1899-1902 and was later attorney-general and minister of justice and of education in the Orange Government. The Nationalist party which he represents has been organizing armed rebellions against English authority during the war.

## The President's Illness

President Wilson on April 3 succumbed measurably to the great physical and mental strain which he had been under ever since his return to Paris, and was compelled to take to his bed and remain there several days. He did not have, as was reported, the influenza, but merely a bad cold with some fever, but it was prudently deemed necessary for him to absent himself from meetings of the Peace Council. The meetings of the representatives of the four great powers were, however, held at his residence, and in the room adjoining his own, so that it was possible to consult him briefly whenever it seemed necessary so to do. He soon rallied from his indisposition, and in the course of a week was practically restored to health, with the satisfaction of knowing that his illness had caused little if any delay in the work of the Congress.

Germany and the League

The interesting announcement was made on April 7 by the Paris correspondence of the *Westminster Gazette* that while Germany would not at once be admitted to membership in the League of Nations, she would be required to recognize it and to acknowledge its jurisdiction. This she would do by signing the Treaty of Peace in which the constitution of the League would be embodied, thus expressing her full accord with the constitution and her willingness to abide by the decisions of the League. Then, as soon as it was quite certain that she would fulfil her obligations, she would be admitted to membership.

Political unrest seems to prevail in many parts of Germany. Herr Landsberg, Minister of Justice, was arrested by revolutionists at Magdeburg on April 7, but was soon liberated by the police. The workmen of the city ordered a general strike, and the Government proclaimed a state of siege. A strong movement was reported for the establishment of a Spartacan republic in Hamburg and Bremen and the intervening country. At Stuttgart order was reestablished after much violence. A formidable demonstration of workmen's councils was made at Duesseldorf on April 6 against the Ebert government and in favor of establishing a Soviet régime. In some cases these agitations and uprisings appeared to be provoked by the scarcity of food, but in others, and in most, they were believed to have been artificially fomented by propagandists from Russia or Hungary. The Government attributed them chiefly, however, to the former cause, and thus sought to strengthen its plea for the raising of the blockade and the complete revictualling of Germany. It was, nevertheless, announced on April 7 that the German Cabinet had practically decided to form a Workmen's Soviet to be included as a third house of the National Assembly.

A Soldiers', Workmen's and Peasants' Congress assembled at Berlin on April 7 with more than two hundred delegates present; its purpose presumably being to consider the application of the Soviet system to German affairs. It sent greetings to the Soviet Government of Hungary, and expressed opposition to the terms imposed upon Germany by the Allies. "The harsh conditions imposed in the armistice have reached the limit," declared its President. "No more will be borne. If the Entente thinks Germany can be destroyed, it is deceived."

The proclamation of a general strike in Berlin and its suburbs was reported on April 9, to deal with which if necessary the Minister of War concentrated

30,000 supposedly loyal troops at the gates of the capital.

Government troops were also sent to Essen, where a great strike was in progress and where the strikers were said to have occupied the great Krupp works.

**Revolution at Munich** Bavarian antagonism toward Prussia and lack of sympathy with the new Government of Germany at Weimar and Berlin culminated on April 6 in the proclamation of a Soviet republic at Munich. The Soviet government on being formed adopted a policy of fraternization with the corresponding governments of Russia and Hungary, and with revolutionists in other countries.

The movement was strongly opposed by both the bourgeoisie and the peasantry, the latter threatening to withhold supplies of grain and other products from the capital so long as the Soviet prevailed. The Landtag was unable to meet, however, and the cabinet did not venture to make a stand against the revolution, but withdrew to Nuremberg, where the Bavarian National Conference of Social Democrats had just voted 42 to 8 against the establishment of a Soviet régime. A little later the Government again removed to Bamberg. The cabinet, under Premier Hoffmann, is composed of radical Socialists.

The Soviet government at Munich promptly put its principles into effect by nationalizing the university, the press, and the principal industries. Some minor conflicts occurred in the streets, but on the whole the revolution was orderly and peaceful. Opposition to it was formidable, however, and showed no indications of abating. Much concern was felt in these proceedings at Berlin, with a widespread fear that Bolshevism would generally invade Germany, or else that Bavaria as a Soviet republic would secede from the

rest of the former empire. It was semi-officially announced that the national Government of Germany would not recognize as legal the Soviet government at Munich, not even tho it should prevail thruout all Bavaria, because it did not comply with the provisional constitution, which provides that local governments shall be chosen at general elections and shall enjoy the confidence of the people.

The Soviet Government at Munich on April 9 recalled the Bavarian envoy from Berlin and broke of all relations with the German national government. The envoy before leaving Berlin informed the Cabinet there that Bavaria would not regard the new German constitution as binding.

**The Soviets of Hungary** Varying reports have come from Hungary concerning the progress of the Soviet government at Budapest. It was rumored on April 7 that the Soviet had been overthrown and that Bela Kun, the Foreign Minister, had been assassinated. This news was not confirmed, but it did appear that there had arisen serious opposition to the new régime.

Representatives of foreign governments felt constrained to hand a memorandum to the Government, demanding protection for the citizens of their countries in Hungary and for their property.

General Jan Smuts, the Boer-British statesman, went to Budapest as a special envoy of the Allies, and on April 8 submitted to the Hungarian Government proposals for the withdrawal of troops, neutralization of certain zones, acceptance by the new government of the military convention which the former government accepted in November, 1918, and the raising of the economic blockade. In reply the Soviet government proposed fuller recognition of its legal existence and various concessions in its behalf, par-

#### A CITIZENSHIP DIRECTOR

The office is a new one created under the Department of Labor to teach American ideals to alien residents. Raymond F. Crist, who as deputy naturalization commissioner has had charge of the Americanization work of the department, is to be the first director of the bureau. Mr. Crist has been in Government service since 1884 and has been secretary to the Secretary of Commerce and Labor and commercial agent of the Department of Labor to Japan, China and Africa

ticularly that the Allies should cease their "barbarous persecutions" of all labor movements in the occupied regions.

General Smuts thereupon returned to Paris, apparently without having achieved any tangible results, tho his mission was regarded by the Soviet government as the Allies' formal recognition of its legitimacy. Following his departure, British and American residents of Budapest began preparations for speedy removal from that city and from Hungary, taking with them all movable property. This was done despite the apparent zeal of the government to give them all possible protection.

**The Burdens of France** In arguing the need of the largest possible indemnity for France, M. Clemenceau has given an impressive account of the burden which the war has imposed upon that country. The population of France is less than 40,000,000, and the public debt is more than \$40,000,000,000. Every man, woman and child is therefore burdened with a debt of more than \$1000. Every baby is born owing a debt on which it must pay at least an annual interest of \$55. According to the last census, there were less than 13,000,000 money producing males in France. Thus, for each worker, there is a debt of over \$3000.

With its present debt, France's expenditures are placed at \$3,600,000,000 a year, and the total annual private income of all the French together is

COME RIGHT IN, DOCTOR

The Hungarian lamb seems to be pretty sick, but it's a question whether the Bolshevik wolf is the doctor to cure her

only between \$1,000,000,000 and \$3,000,000,000.

However, it is not only necessary to meet expenses, but to pay off that great national debt. Prof. Henri Truchy, the economist of the Sorbonne, considers that \$40,000,000 a year for this purpose would be a good average. At this rate, it would require a hundred years to free the country from debt. Some have contended that it would be unfair to Germany, and contrary to the spirit of the times, to place a heavy burden of debt on future generations of Germans, who ought not to suffer for the mistakes of their forefathers. In reply the French demand: "Is it fair to force future generations of French to pay the debts of a war begun by the Germans, when the Germans themselves are exempted?"

**Anarchism in Paris** The first important demonstration in favor of Soviets in Paris was made on April 6, by a great multitude of Anarchists, Radical Socialists and others, protesting against the acquittal of Raoul Villain, the slayer of Jean Jaures, the former Socialist leader. There were numerous cries of "Long live the Soviets!" and "Down with the Peace Conference!" and beside the red flags of Socialism the black flag of anarchy was publicly displayed. The Government treated the affair with moderation. At one point a slight conflict occurred between the paraders and the police, in which nobody was seriously hurt and nobody was arrested. No attempt was made, however, to proclaim a Soviet republic, and at the end of an anxious day the city resumed its quiet.

**British Labor Settlement** The controversies between capital and labor in Great Britain, which have of late assumed the form of controversies between the Government and organized labor, and which have been most seriously menacing, have at last happily been brought close

to what may be hoped to be a complete settlement. It was agreed on April 4, by representatives of both capital and labor, that the Government should be urged immediately to introduce and to press to enactment a number of reform measures. These will establish an eight-hour day at a minimum wage, and will create a national industrial council. Assurances have been given that the Government will give prompt and sympathetic attention to the matter, and it is confidently expected that the desired laws will soon be made.

**The Campaign in Russia** Serious concern was caused by the announcement on April 3 that the Allied forces in Northern Russia were in danger of annihilation. Sir Ernest Shackleton, the explorer, returning from that region, spoke of the peril of "another Khartoum." Communication and supplies by way of the White Sea were much impeded

Thomas in Detroit News  
WAITING FOR THE PLUMBER

Cossack leader, is reported to have redeemed all the Northern Caucasus, from the Black Sea to the Caspian, from Bolshevik control. In the south the Ukrainians, under General Petlura, are threatening to drive the Bolsheviks from Kiev, and are soliciting recognition from the Allied powers, failing which, they intimate, they might have to make "unfortunate compromises" with the Bolsheviks.

On the other hand, the Allied forces, consisting of French, Greek and Rumanian contingents, were compelled to evacuate Odessa and withdraw to the Dneister River. The city was thereupon occupied by Ukrainian Soviet troops. Steps were taken to remove all British and other alien residents.

Lieutenant-Colonel Warwick Greene and five other officers have been sent by the American peace delegation at Paris as a special commission to investigate conditions in northwestern Russia. Before leaving for Libau they issued this statement:

The United States considers that no world peace is possible until the Russian problem is solved and satisfactory governments established in Finland and the Baltic provinces. With the object of facilitating the work of the United States peace delegation in Paris, a special American commission has been appointed to visit Finland, Esthonia, Lettland and Lithuania to study political, economic and military conditions.

**The Polish Compromise** The controversy between the Allies and Germany over the use of Danzig as the port thru which to repatriate the Polish army in France has been ended in a compromise. Marshal Foch went to Spa, Belgium, on April 3 to present to Mathias Erzberger, the head of the German Armistice Commission, the decision of the Allies. At the first conference between them Marshal Foch insisted upon the right of the Allies to send the Poles home by way of Danzig. Herr Erzberger at first sought to contest that point, but later contented himself with pointing out the great danger of popular disorder and bloodshed if that course were followed. At a second conference the German Government was represented as assenting to the use of Danzig provided that the Allies would guard against disorder.

Harding in Brooklyn Daily Eagle  
HURRY UP

by ice, while the breaking up of winter facilitated the advance of the Bolsheviks in increasing numbers from the south. Military authorities, however, regarded the situation with complacency, which seemed to be justified when on April 4 and 5 news came of crushing defeats with heavy losses inflicted upon the Bolsheviks by the Allies. Some small reinforcements of American and British troops were sent, chiefly railroad engineers, to operate, along the Murmansk railroad, and confidence was expressed that the Allies would be able easily to hold their ground until they got ready voluntarily to withdraw altogether from Russia, which it was reported the Americans would do by July 1.

Meantime, Admiral Kolchak's forces, from the Government at Omsk, Siberia, have been swiftly pressing westward against the retreating Bolsheviks, particularly in the regions of Orenburg and Ufa. Many of the Bolsheviks are reported to have deserted their comrades and to have joined the Siberian army. General Deniken, the

London World  
THE UNINVITED GUEST

Kirby in New York World

NO WONDER THE PROGRESS IS SLOW

But it was also urged by Germany that other routes, of which several were proposed, be followed instead. This was finally agreed to by Marshal Foch. It was therefore arranged to send the Poles home by way of several other routes, less offensive to German susceptibilities. These routes are three in number. One is by rail by way of Coblenz, Halle, Lissa and Kalisz; another by way of the port of Stettin; the third by way of the port of Koenigsburg. Germany is to guarantee safe passage of ten railroad trains daily across her territory by these routes. The Allies in no sense renounce their right to the use of Danzig, and will in fact use that port if these other routes are obstructed or prove unsatisfactory. In Poland and elsewhere some dissatisfaction with this compromise was expressed, for fear that it would be regarded in Germany as a sign of Allied weakness and would encourage further resistance to the terms of peace prescribed by the Congress.

#### The "Rainbow" Returning

The "Rainbow" Division of the American Expeditionary Forces began its homeward movement on April 5. On that day the first trainload of its soldiers left Coblenz for Brest, and it was announced that three trainloads would be dispatched daily until April 11, by which time the entire division would have left the Rhine. This Forty-second Division is composed of the National Guardsmen of twenty-seven states. It was the third division to land in France, and its homecoming is the first divisional movement of troops homeward from the American zone of occupation.

#### The Largest Wheat Crop Ever

The forecast is for 837,000,000 bushels of winter wheat this year, the largest crop ever grown, and over twice as much as the crop two years ago. The spring crop, it is predicted, will add 300,000,000 bushels to this total, making the value of the year's wheat about \$2,500,000,000.

The figures in themselves are stimulating. But they gain further interest

from the speculation as to how much of that \$2,500,000,000 the Government will have to pay. Under the bill passed by Congress in the closing days of the last session the Government is obliged to pay the difference between the guaranteed price of \$2.26 a bushel and the world market price for every bushel of winter and spring wheat produced.

It is too early yet to estimate the numerous factors influencing the world market price, such as the production in Argentina, Australia and other countries, and the European demand. There will probably be enough foreign need to use up the surplus of American wheat. And the opinion expressed in Washington these days is that, while the loss to the Government thru its price guarantee might mount into the millions of dollars, so far as the actual wealth of the country was concerned, it would simply be taking money from one pocket and putting it into another. The money will go into the pockets of

Dack in New York Tribune

WONDER WHAT CAN BE KEEPING HER

the farmers, and the forecast indicates that farmers will be more prosperous and possess greater potential buying power than ever before in the history of the country. The large amount farmers would receive for this wheat, therefore, should find its way back quickly into circulation, thus adding to the general prosperity of the nation.

Uncle Sam any contractor to have Settles Up any doubt about his ability to secure an adjustment" reads the announcement of the War Department that the Government is anxious to adjust and settle all of its war obligations with the greatest possible speed. There are four bases on which a contractor may present his claims if he has terminated production upon the War Department's request:

1. Payment for raw materials, parts and work on hand to a certain specified amount, if he will waive his claims to the prospective profits he might have had if the contract had been completed.

2. A remuneration, or reward, consisting of interest at 6 per cent per annum on money invested in raw materials, and com-

ponent parts, and 10 per cent profit on work in process.

3. An amount necessary to reimburse the contractor for what he has to pay to subcontractors or for commitments in terminating his contracts.

4. Necessary amounts for the care and custody of property, facilities, machinery and other special items of expenditure considered as fair compensation in the readjusting of terminated contracts.

Thousands of contractors, according to the War Department, have not as yet presented a statement or claim of what they want, tho it was several months ago when they were requested to suspend production. "If there are any reasons why any contractor cannot state his full claim and the disposition which he desires to have made with reference to every item thereof, there is no reason why he should not present as much of his claim as possible in order that the necessary investigations and negotiations can be proceeding."

Claims must be presented before May 15, 1919, if they are to be passed upon by the War Claims Board, "an organization," as the War Department explains, "which is essentially civilian in character, and composed of men who have come into the department merely for the purpose of the war and remain in this work only at a very great personal sacrifice and at the urgent request of the department."

The Rockefeller Foundation, which spends about \$7,000,000 a year in the disinterested advancement of public welfare, has announced a new appropriation—\$500,000 to promote fundamental research in physics and chemistry. For some time past the foundation has been studying how best it could aid in the work of discovery of basic principles of science

Paul in Sydney Bulletin

DIRECT ACTION

The Lunatic: "Yes, the key's in the lock, the combination's set, and I could easily turn the handle and help myself. But, bless you, that's not my idea of opening safes!"

upon the theory that the discovery of such principles can always be depended upon to result in valuable inventions and development of needed products. The appropriation of \$500,000 will be used to support research fellowships over a period of five years, and will be administered by the National Research Council.

There are three prime considerations, according to President George E. Vincent, of the Rockefeller Foundation, that led the foundation to make this appropriation:

The steepest industrial competition ever known will follow the war. German scientific efficiency has been greatly enhanced under the pressure of war necessity. England has made an initial appropriation of one million pounds for the promotion of research. Japan, Australia and Canada are planning great research laboratories of physics and chemistry. France, Italy, South Africa and New Zealand are moving rapidly toward the same ends.

New industrial research laboratories are springing up everywhere. Self interest, once fully aroused, will amply provide for industrial investigations; but this is not true of the fundamental scientific research

on which industrial progress depends. The advancement of research in pure science must be financed from private funds. At present almost all research in physics and chemistry is done at odd moments by overworked teachers, inadequately equipt and without assistants to relieve them of petty details. With adequate funds these difficulties can be overcome.

The board named by the National Research Council to control the work consists of Henry A. Bumstead, Simon Flexner, George E. Hale, Elmer P. Kohler, Robert A. McMillikan, Arthur A. Noyes and Wilder D. Bancroft. They will award the fellowships "to persons who have demonstrated a high order of ability in research, for the purpose of enabling them to conduct investigations at educational institutions which make adequate provision for effective prosecution of research in physics or chemistry."

**For Philippine Independence** The Philippine Islands have presented formally to the United States their petition for complete independence. And President Wilson has

Kirby in New York World

#### LITTLE FILIPINO GETTING READY TO LEAVE SCHOOL

practically promised to help them get it.

A delegation of forty prominent Filipinos, headed by Manuel Quezon, president of the Senate, came to Washington on April 4 with a memorial from the Philippine legislature, reading in part:

Independence is the great national ideal of the Filipino country, and we believe this is the proper time to present the question, looking to a favorable and decisive action, because of the declared and uniform policy of America to withdraw her sovereignty over the Philippines and to recognize our independence as soon as a stable government has been established. There now is a stable government and the fulfilment of this solemn promise you owe to yourselves, to us and to humanity at large.

You have truly treated us as no nation ever before has treated another under its sway, and yet you—and none better than you—will understand why, even under such conditions, our people still crave independence, that they, too, may be sovereign masters of their own destinies.

President Wilson had prepared an answer to this petition before he sailed for Europe, expressing his sympathy with the Filipinos' viewpoint and asking Secretary Baker to present more fully his sentiments in favor of Philippine independence. Secretary Baker congratulated the delegation on coming to this country to "make known the fact of Philippine progress, the growth and development of political capacity in the islands, the spread of education, and the natural growth of aspirations for political independence." He added:

For a long time the Philippine people had been discussing among themselves their aspirations. As soon as the United States became involved in the great enterprise of the world war, the Philippine people with fine self-restraint abandoned the discussion of that question as inopportune at the time, and threw all their energies and their resources into the common weal with the people of the United States, so that throughout the entire period of the war the relations between the people of the United States and your people have been those of cordial cooperation and confidence and growing appreciation and esteem.

When the United States went into the Philippine Islands, it set up a military government. What has been going on is the rapid progress and development of a new civilization in the Philippine Islands: not an Americanization of the islands, but the growth of a Philippine civilization. It

is normal that people should desire to be free and independent.

The Philippine Islands are almost independent: your legislatures govern the islands. The strongest tie between the Philippine Islands and the United States at present is this tie of affection of which I speak, rather than the political. I know that I express the feeling of the President. I certainly express my own feeling. I think I express the prevailing feeling in the United States when I say the time has substantially come, if not quite come, when the Philippine Islands can be allowed to sever the more formal political tie remaining and become an independent people.

Francis Burton Harrison, Governor General of the Philippines, expressed sentiments identical with those voiced by Secretary Baker. The formal act granting independence, he said, was one that Congress must take up, and the Administration would present the matter to Congress at the appropriate time.

The Philippines have had self-government since October 16, 1916. By act of Congress, approved August 29, 1916, better known as the Jones bill, the old Philippine Commission was abolished, there being substituted as the Upper House of the legislature a Senate, composed of twenty-four members, and, instead of the Assembly, a House of Representatives of ninety members, all elected at triennial elections, excepting two Senators and nine Representatives appointed by the Governor General to represent the non-Christian provinces. The political attitude of the present Administration was set forth in the preamble to the Jones bill, which declared "it has always been the purpose of the people of the United States to withdraw their sovereignty over the Philippine Islands and to recognize their independence as

London Daily Express

GOING DOWN?

soon as a stable government can be established therein."

The prosperity of the Philippines has increased tremendously during the past two or three years. In 1917 the foreign trade of the islands was 34 per cent greater than ever before, reaching a total value of \$161,401,337. The chief increases were in exports to China and Japan. During 1917, too, an actual and effective beginning was made in developing the natural resources of the Philippines by local capital, much of it invested in agricultural enterprises such as sugar centrals and new plantations. Seventy-four agricultural credit cooperative associations were established under a new rural credit law, enabling the small farmers to buy new lands and to secure funds for their development.

**Another Mexican Revolution?** "I will see you in Mexico or eternity" were the general's last words as he sailed. Three months later he cabled from Tepatlaxco, Vera Cruz, "All goes well." Which his supporters in this country took to mean that he was in Mexico.

The general is Aurelio Blanquet, former Mexican Minister of War under Victoriano Huerta, and sworn foe of Venustiano Carranza, President of Mexico. He sailed from Havana on January 8 with munitions, landed on the east coast of Mexico and proceeded to organize armed forces, headed by General Felix Diaz, in an uprising to overthrow the Carranza Government, reestablish the Constitution of 1857 and revoke the alleged confiscatory decrees of the present government. General Diaz, it is said, has 40,000 troops scattered thru fifteen of the twenty-seven states of Mexico; they are known as the National Reorganization Army of Mexico. He has been opposing the Carranza Government for two years. That General Blanquet has united with him seems to promise trouble for the internal affairs of Mexico in the near future, for General Blanquet has a strong following. He is now seventy-one

years old, and he began fighting in the Mexican army when he was fifteen. In 1914 he was Vice-President of Mexico and frequently mentioned as the successor to President Huerta. But the success of the Constitutionalist forces under Carranza in 1914 drove both Huerta and Blanquet into exile. General Blanquet lived at first in Spain and for the last four years in New York City.

Simultaneous announcements were given out in New York on April 5 by representatives of the Mexican Government and the Mexican revolutionists. "We have received authentic news from Mexico that the Carranza Government is sure to fall," said Dr. Roberto Gayon, secretary to General Blanquet. Dr. Caturegli, financial commissioner of the Mexican Government in the United States, issued a statement in which he said: "Felix Diaz is hiding in the mountains of the State of Vera Cruz with a small force of men. They are without adequate support in the way of arms or financial resources. The report that Diaz has an army of 40,000 men at his disposal is ridiculous."

General Edmund E. Byrne, Acting Judge Advocate General.

#### THE NEW ACTING JUDGE ADVOCATE GENERAL

The appointment of Brigadier General Edmund E. Byrne to the position of Acting Judge Advocate General is a new development that may have some bearing on the constitutional controversy now being waged by Lieutenant General Arnold. Two months ago, when he was the acting Judge Advocate General, General Arnold was subsequently promoted and General Byrne, who is also Assistant Major General of the Army, assumed the duties of the office for a short time until he was recently named to the position. General Byrne was head of the branch of the Judge Advocate General's office at the headquarters of the A. E. F.

# THE COURT MARTIAL IN ITS TRUE PERSPECTIVE

BY SECRETARY OF WAR BAKER

*Last before Secretary Baker sailed for Europe on April 7, he gave the following article to Mr. Donald Wilhelm in Washington for The Independent*

**F**IRST let me say that I cannot discuss personalities and the accusations which are made by military officers, one as against another. For, as to such controversies, I occupy only a judicial position and relationship. But, on the subject of military justice, as head of the War Department, I am free to speak.

Undoubtedly it would be strange if this were not the case—some of the courts martial have, during the war, imposed sentences which seemed harsh; undoubtedly some of the examples were made in the wrong place, in part for reasons existing in the nature of provisions made before the war, and in part by reason of considerations that operated inevitably in the men themselves and in the many thousands of officers new to service in the army.

For America was engaged in a great war. The stern realities of that war were borne in, as we can imagine only the men in the service fully understand, upon all those who were brought into the military service. We were obliged rapidly to mobilize and

to train great bodies of men, all kinds of men, and to send them across seas that were infested with submarines to fight a highly-trained, relentless, scientific and ruthless enemy. This enemy laughed, openly, at the possibility of America making soldiers of caliber to withstand him in time to be effective against him. Indeed our French and British associates doubted our ability to bring our soldiers up to such a degree of individual strength and discipline and skill that they would be able to bear the brunt of the highly-organized, confident and powerful attacks that the Germans made. We had, from the outset, the necessity of impressing upon our young soldiers the essential importance of obedience. Now, at the close of this great war, not only are all those who suffered sentences assured that those sentences are susceptible of correction—so that the lessons which the courts martial felt to be necessary in order to teach essential discipline are not allowed to remain an incorrigible disability upon those whose misfortunes or minor shortcomings brought them into court—but we have the proud record of not having had to enforce military discipline by a single example of capital punishment for any purely military offense.

Our foe made light of our intensity, perhaps because he knew of our experience in the Civil War. In that war, it will be remembered, President Lincoln began by commuting death sentences and in otherwise exerting leniency in the carrying-out of military discipline. But toward the end of that war he was obliged to confirm death penalties in large numbers. Indeed, one of the sad and tragic phases of his later life as President was the constant necessity of confirming death sentences, when it had come to be argued that his leniency in the earlier part of the war had made rigid discipline necessary.

The Civil War made clear, even to President Lincoln, that, against the Confederate Army, the consequence of disobedience might at any time prove disastrous to the Union cause. And in this war, against a ruthless and terrible antagonist, it was inevitable that what may be called the psychology of the situation operated in officers and men and made them fearful of the consequences of disobedience. The captains and majors and other officers no doubt realized, from the moment that they embarked upon their perilous enterprise, not only that all success depended upon the reliable carrying-out of orders, many of which [Continued on page 122]

# THE VERY HUMAN ADMIRAL

## How the American Navy and Its Commander Helped to Bring on "The Day"

**W**HEN the final and considered judgment of history sums up the accomplishments of the U. S. Navy in the great war, the brightest star in its diadem will be the manner in which it sank its individuality, its hope of separate glory, its pardonable pride in its own methods and organization, by first contributing its services in such manner as to strengthen the weak spots in existing Allied arrangements instead of insisting on separate and independent organizations which at the moment might have shed glory and brilliance on its record but would have resulted in far less of solid and enduring accomplishment to-

ward the one important result—the winning of the war. This policy, so sound in conception and so successful in achievement, required on the part of the Commander of our active forces the greatest self-abnegation and the placing to one side of the hopes of personal glory and distinction. So it was but poetic justice that this policy, adopted from such selfless motives, resulted in placing Admiral Sims in a position of power and influence in the allied councils second to that of no naval leader developed in this war.

Quite apart from such success as Admiral Sims accomplished in directing and conducting his own American ships, he has, as a representative of America, made a much greater American contribution to the world war against Germany. Unfortunately, this principal accomplishment is very difficult to describe. It cannot be reduced to statistics or specific and concrete statements. Eventually it may gradually come out as the true history of the war behind the scenes reaches public light.

All those who have come in contact with the Admiral, both officials of foreign navies and Americans who had an opportunity of visiting Europe and staying long enough to really understand true conditions, have at least an

impression of this principal accomplishment of our American Admiral. The principles and policies which he stood out for within his own command had a marked effect on other navies with which they worked. He practised them daily and they had a marked effect in the Council Chambers of the leaders of the other navies. They had an effect on the conduct and operations of those other navies, altho it was perhaps indirect. There is plenty of specific evidence to support their impression, but, unfortunately, as in many other important aspects of the war, it cannot be set forth publicly and in detail at present without involving personalities or drawing invidious comparisons, which would accomplish no useful object. We must wait until the present generation has gone and personalities are eliminated from the game to get this side of the true history of the war in all countries.

It is known that repeatedly in Councils of the Allied Naval Leaders in England, France and Italy Admiral Sims took a decided stand for what really amounted to nothing but "unified command" and modern business principles. There is reason to believe that Admiral Sims in carrying out his policies did not always have an easy time, even within his own naval circles.

Admiral Sims's outstanding charac-

teristics are simplicity of character, frankness, and absence of all artificiality. No matter what his audience, he talks his own language, and never is anything but his own true self. There is evidence to show that in the beginning the leaders of allied navies with whom he worked did not understand his frankness and that some doubts existed in their minds as to what motives were behind such apparently unguarded talk. It was not many months, however, before gradually it became evident in indirect as well as direct ways, that this man was above all things simple and of the greatest possible honesty of character.

Above all things, every one who

knows Admiral Sims intimately knows that his outstanding and principal characteristic is the fact that he is in the last analysis very human. He puts on no airs, he invariably means exactly what he says and nothing else. His diplomacy is typically American, he has nothing "up his sleeve," his cards are always "on the table" even if they may actually affect his own interests or be to some extent embarrassing to himself. When this came to be known, not thru words, but by actual experience, it was that Admiral Sims should come to have a powerful influence upon all with whom he came in contact. He came to be looked upon in foreign navies not only as the "American Admiral," but as a brother officer.

One of the many demonstrations of this fact is, that in conservative old England, which still steadfastly adheres to many formalities of past ages, they actually proposed to make Admiral Sims an active member of the "Board of the Admiralty." This is what that meant: The British navy is controlled differently from our own—first, by a civilian Secretary called "First Lord," and second, by the so-called "Board of the Admiralty." This board is bound up in ancient laws which still exist today. Its members are the principal naval officers of the British Admiralty which corresponds to our Navy De-

*Press Illustration*

Admiral William S. Sims, Commander in Chief of the United States Navy in European waters during the war, has just returned to this country, where he was greeted enthusiastically as America's naval hero. In the photograph (from left to right) are his daughter Adelaide, the Admiral; a son, William Jr., Mrs. Sims, and a daughter, Margaret

partment. The members of the "Board of the Admiralty" are legally known as "Commissioners for executing the office of the Lord High Admiral of the United Kingdom of Great Britain, Ireland, etc.," and important official correspondence of the Admiralty starts off with the phrase "The Lords Commissioners of the Admiralty have this day — etc." Furthermore, the office of the First Lord, corresponding to our Secretary of the Navy, is bound down with many restrictions. There are many important questions concerning the British Navy and its direction which are not legal if issued and signed alone by the First Lord. They must have the concurrence of at least a certain number of Admirals on the Board, who are known as "Sea Lords."

The respect and the feeling held by the heads of the British Navy for Admiral Sims was shown by the unprecedented proposal to submit the Admiral's name to the King to serve as an honorary member of the Board of the Admiralty. While the Admiral constantly attended all conferences at the Admiralty concerning the war, still those conferences related solely to the conduct of the war in general and the progress of the Allied naval campaign. His advice was always sought and he took an active part in the discussions which led up to important conclusions and decisions. However, when matters were being discussed strictly referring to the administration and conduct of the British Navy alone, he of course was not present. But making him an honorary member would have carried with it his attendance at Board Meetings of the Admiralty, and his participation in deliberations concerning matters affecting the British Navy alone. The French followed with the same proposal.

Without reflection upon any one, it is a well known historical fact that the history of all allied warfare is unfortunately full of instances of inefficient coöperation due largely to considerations of national pride, prestige, and

jealousies. Past wars have been followed by controversies extending for many years on account of these unfortunate occurrences.

Admiral Sims introduced a most compelling influence into Allied Naval Councils in this war to prevent such undesirable occurrences. He stood out strongly at all times for "team work" regardless of national or individual interests, and he emphasized this stand by his example, as much as by his words, and by the conduct of the forces under his own command. There is no question whatever but that history will eventually show him to have had a marked influence upon the successful outcome of this war.

Admiral Sims is noted for always being popular with his subordinates,

and also for having an organization so efficient and based on modern business "scientific management" principles as to attract the attention of the service. His commands, whether ashore or on shipboard, are always happy.

The Admiral, perhaps more than any other officer in the service, is a real leader of men. He not only understands but actually puts into practice, the all important characteristic of real leaders—such as decentralization, trusting his subordinates implicitly, not going into details himself, but reserving his energy for only the bigger questions of policy and encouraging to the limit individual initiative and exercise of ingenuity on the part of his subordinates. He always keeps himself in perfect health and physical condition by refus-

ing to allow himself to be overwhelmed with administrative and other details which should not be allowed to take up his time.

These are some of the reasons why the forces under Admiral Sims's command are noted for unusual accomplishments, knowing full well that as long as they base their actions on common sense, their chief will take the attitude that they, being on the spot and confronted with a task in an emergency, were the best judges of the action justified, and that they could count upon being supported by him to just as full an extent as if he had signed a hard and fast and explicit order requiring them to do exactly what they did do.

It is a common saying of the Admiral that he does not expect 100 per cent efficiency on the part of his staff or the

that our ships did in European waters during the war:

The navy escorted 62 per cent or about 1,250,000 troops of the United States Expeditionary Forces to Europe, without loss from enemy action.

The navy escorted 27 per cent of all United States, Allied and neutral shipping carrying cargoes to France, England and Italy during the period April 6, 1917, to November 9, 1918.

The navy laid 80 per cent of the northern mine barrage from Orkney Islands to Norway. This in-

American Press Association

"The navy laid 80 per cent of the northern mine barrage. In one operation 5520 mines were laid in less than four hours, an unparalleled feat"

officers of his command, that he knows well that if he even attempted to interfere in details, the percentage of errors would inevitably be higher than if he adhered to his proper role. This simply because of the fact that no one man could do it—he would be overwhelmed—and his ability as a leader would be destroyed. He says, too, that he expects a reasonable number of errors and that, as long as they are not inexcusable and are based on dictates of common-sense, he will take no action, assuming that the one who made the error is generally already punished severely by his own conscience and the unavoidable damage to his reputation. Even when too many errors occur on the part of some subordinate, it is folly for the superior to attempt to take charge. On the contrary the proper corrective measure is to change the subordinate.

Knowing this much of the commander it is natural to expect achievement of the American Navy. And the navy lived up to the standard that its Admiral set. Here are some of the things

shipment abroad, and the establishment of two large assembly and testing plants in Scotland. The mines were handled entirely by our own personnel and laid from a squadron of United States merchant ships converted into special mine layers. In one operation a field of 5520 mines was laid in less than four hours—a feat unparalleled in the annals of mining.

All our ships in European waters were used thruout the war as training schools for new personnel while they were carrying out their actual war operations. Any one familiar with the problems of naval efficiency is aware that one of its greatest requisites is permanence of personnel. Owing to the large expansion of the United States Navy during the war, particularly in the case of destroyers, and the problem of efficiently manning new construction, it was necessary to use all ships for training purposes.

Our ships were self supporting in all respects, except in case of serious accidents and docking.

The navy initiated tactics of a so-

U. S. Navy Recruiting Bureau

"I am not nearly so grave as this would lead you to suppose. On the contrary I am -always cheerfully yours, Wm. S. Sims," wrote "The Very Human Admiral" under this photograph which was taken in London in 1918

volved the designing of the new mines, their manufacture and called "barrage system" in using depth charges in large numbers. The tactics developed were eventually adopted in other allied services.

The navy established, manned and operated nine shore bases to support cruising ships, and thirty-four aviation bases in England, Ireland, France, and Italy from which aircraft bombed enemy submarine bases, and patrolled at sea in protecting convoys from submarines.

As we had more personnel than equipment until late in the game, the navy assisted the Allies by the loan of aviators, aviation mechanics, telegraphers, and many other types of skilled men.

The navy advised and assisted Mr. Hoover in operating food ships thru Europe. It established naval organizations in every port of Europe where United States merchant ships called, in order to assist them in every way and to look out for their interests. During the war all peace time port facilities upon which merchant shipping depends were wholly disorganized and in many cases had ceased. Since the armistice these naval port offices have been greatly extended from the Baltic to the Black Sea.

The navy manned and operated a fleet of sixty seven ships carrying coal from Cardiff to France to meet army needs.

The navy assisted in carrying out the surrender of the German fleet and the armistice conditions with Germany and Austria.

*Western Vespene Union*

*"The navy assisted in carrying out the surrender of the German fleet." These submarines were among the vessels given up*

The navy helped in obtaining neutral ships to carry troops.

The navy equipt, manned and operated on the western front with French and United States armies a battery of mobile great naval guns which had been designed by the navy for their battleships, guns with a range of over twenty-miles. Five complete gun trains operated with the French and American armies by purely naval personnel. To understand the character of this work it should be appreciated that all material, designed and manufactured in the United States in a most remarkably short time, was brought to France by the navy, and more than seventy-five cars, six locomotives and the gun mounts were landed and erected by the naval personnel which operated them on the front. In this expedition the navy furnished the most powerful artillery used on the front by any of the Allies.

An aviation force for foreign service of approximately 20,000 men and 5000 officers was maintained by the navy. This personnel was distributed along the coast line of Europe, from the North Sea to the Adriatic, and successfully operated sixteen seaplane stations, four dirigible stations, three kite balloon stations, two large assembly and repair bases and a powerful bombing group located in Northern France. The measure of efficiency of this aviation force on foreign service cannot be figured according to any fixed scale. Its participation in the successful escort of United States troops overseas was a factor in the accomplishment of that gigantic task. This entire force was organized into an operating unit under Admiral Sims's direction. The nucleus of this force consisted of 100 men and five officers from which a smooth running and effective weapon was made.

Altho the forces actually commanded by Admiral Sims were relatively small in comparison with those of other navies, the Admiral's views and opinions, nevertheless, carried a great deal of weight in the council chambers, simply because they constituted an outside viewpoint from a man representing a great nation. Views from such a source could not be passed over lightly.

As the center of war activity both on shore and sea was in Europe, and as Admiral Sims was the senior United

States naval representative in Europe, his duties were not only to direct and shoulder the responsibilities for the operations and conduct of America's naval forces, sent into European waters—the storm center of the Greatest of World's Wars—but also, and perhaps even more important, he was the representative of the Navy Department, and in fact of the navy and of the country in the Naval War Councils by which the combined naval campaign was coordinated and directed. The fact that, with the exception of the very minor operations of one or two submarines, late in the war, on the home coast, all experience and activity of the war was solely to be found in European waters, placed an additional heavy and all-important burden upon Admiral Sims and his staff.

All information concerning enemy movements, their methods, and the daily progress of the naval campaign centered in Paris and London, but principally in London, owing to the size of the British navy, the British mercantile marine and Britain's outlying stations and lines of communication. It will thus be seen that the Navy Department in Washington (the headquarters of our navy) was almost wholly dependent on Admiral Sims for advice as to how the United States Navy could best help, for information as to all experience of the war which affected design and equipment of new ships to be built or sent, the kind of equipment to be manufactured. In fact, all work at home had to be based on actual war experience, which was only available abroad. Methods, plans, daily movements of the enemy, etc., had to be watched, collected and supplied by Admiral Sims's organization.

With the exception of those two or three futile raids, attempted by individual submarines off the United States coast to divert our attention from the critical localities, the war on sea as well as land was fought about 3000 miles from our home shores. Prior to our declaration of war there was a great wall of secrecy thrown around us on account of our neutrality and the rigid censorship so that accurate and complete information of the actual state of the naval campaign, and the experience gained from it by those engaged in it,

was unfortunately very imperfectly known by our navy at home and, what was even worse, in many important instances was inaccurately known. It would take a volume in itself to attempt an adequate account of the tremendous work which fell upon Admiral Sims and his organization in seeking and collecting and transmitting to Washington, as quickly as possible, after his arrival in Europe, all of the information and experience which was necessary to the intelligent direction of our navy from its main headquarters.

This condition, of course, continued thruout the war, and it is understood that the volume of cable and written communications which passed between Washington and Admiral Sims's headquarters abroad was tremendous. Few people realize, for instance, what an enormous amount of information had to come from Admiral Sims to our Navy Department in Washington before our ships could be properly built, equipt and our supplies suited to the past experience of the war. How the admiral set about furnishing this information is one of the many war secrets that we are only now beginning to hear. Admiral Sims himself told this story to the newspapermen in New York, when he arrived on April 8, after turning over to Rear Admiral H. S. Knapp his command of our naval forces in European waters:

"While I was president of the Naval War College at Newport, I was ordered to report without delay to the Secretary of the Navy at Washington. I was not notified of the nature of the business to be discussed. When I arrived I was received in secret conference with Secretary Daniels and Admiral Benson, chief of naval operations.

"I was told that it 'looked as tho we shall go to war with Germany.' They then explained to me that I was to go at once to see the people on the other side, and reach an understanding as to how the United States could best co-operate with Allied sea forces in operation against Germany.

"They told me that one aide would be allowed me, and that his identity must not be known until it might be decided to reveal it on his arrival on the other side. [Continued on page 120]

#### YOU DON'T USE YOUR FEET ON A TELEPHONE

Or to mend an automobile tire. These are two of the many industrial trade courses given at the big reconstruction hospital in Colonia, New Jersey, where wounded soldiers are fitted to earn their living at a trade they like. Dr. Prosser, head of the Federal Board of Vocational Education, has given it as his estimate that there are about 200,000 men disabled by the war who will need this sort of retraining in the United States. About a third of them choose to fit themselves for industry and trade and about 20 per cent each go into agriculture, commercial pursuits and the professions. "The vast majority of men," says Dr. Prosser, "are better off after the training even with their disability than before"

## OPPORTUNITY IN THE SHAPE OF A WOUND CHEVRON.

For the men disabled by the war and unfit to take up their old jobs again, Uncle Sam is offering instruction in all sorts of trades and professions from carpentering to theology. The manual trades are the most in demand; it is surprising how many things a one-armed or one-legged man can learn to do just as well as before he was wounded. But as Samuel Hopkins Adams explains in the Red Cross magazine, few of us have been educated beyond the crippled stage anyhow. "I suppose you regard yourself as a whole man," demanded one of the vocational therapy experts. "You haven't got anything like the full use of more than four fingers and two thumbs out of a total of ten. Your two smaller fingers are really cripples. Now we teach our fellows to do the work with those fingers that you have to use another hand for. There's the whole physical principle of our training—substitution."

#### WHERE PROFITS ARE DIVIDED FIFTY-FIFTY

Men already somewhat skilled increase their own ability and regain their strength in these shop-classes at the Colonia Reconstruction Hospital, where automobile repairs and carpentering and cabinet work are done on a regular business basis with half the profits given to the soldiers and the other half used to improve the shops, which are financed and run by the Government

Central News

#### A FACTORY THAT PREFERS CRIPPLED SOLDIERS

There are twelve hundred men disabled by the war who are learning diamond cutting and polishing at this New York plant. It is a highly skilled trade and pays well. All over the country schools, factories, offices and farms have offered their facilities to the Government to help wounded men find and maintain their place in the economic life of the nation

(C) Underwood & Underwood

#### NO MORE MADE IN GERMANY" TOYS

Toy making is one of the trades in which wounded soldiers like best to regain manual dexterity. The class above is working at one of the army hospitals under a reconstruction aid. On the theory that no man is discharged from our army or navy until he is as fit as he can be, the instruction at the hospital is often followed by more advanced work in factories, offices or universities. The Government in other words is more than keeping its war promise that those who came back crippled would be retrained, re-educated. The picture at the right is the climax of our proof that the wounded soldiers in U. S. army hospitals have no lack of educational opportunities

# DON'T WEAR A CRUTCH

BY CHESTER T. CROWELL

**I**N these ultrauplifting days when so many noble men and women "With Vision" ask Washington for only a paltry hundred million or two so that suffering humanity may realize its destiny day after tomorrow instead of waiting and watching and working thru weary centuries of struggle and repression—in these days when our great nation is coming to think in international terms and has written a new national anthem which begins: "There ought to be a law"; as I said, in these days, it is doubtful if a "native wood note wild" can be heard, but I am going to sneak up close to a knot hole in the fence and take my chances in competing with the clamor inside the forum.

I want to tell a story about the vision of the founders of a republic that was but is not. I want to tell of their dream about a great commonwealth that should surpass the world in education, and of the untold wealth they poured out of the public treasury to make their dream come true. And I want to tell why they failed. I want to tell this story because there are so many persons looking longingly in the direction of the national treasury—and most of them are sincere in the belief that they can take some money out of that treasury and apply it to the benefit of persons who need something that they don't know they need, and do a lot of good.

**T**HIS is a story about the Republic of Texas. The brave pioneer leaders who won independence were for the most part well educated men. No better English has been written on this continent than they wrote in their early state papers. To the extent that they were able they supported good schools. One of the greatest hardships they suffered was the fear that they might not be able to bequeath to their children, reared in the wilderness, the culture they had brought with them from the older states.

At the Battle of San Jacinto in 1836 about 700 of these pioneers defeated the Mexican army and won possession of a territory so vast they did not even know the extent of it. All of them together couldn't say that they had seen one-third of it. They voted themselves generous allowances of lands and still they had so much left that there seemed not even a remote probability that any one would ever need it. In this situation they decided that they would make provision for all time for the school system of Texas. And they did.

Today the public schools of Texas have the largest endowment of any public schools in the world. The University of Texas also has a vast endow-

ment of lands. Mere figures of such size are not comprehensible but suffice it to say that the income from the endowment of the public schools of Texas today gives about \$7 for each child of school age in Texas every year. And, of course, all of the children of school age do not go to the public schools. No other state has anything like it.

Long before the city of Austin, which is the capital of the state and the place where the State University is situated, had been founded, one of the pioneers who helped to win the independence of Texas sat on his horse on a laurel clad hill and remarked that there was the ideal site for a university of the first class. And he meant to include all Europe in that comparative term. While the Indians were lurking near he was admiring the hills along the Colorado River and dreaming of a great university. He was a man of vision, surely.

**W**ELL, has Texas the best public schools in the United States or in the world? Not by quite a wide margin. Various comparative tables showing the relative position of the public schools of various states are issued from time to time by authorities on educational matters and you never find Texas at the top except in the column which refers to endowment.

The condition of the rural schools of Texas had become so deplorable in 1915 that the legislature of Texas voted a special appropriation of one million dollars to aid them. The last legislature voted an appropriation of four million

dollars to aid rural schools. More than one-third of the public school teachers of Texas quit each year on account of the low salaries. A rural school in operation six months of the year in Texas marks a progressive neighborhood. Sixty dollars a month is considered a very fair wage for a rural teacher.

Well, what went wrong? The people got the impression that it was the purpose of the school fund to provide for schools and that they did not have to do anything for schools. Until only a few years ago an effort to form an independent school district in rural Texas and vote a tax for the support of the neighborhood school was doomed to failure at the start. There are quite a number of these independent school districts now and the number is steadily increasing but the number of schools which receive no aid from local taxation is rather astonishing. To leave out the gruesome details and put the matter bluntly the state endowment killed the public schools of Texas and kept them dead for about half a century—except in the cities. The University of Texas has never received an appropriation from the legislature without the hardest kind of a fight which at some stage of the battle seemed doomed to failure.

The low salaries of school teachers cannot be called an exclusively Texas problem, of course. But I was alarmed a short time ago when I read the suggestion of the head of a great university that Washington should underwrite a minimum wage of \$1500 a year for teachers. It is my deliberate judgment that such an action would be the beginning of the end for the public school system of America.

**I** have no prejudice against our national government. Until a few short months ago I thought it ought to run the railroads and the telephones and the telegraph systems. I do not see anything wrong with that theory now except that it will not work.

Going to the national government for aid in educational matters ought to be made a ceremony with a prescribed form for the petition, as follows:

Now comes your petitioner and shows that he is too stingy to educate his children, that he has the money but lacks the strength of conviction to appropriate it for the ends desired, and prays that the United States Government will send an armed agent to take the money away from your petitioner, disregarding his screams and howls of anguish, and appropriate it to the purposes of public education in order that your petitioner's children shall not grow up in ignorance.

May I say in conclusion: Don't wear a crutch; it may cause your leg to dry up and blow away.

## TO A RETURNED SOLDIER

BY HARRY KEMP

There'll be great talk of *this* and *that*  
Now that the war is over, lad,—  
The knaves that dared not speak before  
Will let their tongues run mad;

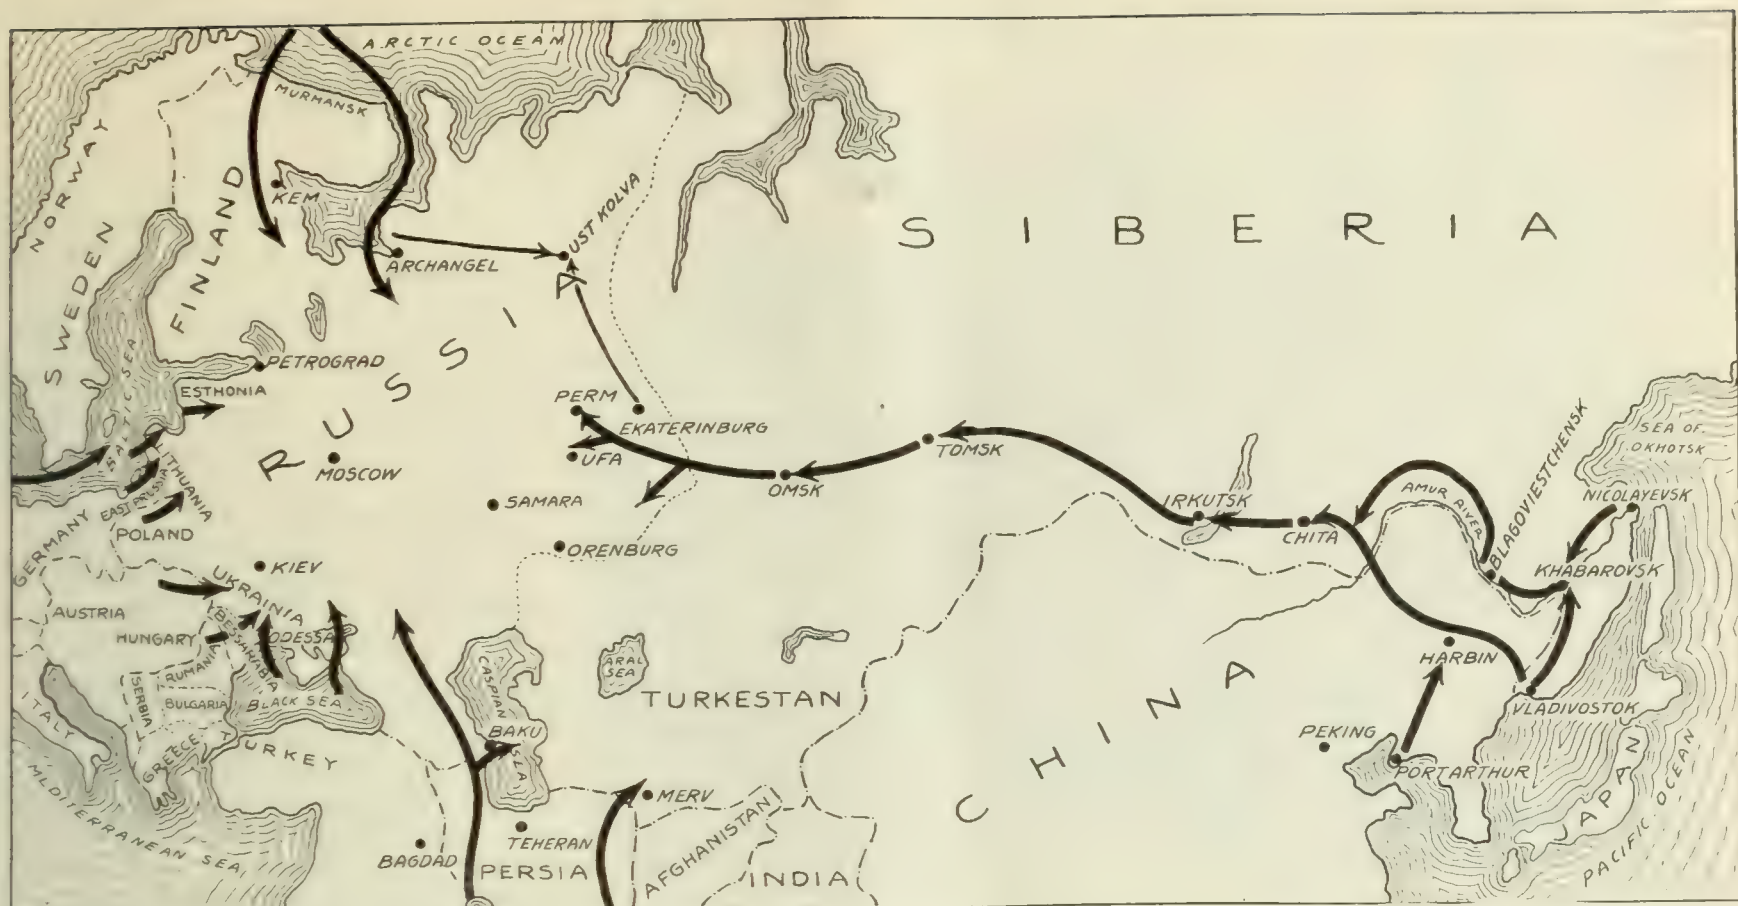

'But you, who rode the heaving waves  
And rolling seas to ravaged France  
And shot for shot and blow for blow  
Hurled back the Hun's advance—

You, who each day looked at your death  
And saw into an open grave,  
Facing the great realities  
That only front the Brave:

At wormy heart and gnawing mind  
Whose curse is never to be still  
You'll shrug your shoulders, go your way,—  
And let them prate their fill. . . .

You'll smile and gravely turn away  
From sawing hand and *thus* and *so*  
Because the Doer understands  
What talkers never know!

The main lines of attack directed against the Soviet Republic are shown by the arrows. Admiral Kolchak, with headquarters at Omsk, has sent successful expeditions into Europe, taking Perm and Ufa and making connection with the Archangel expedition in the north. The American troops are chiefly quartered at Khabarovsk, at the junction of the Amur and Ussuri rivers. The British have control of the Caspian Sea, of the Transcaucasus and of the Transcaspien region. The French expedition into Ukraine has been driven out of Odessa by the Bolsheviks. Bessarabia is claimed by Rumania, but is in revolt. Since Hungary has established a Soviet Government Rumania is exposed to Bolshevism on both sides. The Poles have taken Pinsk and in the Baltic provinces the Bolsheviks are retiring on Riga. The Allied and American forces from the Arctic sent one expedition down the railroad from Murmansk along the Finnish border and another from Archangel, but both have had to fall back under pressure of Bolshevik attacks.

## SMOTHERING THE RUSSIAN VOLCANO

THE Allies are not at war with Russia. The Kerensky Government is still in power. Business relations with Petrograd are normal.

These statements are made on authority that cannot be gainsaid or at least must not. They are embodied in a recent decision of his Lordship Mr. Justice Bailhache of the King's Bench in an insurance case, he acting on the advice of the British Foreign Office and of Sir George Buchanan, British Ambassador in Petrograd.

To be sure Sir George is temporarily absent from his post. Also President Kerensky is just now residing in London and not allowed to gratify his longing for a lecture tour in America. The British Government must know who are the official representatives of Russia for, as was recently explained in Parliament by Cecil Harmsworth, Under-Secretary for Foreign Affairs, the diplomatic and consular corps of the Kerensky Provisional Government are being paid by Great Britain. And according to the *Echo de Paris*, Kerensky, during his enforced seclusion in a London suburb, has been converted to Bolshevism and has telegraphed to Lenin his willingness to return to Russia and serve in the Soviet Government.

But altho the Bolsheviks are not "recognized" it is impossible to avoid recognizing the harm they do. And altho the Allies are not at war with Russia their armies are fighting Russians on seven fronts and have penetrated into Russia to distances varying from 300 to 4000 miles. The Soviet Government—the officially non-existent—is

BY EDWIN E. SLOSSON

being attacked at the present moment by British, French, Japanese, Americans, Finns, Letts, Estonians, Lithuanians, Serbs, Germans, Poles, Ukrainians, Czecho-Slovaks, Rumanians, Italians, Greeks, Chinese, Turcomans, Punjabis and Senegalese. Of these the troops under Allied flags number 1,219,465, according to a statement made by the French Foreign Minister, M. Pichon, on March 25. The Soviet forces, according to the French Ambassador to Russia, M. Noulens, contain only 90,000 trained troops. According to Mr. Martens, the official representative of the Soviet Government in the United States, the Red Army comprises 1,200,000, of whom 700,000 are engaged in fighting their foreign foes. We may safely assume that the Soviet forces amount now to half a million, as this is about what competent and unbiased observers generally agree upon. On the other hand the Allied and American forces now under arms number 13,366,000 men, so if we should really make up our minds to fight the Bolsheviks the odds in our favor would be twenty-five to one at the start.

But we cannot count Bolsheviks with as much certainty as we could Germans. Taking the figures at their face value we should be liable to both overestimate and underestimate the strength of the Bolsheviks. Overestimate because it is not probable that they could stand against an equal number of ours for their armies are in part led by reluctant officers with Bolshevik revolvers pointed at their heads and in

part composed of unwilling men forced into the service by the threat of starvation or the lure of high pay. Underestimate, because the Red Armies receive reinforcement from the population. Wherever the Allied armies have penetrated they have met with increasing resistance and have had to deal with Bolshevik risings in the rear. The recent collapse of the French campaign in the Ukraine was, according to the British Minister of War, Winston Churchill, due largely to the hostility of the people. The Ukrainians before the French invasion were anti-Bolshevik and had been for more than a year successfully beating off the Soviet forces. Now the Bolsheviks have got control of the whole Ukraine except Odessa, not so much by conquest as by conversion, because they appeared as friends.

The Red armies shrink and swell with remarkable suddenness and it is often difficult to distinguish between Bolsheviks and banditti, so we cannot tell what their strength is at any given moment or whether on the whole they are losing or gaining. Last month they lost Ufa and Perm. This month they gained Budapest and Munich. Bolshevism reminds me of the Russian thistle which I used to see in Kansas driven like wild fire by the wind, scattering its seed as it flew over the prairie, building barricades out of barbed wire fences, blockading roads and bringing fair farms to ruin. We hear of Bolshevik movements in Argentina at the antipodes, and even in Australia, which we used to be told was the workingmen's paradise. But altho Bolshevism is spreading to other coun-

The blackhouse which protects the south end and siding at Obozerskaya, the scene of recent fighting, was built by American engineers and is defended by American soldiers

tries it may nevertheless be on the point of collapse in Russia. Lenin and Trotzky promised the people bread and peace and they are not giving them either. The new British White Book tells of 10,000 men at the Putilov works in Petrograd passing resolutions against the Bolshevik régime and shouting "Down with Lenin!" But it will be noted that their complaint is that Lenin is too much inclined to conservatism and compromise and not sufficiently submissive to the Soviets. According to the White Book, factory production in Russia has fallen off 50 per cent, but the peasants have raised big crops and made money. An English bank clerk leaving Petrograd in January reports:

All the streets are deserted and there is no life at all. The Nevsky is practically empty and most of the shops are shut, but perfect order reigns in the streets. There is no looting or robbery. There are hardly any executions now. . . . Services still continue to be held in the churches and on the whole they are well attended.

The population of Petrograd, which was a million and a half before the war and three million during the war, has dropt to less than a million, and of these, according to our State Department, 6000 are dying daily, chiefly from typhus and smallpox. But we must not fall into the error of interpreting the depopulation of the cities and the closing of the shops as altogether signs of weakness. They are in large part due to the desire of the Russian people for land. Just as soon as the Bolshevik leaders announced "free land for all," there was a rush for it that looked like the opening of Oklahoma. Soldiers deserted the army and workmen the shops, and it has not been possible to get them back even by conscription. That this was the cause is shown by the fact that during the first three months of 1918—that is in the first part of the Bolshevik régime and when conditions were not so bad as they have since become—

221,000 out of the 365,000 factory workers of Petrograd left the city for the country. But since the chief trouble is with transportation the more the overcrowded city population is scattered and set to growing crops the less the danger of starvation.

But leaving off the almost hopeless attempt to find out the internal state of Russia let us try to piece together the fragmentary and often misleading information we get regarding the military operations on the seven fronts. Summing up the situation in so far as it can be read from movements on the map we may say that the Bolsheviks are losing on the east and west and gaining on the north and south.

We are naturally most concerned with the Archangel expedition which is in a critical situation. I don't believe in editorial criticism of military operations, but I must say that it has never seemed to me sound strategy to send an expedition in the dead of winter eight hundred miles into a hostile country thru an Arctic harbor, icebound for half the year and four weeks' voyage from the base of supplies, by way of one railroad and two rivers, subject to attack from front and both flanks by a fanatical foe many times more numerous and within ready reach of their own bases by rail and river. Napoleon's march to Moscow was an easy enterprize compared to this. Trotzky boasted that he had the Allied troops trapped and would drive them into the White Sea before the spring thaw. In February the British command realized the serious-

ness of the situation and sent a hurry call for help. The President responded and two companies of railroad troops were dispatched to the Murmansk coast. But it is difficult to get them to Archangel, 500 miles further and on the other shore of the White Sea. The most recent dispatch relates it as a great achievement that one British freighter was got thru the White Sea from Murmansk in three weeks by the aid of three icebreakers and was brought within reach of Archangel "only slightly damaged."

The Allied forces under British command on the Archangel front consists, according to Pichon, of 13,000 British, 4920 Americans, 2345 French, 1340 Italians and 2290 Serbians, some 24,000 altogether. To these are added a contingent of 11,770 Russians and Finns recruited from the occupied territory, but they are of doubtful quality and are showing signs of going over to the enemy as our forces fall back.

In May the ice will begin to break up and in June the troops can be withdrawn, and according to the promise of the British and American governments they will be. They can doubtless hold out till then. By retiring from the boundary of the province of Vologda to Archangel our forces shorten their lines of communication by 250 miles and lengthen the enemy's by the same. But if the apprehended disaster should occur and our troops be killed or captured it would settle automatically the question of our attitude toward Russia. The American people would rise as they did to the slogan "Remember the 'Maine'!" and "Remember the 'Lusitania'!" Our armies would pour into Russia and stay until it was over, over there. This might be a good thing for the country but it would be hard on us. Altho our soldiers

American Red Cross Official Photographs. Copyright Press Illustrating

All the Allied armies are represented

have shown great courage under great difficulties the Archangel expedition, ill-advised and ill-supported, has not increased our military, moral or political prestige. The Bolsheviks are bragging of the prisoners and supplies they have taken. The anti-Bolsheviks complain that by withdrawing our promised protection we are leaving them exposed to the vengeance of the Bolsheviks. Both sides accuse us of insincerity because the Murmansk and Archangel Soviets that invited us in were assured by President Wilson, Admiral Kemp and General Poole "that the Allied action in the White Sea was not aimed against the Soviet Government" and that "their agents would not interfere with home affairs."

The recent advance of the Siberian forces into European Russia has at last brought them into touch with the Archangel expedition. Patrols from the two forces met at Ust Kolva on the Pechora River west of the Urals. (The reader will find such names as this in his atlas more easily if he is reminded that *Ust* in Russia means the mouth of the river named.) But the mere contact of scouting parties will not materially facilitate communication across 700 miles of railless tundra and forest.

The Allied forces in Siberia, according to the French Foreign Minister Pichon, consists of 1600 English, 4000 Canadians, 7500 Americans, 7600 French, 2000 Italians, 4000 Serbs, 4000 Rumanians, 27,000 Japanese, 55,000 Czechoslovaks and 210,000 Russians. The Japanese sent sixty or seventy thousand troops into Siberia, but most of them have been withdrawn, at the request, it is said, of Washington. The Canadians have been promised that they will be brought home in the spring. But Admiral Kolchak, dictator of the Government at Omsk, seems to be more

U. S. Official, from Press Illustrating

*In the street car strike at Archangel soldiers were called upon to restore order. In the crowd are several Americans, and one is serving as a conductor*

than holding his own with his new army of nineteen and twenty year old conscripts, armed with British rifles, commanded by French officers and supported by the Czechoslovaks. He has carried the war into the enemy's country on the European side of the Urals and recaptured Perm and Ufa which the Bolsheviks took in the winter. The Bolshevik Fifth Army was overtaken on its retreat from Ufa and 4000 prisoners were taken.

But while Bolsheviks were being captured at the front they were being made in the rear. The Cossacks who have control of Eastern Siberia have been behaving as they used to behave under the Czar or even worse, terrorizing the towns, robbing banks, murdering peaceful citizens and outraging women. But the Russian people did not take this maltreatment with their former meekness. They appealed to the Americans for aid and when this was refused they rose, organized, armed and fought back. The Japanese took the side of the Cossacks and called upon the Americans to do the same. But General Graves, in command of the American forces, was not convinced that the insurgent populace were Bolsheviks, so he refused this appeal also, stating that he had no authority to intervene on either side. Consequently he is blamed by the Japanese for the double disaster that befell their troops on the upper Amur River when on February 26 two companies of Japanese at Blagovestchensk were virtually wiped out by the Russians and when on March 3 at Pra-

lovka, thirty miles north, they lost ninety men. He further offended the Cossack generals by refusing to give up for execution some Cossack soldiers who had mutined because they felt that they were being used to restore the Czar. There were also complaints that the American troops were drunk and disorderly, but General Graves promptly apologized when two such incidents were called to his attention by Colonel Romanovsky.

On the other fighting fronts there are no Americans so I will pass over them briefly. On the south the British with Indian troops crossed the Persian border and defeated the Bolsheviks in Russian Turkestan. This has given them Merv for which they have longed for thirty years. The Bolsheviks retreated up the railroad to Orenburg, which they still occupy. Dutov's Cossacks, which formerly held a stretch of this railroad, seem to have disappeared. The British have taken over the Russian fleet on the Caspian, which gives them control of this inland sea except Astrakhan, which the Bolsheviks hold.

Passing west of the Caspian we reach the land of wild rumor. Much of the news we have been getting from the Ukraine is now proved to have been false. We were told for instance some months ago that General Denikin, with the Don Cossacks, had captured Kiev, the Ukrainian capital, after a battle with the Bolsheviks in which 10,000 had been slain, and more recently that he had defeated the Bolsheviks on the Don, taking 30,000 prisoners. As a matter of fact Denikin got nowhere near Kiev and was defeated on the Don and had to retire to the Caucasus. We also read that French and Rumanian forces from Bessarabia had captured Kiev and that the French from Odessa were making a victorious advance northward; both reports contrary to fact. On March 18 the Greek commander at Kherson reported "bril- [Continued on page 12]

# IT ALL DEPENDS ON THE BOSS

## Can You Measure Office Output? Do You Know How to Hire?

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

A retired farmhand was hunting a job. He was very much retired—three farmers had retired the poor fellow in as many weeks. But he could not afford to stay in permanent retirement; he was still in his early twenties and thought he might perhaps work a few years longer. And the impulse to eat, strong upon him, demanded wherewithal to gratify it. So he was looking for a job.

In his wandering he spied a farmhouse that manifested no dog on the premises, but a luscious row of savory pies in the pantry window. Suddenly possessed with a huge admiration of this heavenly place, he notified the farmer that perchance he might be willing to accept a position here, and condescendingly gave ear while the farmer considered the proposal.

The farmer asked, "Ever work on a farm before?" The youth lazily drawled, "Oh, yes, a little off and on—mostly off."

The farmer asked, "How much hay can you stack, how many potatoes can you dig, in an hour or a day?" The youth indifferently murmured, "Got no idea—never took the trouble to count up what I could do."

The farmer asked, "Were you the best, or the poorest, worker on the last farm where you were employed?" The youth jauntily giggled, "Blamed if I know. All we thought about was getting our pay, and as long as the boss didn't kick we worked as little as we could."

The farmer asked, "Where is your recommendation from your last employer?" The youth declared loudly, "Ain't got any. Didn't ask for any. Thought I could bluff another farmer into giving me a job. Farmers are boobs and I was always smart enough to pull the wool over their eyes."

The farmer asked, "Why did you leave your last place?" The youth gurgled out, "Me and the boss didn't agree. I told him what I thought of him and he fired me."

The farmer asked, "What made you ask me for a job?" The youth answered, with his first display of real interest, "The pies in your pantry window. Then after I saw you, I had a hunch that you were an easy mark and would give me a soft snap, which is the only kind of job I'll take."

The farmer beamed with satisfaction. He exclaimed with delight, "Oh, my dear good man, for these many moons I have been looking for a noble workman like yourself. Take the job and fix your own salary. Graciously abide in the guest room of my humble dwelling, and if it please your highness remain with me a few years till my daughter is grown, that you may take her to wife and inherit the farm. Praise be to Allah for this highly auspicious day, on which I first beheld your grand visage. Your presence honors me overmuch, kind sir."

And thus did the lazy, careless, boasting youth earn a fine salary for doing next to nothing, and at last wed the farmer's daughter that he might inherit the estate.

You don't believe this happened? You are right. Of course it did not happen—on a farm.

But the like of it happens hundreds of times in American offices, and our aim is to help avoid the repetition of such occurrences. We have spun a fable, or a parable if you choose, to illustrate how clearly the folly and criminality of much of our office procedure would be manifest in case the scene of action were a farm instead of an office. The majority of people cannot see the absurdity of their own action till they observe an equally foolish performance carried on by somebody else.

Every day in New York, thousands of office workers hunt for jobs by walking from one place to another, by answering newspaper advertisements, by attempting to form connections in other ways. Bookkeepers, accountants, typists, stenographers, filing clerks, machine operators, office boys and messenger girls—all are hunting jobs. An experience of twenty years with office employees warrants the opinion that about two-thirds of these jobless young people are looking for the pies in the pantry window.

They haven't the least idea how much office work they can really do, or if they are accustomed to do it in the right or

the wrong way. If you ask them about quality or quantity standards of performance, you might as well be talking Hottentot. And if you ask them why they wanted a job at all, you would get either a lie or a bold acknowledgment that their only reason for working was the pay envelope.

The scientific measurement of man power is fundamental to correct office operation. When you buy an automobile, you first demand to know how fast and how far the machine will go without going to pieces. When you buy so trivial a thing as an electric light bulb, you insist that the bulb comply with a known standard of intensity and durability. You pay for horse power in the automobile, and for candle power in the electric light. When you pay for the service of a human machine termed an employee, how much and what kind of man power do you specify—and pay for?

The head of a modern factory knows just how many pieces of work are produced, or how many motions made by each operative, during a given period of time. The factory output, management and profit rests on this basis of exact figuring of individual production. This is the only fair method of apportioning work and distributing pay. The office needs it as much as the factory. All straight hand work, wherever and however done, should be paid for on a unit cost basis of time, quantity and quality.

Miss A. and Miss Z. are stenographers employed in a room where fifty typists work together. But these two girls are as different in their training, skill, manner and product as tho a continent lay between them. A mental continent, a moral universe, does lie between them. Miss A. works at top speed without losing accuracy. Her spelling and punctuation are almost perfect. She remembers everything you tell her and thinks of important things you do not tell her. She is reliable as the clock. Her faculty of order and sense of neatness add to her efficiency. She is courteous and kind, radiating an atmosphere of optimism that cheers up and speeds up the others. She has a keen, strong conscience that never permits her to slight or neglect her work. She has an ambition that keeps her on the job when the other girls are loafing—she looks ahead and prepares to get ahead.

Miss Z. is always behind time, and temperamentally as slow as a glacier. Her punctuation looks like a Chinese puzzle, and the only way she can spell words of three syllables is to implore the constant aid of an unabridged dictionary. She forgets most of what you tell her and doesn't seem to care. The only way she can correct her own manuscripts is to ask the advice of the office boy. She has a bad temper and is frank and generous with it. The only time she takes a real interest in her work is on the afternoon of pay day. She merely does enough to keep from getting fired, and does what she does as poorly as she dares.

How are you going to pay these

A. W. Shaw Co.

A planning board like this helps the manager to know the condition of the office work at all times. The figures across the tops of the columns represent the working hours, which in turn are subdivided into fifteen-minute periods. Down the side are written the names and positions of all the persons employed in the office. Colored pins opposite the names show the amount of work scheduled, as well as what each clerk has on hand and the time at which the task will probably be finished

"Y and E" Efficiency Desks help the executives and employees of the Potlatch Lumber Co., Potlatch, Idaho, to do more work in less time. In the background of the photograph are seen several "Y and E" letter-size sectional cabinets in oak. Also made in mahogany and steel, in all standard sizes.

## Efficiency Desks

THE Efficiency Desk is in reality a "Y and E" filing cabinet built with adjustable compartments in which all kinds of card and vertical systems may be filed *within arm's reach*. We sell this equipment as a complete individual system for each user. Let us make a tentative recommendation for an Efficiency Desk completely equipped *for your work*; also for other executives and employees of your company for whom time saved and efficiency gained are important developments.

### A Complete System with Every Purchase

A "Y and E" filing cabinet or desk is more than a receptacle for the storage of important papers—it is a machine *for finding them*. With every cabinet or desk installed, we are ready to work out a system that will exactly meet the requirement—a service based upon nearly forty years' experience. There is no charge for this service.

Write for free copy of "Vertical Filing Down to Date" in the new (7th) Edition

two girls? Your instinct, observation and common sense tell you that the work of Miss A. is near the maximum production while that of Miss Z. is near the minimum. You believe that Miss A. turns out 30 or 40 per cent more and better work than Miss Z. But you haven't any proof on which to base a difference in salary. When you pay them alike, there are sure of the bad results. You lose money regularly on Miss Z. and others like her, perhaps \$2 a week, on the average, or \$100 a year on each. You create disappointment and dissatisfaction in the mind and heart of Miss A., because she very well knows that she earns at least a third more money than Miss Z. and ought to be getting it. You remain yourself in a state of total confusion regarding overhead expense, because you have never learned the unit cost of operation for each typist and her machine.

Some years ago in developing a certain feature of our work we employed several new stenographers all at once. We agreed that our officials should be given their choice of the new helpers, so far as possible. One of our department heads, being young, handsome and impressionable—a horrible combination for a department head—chose immediately a pretty, coy, captivating, sweet young thing, regarding not her productive capacity at all. I happened to know some of the scientific production tests and character analyses for office workers; having applied these to the new stenographers without their knowing it, I selected the most unattractive, most unpopular girl for my special helper. The handsome youth made large sport of my choice.

Within a year the French doll he had picked had left and gotten married—she fell down so badly on her job that all she could do was to get married. Whereas the unprepossessing girl I had chosen scientifically was promoted twice within a year; became shortly my private secretary; did the work of two ordinary girls for the pay of one—even after we raised her pay twice; and proved so reliable and capable that she could in my absence run the whole department, that she had entered a short time ago as a beginner. When you hire an office worker, do it by science and not by chance. Above all, cut out personal preference.

How shall we begin to measure office output? By taking the standard unit of work representing both man power and machine power, and making every item of production pass under scientific tests. The fundamental unit of office operation is the typewriter. Have you a typewriter cyclometer for every typewriting machine in your office? There seems to be no other way of determining the value and cost of your typewriter production to a penny. The typewriter cyclometer works on the principle of the pedometer—counting and recording strokes of the machine as the pedometer counts and records steps of the foot. The cyclometer is quickly and easily attached to the back of your machine. It registers one point for every 180 strokes. Every night each typist turns in a statement of her cyclometer reading and is paid

for her typewriting work on the basis of the weekly total of her cyclometer reading. Salaries are generally based on the cost per 100 points, but if two or more makes of machine are used in the same office the unit of cost per 100,000 strokes is suggested, to keep all operators on the same production level. The usual rate of cyclometer salary is for stenographers \$1 per 100 cyclometer points; for operators of dictating machines 75 cents per 100 cyclometer points; and for copyists 60 to 65 cents per 100 cyclometer points.

How does this accurate system of measurement work out? You will know by the end of the first week just how much each typist ought to be getting for her work, whether she is underpaid or overpaid, and how much money you have been losing regularly because of inefficient typists. For example, you may find you have been paying one girl \$3.91 average cost per 100,000 strokes, while you have paid another girl

periods in each. Every day the stenographer fills out this blank, indicating the amount and kind of work done and the exact time occupied. There are other methods of appraising and apportioning stenographic work, but these two are good illustrations of the science and art of measuring office production.

Don't make this change suddenly or carelessly. A revolution of any kind should be attended by caution. When you put all stenographers on a clean production basis, where each pays herself by the amount of work she does, you may find two undesirable things happening. First, the keen, sensitive, ambitious girls will be likely to overdo in trying to reach and maintain their daily maximum output; the result may be excessive or premature fatigue, insomnia, indigestion, eyestrain, or nervous disorders, low spirits or low vitality. Our observation has been that the employees who should be most protected are often most neglected. One of the best stenographers I ever had always went beyond her strength, and we had to put regular safeguards around her to prevent recurring periods of exhaustion. However, we found when she was in fine physical condition her work surpassed that of other employees so far that the little time and money spent in keeping her vaulting ambition down to earth was a mighty good investment, apart from the satisfaction of helping the employee who most needed and deserved help. Rather than push a fine worker to the point

of exhaustion, I would go without my dinner and do the job myself. You can't do too much for an employee who does her most and best for you.

Second, you may find that the girls who cannot hurry without making mistakes will hurry anyhow, regardless of mistakes, and expect the same salary that other typists get for the same quantity of perfect work. A system of fines or demerits to disclose and remove the errors from additional speed may discourage the unfortunate desire for more money and less character.

Other office workers should recognize and realize, each for himself, a certain standard of performance. Is your bookkeeping force trained and equipt to produce maximum results at minimum cost? I have before me a letter from an official of a large manufacturing concern to illustrate this point. I will give you the gist of the letter. The bookkeeper of this concern was always busy, and generally behind time with his work. The company had no idea how much he could or would do—all they knew was how much he failed to accomplish. And he was not to blame. The company was to blame. The mere posting of ledger items—a mechanical operation, kept this high-priced man busy most of his time.

The company woke up and resolved to try out a bookkeeping machine. The bookkeeper, within three months, by the aid of the machine, was posting all charges and credits in an hour and a half—a process that formerly took some five hours. He was able to take over another man's job in his spare time. When he got that organized on the machine plan. [Continued on page 118]

A. W. Shaw Co.

*"For every ten typists you save the salary of one by using cyclometers"*

\$4.93 average cost per 100,000 strokes. On the second girl you have been losing right along \$2 or more every week. The cyclometer costs only \$6 and is guaranteed for three years; that is, for \$2 a year you get absolute knowledge of production total of one machine that enables you to prevent a loss of \$2 a week. By spending \$2 a year you save \$100 a year.

You can figure your probable saving on a 10 per cent basis. For every ten typists you employ on straight routine work, you should save the salary of one by complete installation of cyclometers. If you employ fewer than ten typists, you can estimate that each will have 10 per cent more time for other work, and that all will be paid for the exact amount of work they do. Such a method promotes good workers and eliminates poor ones. It checks up delays in various departments and gears up the departments with each other. It records the number of machine hours and prevents the waste of idle machines. It places all typists for the first time on a clear plane of absolute justice and equality.

But the cyclometer measures only typewriting output. The day of the average typist also includes various operations, such as dictating, filing, figuring and other kinds of work, regular and irregular. The time card is valuable here. It is a daily report blank, with a vertical column for each class of work, the kind of work being named at the top, and the whole sheet ruled with horizontal lines, each representing a ten-minute period. The left vertical column states the hours of the business day, and notes under each the fixed ten-minute

# ECONOMIC PRIZES

## SIXTEENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

**Professor J. Laurence Laughlin, University of Chicago, Chairman**

**Professor J. B. Clark, Columbia University**

**Professor Henry C. Adams, University of Michigan**

**Hon. Theodore E. Burton, New York City, and**

**Professor Edwin F. Gay, Harvard University**

has been enabled, through the generosity of Messrs. Hart Schaffner & Marx of Chicago, to offer in 1920 four prizes for the best studies in the economic field.

In addition to the subjects printed below we will send on request a list of available subjects proposed in past years. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

1. On what economic basis can a League of Nations be permanently established?
2. The Future of the Food Supply.
3. A study of the means and results of economic control by the Allies during the European War.
4. The effects of governmental action in the United States on the wages of labor.
5. The effect of price-fixing in the United States on the competitive system.
6. A study of the effects of paper money issues during the European War.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set.

### **A First Prize of One Thousand Dollars, and A Second Prize of Five Hundred Dollars**

are offered to contestants in Class A.

### **A First Prize of Three Hundred Dollars, and A Second Prize of Two Hundred Dollars**

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of \$1,000 and \$500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The committee also reserves the privilege of dividing the prizes offered, if justice can be best obtained thereby. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. No paper is eligible which shall have been printed or published in a form to disclose the identity of the author before the award shall have been made. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1920, to

**J. LAURENCE LAUGHLIN, Esq.**

**The University of Chicago**

**Chicago, Illinois**

## You Can Make Your Writing T-a-l-k!

Just as oratory puts the power of emphasis into the spoken word, so the—

# MULTIPLY HAMMOND "WRITING MACHINE"

—puts the all telling power of emphasis into the written word.

### No other typewriter

can turn cold type into living, breathing words—words pulsating with the writer's deepest convictions, words expressing to a society his most conventional mood, words showing always absolute correctness—in business, professional or social usage.

### The business man

who uses the Multiplex can put character and individuality into his letters, and can emphasize the important parts by changing instantly from one style of type to another.

Note the six distinctly different type-styles reproduced in this advertisement.

### The mail order man

can put the same emphasis on the selling points of his product as he would in talking. "Just turn the knob" and you can change from commercial type to italic, giving emphasis when and where you want it.

### The lawyer who swayed

judge and jury by his eloquence can write his brief on the Multiplex so that every telling point scores with the judge.

### The author

can prepare his manuscript so that no climax or no subtle point will be lost—can see his story practically in print before it goes to the publisher.

### The Multiplex is unlike any other typewriter

It is revolutionizing typewriting. Its work is as great an improvement over the typewriter as the carrier typewriter was over the fountain pen, or the fountain pen over the quill. Just think of being able to choose from over 365 different type-styles, including all languages!

The Multiplex is typewriting perfected to the art of fine printing and engraving—plus personality.

### Mail the Coupon for FREE BOOKLET

It will show you how, with the Multiplex, you can put the force of emphasis into your typed matter—how you can drive home with strength of accent the fullness of your argument; how you can write with the same convincing force that you use in speaking—an exclusive feature of the Multiplex.

We will also send our pamphlet, "The President and His Typewriter."

Also—A  
**PORTABLE Model**  
For Traveling—for Home. Weighs about 11 lbs. Full capacity. Ask for special folder.

## MY PRIVATE OPINION OF YOU

BY MARIA MORAVSKY

Nowadays, when most of us Americans are discussing "What's the matter with Russia," it is refreshing by way of contrast to read so frank an estimate as this of "What's the matter with America." Miss Moravsky is a Russian girl who was known rather extensively as an author in her own country before she came to the United States a year or two ago.

**E**VEN before I came to America I had heard that your people always ask a newcomer: "What do you dislike in America?"

It was explained to me that they ask such a risky question because they want their country to be perfect, and everybody knows how much easier it is to notice the faults when coming from outside.

I admire this civic courage of Americans and I will try to answer this question, giving my fresh impressions of a greenhorn.

I need for it a big dose of courage, too. . . . It is so much easier to pay compliments than to tell the bitter truth. . . . But I am willingly taking the risk: it seems to me that those representatives of Russia and America, who want to bring up the closest friendship between the two great countries have exchanged too many compliments, while their private and their "official" opinions about each other's countries differ a great deal.

It means insincerity: let us stop it: let us cease to exchange "diplomatic notes."

I start it with a cordial hope of a better understanding between Russians and Americans.

When Russians say "America" they mostly mean the United States. That is very characteristic of us: it shows that we consider your country to be the greatest and the most essential part of the New World.

America has enjoyed too good a reputation among Russians, and it is always dangerous: nothing spoils friendship so much as the exaggeration of a friend's merits.

Our Intelligentsia, the most radical and highly educated part of the Russian nation, used to think that America and freedom are synonymous. When we became deadly tired of the cruelty of our old regime we would read and dream about your land. So many of the political criminals, exiled to Siberia, ran away to America with the unshaken hope of finding a new, perfect life!

They expected too much and naturally they felt rather disappointed when they noticed the faults, which were unseen from afar. . . . Everything seems so much rosier from the long distance, you know.

The first sad surprise for the Russian newcomer was the still existing death penalty. We do not have the death penalty for the non-political crimes. It was already abandoned in the seventeenth century, under the reign of Empress Elizabeth, the daughter of Peter the Great.

"From this very day nobody shall be executed in my country!" said Elizabeth when she took her seat on the throne.

I am very proud that this greatest act of mercy was proclaimed by a woman.

Speaking about women I must not omit to add that it was another painful surprise for our emigrants to see the whole part of your population without equal rights. Why, we had believed that such an anachronism as the woman's suffrage problem was well forgotten here long ago!

Many disappointments have awaited us in America, because we thought it so highly advanced and unprejudiced. Maxim Gorky wrote a bitter book about the United States. He blamed America very harshly

and of course he was unjust. His bitterness had a personal basis: he came here with a woman whom he loved many years, but she was another man's wife. And he was refused shelter by all the hotels because of it.

But the Americans do not know that under our old regime it was almost impossible to obtain a divorce in Russia. Even the cruel treatment and the shameful sexual diseases were not considered sufficient for a divorce. All our marriages must be practically lifelong.

As a consequence of the hard divorce laws we have had many free relations in Russia and many illegitimate children. And those children are not despised, as in America. The Russians who read and heard about the splendid institutions devoted to children's health and education in America could hardly digest this strange contradiction.

The American child is a little god of the nation, and still it may be morally persecuted for the crime of its parents.

The moral persecution of the Jews was a surprise for me, too. They ran away from "anti-semitic Russia" to the "land of equality" and here—many a fashionable club refuses to receive them.

I cannot describe all the horror which was awakened in my soul by the other facts of racial prejudices, by negro lynching. Russian "pogroms," which—you must remember—were inspired by the Czar's Government, seem pale if compared with the pogrom of negroes. And I believe that your Government has clean hands—it is the citizens themselves who have committed these barbaric acts of club law. So in this case I am denied even the favorite Russian consolation of blaming the "bad government."

We were well informed of your political freedom, but few of us knew that your citizens are morally less free than were the deprest subjects of our Czar. The spirit of your press, for example, is far less independent than in Russia. The reason is, perhaps, that our editors are not so often tempted by money. Advertising is not well developed in Russia. . . .

The comparison between the two friendly countries is not always favorable for America. Our Intelligentsia observe many faults when they come here, but the general ideas which we got about you in Russia have proved to be true: your republic has the oldest traditions of liberty, you are the nation of originators, conquerors and inventors. And . . . you have no patience.

Russians had too much of it. It was considered our greatest national merit, but from the radicalists' point of view it was our national disease. We would suffer for centuries before we dared to change a thing! Your citizens have never had such patience, and we used to adore you for that.

You are not accustomed to wait for the important things, not in politics, nor in private life. I have read in the paper a good illustration of it: in the coldest days of last winter, when the coal was delivered with such a cruel delay, a father of a certain shivering family chopped up the expensive piano, just to get the heat one day earlier.

That is the way you do everything! Russians would be frozen to death, and never dare to destroy the family's best furniture. But the American—he chops the piano! You are capable of changing for the better everything at any price! I believe that no one fault of your country can live long—your great creative impatience will kill them all!

*A New  
and Better Way*

*Cheaper than Clips*

"WE HAVE become so accustomed to your convenient equipment that we must have a machine on each desk"—that is the Eveready story briefly told. No one who has once used an Eveready Fastener wants to do without it. The Eveready quietly, rapidly and positively fastens together papers of every description, for all purposes and under all circumstances. Only a gentle pressure is required; the little rubber-shod machine is always at your service.

#### *Each Machine a Miniature Factory*

The Eveready makes its own staples from a roll of specially prepared metal tape—a truly ingenious invention, an exclusive, protected feature. That is why the machine works so easily and quickly, why it cannot clog, why it costs less to operate—there are no manufacturing charges or profits to pay on staples. It is why Eveready staples are cheaper and more convenient than clips or pins. Each roll of tape provides 5,000 staples, eliminating the annoyance of frequent refillings. The machine construction is dependable throughout. The Eveready is practically indestructible.

#### *The Machine of a Thousand Uses*

The largest industrial houses in America—and the smallest—indorse the Eveready. Bought usually for a particular purpose, the efficient little machine is constantly finding new work. Used on pay envelopes, Eveready does away with the unsatisfactory moistener and gives a positive, indisputable fastening until opened by the employee. Eveready fastens correspondence, invoices, shipping receipts, specifications, estimate and cost sheets. Price tickets may be attached to samples, or samples to one another. The machine will handle post cards, blotters and bristol board. We are in almost daily receipt of advice on new uses to which the machine is being applied, and new methods by which it is adapting itself to office, factory, store and professional use. There should be "one on every desk."

#### *Let Your Stationer Supply You*

Let us send you a machine through your local stationer. You may then examine it at your convenience, and be assured of a supply of tape rolls or additional machines as they are required. Held back until recently by government orders, we have not been able to keep our distribution perfect in all cities. Therefore we ask you to use the coupon below, or a similar form of order. It will help us get the available machines where they are wanted with the least lost motion.

EVEREADY MFG. COMPANY OF BOSTON  
80 BOYLSTON STREET, BOSTON, MASS.

Gentlemen		
Our stationer is		Please send
us	EVEREADY FASTENER	through him, at \$7.50 per machine and roll of tape, ready for use.

# THIS LITTLE PIG MOTORS TO MARKET

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

As a result of the recent development in this country of motor transportation there has accumulated no little evidence that the motor truck offers the most efficient means of transporting freight and express matter in what the railroads term the short haul field that is, for distances up to one hundred or one hundred and fifty miles. The superior efficiency of motor transportation is maintained over considerably greater distances in the case of certain classes of goods, such as household furniture and furnishings, extremely fragile articles, etc. and where speed in delivery is the primary factor.

In the short haul field motor transportation becomes a direct competitor of the railroads and to some extent of steamship services. However, if the often repeated assertion of railroad officials is taken at face value, then the rail carriers will be glad to relinquish most if not all of their short haul freight business, which, it is claimed, is not a worth while paying business because of the handlings at terminals. The foregoing of course applies principally if not wholly to shipments of less than carload lots, that is, railroad freight car lots.

In comparison with the railroads on short hauls motor transportation has the advantage of carrying shipments directly from the door of the shipper to that of the receiver. It is generally conceded that thereby considerable time in delivery is saved, and the wear and tear and cost of several handlings eliminated. Just what this means in actual dollars and cents was impressively presented at the recent Truck Owners' Conference in New York City by the general traffic manager of a large manufacturing business which ships its products to every section of the United States as well as abroad. In considering this man's statements and figures it must be borne in mind that his shipments by railroad are many times greater than by motor truck. He presented a table of comparative figures on transportation costs of less-than-carload lots within the limits of the short haul field. The weight taken is one hundred pounds and in the case of the railroads is based on the first class rate, and includes 15 cents per hundred pounds teaming charges from the shipper's warehouse to the freight station, another 15 cents for the teaming at the other end from the freight station to the receiver's warehouse, 24 cents per hundred pounds increased cost of boxing to protect shipment thru the many and severe handlings incident to transportation by railroad, and allowance for the increased weight of the extra boxing. Every one of these items is properly included in the cost of rail transportation when drawing comparisons with carrying by motor truck, yet how few, even among shippers, give them due consideration.

With this preface the table of comparative costs as compiled by the general traffic manager in question:

From New York to	Distance in Miles	Cost by Railroad Freight per 100 lbs.	Cost by Motor Truck per 100 lbs.
Newark	12	\$.91	\$.15
Passaic	18	.91	.18
Paterson	22	.91	.20
Elizabeth	18	.91	.20
New Brunswick	36	.91	.40
Trenton	63	.98	.60
Philadelphia	100	1.02	.80
Chester, Pa.	115	1.05	1.00
Wilmington, Del.	133	1.45	1.20
Coatesville, Pa.	140	1.15	1.05
Port Chester, N. Y.	27	1.02	.63
Greenwich, Conn.	30	1.02	.63
Stamford, Conn.	35	1.03	.65
Norwalk, Conn.	44	1.06	.68
Bridgeport, Conn.	58	1.10	.70
New Haven, Conn.	75	1.13	.73
Derby, Conn.	73	1.13	.73
Ansonia, Conn.	75	1.13	.73
Shelton, Conn.	72	1.13	.73
Naugatuck, Conn.	86	1.15	.74
Waterbury, Conn.	91	1.16	.75
Meriden, Conn.	95	1.16	.75
Hartford, Conn.	113	1.21	.90
Springfield, Mass.	140	1.25	1.00
Holyoke, Mass.	148	1.25	1.10
Worcester, Mass.	190	1.31	1.50
Providence, R. I.	202	1.32	1.10
Boston, Mass.	234	1.36	1.50

This table would seem to include every expense consequent to making a shipment

ten days, or net thirty days, the receiver takes ten or thirty days from the date of receipt of freight. If goods are in transit thirty days, then the shipper is actually selling on sixty days credit instead of thirty. If the difference in time of delivery between railroads and motor trucks averages ten days thruout the short haul field, then there is an actual saving or gain in interest on the sale price of the goods of the shipper utilizing motor transportation.

To the inexperienced there may be some doubt of the justice of the allowance of 24 cents per hundred pounds for extra boxing and a further allowance for the weight of the extra boxing material, as included in the table herewith, and added to the cost of shipping by railroad. In the case of motor transportation the shipment is handled once at each end and by employees of the shipper or receiver, in both cases by those interested in the safety of the shipment. With railroad transportation in the case of less-than-carload lots, there will be from eight to twelve or more handlings. Therefore it is necessary to go to considerable additional expense for boxing or crating, or protecting by other means, in order to prevent loss or damage in shipping goods by rail. The general traffic manager above mentioned stated that he was convinced that one of the principal savings consequent to the use of motor transportation was in the lumber and other material and the labor required for boxing. This saving, of course, will vary with the amount of protection which different kinds of goods re-

Time is money to the farmer. That's why he ships live stock by motor

by both motor truck and by railroad. There are other considerations, however, which cannot be figured on a dollar and cents basis. Take the matter of speed, for example. Any delivery in the short haul field can, and regularly is made within twenty-four hours by motor trucks. In the case of railroads the time is from three days to thirty days. In addition to the saving in time there is often a saving in actual money, because the average receiver of freight considers invoices due when delivery is made. If terms of sale are 2 per cent

quire for rail shipment, but any one who questions that there is a considerable and worth while saving should watch the loading of a large motor van engaged in inter-city hauling or in rural motor express service, and then visit a railroad freight station. And remember that the lumber used in boxing unless it has been dried in a kiln will carry from 10 to 25 per cent of its weight in moisture.

Another department of the Government, the Federal Bureau of Markets, has recently completed a survey and study of the transportation problem in the short haul field, in as far as it concerns the shipment of farm and other food products. The result is a strong recommendation for the further development of motor transportation in this field, for rural motor express services as railroad feeders, and for store door delivery systems in the centers of large population. Emphasis is laid on the tremendous loss in perishable food products due to the delays of rail shipment, and the many handlings incident thereto. Here again the advantage of transportation directly from shipper to receiver without any change is brought forward in behalf of the motor truck, as well as the saving in transportation charges. In its report the Federal Bureau of Markets voices the belief that motor transportation will accomplish the freight carrying results which it was hoped would follow the advent of trolley lines thru rural districts.

The goods on this truck are handled only twice, once by the shipper and once by the receiver. The result is a saving in crating, and prevention of damage

# Building GMC Truck Confidence Through Quality

The man who owns a GMC Motor Truck may well look upon it with the same degree of confidence he placed in the horse, his faithful friend.

Whether it be a single GMC Truck or a fleet, the owner finds untold satisfaction in his confidence that his work will be well done.

During the years since GMC Trucks were put on the market there has grown up among GMC owner everywhere just such a feeling.

There is a good reason for it.

GMC Trucks, from the very first, were built to be inherently good—good for their own sake.

No GMC Truck was ever built to meet a price.

The GMC ideal has been to build the best truck possible in a particular size and for a particular kind of work.

That is why, as a result of proof of performance, the reputation of GMC Trucks for reliability and plain, honest quality is rapidly growing.

Let your next Truck be a GMC.

# Does your laundry use Perfect Soft Water?

Sectional View of  
Refinite Water Softener

**A**FTER a tubbing or two—do your laundered pieces take on an unsightly yellow cast and show surprising wear and tear?

It's the soap curd and the severe rubbing, unavoidable when HARD water is used.

Perfect soft water is now within the reach of every user. In the rugged Black Hills country of South Dakota there was found a most unusual mineral. When placed in water, it collects the elements which cause hardness and gives off softening properties in exchange. A natural water softener, as old as the hills—this mineral, Refinite, needed only man's ingenuity to make it practical.

**REFINITE**  
ROYAL OF THE CLOTHS  
TRADE MARK

The Refinite Water Softener is the only one using the natural Refinite mineral. It is a simple filter system—no technical knowledge required to operate it. Quickly installed—occupies very little space—100% efficient. It softens water perfectly, in any quantity desired and at the lowest cost of operation.

Refinite systems are now used and approved by laundries, textile mills, steam power plants (to prevent boiler scale), hospitals, hotels, apartment buildings and private homes in all parts of the country.

There's a Refinite user near you. Write for his name and full information. Any district office, or

# The New Books

## Twentieth Century Poets

**I**F there is one thing certain about the advance of poetry in America, it is that the advance is a general one along the whole line of composition from free verse and polyphonic prose on the extreme left to sonnets and quatrains on the extreme right."

So says Professor "Billy" Phelps, of Yale, in his book on *The Advance of English Poetry in the Twentieth Century*. Whether he was thinking of an army or of a sort of embattled parliament, the metaphor is a good one, but it involves the most outstanding fault of this breezy book. Its title is a misnomer. Professor Phelps has assembled a great many interesting comments on poets and poetry, but outside of this paragraph there is mighty little discussion of the advance; little, that is, of the critical synthesis, the recognition and exposition of poetical development, of interrelations and sequences, that one expects from the title. For illumination on the broader tendencies in the verse of the generation one can much better turn to Amy Lowell's "Tendencies in Modern American Poetry," or even to the unassuming little symposium edited a few years ago by Lloyd Morris, "The Young Idea."

But this is not quite fair to Professor Phelps. Perhaps he didn't choose the title, and, in any event, we should consider the book he wrote and evidently intended to write, rather than the one we think he ought to have written!

There are no less than 114 poets whose work is in some measure discussed in this single volume. The comment extends to a whole chapter in the case of John Masfield, for whom, properly enough, this distinction is reserved; and shrinks to a very few lines in many cases. In these days of Princeton anthologies sponsored by no less a personage than Alfred Noyes, one can forgive Mr. Phelps for devoting a chapter to Yale poets, but how he can find space for men like John G. Neihardt and John Curtis Underwood, and even spare a paragraph to Ella Wheeler Wilcox, and yet have no room for Joyce Kilmer save in an apologetic note in the appendix, is hard to understand.

The chapter on Masfield makes one regret that Mr. Phelps felt that he had to crowd his other pages so full that he had space for no more than fragmentary comment. It is an excellent outline of the work of the master of our generation; it does estimate the nature of the "advance" which he represents; and it is a well-rounded commentary on the outstanding features of his greatness. Its gist is here:

Mr. Masfield is a mighty force in the renewal of poetry; in the art of dramatic narrative he goes back to the sincerity and catholicity of Chaucer. For his language, he has carried Wordsworth's idea of "naturalness" to its extreme limits. For his material, he finds nothing common or unclean. But all his virility, candor and sympathy, backed by all his astonishing range of experience, would not have made him a poet had he not possessed imagination and the power to express his vision of life.

Wisely, Mr. Phelps refrains from any attempt at arbitrary classification. We are left nearly always to guess his rating for a particular poet by the extent and nature of his comment. That is as it should be;

Here is the peer of all typewriter stands. It will please your stenographer. Saves fatigue because adjustable to any position. More work is possible with

### The "Satellite" Stand

Figures show that 10% to 20% more work is possible when operators use this stand for their typewriters.

You can move it about. Rolls on casters. Saves space. All metal except top. Wears forever.

### 30 Days Free Trial

We will let you try the "Satellite" for 30 days free and take it back if you don't want it. We pay charges.

Send for our folder giving all details concerning "Satellite" models.

**ADJUSTABLE TABLE COMPANY**  
45 Mt. Vernon Avenue, Grand Rapids, Mich.

Baederized anthologies have proved the futility of the other method.

For this reason it is interesting to note what he chooses to say of some popular versemen. We quote, admitting frankly the injustices of the process when such fragments are taken from their context:

*Alfred Noyes*—He is not without ideas, but he is primarily an artist, a singer. (Page 58.)

*Edgar Lee Masters*—In the "Anthology" the driving motive is an almost perverted passion for truth. (Page 267.) I therefore regard the "Spoon River Anthology" not as a brilliant revelation of human nature, but as a masterpiece of cynicism. (Page 269.)

*Amy Lowell*—Vigor and versatility are the words that rise in one's mind when thinking of her poetry. (Page 248.) In spite of her assured position in contemporary literature, one feels that her career has not yet reached its zenith. (Page 256.)

*Vachel Lindsay*—Such unquenchable vitality, such bubbling exuberance, cannot always be graceful, cannot always be impressive. But the blunders of an original man are sometimes more fruitful than the correctness of a copyist. (Page 235.)

*Robert Service*—The poetry of Mr. Service has the merits and the faults of the "red blood" school in fiction. . . . It is not the highest form of art. It insists on being heard, but it smells of mortality. You cannot give permanence to a book by printing it in italic type. (Page 34.)

*Henry van Dyke*—Among our veteran poets should be numbered also Henry van Dyke. His versatility is so remarkable that it has somewhat obscured his particular merit. (Page 202.)

*Rudyard Kipling*—The reach of this particular poet seldom exceeds his grasp. (Page 32.) I hope that after the war he will become one of the leaders in the advance of English poetry in the twentieth century, as he will remain one of the imperishable monuments of Victorian literature. (Page 33.)

Mr. Phelps's method is conversational. He browses briefly in a poet's life-history, quotes a poem or two, tells a story or makes a disquisition on human nature that occurs to him, comments on the principal characteristics of the work in question, and passes on. Too often his bright phrases are a little cheap; one wonders if they were written with the stamping of undergraduate feet in view. But his opinions are sound and pertinent. If he opens few doors to unsuspected subtleties, he does tell us briefly and pointedly what he thinks of the important poets. His judgments command general agreement, and rarely fail to hit the nail on the head.

*The Advance of English Poetry in the Twentieth Century*, by William Lyon Phelps. Dodd, Mead & Co. \$1.50.

## The Slav World

THE study of *The Jugo-Slav Movement*, by Robert Kerner, relates the birth, or rebirth, of a common sense of nationality among the Serbian, Montenegrin, Bosnian, Croatian and Slovene peoples, long divided from each other by mountain barriers, religious antagonisms, political boundaries and the Austro-Hungarian policy of "divide and rule." There is a complete bibliography at the end of the study.

Vladislav Savic, a Serbian scholar of reputation and a Serbian political leader of experience, discusses the diplomatic position of a resurrected Yugoslavia in his recent volume on *Southeastern Europe*. His solution is the union of the Jugo-Slav peoples into one state, the rearrangement of frontiers in the Balkans and in Austria-Hungary on the principle of nationality, and the creation of a new synthesis in southeastern Europe in place of the present Hapsburg Empire. "Materially, economically, and politically, southeastern Europe will be complete if it includes Bohemia, Hungary, Rumania and the southern Slav state, but its moral entity will not be perfected unless all the other smaller neighbors join with them," namely Greece, Bulgaria and Albania. President Butler of Columbia University has contributed an introduction to the volume.

*The Heart of Europe*, by Charles Pergler, is a plea for the union of the Czechs

## The IDEAL Safeguards your Shipments

# Stencil- Marking to Avoid Losses

You can save time—money—losses—disputes—delays—by stencil marking your shipments—instead of following the old-fashioned, cumbersome, expensive and illegible method of hand-lettering. Mark your shipments with plain, bold, readable, unmistakable stencil letters cut on

## The IDEAL Stencil Machine

The IDEAL cuts paper stencils of your customers' names and addresses, at the rate of one each half minute. Each stencil is good for hundreds of markings. Anyone can do the work without previous experience. The IDEAL is speedy, accurate, durable. It will put your shipping room on an efficient basis.

### Use Coupon for Free Booklet and Demonstration Offer

We have an interesting booklet to send you, "Safeguarding Your Shipments"—write for it today. It is free, together with sample stencils cut on the IDEAL, and details of our free demonstration offer.

## Don't Wear a Truss

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. No obnoxious springs or pads

MR. C. E. BROOKS

### Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.

C. E. BROOKS, 490F State St., Marshall, Mich.

of Austria and the Slovaks of Hungary into a new national state, independent of the decadent Hapsburg Empire. The new republic which has been formed is better endowed for independence than many suppose.

An independent Bohemian-Slovak state will have a population of over twelve million inhabitants, and in territorial extent will be eighth among twenty-two European sovereignties. At the present time 62.7 per cent of the burden of Austrian taxation is borne by the Czech countries. 78 per cent of the grain lands of Austria is found in Bohemia. Of the coal found in Austria, 83 per cent is mined in the Bohemian lands; 69 per cent of the Austrian iron is found there; 90 per cent, if not more, of the sugar factories of Austria are located in the lands of the Bohemian crown; the textile industry is one of large proportions, and leather, paper, furniture and electro-technical industries are of importance.

For those to whom the Ukraine is only a word, the study of Dr. Stephen Rudnitsky, of the University of Lemberg, will prove of value, especially on the economic side. The author is much concerned to prove that his fellow-countrymen have nothing in common with the Russians in race, speech, or national characteristics.

*The Jugo-Slav Movement*, by R. J. Kerner. Cambridge: Harvard Univ. Press. \$1. *South-eastern Europe*, by Vladislav Savic. F. H. Revell Co. \$1.50. *The Heart of Europe*, by Charles Pergler. Chicago: Bohemian National Alliance. 25 cents. *Ukraine*, by Stephen Rudnitsky. Rand McNally Co. \$2.

## Consequences of the War

WILLIAM HERBERT HOBBS'S *The World War and Its Consequences* is unquestionably a powerful review of the circumstances and events, other than military, of his subject. Professor Hobbs is unsparing in arraigning his evidence against those of admitted pro-German sympathy, and reminds others who palliated such atrocities as the sinking of the "Lusitania" on the ground of neutrality, of Confucius' words: "A wise man is impartial, not neutral; a fool is neutral but not impartial." He also lays bare German propaganda in the United States with its devious and endless ramifications. Coming to the Peace Treaty, Professor Hobbs warns us what we may expect from a beaten and unregenerate Germany, if the terms are not those imposed by a victor. In this relation he quotes Maximilian Harden:

We will go back to the times of savagery when man was a wolf for his fellow man. . . . If in France they think that the reestablishment of peace can only be made possible by the restoration of Alsace-Lorraine, and if necessity should oblige us to sign such a peace, the seventy millions of Germans would very soon tear that peace to tatters.

Professor Hobbs's book bears a warm indorsement from Theodore Roosevelt. The vigor of its style and its direct force remind one of the deceased President.

*The World War and Its Consequences*, by William Herbert Hobbs. G. P. Putnam's Sons. \$2.50.

## Our Part in the War

NO work of five hundred pages could be more pregnant with fact and event than Professor McMaster's review of the United States in the world war. It is a recording of affairs military, political, and social from 1914 to 1918 with respect chiefly to their influence on the United States and her part in them. As a reference work it will prove invaluable.

The first part of the book deals with pre-war activities, such as neutral trade and the war restrictions placed upon it, the sinking of unarmed ships, pro-German propaganda, the latter with our entrance into the war, the mobilization of our soldiers, our industries, and our food supplies, concluding with the international peace discussions at the time of the Brest-Litovsk parleys.

Professor McMaster has no words to

spare on comment or interpretation. His is a straight chronological narrative, amply supplied with such documentary support as the speeches of statesmen, government proclamations, and newspaper comment. As always he lays stress upon the political and economic rather than the military events of the war. He presents his facts with high impartiality and with no attempt at their evaluation.

*The United States in the World War*, by John Bach McMaster. D. Appleton & Co. \$3.

## What of Alsace-Lorraine?

AMONG the peace problems that it will be difficult to settle with absolute justice is that of the disposition of Alsace-Lorraine. Dr. Coleman Phillipson's book, *Alsace-Lorraine*, dealing with the history of this province, past and present, and with its probable future status makes clear the importance not only to France and Germany, but to the world peace, of a just solution of this question. His impartial report of the claims of both sides, presented from the geographical, economic, political, ethnographic and historical viewpoints lead to the conclusion that the future sovereignty of the country must be left to the decision of its own people.

The book is well planned to meet the needs of the student, giving a thoro description of the land (illustrated with topographical maps) and the reaction of the inhabitants to the various regimes by which they have been governed.

*Alsace-Lorraine*, by Coleman Phillipson. E. P. Dutton & Co. \$8.

## A Poet Who Went to War

BUT for the war, we should not have had Joyce Kilmer's collected *Poems, Essays and Letters* this year. Yet it is part of his distinction that he was a poet who went to war—not a poet made by the war. From France he wrote only a handful of verses, and these, tho they gather up in especially poignant form some of the finest strains of his poetical personality, are by no means his most characteristic work. There is great nobility and a high order of rhetorical vigor in "The Peacemaker." But another man might have written it more readily than "Trees" or "The Twelve Forty-five" or "The Blue Valentine," to name only three familiar poems in as many different moods.

Kilmer was a poet to be prized most of all for a racy simplicity, a mingling of homely emotion and an urbane and virile humor. It is the verses that show these qualities which will be longest remembered by the greatest number of readers—not the more especially devotional poems, tho their spirit and the strain of Kilmerian fancy which runs thru them will widen their appeal beyond the limits of Kilmer's own Catholic faith. Joyce Kilmer posset, and dared to display, that naïveté which is the fruit of an exquisite sophistication.

Of his career, one can say nothing after the intimate and spirited memoir which Mr. Holliday offers. An amazing energy, cloaked by a quaint dignity, and linked with a passionate devotion to the Catholic Church, made him a figure fit for legend. The first of the reprinted letters is charmingly characteristic in manner:

The New York Times,  
November 1, 1914.

Dear Charlie:

Can you lend me \$1? I wish to go to New Brunswick, New Jersey. Help me to gratify this strange whim!

J. KILMER

It was the quiet graciousness of his voice, with an autocratic finality and a humorous insight in the dictum, that made his conversation delightful, and a like blending of mellow observation, whimsy

cality and vigor gives flavor to his prose and verse.

Kilmer wrote good verses and a great quantity of good newspaper prose which are not included in these representative volumes; but for their many-sided revelation of one of the most thoroly interesting dynamic young personalities of the generation they are very certainly among the books of the year which one will read, and keep.

*Poems, Essays and Letters*, 2 vols., by Joyce Kilmer. G. H. Doran & Co. \$5 set.

## The Sacred Beetle

ONE does not look for that indefinite quality called human interest in a book of science, yet it exists on every page of M. Fabre's books on the insects he found in his garden and the nearby fields. In *The Sacred Beetle* the translator has brought together Fabre's scattered essays on the scavenger beetles that, for their own purposes, clear the land of the droppings of cattle, utilizing the discarded material as food and as a nidus and nutriment for their young. The purely instinctive work they do, forming with marvelous skill the perfect spheres, or the elegantly shaped egg-pairs laid away in their burrows, is sufficiently interesting by itself to hold the reader, especially when he recalls the reverence paid to one of these beetles—the Egyptian scarab—as a religious symbol. But he is even more fascinated by the enthusiasm of the man who is penetrating their secrets with a patience and ingenuity of research almost as wonderful as his discoveries, and by the very human amusement that is mingled with his scientific delight as he discloses one hidden feature of beetle life after another, and links them together into biographies.

*The Sacred Beetle and Others*, by J. Henri Fabre. Translated by Alexander Teixeira de Mattos. Dodd, Mead & Co. \$1.60.

## A Critic of the Colleges

IS the higher learning a business proposition? Is the university a business corporation? Is the college president a successful business man, a captain of finance? If this is so, should it be so?

These are some of the questions propounded by Thorstein Veblen in his new book on *The Higher Learning in America*, a memorandum on the conduct of universities by business men.

In the working theory of the modern civilized community, the university is a corporation of learning, distinct and dispassionate. . . . Within the university precincts any aim or interest other than those of irresponsible science and scholarship, the pursuit of matter-of-fact knowledge are to be rated as interlopers.

This is the theory, indeed, but the practice, he says, is far different. More and more the modern university is becoming an efficient business machine—efficient in that it trains people to take their place in the complex business world and, in turn, to become efficient business machines. Its professional schools, whose one aim is utilitarian, outweigh its academic department. Even the college of arts must adapt itself to utilitarian ends. It must produce results which can be gaged and measured on a statistical basis and in terms of modern science. The college president is chosen not because he is "a scholar and a gentleman" as in former days, but because he is a successful administrator, a good public man, a clever money-getter. He chooses as his subordinates men who can see sense in carrying out the policies expected of him. In such a scheme of things the scholar does not fit. Big business and pure learning have no common ground.

Thus does Mr. Veblen indict the modern American university. His remedy, as far as he suggests one, for his book is, after all,

# The New and Improved Weilaphone

but a criticism of existing conditions—is  
a return to the essential idea of the small  
American college.

to that ancient footing of small-scale parcelment  
and personal communion between teacher and  
student that once made the American college,  
with all its handicaps of poverty, chauvinism  
and denominational bias, one of the most ef-  
fective agencies of scholarship in Christendom.

In the New School of Social Research,  
of which he is one of the founders, he may  
find opportunity to carry out his radical  
ideals of educational reform.

*The Higher Learning in America*, by Thor-  
stein Veblen. B. W. Huebsch. \$2.

## Goat Feathers

DON'T be a goat—that is the lesson of  
Ellis Parker Butler's tract on effi-  
ciency. It is, like all true tracts, based on  
personal experience and misfortune, for  
he, like the rest of us, has gone gathering  
goat feathers. This is not the same thing  
as "wool-gathering," tho it has an equally  
deleterious effect on a man's work. To take  
up every public task one is asked to do and  
turn aside into every by-path that looks  
inviting—that is gathering goat feathers.  
But one cannot review Butler. One can  
only quote from him:

I can sit down to write a story about a man  
who fell off a bridge and landed in a kettle of  
tar on a canal boat and, before I have com-  
pleted a full paragraph, I can have stopped to  
clean the small o, small e, and small a of my  
typewriter with a toothpick, stopped to think  
about the pearl buttons on a vest I owned in  
1894, the Spanish-American War, what the  
French word for "illumination" is, and whether  
I paid my last Liberty Loan installment. Be-  
fore I have finished that first paragraph I may  
have stopped to fill my fountain pen, gone down-  
town to attend a meeting of the Red Cross Com-  
mittee, started to recatalog my published stories,  
and taken a trip to Chicago. Before I have got  
to the first period in the first sentence I may  
have decided that I would not have a man fall  
off the bridge but have a woman fall off it, that  
I would not have her fall off a bridge but off  
the Woolworth Building, that I would not have  
her fall into a kettle of tar but into a wagon-  
load of feather beds, that I would not write a  
humorous story at all, that I would not write  
at all, and that I would, instead, get an empty  
cigar box and make a toy circus wagon for my  
young son.

On my wall, alongside my desk, I have a cal-  
endar, and the sheet that faces me is that for  
the first week in March, 1916. It says "Con-  
centration. Concentrate all your thoughts upon  
the work in hand. The sun's rays do not burn  
until brought to a focus. Alexander G. Bell."  
That is the whole matter in a nutshell, but the  
only use the motto has been to me has been to  
permit me to look at it and think about it when  
I ought to be thinking of the story I was trying  
to write.

*Goat Feathers*, by Ellis Parker Butler. Hough-  
ton Mifflin Co. 50 cents.

## More Bennett Philosophy

WE are always glad when Arnold Ben-  
nett takes time in the midst of his  
prolific and versatile literary contributions  
to add another volume to his pocket philos-  
ophy series. This eight-volume library on  
what men live by, or should live by, ought  
to be crowded on everyone's five foot shelf,  
because these books contain essays on ex-  
isting that challenge one to think and in-  
spire one to try to live a richer life. Arnold  
Bennett possesses the happy faculty for  
talking to plain folks straight from the  
shoulder and with "punch," and at the  
same time rendering himself most delight-  
ful and amusing reading.

*Self and Self-Management* consists of six  
essays on miscellaneous topics, such as run-  
ning away from life, war-work, the diary  
habit, lecturing a young woman, being  
fussy and the meaning of frocks. The first  
essay on "Running Away from Life" is  
nearly all quotable, but lack of space limits  
us to one paragraph:

My point is that you may take refuge in  
good works or you may take refuge in bad  
works, but that the supreme offense against  
life lies in taking refuge from it, and that if  
you commit this offense you will miss the only  
authentic happiness—which springs no more

from content and resignation than it springs from mere pleasure. It is indisputable that the conscience can be, and is constantly narcotized as much by relatively good deeds as by relatively bad deeds. Nevertheless, to dope the conscience is always a crime, and is always punished by the ultimate waking up of the conscience.

*Self and Self-Management*, by Arnold Bennett. George H. Doran Co. \$1.

## Truth and Phantasy

A book that despite not infrequent dallies with the sentimental, manages to capture a great Truth in its cobweb net of phantasy, is *The Little Girl Who Couldn't Get-Over-It*. The story centers round the life of a little girl of cultured parentage who is born in the slums of New York and brought up until she is six years old by a slum foster-mother. She then is restored to her natural sphere. A life of luxury and aimless culture fails to banish early impressions and values from the girl's sensitive nature, and she finally shapes her life upon unusual and ideal lines. On the whole it is an unusual romance.

*The Little Girl Who Couldn't Get-Over-It*, by Alfred Scott Barry. E. P. Dutton & Co. \$1.50.

## The Avalanche

READERS of fiction will be twice grateful to Mrs. Atherton for her latest story. In the first place, because she is an American and knows not only how to portray the American character but also because she belongs to us, lives with us and writes to us. We thank her, too, for choosing San Francisco as the locale; no one knows better than she the life and business of this Western metropolis.

Possibly one might criticise Mrs. Atherton for handling, without gloves, some characters and localities which are more often discussed in men's clubs than in the open pages of a widely circulated book. But we see in this story an ingenious tale of San Francisco society, or at least that part of society where idleness and too much money lead it to resort to unusual methods of amusement.

It seems somewhat unjust to classify *The Avalanche* as a detective story—so many crimes have been committed in that name! But as in "Mrs. Balfame," her previous book, Mrs. Atherton features in *The Avalanche* a professional detective as an integral part in the machinery of the well-constructed plot. And the unfolding of the tale loses nothing in the way of thrills and climax.

*The Avalanche*, by Gertrude Atherton. F. A. Stokes Co. \$1.35.

## Behind the Battleships

HARRIET WELLES has done a splendid thing for the navy and for the American people; she has won for the men and the organization a new appreciation, and has brought the human side of the service home to us.

*Anchors Aweigh* is a collection of short stories about the navy and navy men—and women, for officers' wives are almost as much a part of the service as their husbands. "The Admiral's Birthday" and "Orders" are the two outstanding stories in the collection, but the others, too, have a way of tightening your throat just a bit, and making you see with new and more understanding eyes what is behind the great gray battleships.

There is a variety of background in these tales, and the incidents stand forth sharply against a setting of proper atmosphere, sometimes in this country, sometimes in China, in port or at sea. Mrs. Welles presents a well told straightforward story in a manner that changes it from merely a story into an unfolding picture.

*Anchors Aweigh*, by Harriet Welles. Charles Scribner's Sons. \$1.50.

# Eat 30 lbs. Daily

## If You Live On Vegetables

Vegetables are good foods and necessary. But the kinds we picture average about 100 calories per pound in energy value. And the average person needs 3,000 calories per day.

Fish is good food, but fresh fish averages 300 calories per pound. You would need 10 pounds per day.

Quaker Oats yields 1,810 calories per pound. You would need 1 2/3 pounds of that.

This is what 3,000 calories cost at this writing in some necessary foods:

Cost of 3,000 Calories						
In Quaker Oats	-	-	-	-	-	\$0.15
In Round Steak	-	-	-	-	-	1.23
In Veal Cutlets	-	-	-	-	-	1.71
In Blue Points	-	-	-	-	-	7.50
In Average Fish	-	-	-	-	-	1.80
In Salt Codfish	-	-	-	-	-	2.34
In Squash	-	-	-	-	-	2.25
In Canned Peas	-	-	-	-	-	1.62

Eat a mixed diet, but consider what Quaker Oats means in your breakfast. It costs one-half cent per dish.

It costs one-tenth what meat or fish costs for the same energy value.

Each 30-cent package served in place of meats saves at least \$3.

In the oat you get supreme food—the greatest food that grows.

You get almost a complete food—the nearly ideal food.

You get a food with age-old fame as a builder of body and brain.

And you get the most delightful flavor which Nature confers on grain.

One reason for high cost of living is too little use of oats.

# Quaker Oats

## The Flavorful Flakes

Get Quaker Oats because of its flavor. It is flaked from queen grains only—just the plump, rich, flavorful oats. We get but ten pounds from a bushel. It makes the oat dish doubly delightful without any extra price.

**Prices Reduced to 12c and 30c a Package**

Except in the Far West and South

Packed in Sealed Round Packages with Removable Cover

(3054)

# DURAND STEEL LOCKERS

**SOME** people are blocking prosperity by holding up orders in hope of a drop in prices. If we all did that, business would be at a standstill.

Professor Irving Fisher of Yale says "We are on a permanently high price level."

Patriotic, far-sighted business men are going ahead. Business has got to be good to meet war taxes, to give jobs to returning soldiers, and to create prosperity.

**Buy wisely; but buy what you need**

Write us of your particular needs regarding steel lockers, or steel racks. Catalogue of either on application.

**DURAND STEEL LOCKER CO.**  
1572 Ft. Dearborn Bk. Bldg. Chicago  
972 Vanderbilt Bldg. New York

**BE A CPA ACCOUNTANCY**  
The Highest Paid Profession taught thoroughly in a few months of home study by new system.  
**FREE BOOK** International Accountants Society  
Dept. 210, 624 S. Michigan Ave., Chicago

## Your Vacation Opportunity

The Summer Quarter 1919 will receive the added inspiration of professors and instructors returning from war service in many lands. Students and teachers, interested in keeping abreast of the times or in completing work already begun, appreciate the opportunity of instruction in a regular season of study under members of the University staff. Scholars desiring to prosecute research in the libraries and laboratories will find facilities for work under the most favorable conditions.

Courses are offered in all departments and include undergraduate and graduate instruction in Arts, Literature, Science, Commerce and Administration, Law, Medicine, Education and Divinity.

**SUMMER QUARTER 1919**  
First Term June 16-July 23  
Second Term July 24-August 29  
Students may register for either term or both

For the complete announcement of courses address  
**The University of Chicago, Chicago, Ill.**

## IT ALL DEPENDS ON THE BOSS

(Continued from page 106)

he had spare time left, so he took over two other partial jobs from other officials. Presently he found time again hanging on his hands. The company was organizing a new concern, and wished to know if the bookkeeper could handle a similar job for the new concern. Surely he could. And he did. The right man, plus the right machine and the right method, handled the work of five men, and did it better than five men ever could, lacking the modern machine and the modern method. You have no way of determining what your bookkeeper might and should accomplish, until you consult and compare the claims and tests of a number of manufacturers of modern bookkeeping machines.

What is your standard of performance in your addressing department? A girl using the old-fashioned pen and ink method of writing addresses usually finds 1000 her utmost for a day's work. If she uses the best type of foot-power machine for writing addresses, she can turn out 3000 an hour. The old method costs \$1.50 per 1000; the new method costs 15 cents per 1000.

Consider now the office boy. He is apt to be the highest-priced employee of a business organization. What? Isn't he paid the least? Of course—and the cheapest of anything is usually the costliest of its kind. A man willing to waste a dollar a week on the office boy—merely because he is the office boy, has a bad conception of business and will arrive at a bad conclusion thereof. A typical American office boy is unsystematic, unscientific, lazy, impertinent, impolite, fractious and buccolic. He talks and acts as if he owned the place.

The spare time of the office boy should be accounted for strictly. He should be given a variety of small jobs every day that need not be done at any special hour but must be done before closing time. He should be trained as an understudy of at least two higher employees. He should be taught how to study and work for promotion during his leisure periods. And he should be furnished a time schedule of every class of job he is supposed to perform, with a minimum salary for his time alone, and a piece rate or bonus addition for a maximum quality and quantity of production.

The preponderance of office action is routine work, and nearly all routine work involves the repetition of a certain kind and number of standard motions, or the completion of a certain kind and number of standard jobs. All this output, whether manual or mechanical, should be figured on a scientific basis equally fair to employer and employees.

The only worker whose output can be neither measured nor standardized is the man paid to think. The law of necessity makes you work perhaps eight hours a day; but when the law of originality gets hold of you, it may force you to work twelve hours a day, or to do as much in two hours as an ordinary man does in eight. There is no measure for the human mind. A certain famous man recently finished a brain product in four hours—then proceeded to sell it for \$20,000. He earned on that job \$5000 an hour. But he worked by inspiration as a primal motive—he never even thought of the price he would get for the production while he was absorbed in creating it. Everybody ought to work that way. Not everybody even by mental concentration and moral aspiration could earn \$5000 an hour; but I am firmly convinced that almost everybody could earn \$5000 a year if he did the work he was born to do, did it because he loved it, and trained himself to do it better all the time. Poverty

is not lack of money but lack of knowledge, lack of skill, lack of purpose, lack of power.

We suggest a few sample production tests for the office manager—till he originates better ones for himself. A daily standard of performance and of excellence should be fixed and followed as much by the employer as by the employee. One test for the office manager is that he leaves an absolutely clean desk at the close of the day. Another is that he apportions each day's work so that overtime is not demanded of any employee. Another is that he adjusts all complaints and difficulties promptly, kindly, patiently and effectively so that all employees are kept in a state of high satisfaction. Another is that he trains every worker, every day, to detect and correct his own mistakes and thus renders personal supervision by the manager unnecessary. Another is that every day he conceives a new idea or develops a plan for expediting, improving or extending the work.

Before you install production tests for an office department or individual employees, you should make it clear to everybody that the intention is to raise the pay of good workers, and to equalize the pay of all workers so that everybody gets a square deal. For instance, the chances are that if you regularly overpay your worst stenographer \$2 a week, you regularly underpay your best stenographer \$2 a week. Not only is it bad for the success of the business and the character of the poor stenographer to give her \$2 a week more than she earns—it is equally bad for the character of the business and the disposition and ambition of the good stenographer to give her \$2 a week less than she earns.

It isn't safe to criticize the employee whose production average falls below the ideal. The fault may lie in the management. The inequality of office output, whether departmental or individual, may be due to causes like these: Unjust or irregular apportionment of work; lack of coördination of individuals or departments; lack of technical training of the worker for the work; assigning of employees to jobs they could not do right in a hundred years because of temperamental unfitness; fault or absence of time schedule; disregard of the law of fatigue; overuse of man power and ignorance or neglect of machine power; selfishness, harshness or stupidity of higher officials; bad relations generally between employer and employee, or customer and employee, or employee and employee. All such factors in variation of production lie at the door of the manager of the office or the proprietor of the business. No matter how little or how poor work is done, to blame the employee offhand is unfair and unwise.

Now we turn from the principle and theory of our subject to the practical demonstration. How are you going to measure the output, actual and potential, of your office employees, tools, methods and machines? While the limitations of a general discussion make detailed application somewhat difficult, we would offer a number of suggestions that have been found serviceable in a large number of American business offices.

Get all available literature from the leading national efficiency organizations. Among these are The Independent Efficiency Service, the National Efficiency Society, the Harvard Bureau of Business Research, the Federal Bureau of Standards. The Independent Efficiency Service, 119 West Fortieth Street, New York, supplies on request a printed office list of machine operations. To find whether your machines are up to the standard, or whether your combination of

man power and machine power is turning out the most and best work, you have only to check this list, obtain from the publishers a directory of manufacturers of machines for office use, then write for catalogs of the manufacturers and compare their production standard with your own.

Locate your problem and its solution in a recent business book. The science of office management can now be learned by mail. This was not true even five years ago; but the recent publication of authoritative books and lessons on office principle and procedure has made it possible for any office worker or manager, from Florida to Alaska, to know what production engineers have accomplished in New York, Chicago and other great business centers.

Consult the manufacturers of the machines and appliances you are now using. The big aim of the big manufacturer is not now to sell the customer but to serve the customer. Efficiency bureaus and service departments have been organized for the benefit of the customer by leading manufacturers of typewriters, cash registers, bookkeeping machines, dictating machines, filing cabinets, office furniture, and other items of equipment and supply.

Stimulate thought, effort, enthusiasm, by means of tests, contests, races and prizes. A man never knows how much he can do until he starts out to beat his own record. Why should baseball teams and bicycle races be full of the excitement of winning the game—and offices be as dumpy and dreary as an old ladies' home on a rainy afternoon? The finest game in the world is the game of business. Put the spirit of the game into your business. Rouse every individual section and department to go after a new record.

Train your employees for their work on a systematic, scientific basis. Reports from the U. S. Department of Labor indicate that 90 per cent of the training rooms, classes and methods recently organized in large industrial plants have not only paid for themselves but have materially increased the profits of the concern.

Furnish your employees with proper tools and facilities. The best equipment is the best investment. Are your workers entirely satisfied with their tools, machines and appliances? If not, see that they are. Don't cripple them with cheap, scant, old-fashioned, outworn, irresponsible utensils.

Be fair to your employees by giving them a chance to do their best work. For example, in dictating to your stenographer, bear in mind that the outcome depends as much on you as on her. Dictate in a quiet room. Prevent interruption during dictation. Speak slowly, clearly, and directly to the stenographer. Give all necessary instructions for handling copy, take nothing for granted. Spell out every proper name, every technical or unusual word, foreign word or phrase. Don't keep your stenographer waiting, and don't expect her to do a lot of rush work in the afternoon. Prevent the late afternoon rush by analyzing work distribution more keenly and apportioning it more equitably. Furthermore, do not blame your stenographer for all the mistakes she makes—remember that the average dictator is responsible for about a third of the blunders, errors and delays of his typist.

Fit the work to the worker—not the worker to the work. The largest factor in failure is misfitness. You can't make a vital temperament do good mental work, or an eternal temperament do good mechanical work. There are some people who would go crazy if kept on a routine job all day. There are other people who wouldn't be contented with anything but a routine job. Character analysis forms the one correct basis for the selection of employees. The physical, mental, emotional, executive,

Actual use on some of the best kept lawns in the country has demonstrated that the Ideal Power Lawn Mower will easily replace five men with hand mowers and all the way from four to eight men with hand rollers. One man with the Ideal can easily cut four to five acres of lawn per day, and as the roller is an integral part of the machine the grass is rolled every time it is cut. Hence the turf is kept firm and smooth and in the finest possible condition.

#### How the Tractor Principle Eliminates Difficulties

We have been manufacturing power lawn mowers for six years and our Ideal Tractor Mower was probably the first one on the market that could truly be called trouble-proof. It is of very simple construction and its design is such that all complicated clutches and gears are eliminated. All the operator has to do is guide the machine and operate the starting and stopping lever.

#### Uses Tractor Principle

The cutting blades operate by the traction of the side wheels upon the ground, just the same as the blades on a hand mower operate. This eliminates the difficulties that are almost sure to occur where an attempt is made to drive the blades direct by power from the engine.

#### Cuts Close to the Walks, Trees, Flower-beds and Shrubbery

With the Ideal a man can work just as close to various obstacles as with a hand mower. The mower is hung in such a manner that it turns easily and is guided around corners, flower-beds, trees, etc., without difficulty. Photo at right shows how the Ideal is quickly converted into a roller by using the small castor which we furnish. Valuable feature for early spring rolling.

#### Five Day Trial—Satisfaction Guaranteed

Write for details of our five day trial offer. Ideal Power Lawn Mowers are sold on a positive guarantee of satisfaction and we will willingly refund money on any machine that does not prove satisfactory when properly operated. You can secure this Ideal through your hardware dealer or direct from our factory. Write today for special literature.

(Continued from page 119)

moral, social, industrial and inspirational faculties, traits and powers of each prospective worker should be judged in advance of employment, and the principal job assigned to him be made to fit him.

Make every worker a partner—and treat him like one. You may not be able to follow the example of Henry Ford and pay a minimum wage of \$6 a day, or the example of the United States Steel Corporation and invite your employees to become stockholders, but you can somehow gain their respect, win their loyalty, get their cooperation, stir their pride in good work well done. Explain to employees the principles and purposes of all your work. Show them how each is necessary to the final product. Create professional standards, with admiration therefor and reliance thereon. Make sure that dignity, courtesy and kindness prevail thruout your establishment. Prepare each worker definitely for promotion. Don't be satisfied till they all respect your justice and like your generosity. Production is the scientific name for satisfaction.

## THE VERY HUMAN ADMIRAL

(Continued from page 96)

"I chose Commander J. V. Babcock, who was my aide at Newport. We both put on civilian clothes, dropt our names, and assumed others more suitable to the occasion. Babcock and I chose 'Richardson and Robertson' as near as I can recall. We sailed from New York on March 31, 1917, on the steamship 'New York.' No one on the steamer recognized us, and we passed the trip as ordinary voyagers.

"We received news of the declaration of war by the ship's wireless on April 5, but it did not disturb us. We reached Liverpool on April 9 in a thick fog. Entering the harbor the 'New York' struck a mine which blew a hole in one of her forward compartments.

"At Liverpool we went ashore like any one else. A special train was waiting at the landing stage, however, with Admiral Hope of the British Admiralty. It waited there until we got aboard, then pulled out for London.

"We arrived in London on April 10, still wearing civilian clothes. We went at once to the Admiralty offices, where we had a conference with Admiral Jellicoe.

"On April 13, at a luncheon in London, the United States Ambassador made a formal announcement that I had arrived in the country. After that I went about in uniform.

"When we arrived in England, in April, 1917, the Central Powers were winning the war, whether you knew it or not. There were 700,000 to 800,000 tons of shipping being lost each month, and we did not know how to stop it. We had to adopt a new method. We did this. We established first the convoy system; second, the depth charge; third, the listening device. The convoy system might have been put into operation sooner than it was, but it had undergone a period of incorrect information.

"The cooperative arrangements between the naval forces of the Allies were complete. There never was a single instance of friction. The work of the American naval forces was brilliant, but I want to take this opportunity of emphasizing the wonderful display of grit and endurance shown by the merchant seamen of the Allies. Without them the war would have been

lost. There is no praise strong enough to reward their persistent gallantry.

"During the war we had 80,000 officers and men actively engaged in European waters. Of these 5000 were officers. There are 25,000 left, chiefly engaged in transporting troops and supplies.

"When we entered the war the first contingent was six destroyers sent over to engage in offensive operations against the submarine warfare. These were put to work at once where they were most needed. Then, as the others came over, the same policy was carried out.

"From the first I adopted the policy that there should be absolutely no friction between the various nationalities, and I issued orders that any one criticizing the work of the other navies should be sent back home.

"The other people had been engaged in submarine warfare for three years, and at no time were we in a better position than one to ten in anti-submarine craft. At the time the armistice was signed the British had 4000 submarine chasers to our 400.

"But the submarine campaign was never a question of guns. It was a question of the depth charge. That is what defeated the submarine.

"It was not until we entered the war that the convoy system was adopted, but that was chiefly due to faulty information that was at hand up to the time we entered. Under the convoy system it is necessary for ships to steam in columns of four, line ahead. When a submarine is sighted the leading ships must turn simultaneously irrespective of the number of columns. Then, too, the column must be maintained thru the night without navigating lights.

"The Allied naval staffs all declared the merchant seamen could never maintain these positions. What also contributed to the error was the fact that the merchant seamen themselves also stated they could not do so. They pointed out that even with naval ships it was a difficult maneuver, despite the fact that naval crews are trained to it constantly.

"Finally we succeeded in putting two experimental convoys on from Gibraltar to England. They were a complete success, and from that time the convoy system was continued. Our light naval forces were used as escort vessels to as many of these convoys as they could handle."

As to the work of the naval forces in European waters now, Admiral Sims went on to say: "Our naval forces are directing all transport movements. They are escorting ships thru mine fields, directing the movements of food ships and supply ships. Their operations extend from Constantinople thru the Mediterranean across the Atlantic, in the North Sea and clear to the White Sea thru the Arctic Ocean.

"Five hundred men of our navy are in northern France aiding the inhabitants to rebuild their shattered villages. These men were engaged in the bombing squadrons quartered there, and they have taken on their new work voluntarily."

Dear Old Party (to returned soldier who has been issued with an artificial leg):  
Why, Mr. Fitzgood's pup, I heard an 'ow  
you'd lost a leg.

Lost, Fitzgood's pup? Why, so I have.

## "The Dictograph will cut out this confusion and running around"

"With the Dictograph you can translate fully 75% of your employes' time and lost motion into actual money" said the Dictograph man.

"And you can do this without having your employes feel that you are demanding more than full value for every second the clock ticks."

# The Dictograph

System of Interior Telephones

Turns wasted time into productive effort

How?

By enabling each department to get instant information from any other department without waiting for a switch board connection; and at the same time—

By giving the Executive, through the famous loud-speaking Master Station, the "right of way," or executive control; and—

By enabling you, and your other creative executives, to hold conferences, dictate letters, receive reports, give orders, talk to callers—all without effort and without the necessity of any employee or executive leaving his desk for an instant.

The Dictograph brings complete efficiency in inter-communication—why be satisfied with less?

Let us show you, on your own desk—in your own office, bank, plant or factory—how the Dictograph will simplify and expedite the work of every executive and employee in your organization.

Check the coupon for 5 minute demonstration, or for interesting booklet, "An Easy on Executive Efficiency," which will show you how to analyze your inter-communication problems, and how to lighten the burden of routine that tends to smother you and your other creative executives.

## SMOTHERING THE RUSSIAN VOLCANO

(Continued from page 103)

that victory over forces of Bolsheviki four times the number of Greek troops engaged. Greek arms covered with new barrels." At the same time the French commander at Nikolayev reported a great victory inflicting losses in the Bolsheviki of "between 6000 and 8000 men." But as soon after these triumphs as possible both Greeks and French took ship and escaped to Odessa, which they have now had to evacuate. It has been, as the British War Minister told Parliament, a terrible disaster for the French. It is an even greater disaster for the Ukrainians, for General Petlura, who has been fighting Germans and Poles on the west, Bolsheviki on the north, Denikin's Cossacks on the east and French and Greeks on the south in the endeavor to establish an independent Ukrainian republic, has at last been driven over the border into Galicia. His appeals to Allies for aid have met with no response and now the Ukraine, the richest part of Russia in corn and oil, has been overrun by the Bolsheviki and many of his troops have gone over to them. In their Ukrainian campaign the Bolsheviki were led by General Obowsky, chief of staff to General Brusilov in the Czar's army.

On the western side of Russia the tide seems to have turned and the Bolsheviki are losing the ground that they gained in the winter. The Poles, with the troops sent

from Paris, will be able to defend their borders. The Poles have taken Pinsk. On the Baltic the Lithuanians, Letts and Estonians, with aid from the Allies, are driving back the Bolsheviki and have forced them to evacuate such cities as Mitau and Dyvinsk.

We have now bounded Russia and come to the point where the Allies are most likely to strike if they decide to undertake decisive operations, namely Petrograd. The Bolsheviki are afraid of this and Trotzky has garrisoned Petrograd with 50,000 of his best troops and has ordered the fleet put into commission as soon as the ice breaks. But the British navy, aided by land forces from Reval on the south and Helsingfors on the north, could doubtless reach Petrograd without difficulty. This is a more promising way to crush out the Russian Socialist Federated Soviet Republic than the attempts that have been made to enter the country from the north, east and south. But none of the powers except France favors military operations by the Allies against Russia, and it would be an unpopular policy in any country. British and Canadian soldiers have threatened mutiny if ordered to Russia and Americans would be likewise reluctant. So efforts are now being made to solve the Russian problem by economic and political rather than military measures.

## THE COURT MARTIAL IN ITS TRUE PERSPECTIVE

(Continued from page 92)

orders in their larger strategy could only in part be revealed or explained, and that the consequences of disobedience, like the consequences of disloyalty, might, at any time, prove to be annihilation, or capture, or defeat, of a unit or of an entire command. They had no idea how long the war would last. They were intent only on building an army that could win—in 1918, if possible; if not then, in 1919, or 1920, or whenever it could be done.

Each of us knows how such considerations would operate in ourselves, if we were engaged in a similar life-and-death struggle having for its object the safety of the entire world. It followed that, in this war, a considerable number of trials were had, and, without any question, not a few of them were based upon seemingly trivial incidents involving little more than the quality of disobedience as against obedience, and neglect of duty as against the performance of duty. The courts martial were scattered over wide areas. They were carried out under the pressure of war, in the shadow of haunting necessity, often, too, no doubt, without adequate provision, if we view the trials in the light of everyday normal considerations, for the full rights of all concerned.

But, from the outset, no one dreamed that any long or severe sentences imposed would escape review and reconsideration. For, automatically, War Department Regulations call for a review of cases. In each case the Judge Advocate General's office is expected to assure and did assure itself that a legal trial was held; that innocent men were not convicted; that all cases involving capital punishment were subject, upon the War Department's action and recommendations, to recommendation by the President, so that no severe sentences imposed during the war at any time passed beyond control. It was realized that cases involving long terms of imprisonment and dishonorable discharge could not well be adjusted with exactness even in Washington under the pressure imposed by war.

Accordingly, as soon as the war was over, a Clemency Board was organized, and this is now reducing all sentences substantially to a peacetime basis, and correcting incidental inequities.

As the war progressed, the number of trials by court martial, it should be noted, steadily decreased in proportion to the number of our armed forces, until the percentage was lower than it was the regular army in normal times. Nevertheless, it must not be presumed that the War Department, and the Judge Advocate General's office were, or are, satisfied with the provisions of law looking to the conduct of the courts martial.

The disciplinary system of the army long has been reclamatory in its purpose. That is, the plan was based upon the thought of restoring men to standing rather than of punishing them. Men were sent to disciplinary barracks and given an opportunity to show by their conduct that they could be trusted, and when they had demonstrated that they could be trusted, they were restored to disciplinary battalions and thence to the army, where they could get honorable restoration, complete their service, and receive their discharge. But, at that, the War Department and the office of the Judge Advocate General have been by no means satisfied with the disciplinary provisions supplied. The proof of that lies in the fact that, after four years of insistence by the department, Congress at last amended the military law in 1915-1916. The new regulations prescribed as a result of that law were not, of course, extensively tested before the Great War, either in application to the regular army or in application to such an army as we were later called upon to organize. When the new code and its regulations were applied to the great army drawn by the Selective Service Act from all parts of the United States, and from all sorts and conditions of men, some defects in the substance of the law, and some in the methods of its administration, were disclosed. One such

defect resulted in the complaint that the Judge Advocate General's office had not the power, as a Supreme Court would have, and should have, to reverse a decision made by a court martial and then to notify the department commander concerned of its act. The Judge Advocate General's office had the power to render its opinion, of course, but the department commander was left, by the law, to take cognizance of that opinion, or not, as he saw fit. Accordingly, in January, 1918, General Crowder who, it should be said, has sought consistently and continuously from the time he took office during the administration of Secretary Stimson, to accomplish thoroughgoing reforms in the military code, drew an amendment which gave the President the power, thru the Secretary of War, to reverse any sentence imposed by a court martial. The bill carrying this amendment was not passed by Congress.

We now have the experience of the war to guide us. We should profit by that experience. And we shall, without question. It is our duty now to reap the lessons of experience, and, as far as we can, to embody those lessons in a statute and in regulations so that, in the future, we can profit by every weakness we have discovered during the war and by every mistake we have made. That is why the officers of the Judge Advocate General's corps, the men who held military commands in the field and at home, a committee of the American Bar Association, and others are being asked to examine, fully, in the atmosphere of peace, with the attention and stress of war preparation relaxed, the military code, its provisions and its administration and to work out the best contributions which can be made to aid the Congress in revising the law wherever revision is necessary.

Washington, D. C.

### Pebbles

Willie—What's a Red, dad?  
Crabshaw—Usually he's a fellow without a red.—*Life*.

There is no cold cream that will keep away wrinkles so successfully as the milk of human kindness.—*Boston Transcript*.

Silas (in a whisper) "Did you git a peep at the underworld at all while you wuz in New York, Ezzy?"

Ezra—"Three times! Subway twice an' ratsellar once."—*Buffalo Express*.

Efficiency is an admirable quality, but it can be overdone, according to Representative M. Clyde Kelly of Pennsylvania. "Last election day," Mr. Kelly explains, "the city editor of my newspaper in Braddock sent his best reporter out to learn if the saloons were open in defiance of the law. Four days later he returned and reported, 'They were.'"—*San Francisco Argonaut*.

No Beer, No Work;  
No Work,  
No Pay;  
No Pay, No Food;  
No Food,  
No Existence—  
Let's All Get Mad  
And  
Starve to Death!

—*New York Evening Sun*.

They were playing poker in a Western town. One of the players was a stranger, and was getting a nice trimming. Finally, the sucker saw one of the players give himself three aces from the bottom of the pack.

The sucker turned to the man beside him and said: "Did you see that?"

"See what?" asked the man.

"Why, that fellow dealt himself three aces from the bottom of the deck," said the sucker.

"Well, what about it?" said the man. "It was his deal, wasn't it?"—*Pit Bits*.

"A miracle of condensed scholarship." N. Y. Sun.

## THE CONCISE Oxford DICTIONARY

Adapted by H. W. FOWLER and F. G. FOWLER from the famous OXFORD DICTIONARY, familiar to all as the world standard on English lexicography

Over 50,000 words are defined in its 1041 pages, each entry forming a guide to pronunciation and spelling as well as to etymology and definition. It renders immediately available the riches of the great Oxford Dictionary at the immediate disposal of all people, at low cost.

Ample space is devoted to the common words of every day usage which are often used incorrectly and treated briefly in other dictionaries.

Uncommon words are treated curtly as fitter for the encyclopaedia.

Words that have fine distinction in meaning have definitions supplemented by illustrative sentences from standard authors.

Foreign words appear in their alphabetical places, not in an appendix, and pronunciations are precisely indicated.

# Is Your Life's Blood Trickling Away—

When you see red blood escaping you know your vitality is escaping with it, and you promptly stop the flow.

Millions of people live on, indifferent to the loss of vital power even more serious than the loss of blood—the **LOSS OF NERVE FORCE.**

If you are tired; depressed; nervous; irritable; sensitive; cannot sleep or digest your food, it means that your **nerve force is depleted** through overwork and nerve strain. Stop the leak at once and build up your nerve force, for your health, brain power, strength and endurance directly depend thereon.

## Wonderful Book on the NERVES

Paul Von Boeckmann, the nerve specialist, has written a remarkable book which teaches you how to save your nerve force and care for your nervous system. It explains how to soothe, nourish and calm the nerves.

**Price of Book 25c**  
is only . . .

Bound handsomely in Cloth 50c  
(Coin or Stamps)

### What Readers Say

"I have gained 12 pounds since reading your book, and I feel so energetic."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of amped nerves."

"Your book has helped my nerves wonderfully. I am sleeping a well, and in the morning I feel so rested."

"The advice given in your book on relaxation and calming of nerves has cleared my brain. Before I was half dizzy all the time."

A promise to lower in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

**PAUL VON BOECKMANN, R. S.**  
Studio 230 110 West 40th St., New York City

### DIVIDENDS

#### WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

##### I. The Very Human Admiral.

1. Write a character sketch of Admiral Sims.
2. Write a paragraph of proof, giving reasons why Admiral Sims may be called truly great.
3. "The history of all allied warfare is full of instances of inefficient cooperation." Develop the topic sentence by giving specific instances.
4. Give a talk in which you emphasize the influence of Admiral Sims as a man and as a leader.
5. "Admiral Sims is noted for being popular with his subordinates." By references to history and to literature prove that popularity with subordinates is, or is not, a common mark of greatness.
6. "His commands, whether ashore or on ship-board, are always happy." Tell a story, drawn from history or from literature, to show how the happiness of subordinates influences the success of a superior.
7. Read the sentence beginning "He says, too, that he expects a reasonable number of errors." Apply the thought of the sentence to the management of a class in school.
8. Compare or contrast Admiral Sims with Henry V, Richard the Lion-Hearted, Admiral Nelson, or any other character named in books read in school.
9. Give a talk in which you extol the work of the United States Navy in the Great War.

##### II. Smothering the Russian Volcano. By Edwin E. Slosson.

1. Write an outline that will present the thought of the article.
2. Show in what ways the article is based upon comparison.
3. What solution of the Russian question does the article emphasize?
4. Point out examples of humor.
5. Point out examples of satire. What is the purpose of satire?
6. Give a talk in which you explain the present relation of the Allies and the people of Russia.
7. Prepare an exposition on "The Present Condition of Russia."
8. Write an original short story that will awaken a feeling of human interest in Russian conditions as they are today.
9. Imagine that some one sent you a copy of a diary kept by a person during the recent terrible days in Petrograd. Reproduce one or two pages of the diary.
10. "We are naturally most concerned with the Archangel expedition." Write a letter that might have been written by a member of the expedition.

##### III. Don't Wear a Crutch. By Chester T. Crowell.

1. Give a patriotic talk in which you show that the work of the American schools has done much to aid in the building of the United States.
2. The article speaks of "the best public schools." Explain orally what characteristics mark "the best public schools."

##### IV. The Court Martial in Its True Perspective. By Secretary Baker.

1. Explain the purpose of sternness in military life.
2. What is the usual effect of leniency?
3. Show by what steps Secretary Baker proves his point.

##### V. It All Depends on the Boss. By Edward Earle Purinton.

1. Show how the writer makes use of the principle of specific instance.
2. Write an outline of the entire article.
3. Give a talk in which you sum up practical suggestions for the treatment of employees.

##### VI. The Story of the Week.

1. Prepare a formal report such as General Smuts might have prepared after his visit to Budapest.
2. You have a friend in Munich. Write a letter that he might have written, explaining the steps of the recent revolution in Munich.
3. Write a dialog that will reveal the recent work of the Peace Congress.
4. Imagine that some one has shown you a letter recently received from President Wilson. Reproduce the letter.
5. Write an outline for an extended article on the Polish Compromise.
6. Write a description of any event in the recent disturbances in Paris. Imitate Dickens's style as seen in "A Tale of Two Cities."

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

##### I. Progress Toward Peace—"Peace, Prompt or Permanent," "We Stand Together," "Stand by the President," Story of the Week.

1. Is there any validity in the "charge that the inclusion of a League of Nations has prevented a 'prompt peace'?"
2. Discuss Mr. Holt's statements that (a) "if we don't get the League now we may not get it at all"; (b) "otherwise we shall have to make a far different kind of a peace."
3. Would the English, French and Italians agree that President Wilson is "the leader of the liberals of all nations"?
4. Why, in the judgment of M. Bourgeois, can nothing separate the French people from the people of America?
5. What are some of the "matters that must still be brought into true perspective before we can achieve the great Covenant of Nations"?
6. Why is the final settlement of the peace terms still a matter of doubt?
7. What position does President Wilson probably hold on the problem of (a) reparation, (b) the Sarre Valley, (c) recognition of the Bolshevik government of Russia? What positions do the other members of "the Council of Four" probably hold?

##### II. Revolutionary Movements in Europe—Story of the Week.

1. Is the revolutionary government in Hungary more or less firmly grounded than it was a week or ten days ago? Why did General Smuts's mission to Budapest fail?
2. What was the cause of the revolution in Bavaria? What effect has the revolution had on the rest of Germany?
3. Indicate on a map the other centers in Germany where revolutionary movements have recently taken place.

##### III. The Bolshevik Movement in Russia—"Smothering the Russian Volcano," "The Campaign in Russia."

1. How do you interpret the first paragraph of Mr. Slosson's article?
2. Indicate, as far as you can, the basis for the statement: "The Soviet Government . . . is being attacked at the present moment by British, French, Japanese," etc.
3. "But we cannot count the Bolsheviks with as much certainty as we could the Germans." Why not?
4. Why, according to Mr. Slosson, is it so difficult to arrive at a true judgment of the strength of the Bolshevik movement in Russia?
5. Summarize the military movements now going on in the old Russian Empire. Can you form any judgment as to the probable ultimate outcome of these movements?

##### IV. Our Foreign Critics—"My Private Opinion of You."

1. Do you regard the criticism of our "extremely severe punishments for the little crimes" as serious? the criticism of "the still existing death penalty"? the criticism of the American attitude toward woman's suffrage? the criticism of "the moral persecution of the Jews"?
2. Is the author's arraignment of our lynchings too strong?
3. Is it true that our citizens "are morally less free than were the deprent subjects of the Czar"?

##### V. The Philippine Islands—"The Future of the Philippines," "For Philippine Independence."

1. Give a brief survey of the history and government of the Philippines down to the present time.
2. What are the grounds for the Filipino statement: "You have truly treated us as no nation ever before has treated another under its sway," etc.?
3. "Of course, if no League of Nations is formed, then it would be unwise to give the Philippines their independence," etc. Do you agree?

##### VI. America's Industrial Situation—Story of the Week.

1. How will the "bumper" wheat crop affect the general economic situation in this country?
2. Why is it important that war contracts be settled speedily?
3. What, in your judgment, will be the result of the Rockefeller appropriation for industrial research?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. Entered at the New York Post Office as second-class matter March 28, 1918, under Act of March 3, 1879. Copyright, 1919, by The Independent. ## REMARKABLE REMARKS

LADY DUFF GORDON America is an awful place.

BERNARD M. BARUCH Peace rests upon contentment.

JACK LONGAKER—The younger generation stops at nothing.

ED. HOWE—The flavor of frying bacon beats orange blossoms.

J. G. HUNEKER—After all, music critics are men and brethren.

JOHN ARMSTRONG CHALONER—Most women's feet are too big.

LLOYD GEORGE—The situation is still full of perils for all countries.

GENERAL LUDENDORFF—I am to blame for the continuance of the war.

ADMIRAL SIMS—I have a tolerably well established reputation for indiscretion.

FOREIGN MINISTER PICHON—The day Russia awakes she will be the ally of Germany.

MARIA MORAVSKY—Nothing spoils friendship so much as an exaggeration of a friend's merits.

JEANNETTE RANKIN We cannot hope to solve problems affecting men and women by using the wisdom of men only.

COL. JOSEPH M. BLAKE, M. D.—There has been little new in the development of surgical knowledge during the war.

BARON MAKINO—We are too proud to accept a place of admitted inferiority in dealing with one or more associate nations.

COUNT ALBERT APPONYI The League of Nations is merely a trust organized by the victors without asking the consent of the others.

HOWARD BRUBAKER Since the adoption by the legislatures of the prohibition amendment, the referendum has a lot of charming new friends.

BISHOP OF HULL—If we are to have a League of Nations the Church must reconsider her attitude of blessing large families and saying "Be fruitful and multiply."

SENATOR REED Shall we make our Government of the people, by the people, for the people a Government partly by the people and partly by kings and emperors?

JOHN D. ROCKEFELLER, JR. Bolshevism is not likely to spread to serious proportions in the United States when the wage-earner knows that capital is treating labor fairly.

PREMIER CLEMENCEAU While clothes are so expensive I am not going to indulge in the luxury of a new overcoat just because a fool shot a few holes in my old overcoat.

MR. MACQUISTEN, M. P. If I had had my way I would have said to the volunteers: "Now you fellows are too good to be sent out, we will take the fellows who did not volunteer."

CARDINAL GIBBONS We have 20,000 Catholic priests in the United States who every day offer the sacrament of the Mass. How can they perform this duty if they cannot obtain wine?

OPERA CONDUCTOR BODANSKY My reaction as a musician to the world situation is the desire to see the feeling and

high humanity of a Wilson fused with the cerebral genius of a Richard Strauss.

UPTON SINCLAIR—I would rather a man shot me with a rifle and let out my blood upon the Arctic snows than that he should blast my reputation and destroy my ability to make my ideals effective in the world.

BILLY SUNDAY—Any club that thinks it has a cinch on the Red Sox this year will find itself in much the same position as the rotten hearted man who tried to sow the seed of sin in the hearts of God-fearing churchgoers.

SIR SIDNEY LOW We may yet live to see President Lenin entertained to luncheon at the Mansion House, and the health of the enlightened ruler of a liberal and friendly republic proposed in felicitous terms by one of our most eloquent and progressive bishops.

WALTER DE LA MARE—How uncomprehendingly, even if compassionately, must an angel from heaven smile on a poor human sitting engrossed in a romance; angled upon his hands, motionless in his chair, spectacles on nose, his two feet close together as the flukes of a merman's tail, only his strange eyes stirring in his time worn face.

## THE NEW PLAYS

*Take It From Me.* A musical farce got up to suit the assumed taste of soldiers and sailors. Like the others, only worse. (Forty-fourth Street Theater.)

*39 East.* A pleasant entertainment that drops in interest and quality from its good first act into serio-comic sentimentality. Well played by Henry Hull and Constance Binney. (Broadhurst Theater.)

The Theater Guild present very successfully *The Bonds of Interest*, a seventeenth century Spanish costume play combining excellent wit and satire with the invariable charm of Columbine and Harlequin. (Garrick Theater.)

Elmer A. Lottes, of Crown Point, Indiana, writes us that he won a gold medal in the Lake County oratorical contest for the speech, "Men of a Hundred Races," by Prof. Arthur M. Wolfson, in The Independent, February 23, 1918, and asks us for another equally good. We believe that recent numbers of The Independent will supply him and other oratorical aspirants with what they want, but we cannot guarantee that they will win gold medals in every case.

### AERO-LAUGHTER

By ROBERT M. McALMON

You've never laughed  
Until the world  
Has been beneath you  
A mosaic map of lines and dots,  
Called roads and mountains  
By minute moving spots  
Named men.  
The jollity  
Of this petty panorama!

When your plane,  
Overcome with mirth,  
Ripples in air pockets  
With uncontrollable lurches,  
Nosing down with a dart  
To frighten the tiny earth;  
Then recovers, fleeting  
To heights beyond eyes' seeing,  
Far from ears' hearing,  
You are all tense  
With the comedy of life  
And the world's being.

At night the stars  
Chortle gleefully with you,  
The moon beams,  
Benignly sharing your joy.  
Thinking: "I laugh!  
The world? rather one world,  
The buffoon of them all!"

Reprinted from Poetry,  
A Magazine of Verse

# Put Your "Creator"

**I**N LESS THAN ONE MINUTE, you can easily and quickly demonstrate to yourself that you are only half as dynamic, vital, well, strong, energetic, and vigorous, and that you are but half as authoritative, forceful, dominant, self-reliant, daring, and courageous, and that you are merely half as progressive, masterful, aroused, powerful, and creative as you may easily become through putting your "creator" to work for you—to create for you.

## Only the "Supreme" Know the Pleasures of Supremacy

Everywhere intelligent and smart men and women, in every walk of life, are secretly and privately advancing themselves in life, happiness, joy, power, health, and personality, through consciously employing the principles of evolution, by compelling their "creators" to work for them, strive for them, plan for them, evolutionize for them, and create for them, and to give them better and more vital and energetic bodies, and more intense and conscious personalities.

## Only the "Masterful" Know the Joys and Pleasures of Life

Whether you are a doctor, farmer, lawyer, laborer, banker or soldier, business man or sailor, philosopher or scientist, greater success is waiting for you, through compelling your internal

"creator" to build, construct and create for you.

## Only the "Vital" Know the Pleasures and Joys of Real Success

Mentally and physically, you are the result of blind evolution. You can amazingly advance yourself beyond your blind evolution through compelling your internal "creator" to create for you a better mind and personality, better brain, a better nervous system, a better digestive system, a better heart, better arteries, better lungs, better liver, better blood, better protoplasm, better every cell, tissue, gland, organ, and every part of your body, as well as a higher and more wide-awake and more able mind.

## Only the "Mighty" Know the Pleasures of the Mighty

Your "creator" is ready to furnish you with higher power of mind and body, if you only make the demand in the way your internal "creator" understands and recognizes. Conscious Evolution uses the means and avenue through which the internal "creator" is reached positively, successfully, easily, and conveniently, and without loss of time, compelling the internal "creator" to create for you just what you really desire, and really need, and really want. Your "creator" gives you the mind, the ideas, and the power to obtain what you want, if you activate your "creator" through the proper medium.

## Only the "Evolutionarily Perfect" Know the Joys of the Conqueror

Why deny yourself the super-joys, the super-pleasures and the super-happiness? Why deny yourself the best there is in existence? Why deny yourself these advantages when they are so easily available, and when it is so absolutely certain that you can attain them? Why, in other words, live the

## Conscious Evolution

Conscious Evolution must not be confused with Darwinian evolution, nor should Conscious Evolution be confused with Hindoo philosophies, auto-suggestion, self-hypnosis, gymnastics, or mere physiology, anatomy, histology, theosophy, morphology, medicine, pathology, exercise, New Thought, Christian Science, calisthenics, embryology or psychology.

Conscious Evolution is not an occult science, nor a metaphysical science, nor a divine science, nor a spiritual science, nor a material science, nor is Conscious Evolution a symbolic science, nor a hoping, wishing, longing and dreaming philosophy.

Conscious Evolution must not be confused with any of the conceptually symbolic systems of the secondary and tertiary type, and Conscious Evolution cannot be comprehended in any of the present day concepts in science and philosophy, including the science of biology.

Conscious Evolution must not be confused with any present day philosophies or sciences of a material or mental character.

Conscious Evolution cannot be understood by physicians, psychologists, physical culturists, philosophers, chemists, cosmologists or biologists of the present day.

Conscious Evolution is a new and original science, an exact science, a demonstrable science—a science of the evolution of and through Conscious Energy—a science of the Ultimate.

Conscious Evolution is the beginning of a new evolutionary era for the human race.

## DAILY RESULTS

"I am my rise from the position of a country insurance agent to national head of one of the largest insurance companies of the world entirely to the power of personality Conscious Evolution has given me."

"My weak will and personality for years made it possible for my business partners to rob me of my proper share of the profits. Conscious Evolution gave me courage, self-reliance and power of personality, and I made my partners pay me \$160,000 out of which they had bulldozed me during my feeble and powerless days."

"I became aware of the beneficial power of Conscious Evolution at the end of the first ten seconds."

"What more can I say except to express my appreciation of your method and sincere thanks for your interest and co-operation? What more can one want for so little? What more does one get in this world?"

"Conscious Evolution has taken away that tired, lazy feeling and replaced it with a feeling of energy—a feeling to do something and to take an interest in doing it. Truly, conscious Evolution is a wonderful discovery. My experience with it enables me to say that it is all that is claimed for it and more."

"Conscious Evolution made me feel twenty-five years younger. I can run up and down stairs, and walk six or seven miles at any time. I rest and digest as I did in my youth. I have no worry and I feel happy. My arms and legs are getting strong, and I thank your System for it all. I have got along so well, I constantly think of going into the shipyard, to see what I can do. I want to stir around at something even though I am eighty-three years of age. Conscious Evolution is bringing me back to youth. Conscious Evolution is bringing me back to youth. And I thank you, Mr. Swoboda."

"I am happy to say that I received your instructions, and that in spite of traveling a good deal my health is remarkable at ninety years of age."

"I am certain I am gaining in every way, for I feel as full of 'fight' and energy as a wild cat."

"Problems that formerly worried me are now as easy as to seem almost unreal, since I gained power of personality through Conscious Evolution."

"I would not take fifty thousand dollars for the power which in six weeks Conscious Evolution has given me."

## Swoboda 26 Years Ago

From a sickly youth Swoboda made of himself a magnificent physical specimen of the human race. This was just the beginning—his greater evolution was yet to come.

# To Work For You

inferior life in preference to the superior—the genuinely successful life? Why cheat yourself of the advantages of life? Why deny yourself this super-energy, this super-power, and this super-activity of personality and mind, which is made easily and absolutely possible through progressive evolution—self-evolution—scientific evolution—personal evolution.

## How to Gain What You Want

The way for you to gain what you want is by increasing your power of mind and body evolutionarily, so as to compel conditions to yield to your superior and irresistible energies. Conscious Evolution is the easy and sure means of making yourself supreme.

## Why Be Satisfied with Inferior Life?

Why be satisfied or content with inferior vitality, inferior health, inferior energy, inferior digestion, inferior heart power, inferior lung power, inferior nervous system, inferior brain power, inferior memorizing power, inferior reasoning power, inferior sensing power, inferior scheming power, inferior business power, inferior conscious power, and inferior personal power? Why not attain the vital power of supremacy?

Swoboda To-day

## A Remarkable Personality

Swoboda, himself, is perhaps the most perfect example of what Conscious Evolution can accomplish. At Swoboda's early life years, he grew younger in enthusiasm, younger in vitality, younger in health, he is becoming stronger, more energetic, more confident, more distinct and more alive by capitalizing his creative powers through Conscious Evolution. What Swoboda is accomplishing for himself, you too can accomplish—every individual can accomplish, for every individual is governed by the same laws and principles, and every individual has it within himself to make use of these laws and principles. Swoboda's mind and body are in such an active state that he has no time for anything but his work. His personality dominates everything with which it comes in contact. Yet Swoboda is real—there is absolutely nothing mysterious about him. He knows no great failure—he is a tireless worker. He laughs in making sick people well and weak people strong. He knows no more because he feels he is of benefit to humanity—making a better, more vital, more potent race of men and women.

### MORE DAILY RESULTS

"A year ago I was down and out financially and physically. I was a wreck. Conscious Evolution gave me power of mind and health. I am to-day better than ever and I am more prosperous than ever. Naturally I am a believer in the Swoboda idea."

"Your system makes me feel like a different person. Every one whom I have ever met who has tried it out, has the same thing to say about it. Was talking to a man to-day whose wife is a Swoboda enthusiast."

"Your system is direct, simple, scientific, effective, and makes one feel so invigorated. As an athlete and a physician, I endorse Conscious Evolution unreservedly. It is, and more, what is claimed for it."

"Conscious Evolution has given me surprising results. I expected good results, but I am surprised."

"Conscious Evolution sent a message of energy, health and power through me in twenty seconds, which has been increased from day to day."

"I feel very much better. You did me more good in three weeks than four doctors did in sixteen months."

"Your course has been of great benefit to me. I am able to do a great deal more work with less fatigue. My pleasures are also increased: all work seems a pleasure now."

"When your first letter of instructions reached me I was tired and blue. I read it and saw the 'light.' My blues disappeared. I used my energies for about ten seconds, and my tiredness left me. Conscious Evolution is increasing my every power of mind and body as I wish and as you promise."

"I indeed realize what physiological gladness means. My sensation of physical enjoyment is wonderful. It seems too good to be true. It is something as I felt when I took my first trip to the

Bermudas, where nature has combined the blending of dainty coloring so exquisite that nothing short of fairy land can describe it. This is how Conscious Evolution causes me to feel."

"I can honestly say that the benefits I have received from Conscious Evolution cannot be measured by any payment of money, and I can say unhesitatingly that your system far exceeded my fondest hopes."

"I could see the tremendous reality and possibilities of Conscious Evolution in less than half a minute's direction of my energies into creative channels."

"Conscious Evolution has changed me from an invalid into a tireless human machine."

"I would not consider trading the benefits I have received from Conscious Evolution for gold."

"As a student of physiology and histology, I at once recognized the feasibility of Conscious Evolution."

"Ten seconds from the time I started Conscious Evolution, I felt myself more alive and energetic."

"I have used Conscious Evolution for a few weeks, and I find myself marvellously improved in both body and mind. Conscious Evolution is wonderful, and the world will be brighter when men and women everywhere grasp it."

"My doctor has been quite interested in my results. To-day I went to his office for a personal examination. It is my practice to have my physician examine me once a year. The doctor said he would not have thought me susceptible of so much development and improvement and reiterated, 'It is wonderful. Does not seem possible, etc.' He was highly impressed and you could not expect him to be more favorably so."

## These Rare And Amazing Books Are For You

Swoboda has published for distribution two remarkable books which explain his system of Conscious Evolution and what it has already done. Write for these books—not because Conscious Evolution has meant so much to 262,000 other men and women, not because there is scarcely a prominent family in the country that hasn't at least one member a pupil of Swoboda, but because they contain valuable ideas for you. Conscious Evolution is being personally used by many of the most prominent physicians, and such men as Woodrow Wilson, Charles E. Hughes, the Rockefellers, the Vanderbilts, the Goulds, the Huntingtons, the Cudahys, the Armours, the Swifts, and McAdams for advancing themselves in energy, health, vitality and power of personality.

Write for these books because they mean so much to YOU in multiplied living power, earning power and personal power. They are filled from cover to cover with the vital facts about yourself and how you can acquire the degree of power in body and mind that you so consciously or unconsciously desire. They explain the dangers of excessive deep breathing, excessive exercise, and excessive muscular development, also the fallacy of conscious control of physiological processes.

CONSCIOUS EVOLUTION and THE SCIENCE OF LIFE show how to double or even treble your power of mind and body; not by tedious, prolonged study, but by a process of energization which raises the very level of your life and mental power.

CONSCIOUS EVOLUTION and THE SCIENCE OF LIFE supply the key to dominant personal power, dominant business power, dominant success power, dominant mental power and dominant will power. They show how to change your aimless and fruitless life and attitudes into ambition, inspiration, enthusiasm and the higher success.

These books show how to amazingly increase your power of will and personality, as well as your power of body for every action, for every purpose and process.

Conscious Evolution is a new science, and no one can afford not to know at least the simple facts about it. These facts show how Conscious Evolution overcomes weak will, poor health, feebleness of mind and body.

They show how to overcome the inferior, pleasureless, feeble and unsatisfactory life, by giving the means to the successful, superior and abundant life. Conscious Evolution also shows how to arrest the aging of the body, and how to remain young, energetic, vigorous and active all of the days of life.

These books are absolutely free and there is no obligation now or after. These books are yours to keep, that you may attain a higher understanding of yourself and of evolution and the means to a higher existence.

Even if you gain but one idea or the realization of the one principle of life through CONSCIOUS EVOLUTION and THE SCIENCE OF LIFE, these books will be of eternal advantage to you.

Just write your name and address on the corner of this page, tear it out and mail it to Swoboda, or draw a ring around your name on your letterhead, or merely send a postal, giving your name and address. Do it today! This is your opportunity! Now is your turn! This is your day! This is your hour! Write NOW.

Conscious Evolution is as Effective for Women as for Men

## It picks your pocket while you look on!

The last pre-war figures show America's fire loss at the astounding figure of \$2.10 per person per year. This is what you and everyone else in America paid to fire in 1913 — four times as much as the Frenchman paid, seven times more than the Englishman and far more than in any other country investigated.

If this tax you pay to fire earned you immunity from it, perhaps the cost would be justified.

But fire grants no such stay—its threat is omni-present. Conflagrations still rage—particularly in America where its toll is greatest.

We have built our towns in a hurry and in the haste have overlooked the fact that "fireproofed" to have proper emphasis should be read "firep-roofed." For the easy path for fire through a community is across that community's roofs. Not always are roofs the kindling point but invariably they mark its course —unless they are built to repel fire.

In Johns-Manville Asbestos Roofing lies the answer to both community and personal fire safety. For in this fire-safe roofing, adaptable alike to factory or home, warehouse or public building, is nature's rock-like fibre, Asbestos—that repels fire, limits its destruction and protects your property.

It is of first and vital importance that you protect your own property against fire loss because this self-protection when taken collectively means the fire safety of America.

There is a Johns-Manville Asbestos Roofing on this list that on your building will protect you from fire's scourge.

## WHAT'S THE MONEY FOR?

**T**HE Fifth Liberty Loan will be put on the market next week. It is the Victory Loan. It is for \$4,500,000,000. It is put out in the form of three year notes at attractive rates of interest. The notes are a good investment. But it is not unnatural for many to wonder why we need another loan at all. The war is over. Our boys are coming home. Why do we need all this money now? The answer is simple.

When the armistice was signed and the fighting stopped, there were 3,764,677 men in the United States army. Demobilization began at once. It will be completed, except for the soldiers to be kept in the regular army, if the present rate of discharge continues, by next September. It costs the Government forty-five cents a day to feed an American soldier. The total bill for feeding the army from the signing of the armistice to the end of mobilization will be \$287,898,653.25.

It must be paid from the Victory Liberty Loan.

The average pay of the men in the army, from General Pershing down to the buck private, is \$40 a month. The aggregate payroll of the gradually decreasing army during the ten months of demobilization will be \$827,970,800.

It must be met by the Victory Liberty Loan.

When the fighting stopped there were 2,200,000 men over-

seas. It will cost \$200 to bring each man home. The total bill for bringing the A. E. F. back will be \$440,000,000.

It must be paid from the Victory Liberty Loan.

It will cost \$20,273,750 to send the men home who never went over to France.

It must come out of the Victory Liberty Loan.

There are other expenses under the general head of maintenance which will add up, for the army of nearly four million, during the ten months of demobilization, to the tidy sum of \$818,173,797.

They must be paid from the Victory Liberty Loan.

Besides all this, there are the expenses of the navy, of the civil government, of the care of the sick and wounded, as well as the payments on account of contracts entered into before the cessation of hostilities.

They must come out of the Victory Liberty Loan.

The figures here given are not the whole story. But they should be enough—since they show definitely that more than half of the four and a half billion dollars must be spent for the army alone—to convince the inquiring mind that the need for the full amount really exists.

It is a plain question of paying our bills. Shall we pay up or default? The American answer cannot be for a moment in doubt.

## TWO PARABLES

**I**N the April issue of the *North American Review* the sometimes sapient and always jocund Colonel George Harvey makes his regular monthly attack on his pristine protégé—now the President of the United States. In this installment he thinly camouflages his barrage under the guise of an attack upon the League of Nations. To the proponents of the League he presents the following allegory as a "clincher":

You have built up a great, successful bank. Some other like institutions not so very near are attacked successfully by burglars. You go to their assistance, not in a dream or because you have visions of an approaching millennium, but because you fear that if those burglars are not stopped they may rob you, too. You arrive in the nick of time to help the others beat off the burglars.

When it is all over you find that you have incurred heavy liabilities, but that your capital and surplus are still intact, your deposits show signs of increasing and your bank is the soundest, richest and most promising in the land. Meanwhile, those other banks have suffered sadly, two or three are on the verge of bankruptcy. You meet to consider the situation. You have done your full part, but you are willing to do more. You will extend loans, you will make fresh loans, you will reduce interest, you will do anything in reason that can be asked. Then somebody makes a proposal. It is that all the banks combine and pool assets and liabilities, and there will be nine directors of whom you shall be one and president. They are to have the control, but you are to have the honor. Think of that!

And who do you suppose makes this remarkable proposition?

Why, you, the head of the great solvent bank, and the others hem and haw about it for a while and after persuading you to concede this, that and the other to bind the bargain, finally consent. Then you go back to your stockholders and report what you have done in the name of humanity, for the common good, and demand ratification of your superb performance. Suppose all that should happen! Where do you think you would get off? Well, that is the precise proposition which now confronts the stockholders of the United States. It is a homely illustration, but a true one. I defy anybody to find a flaw in the analogy.

Far be it from non-immortals such as we, to attempt to find a flaw in the flawless. But with Editor George's permission and following good old American precedent we venture to answer his allegory with another:

You have built up a great successful bank despite the fact that there is no federal banking law in your country and no private association of banks to look after common interests. Some other like institutions not so near are attacked successfully by a powerful combination of wild cat banks who propose by fair means or foul to turn each former rival into its branch bank, thus gaining the whole financial control of the country. It is the most infamous crime ever attempted by high finance.

You go to the assistance of the threatened banks with all your resources. You arrive in the nick of time to save the day. The wild cats have staked their all and have spent

so much money in buying up the national Government and the state legislatures, in rigging the stock markets and in pressing their propaganda thru their subsidized periodicals that they have now to accept any terms you may choose to offer.

When it is all over you find you have incurred heavy liabilities, but that your capital and surplus are still intact, your deposits show signs of increasing and your bank is the richest and most promising in the land. Meanwhile the other banks have suffered sadly—two or three are also on the verge of bankruptcy.

You meet to consider the situation. You have done your full part and are willing to do more. Not only will you extend loans, make fresh loans, reduce interest, in fact do anything in reason that can be asked, but you intend to prevent at all personal costs such another catastrophe from ever happening again.

Then you make a proposal.

You suggest that all honest banks stand together and ask Congress to enact a national banking act so as to abolish wild cat banks with their slush funds, bribery of legislatures, subsidizing of newspapers, monopolizing of credits, etc., and you propose that you form an association of banks for this purpose, especially as many people are raising the question of whether it would not be wise to abolish banks and bankers altogether, and you don't want the whole financial structure to tumble down in ruins and the country to go to the dogs. Of course your proposed association has no power to pool assets and liabilities nor in any way to compel a bank to do more than pay its pro rata share of the expenses of the association, to agree to open its books for all proper inspection and to cut out all lobbyists, whether political or financial, who might injure the integrity of other banks. The Executive Committee of Nine of the Association has naturally no supervision whatsoever over the internal affairs of your bank, or any other bank, and as its action has to be by unanimous vote there is not the slightest

danger of your bank being compelled to take any action against its will.

Your association also proposes to aid the Federal Government to root out the bad banks under the new banking law, to raise as far as possible the ethical standards of the banking profession and to work together as far and as fast as ways and means can be agreed upon unanimously for the principles of sound banking. This is accepted by all your confreres in good faith, the association is formed and you go back to your directors to have it ratified. Some of them, however, do not like your progressive views and certain of their friends in high editorial offices say you are crazy, but the sentiment of the stockholders is with you, and the directors at the next meeting, it is expected, will ratify it by more than a two-thirds majority, tho certain directors say they are going to vote against you on the ground that there were no banking associations in the days of Washington and Jefferson and the editor of the *North Antarctic Review* denounces you because Lincoln said "Nothing valuable can be lost by taking time" and you are going too fast for him.

We defy Colonel Harvey to find a flaw in this analogy.

## THE MONROE DOCTRINE

BY writing the Monroe Doctrine last week into the re-drafted Covenant, President Wilson has won a really momentous triumph for American ideals. Thus, after ninety-six years, the famous doctrine is recognized by the world as sound international law.

But what a shame that it had to come about in just this way. The Paris Covenant not only amply guarded, but actually glorified the Monroe Doctrine. And yet the United States asks for an exemption to be made in the general terms of the Covenant in order to get in her special policy by name. It is a bad precedent.

# WE MUST HELP ITALY

BY HAROLD HOWLAND

A disquieting report comes to hand from Washington. It is expressed thus: "Italy is regarded in well informed quarters here as face to face with the most desperate crisis since the Austro-German hordes broke thru the Isonzo line. The food and coal situations have developed great popular unrest, which, if not dealt with wisely and promptly, Italian officials here say, may lead to strikes and a revolt that may tax the ability of the authorities to deal with them."

The report has every earmark of truth. To one who has spent months in Italy during the past fall and winter its probability comes with compelling force. Italy is ripe for trouble, for Italy is in want. There is no more powerful incentive to revolt and disorder than hunger; and Italy is in danger of going hungry.

The first and most pressing need is coal. For Italy has not a single coal mine within her borders. Every pound of coal that moves the trains on Italian railroads and turns the wheels of Italian factories must come from beyond Italy's borders. Italy has, it is true, large deposits of lignite, a combustible substance that is dug out in large slabs looking like rotten wood and producing not much more heat. But lignite will not run railroads nor fire factory boilers to any degree of efficiency, if at all. Italy must have coal, and she must get it from overseas.

Last winter wood for burning in the stoves that constitutes the sole resource for the heating of nine-tenths of the houses and buildings of Italy, which have any heat at all, cost

over \$25 a ton. Coal was not to be had for heating purposes, except thru military channels. The Y. M. C. A. was enabled, thru the War Department, to obtain coal for heating the hotel which it operated at its headquarters in Bologna; but it cost \$100 a ton. For most of the winter the railroad trains were unheated; as spring came on they began to be heated—and decidedly mildly at that—only after sundown.

Italy must have coal. There is grave danger that, if her need is not supplied, it will not be possible to move the food supplies, which come from abroad, from the ports where they are landed to the inland cities and the country districts. The need for coal applies not only to the railroads but to the manufacturing industries. Lacking coal, factories must shut down. Closed factories mean unemployment. Unemployment means hunger, suffering, discontent; it makes fertile ground for the sowing of such dragons' teeth as Bolshevism spreads broadcast.

The critical situation in Italy is set forth by the Rome correspondent of the *London Times*, who wrote several weeks ago:

Italy's pre-war requirements of coal for all purposes was some ten or eleven million tons yearly, a modest figure, about one-quarter of the amount burned in England for domestic purposes alone. During the war the quantity received has been far below what was recognized as the necessary minimum, the figures being for 1916, 8,000,000 tons; for 1917, 5,037,000 tons; and last year, 6,400,000 tons. The quantity assigned to Italy by the Inter Allied Commission after the armistice was 800,000 tons for the first two months and subsequently 1,000,000 tons monthly. The actual

amounts received have been as follows: November, 647,000 tons; December, 472,000 tons; January, 439,000 tons; February, 502,000 tons. The forecast for this month is 375,000 tons. In view of the fact that the state railways alone require 240,000 tons monthly, it is clear that Italy has had great difficulty in getting on with "reconstruction."

Last year, in order to save tonnage, it was agreed that France should supply Italy with a proportion of her coal requirements, receiving in return a corresponding quantity from England. England was to supply 360,000 tons per month, and France 240,000. The amount received fell short of the minimum fixed by 800,000 tons. But England actually exceeded her quota by 80,000 tons, France failing to reach the figure agreed on by 880,000 tons. The French coal was not suited to Italian requirements, and it was arranged that from January this year England should take over the duty of supplying Italy. We are now unable to do so. We cannot guarantee more than 250,000 tons per month.

The future is very obscure. It is acknowledged that England has done, and is doing, all she can to help Italy. The last bulletin from Cardiff states, however, that exportation has completely ceased, the production of the mines being no longer sufficient to meet the most urgent requirements of the British market. There is talk of a supply of American coal, and it may be that the minimum can be assured this way, but it is pointed out that the price will be higher and tonnage insufficient.

Italy needs more than coal; she needs food. It is difficult for Americans, in these days of plenty if not of luxurious abundance, to realize what are the conditions which the Italian housekeeper has to meet. It is doubtless true that the prices of foodstuffs are still high over here. But it is one thing to have food expensive; it is quite another to have it scarce. The American people have done splendidly in their war campaign of voluntary rationing and self denial. But there is a difference between voluntary rationing and involuntary.

During eight months in Italy, ending on the fourth of March, I experienced the involuntary kind. It was a surprise, to the palate if not to the mind, to find on reaching home that the bread was beautifully white and of the finest texture. When I left Italy we were still eating war bread. It was good, but it was not white nor fine. Butter and cream were non-existent, except in infinitesimal quantities on high days and holidays, by special dispensation or thru the Machiavellian diplomacy of a skilful housekeeper. Cheese was a luxury, in a country where in the piping times of peace it has always been a staple of almost as universal use as bread. There were food cards for meat, bread, milk, oil, fats, sugar, rice and *pasta* (the generic term for spaghetti, macaroni and the allied foods). The cards entitled the holder to buy certain definite portions of each foodstuff per week, *if there was any to be had*. But the card afforded no guarantee that the householder, when he went to market, would find even the small quantity of the commodity he was permitted to buy. It was precisely because the stocks of food were insufficient that the cards were necessary.

One thing that has impressed me particularly on my return to America is the abundance of beef to be found in the markets. In Florence our meat card permitted us to buy beef once in two weeks. Beef day came on Sunday, and it was an interesting spectacle to see the long lines of housekeepers, servants, mothers of families and other marketers stretching down the street from every market door in the early morning. The lines—they told me—began to form as early as five in the morning. I always intended to verify the statement with my own eyes, but I never did. In those days beef was an actual luxury, and sometimes, when one ate it at a restaurant, one suspected that it was horse.

It is true that, in our *pensione*, we lived well. But we had nothing like the variety to which we are accustomed at home, for the foods were simply not to be had. Sweet desserts, which the typical American looks upon as an inalienable right probably guaranteed in Magna Charta or the Constitution or something, were replaced by fruits—of the season, for there is no cold storage in Italy—nuts, and the infrequent fragment of cheese. But our experience was no criterion of what the Italian of modest means was undergoing. We were able to pay the high prices that were

universal—one dollar and a quarter a pound, for example, for our Thanksgiving turkey. But the poor among the Italians were in harder case.

In a little town outside of Rome the American Red Cross had established an asylum for the destitute children of soldiers who had gone to the war. One day the two American women in charge of the *Asilo* made a trip to another village several miles away to explain the purposes of the *Asilo* to the inhabitants. Shortly after their return they were informed that a peasant woman from the village wanted to see them. They asked her errand. She had followed them down, she said, to ask if she might have the water from the *Asilo*. "What water?" was the natural question of the bewildered Americans. "The dish-water," she replied simply. "What on earth do you want the dish-water for?" they demanded. "For my pig," she explained. "It's impossible to get grease or anything to fatten him with; and the grease in your dish-water would be a great help." Just think of it, you American housewives, and blush for the condition of your own garbage cans. An Italian woman willing to come three miles every day to get the dish-water from an institution with thirty children in it in order that she might put a little fat on her pig's bones from the grease the water contained! She had not dared to speak about the matter before the Americans left the village for fear her neighbors would hear her great idea and want to share it.

This is not an exceptional case; it is typical. Italy's need is poignant. The Italian people have made sacrifices in the Great War that have cut to the bone. They have made them cheerfully and bravely. They deserve every bit of assistance that we are able to give. They deserve it because of their achievements on the field of battle, not only before we entered the war but after. A real break in the southern front would have made the task of the Allies on the western front immeasurably harder. Italy held that front for four and a half years by the force of her own strength and her own spirit—with the assistance after Caporetto of a few English and French divisions whose contribution in the aggregate was rather moral than military. The release of the Austrian forces for use elsewhere would have thrown a burden on England and France—and America, after we came in—that would have taken much longer to dislodge. Italy not only kept the Austrian armies occupied, but ultimately routed them. We owe her a debt of gratitude that it is a high privilege to repay.

We should help Italy, as we have been helping her since we entered the war, because we cannot look with equanimity on the growth of Bolshevik or revolutionary socialistic tendencies in any of the still sane countries of Europe. Hunger and want throw peoples off their balance and tangle their feet in the snares of the false prophets of political and economic revolt. We ought to help Italy on behalf of civilization and humanity.

We should help Italy, so long as Italy needs our help, because there never was a finer opportunity to cement a real and lasting friendship between the two peoples. Everywhere in Italy during the past months you could find only the warmest appreciation of what the United States had done in the war and especially of the contribution which America had made to the solution of Italy's pressing problems of suffering, hunger and want. The American people are held in higher esteem in these latter days than the people of any other nation anywhere. The good will of the Italian people is a treasure that we should not lightly sacrifice. The two nations are by way of being bound close by ties of mutual sympathy and understanding and coöperative achievement—unless America is so careless as to ignore the opportunity. We cannot afford to do so, for the sake of our influence in the world, to say nothing of more practical considerations of commercial and trade advantage. Italy will repay our friendship a thousandfold if it is sincere and understanding and wholehearted.

# THE STORY OF THE WEEK

## The Revised League Covenant

The Covenant of the League of Nations, revised by the special committee appointed by President Wilson, was laid before the League Commission of the Peace Congress on April 10, and two days later an official summary of it was issued. The instrument has been condensed to eight sections. It provides for a league of belligerent and neutral states named in an accompanying document, and for the admission of others by a two-thirds vote of existing members. States which have kept their obligations may withdraw on two years' notice. There will be a council of nine, comprising one member from each of the five great powers and four representing all others; and an assembly, of not more than three members from each state, each state having one vote in each body. A decision of either body, save in certain specified cases, must be by unanimous vote.

The states are to agree to reduce their armaments, and not to increase them without the assent of the council; to exchange full information of their military strength and programs; to respect each other's integrity and to

London Opinion  
MUZZLED

defend it against alien aggression; to submit all international disputes to arbitration or to inquiry by the council, which will express no opinion, however, on any domestic matter; not to go to war within three months after an award, and even then not to go to war with a state which accepts the award; to regard as an enemy any state which breaks the Covenant and to facilitate operations against it; and

not to consider any treaty as binding which has not been communicated to the League.

The validity of the Monroe Doctrine is to remain unimpaired; the former German colonies and Turkish territories are to be administered by mandates of the League; and the members of the League are to accept certain responsibilities concerning labor, treatment of natives, white slave traffic, opium traffic, arms traffic, transit and trade conditions, public health, and Red Cross societies. On the initiative of President Wilson, Geneva, Switzerland—a city much identified with arbitration, Red Cross, and other beneficent international activities—was chosen as the headquarters of the League.

After being acted upon by the Plenary Council of the Peace Congress, the Covenant will be made a part of the Treaty of Peace.

## Progress on the Peace Treaty

Early in the week the question of reparation, especially to the satisfaction of France, seemed to be the crux of the peace negotiations. Following similar action by the Cham-

London World

## THE FREEDOM OF SMALL NATIONS

Poland: "Help! Help! Murder! They are robbing me."  
Emissary of Peace Conference: "My good woman. Do please go somewhere else. How can President Wilson perfect his plan for Universal Brotherhood and no more wars if you interrupt his thoughts by shrieking on the doorstep."

Cheney in London Passing Show

## A CHANCE FOR THE PHILANTHROPIST

The Patron: "He has smashed up nearly everything in the place, and stolen the spoons, and now he says he won't pay my bill."  
The Guest in the Foreground: "I think justice would be done if the wretched man paid for his dinner."  
The Patron: "Eh bien! Perhaps Monsieur is willing to pay the balance?" [No response.]

ber of Deputies, the French Senate on April 10 adopted a resolution expressing the hope "that full restitution will be exacted from the enemy, together with reparation for damage caused to persons and property, and that the full cost of the war will be imposed on those responsible for the greatest crime in history." This demand was partially met that day by the decision of the Council of Four that the Sarre valley with its valuable mines should be administered by France for fifteen years, and then finally disposed of by plebiscite. On April 14 further progress was made in the decision that Germany should be required to pay an indemnity of \$25,000,000,000, of which \$5,000,000,000 must be paid by 1921 without interest, \$10,000,000,000 by 1951 with interest, and \$10,000,000,000 thereafter when a commission shall require it. Additional indemnity may also be required when determined by a commission on which Germany will be represented. In brief, the principle is established that Germany must pay the costs and the losses of the war to the full limit of her ability as determined by an international commission.

Of the \$25,000,000,000 specified to be paid, it is understood that France will receive about 55 per cent, Great Britain between 20 and 30 per cent, Belgium from 10 to 15 per cent, and the United States 2 or 3 per cent. Serbia and Rumania will probably receive some portions, but will be considered to have received most of their indemnity in acquisition of territory.

The immensity of the indemnity thus required of Germany will be appreciated when it is recalled that the largest ever exacted from any nation heretofore, that taken from France by Germany in 1871, was only \$1,000,000,000; that paid by China to the powers for the Boxer War \$335,000,000; that paid by China to Japan in 1894, \$150,000,000; that paid by Turkey to Russia (which was not all paid) in 1878, \$160,000,000; that paid by Austria to Prussia in 1866, \$15,000,000; and Russia paid to Japan at the end of their great war, nothing at all.

The terms of reparation thus prescribed were declared by M. Clemenceau to be satisfactory to France. It was reported that the German Government, however, "would resolutely reject any proposal to tear the Sarre valley from the empire."

In addition to these terms to be exacted from Germany, it was agreed by the Commission on reparation that Germany's former allies, Austria, Hungary, Turkey and Bulgaria, should be required to acknowledge responsibility for damages to civilian life and property similar to that imposed upon Germany, and a committee was appointed to study the extent to which they might be compelled to make indemnity. Their ability to do so is of course greatly impaired by the loss of territory and resources which they have suffered in the creation of new states.

### The President's Report of Progress

In view of the progress thus made, President Wilson, in behalf of the Council of Four, issued on April 14 this statement:

It is hoped that the questions most directly affecting Italy, especially the Adriatic question, can now be brought to a speedy agreement. The Adriatic question will be given for the time precedence over other questions and pressed by continual study to its final stage.

The settlements that belong especially to the treaty with Germany will be got out of the way at the same time that all other settlements are being brought to a complete formulation. It is realized that, though this process must be followed, all the questions of the present great settlement are parts of a single whole.

### The Peace Program

It is assumed at Paris that the completed draft of the Peace Treaty will be handed to the German envoys at Versailles on April 25. The Germans, their entire party numbering about 175, will cross the Rhine at Cologne and proceed across France by special train under French guard and escort, probably traversing the region most devastated by their own armies during the war. They will not be permitted to enter Paris, but will pass by that city to Versailles, where they will be lodged in a hotel specially set apart for them. It is intended that the crowning act of their acceptance of the treaty shall occur in the famous Hall of Mirrors in which the German Empire was proclaimed, with the King of Prussia as Emperor, in 1871.

The German envoys have already received detailed instructions from their home government. If they have plenary powers, it is supposed that they will sign the treaty promptly, before leaving Versailles. If not, they will take it to the National Assembly at Weimar for its consideration, in which case there may be a delay of a fortnight. But it is generally believed that, with whatever reluctance, the German Government will eventually accept and sign the treaty. A few days after the arrival of the Germans at Versailles separate treaties of peace will be presented to the governments of Austria, Bulgaria and Turkey. After all have been signed, a period of three or four weeks will be granted for ratification of them by the Allied governments, and when two-thirds of these governments have ratified them, they will become effective and peace will be formally proclaimed.

### Lloyd George on the Defensive

Mr. Lloyd George, the British Prime Minister, returned to London on April 16 and replied in the House of Commons to the various criticisms and attacks which had been made upon his course at the Peace Conference. He declared that the situation was "still full of perils for all countries," and pleaded that "those who were trying to do their best should be left alone." The Allies at Paris had reached a complete understanding on the fundamental principles of peace, and hoped to present them, completely formulated, to Germany for her ac-

## GENEVA—THE CAPITAL OF THE LEAGUE OF NATIONS

The peace conference's choice of Geneva as the future meeting place of the League of Nations was influenced chiefly, it is said, by President Wilson's speech in favor of the Swiss city as opposed to Brussels. France was the only one of the great powers to vote for Brussels. Great Britain, the United States, Japan and Italy, with two votes each, and Serbia, Greece, Brazil and Poland, each with one vote, chose Geneva by a total of twelve votes. France, with two votes, and China, Czecho-Slovakia, Portugal and Belgium made up the minority of six votes for Brussels. The Belgian delegates were particularly disappointed that the choice of Geneva disregarded Belgium's sentimental claims—"Had Geneva withstood the terrific bombardment to which Antwerp was subjected, had the Swiss army battled for four years along the Rhine as the Belgians fought and died along the Yser, then we should understand why Geneva should be chosen." Geneva is a city of about 100,000 population in the Alps at the southwest end of Lake Geneva. The Rhone River divides the city into two unequal parts, on the left a prosperous commercial center and on the upper bank a flourishing tourist colony.

ceptance in the course of the next week. The time devoted to framing the League of Nations had not delayed but had really expedited the general work, since it had provided a means of adjustment of possible errors in the treaty. He denied that there had been serious dissensions between the United States and the European delegates, and deprecated attempts to create any.

Referring to the necessity of reducing armaments for peace time, he said that the forces of the country which had kept Europe in arms for forty years were to be reduced to an army which would be only adequate enough to police her cities and protect her commerce. There were suggestions that there might be a recrudescence in Germany. That was not a danger, Mr. Lloyd George asserted, because only with difficulty could Germany raise eighty thousand men to preserve order. The danger, he said, was of the world going to pieces, adding: "A real danger—the gaunt specter of hunger—is stalking thru the land."

**Martial Law** Ireland has again become a scene of grave unrest. Political agitation and some violent disturbances led the Government on April 15 to proclaim martial law in the five counties of Cork, Limerick, Tipperary, Kerry and Roscommon, the first four being in the extreme south and the fifth in the center of the island. In protest

against this action a general strike was proclaimed in the city of Cork and all business was suspended; an extensive strike occurred at Limerick, and there were great processions and other public demonstrations in Dublin.

The situation was made still more tense by the statement of Mr. Law, the Government leader in the British

House of Commons, that it would be a mistake to expect that Home Rule would be put into operation in Ireland immediately upon the declaration of peace.

## Troops Mutiny in Russia

It was reported from the Archangel front in Russia on April 10, that a company of American troops had demurred at being ordered to the front for action. They declared that they had been drafted to fight against Germany and not against Russia, with which the United States was not legally at war. After some expostulation and argument by their commander, who pointed out that their refusal to fight would endanger the lives of their comrades, the men obeyed orders and went forward. There was little disposition to censure them severely, and it was felt that the incident emphasized the necessity of some radical revision of American and Allied policy toward Russia, or at least toward the Bolshevik government. On April 11 it was announced that an entire Allied camp had been captured by the Bolsheviks in the Pinega region and that the Allied forces had hastily retreated. Two days later the Allies were reported to have won an important victory at Urozero and to have compelled a Bolshevik retreat of ten miles. In the south the Ukrainian Bolsheviks were reported on April 15 to be overrunning the Crimea, capturing Eupatoria and Simferopol, the latter place being regarded as the key to Sebastopol.

The American delegates at Paris have proposed that food be supplied to Russia, believing that such a course would weaken the power of Bolshevism. This was opposed by the French.

It was reported on April 11 that the Bolshevik government in Russia had offered, in return for food supplies and for full recognition of its legality, to cease hostilities, to cease Bolshevik

Orr in Chicago Tribune

CAN'T HE SEE THEY'RE BUSY?

propaganda outside of Russia, to grant full political amnesty, to grant self-determination to the border states, to pay all foreign debts, and to enter a conference of all parties to determine Russia's future. It was apparently unwilling, however, to reconvene the Constituent Assembly which it had dispersed, or to submit Russia's self-determination to a democratic plebiscite.

**Disorders in Germany** The attempt to establish a Soviet government in Bavaria continues to be bitterly opposed. On April 12 the Soviet was reported to have been overthrown by a Commune, which was equally antagonistic to the Majority Socialist government which had been in power in coöperation with the national German Government at Weimar and Berlin, and which had been compelled to retire from Munich for another capital. Following this came reports that the Commune had adopted some of the most extreme measures of Russian Soviets, such as the removal of all managers and directors of industrial establishments and the filling of their places with workmen, and also the "communization of women, 'including wives.'"

At this a large part of the troops of the Majority Socialist government revolted against the Commune and attempted to drive it from the city. A military dictatorship was proclaimed, and civil war raged in the streets of the capital. On April 15 the Communists were reported to be in control of the city, and Government troops from all parts of Bavaria were being hurried thither to suppress them.

At present the Bavarian capital and a considerable portion of the former kingdom are rent by tripartite civil feuds, the factions being the old government, of Majority Socialists; the Soviet party, which got its inspiration from Russia and which drove the government from Munich; and the Communists, who may be described as a German type of Bolsheviks.

Saxony also became involved in grave disorder. Herr Neuring, the War Minister of the Saxon Government, was brutally butchered in the streets of Dresden on April 12 by mutinous soldiers to whom he had refused a hearing in which they wished to protest against his order that wounded soldiers in hospitals should receive only peace-time pay. This was followed by a Communist uprising, which drove the Government troops from the city; national troops were hurried thither from Berlin, and a state of siege was proclaimed thruout Saxony. By April 13 the Communists seemed to have been checked, if not crushed.

A Soviet republic was reported to have been established without bloodshed in Brunswick on April 12.

**Intercourse with Germany** The Allied governments on April 14 authorized the resumption of postal and telegraphic services between neutral countries and Germany, to a limited extent, in order to facilitate the

#### A PARABLE OF CAUSE AND EFFECT

"The ill-defined but yet certain figure of beaten Pan-Germanism ever looms behind the great and cruel beast of Bolshevism. Let us beware lest, in the overwhelming aspect of the monster, we lose sight of the fiend who drove and still drives him on"

operation of the food supply arrangements which were made recently. It was recognized that Germany could not export the goods with which she is to pay for her food unless she were permitted thus to communicate with her prospective customers. The Allies will maintain a censorship over such intercourse.

#### The Korean Troubles

Demonstrations of Koreans in favor of the restoration of that country's independence have become so widespread and influential as to involve nearly all the country and to lead to some violence. The Japanese Government has sent six more regiments to reinforce its garrisons there, and have arrested five American missionaries on charges of complicity in the attempted revolution.

#### Strikes and Rumors of Strikes

The industrial problem is without question the most serious that will engage the attention of the people of the United States—to say nothing of the world—in the reconstruction period. There is strong probability that something of unprecedented interest and value for the future relations of capital and labor will come out of the Peace Conference itself. But the problem, as expressed in individual cases, cannot wait. Already there are strikes and threatnings of strikes in many important industries here.

Last week the girl telephone operators of all the New England States except Connecticut struck for higher wages. The strike is of unusual character, since the employer is not a private corporation or concern, but the United States Government. The telephone lines, like the telegraph and cable lines, are being operated by the Post Office Department.

The crux of the matter is not at the present moment the question whether the wage increase shall be granted or not, since no answer has yet been given by the Postmaster General or any of his subordinates. The demand of the operators has not been presented in the manner required by the Post Office Department. The Postmaster General insists that a regular procedure shall be followed; but the operators refuse to follow it. The demands of the workers, says Mr. Burleson, should be presented to the general manager of the New England Telephone and Telegraph Company, who will refer them to the operating board in New York, from whom they will go to the Wire Control Board in Washington, whose recommendation will finally be passed on by the Postmaster General. The operators are ready to submit their demands to the New England general manager provided they are first assured that he is authorized to act upon them himself with finality. Apparently, however, they prefer to strike rather than to go thru

the complicated process insisted upon by the Government.

On the day after the strike began Mr. Burleson issued a statement which seemed to indicate that it would not be merely a question of procedure which would separate the department and the operators, but one of the substance of the workers' demands themselves. The Postmaster General said:

The Post Office Department, whose first responsibility is to the public, does not feel free to grant wage increases, which must be paid for by the public which uses the services, without carefully inquiring into the relation between revenues and expenditures. If the expenditures are increased beyond the point where the revenues no longer yield a fair return upon the investment, either efficiency of the service must be lowered or else the charges to the public must be increased. In the public interest ordinary business caution must be observed.

During the period of Government management, the Post Office Department feels that it cannot grant wage increases merely upon demand from the employees. A strike on the part of employees working for the Government is not permissible. Sound public opinion can always be depended upon to secure for them absolute justice. It must always be kept in mind that a strike cannot be successful without public approval. The employees should realize that the public interest is involved and should return to work at once upon the assurance that their demands will be carefully investigated to determine whether increased wages can be granted without impairment of the financial stability of the companies. If the increases they ask prove to be just and reasonable, the increases will be granted in any event, even tho, in order to continue efficient service, the charges to the public must be increased. But the public interest cannot be sacrificed upon the mere demand of any set of employees.

If the employees will submit their demands to the general manager and return to work, they have the assurance of the Government that they will be dealt with fairly. If they continue to disregard the public interest, the public will be less likely to give the employees the support necessary to warrant favorable Government action.

There is one sentence in Mr. Burleson's statement which is of particular interest as raising a fundamental question of the rights of workers in Government employ. "A strike on the part of employees working for the Government," says the Postmaster General, "is not permissible." The question which this assertion raises becomes of the most acute importance at a time like this when the Government operation of railroads, telegraphs and telephones has so enormously increased the number of workers in Government employ.

Meanwhile, permissible or not, the strike is on; and there are rumors that it is only the prelude to similar strikes of telephone operators all over the country.

"48-54" and For eleven weeks  
Union Recognition a strike of textile  
workers in the  
mills at Lawrence has been going on  
with no apparent prospect of coming  
to an end. The demand of the workers  
is for a 48 hour week instead of a 54  
hour week as at present is the case,  
but with no reduction in pay. The slogan  
of the strikers, which they wear  
on buttons and cards and display in all  
kinds of ways, is "48-54." The present  
form of the workers' demand came  
about in a curious way. They originally  
asked only for the 48 hour week, which

Stinson in Dayton Daily News

—AND THEY WONDER WHY HE TURNS  
TO ANARCHY

is, of course, the equivalent of the eight hour day. The mill owners called their attention to the fact that if they only worked 48 hours in a week they would receive six hours less pay than they were then getting. Thereupon the workers revised their demand to include no reduction in pay for the shortened hours of work. One of the representatives of the workers tells the story thus: "The mill men practically educated the men to the fact that they wanted 48 hours of work and 54 hours of pay, and then the strikers came out and asked for it." Another representative declared his belief that if the em-

Western Newspaper Union

#### THE FIRST PRESIDENT OF LITHUANIA

The Lithuanians, who are struggling to establish an independent republic, elected as first president of the Provisional Government on April 4 Anthony Smetona, one of the leaders in the republican movement and thruout the war a strong opponent to the German occupation. Mr. Smetona was editor of *Lietuvos Aidai*, the official organ of the Lithuanian State Council; the paper was suppressed for refusing to print communications from Berlin and afterward suppressed again by the Bolsheviks. The Lithuanians claim a territory of 583,000 square miles with a population of more than six million. They are opposed to union with any of their neighbors, Poland, Russia or Prussia.

ployers had not called the workers' attention to this fact, but had granted the shorter hours without comment, the workers would have accepted the 48 hour work with the corresponding reduction of pay. "I think," he said, "that the mill men tried to hurt the 48 hour week."

After the strike had been going on for ten weeks an investigation was undertaken by the Massachusetts State Board of Conciliation and Arbitration. The inquiry was begun at the direction of Governor Coolidge, after the mill owners had refused to submit the matter to arbitration.

In Brooklyn last week a controversy between the managers of the Brooklyn Rapid Transit Company and the employees of its elevated and subway lines nearly resulted in a strike, but decisive action was postponed by an appeal from Mayor Hylan, of New York, for a conference between the two parties involved. The B. R. T. is under a receiver appointed by a Federal court, and here again the relationship of the Government to a dispute between capital and labor is involved. The receiver, former Secretary of War Lindley M. Garrison, has refused to treat with the representatives of a union to which only a part of the employees belong. Mr. Garrison declared that any committee professing to represent B. R. T. employees must be selected by all the employees or at least in an election at which all employees have an opportunity to vote.

This position was upheld by Justice Mayer of the United States District Court, who had appointed Mr. Garrison as receiver. A hearing was held by Judge Mayer at which the employees were encouraged to state frankly their grievances, the Justice assuring the men that since the court was the present owner of the property they had every right to address their grievances to it.

The disagreement in Brooklyn raises again the question of the recognition of a union which extends beyond the limits of the industrial organization in question, and which at the same time does not include all of the workers in the organization itself. Mr. Garrison's position, upheld by the Federal Judge, is a definite negative to the contention for the right to such recognition. In a letter replying to a communication from the Amalgamated Association of Street and Electric Railway Employees of America, the Federal receiver made this perfectly clear. He said:

All agreements at any time made with our employees should cover all of the men in similar employment, whether they are members of the union or not. . . . The management will not deal with any outside organization, whether the same be religious, patriotic, benevolent, political or labor. It will always be ready to deal with its employees directly thru committees selected by the employees.

The union representatives also complain that the union members are discriminated against because of their membership. They were assured by Judge Mayer that the discrimination, if there had been any, would not be permitted to continue.

### The Drug Habit and Its Victims

New York City is confronted with an appalling problem in the elimination of the illicit traffic in habit-forming drugs and in the treatment of those who are addicted to their use. The distressing facts have been brought to light by a campaign undertaken by Federal and city officials against those who are selling the drugs to victims of the drug habit in violation of the law. The campaign began with the arrest by internal revenue officers of six physicians and four druggists charged with violations of the Harrison anti-drug act. When the fact of the arrests became known, other illicit dealers evidently took fright and refused to sell further doses to their former customers.

It was found necessary for the city authorities to take care of the patients of the physicians who were arrested as well as those other victims of the habit whose source of supply was shut off thru the fear of those who had been supplying them. A clinic of the Board of Health supplied to the drug addicts who came to them the minimum doses which the law permits and which are considered indispensable by medical science if the slave of the habit is to be saved from extreme suffering and put on the road to a cure.

Before the hour when the clinic opened a long line of unfortunate drug users were waiting, and 132 of them applied for narcotics in the first ninety minutes after the doors were opened. In seven hours of the day almost 700 were given the dose that would give them relief from the terrible craving.

The Health Commissioner has said that there are between one and two hundred thousand narcotic users in New York City. In the cellar of one drug store were found something like 100,000 prescriptions for habit-forming drugs, all issued and filled illegally during the past year; in another store 50,000 were discovered.

A report of the New York City Parole Commission declares that in the first draft for the National Army there were found 80,000 drug users all of whom were of course rejected. In New

York City alone there were 8000, in the draft ages.

The problem is, of course, not confined to New York City, since only 10 per cent of the drug users found among the drafted men were from that city.

There are two aspects of the case that demand governmental attention and public action. The one is the enforcement of the law against the sale of the drugs; the other is the cure of those who have become addicted to the habit. There is danger in stopping the supply of the drugs to the users without making an attempt to cure the craving, since an unsatisfied desire for a drug is provocative of other forms of vice and of crime.

### Getting the Boys Home

In the five months since the signing of the armistice 686,114 American soldiers have sailed for home. On April 8 there were in the American Army a few less than two million men, of whom 1,326,525 were in the A. E. F., a total of 1,607,281 officers and men have been discharged. The process of demobilization has gone on with much greater rapidity than it did in either the Civil War or the Spanish-American War. General March, the army's Chief of Staff, has furnished the following comparison:

In the Civil War the volunteer army of the United States reached its highest figure on April 30, 1865, on which date its strength was 1,034,064 officers and men. The number of regulars in the service on that date has been computed at 26,898 officers and men. The muster out of the troops began on May 1, 1865, following the surrender of the Confederate armies, and lasted until November 1, 1866, on which date the demobilization was practically completed, with 1,023,021 men mustered out, a few volunteers being retained in the service until December 20, 1867. We have mustered out, as you see, in three months more than the entire number mustered out of the armies in the Civil War, extending for a period of over a year.

In the Spanish-American War the greatest strength was reached on August 31, 1898, on which date it included 216,256 officers and men. The armistice was signed on August 12, 1898. The muster out began on September 5, 1898, and lasted until June 22, 1899, on which date 179,397 officers and men were mustered out. Some volunteer organizations were held in the Philippines until November 23, 1899. The muster out of the entire army in the war with Spain consumed, as you see, more than a year. We must have mustered out in the first month of our demobilization more than that entire force.

In the demobilization of the present army the figures are quite striking, due to the fact that such a portion of our forces has been overseas. In the other cases they were largely in the United States.

General March has given other interesting figures, showing the length of front held by the different Allied armies when the fighting stopped. Belgium held 25 miles, or 6 per cent of the whole western front; France held 220 miles, or 55 per cent; Great Britain held 70 miles, or 18 per cent; while the United States held 83 miles, or 21 per cent. This was for the American army slightly less than it had held a month previously, when the American forces occupied 23 per cent of the whole.

Further figures furnished by the Chief of Staff provide a comparison between the percentage of casualties during the great Argonne Meuse offensive

and the percentages in some of the great battles of the Civil War. They are as follows: the battle of Shiloh, 24 per cent; the battle of Murfreesboro, 23 per cent; the battle of Gettysburg, 20 per cent; the battle of Chickamauga, 28 per cent; the Argonne-Meuse advance, 18.3 per cent.

### The Last of Zapata

It is officially announced from Mexico City that General Emiliano Zapata has been killed by government forces. Zapata, who had been the rebel leader in southern Mexico, his hand against every man and almost every man's hand against him, had been hiding in an inaccessible part of the mountain region of the State of Morelos since the Government troops had pacified the rest of that state. He was hunted out and killed by an expedition under the command of General Guajardo.

Zapata has been for nine years a picturesquely brutal figure in the Mexican drama. He was called the Attila of the South. Apparently he well deserved the name. He terrorized all the southern states of Mexico, until Morelos, his native state, which had once been a prosperous region, noted for its sugar production, was as thoroly devastated as Belgium or northern France. The ostensible purpose of his rebellion, begun in 1909, was to give rights to land to the Indians; but the net result of it was to turn valuable sugar mills, giving employment to thousands of Indians, into piles of ruins.

At three different times during the past ten years Zapata and his followers were in control of Mexico City, but never for long. For a short time in 1914 Zapata and Villa were in alliance against Huerta; but they were too much alike to continue to agree. His leadership was based on his personal prowess and ruthlessness and on his plan to put the Indians in power, as opposed to the Spanish or part-Spanish ruling classes. His presence in the south was a constant menace to the capital of Mexico; and the Carranza government has been campaigning against him for at least three years. A month ago his stronghold was reported captured by the government forces.

Thomas in Detroit News

HOW CAN WE TELL MUSHROOMS FROM TOADSTOOLS?

**F**OR the first time in the history of America, representatives of the plain people control the machinery of government free from the interference of corporation lawyers or agents of the great special interests, and the result is that after the present Assembly adjourns North Dakota will be generations ahead of any other American state in the character of its laws governing industry, labor, revenue, education, and even court procedure. Most significant of all, North Dakota will be the first state in the Union to place the sovereign powers of the government in direct competition with the private profiteers who now monopolize the markets on which the producers of this commonwealth depend for their living," read a statement issued at Bismarck a few weeks ago by an official representative of the Non-Partizan League.

"Democracy has been vindicated, a revolution has been peacefully achieved on the prairies of North Dakota." "A political millenium is just ahead for the farmers who make 85 per cent of the population of this great agricultural state." "The farmers have broken their bonds and emancipated themselves from the control of 'Big Biz.'" "The blood-suckers of capitalism, the kept press, the political gangsters, have all been routed." "The star of North Dakota leads all the rest." "One state in the Union has been made safe for democracy"——

Thus did the leaders of the Non-Partizan League congratulate the members of the North Dakota Legislature when at the close of the session a short time ago the halls of the capitol at Bismarck rang with cheers and jubilee. While the movie operators made reel upon reel of pictures, to be used in other states for propaganda purposes, the legislators, and many of their constituents from all over the state, celebrated the completion of such a program of radical and reformatory legislation as never before has been assembled in a single American commonwealth.

This phenomenal overturn is the outcome of a campaign which began four years ago with one man and a flivver—which he did not own. But the man was Arthur C. Townley—"After Cash" is the way his op-

*Signing one of the league bills—Governor Lynn J. Frazier, whom the Non-Partizan League has twice elected to govern North Dakota*

## THE PEOPLE'S CZAR IN NORTH DAKOTA

### And the Machine that Makes the Laws to Suit the Farmers

BY F. LAURISTON BULLARD

*Mr. Bullard has just returned from North Dakota, where, as he says, he "spent some time watching the 'machine' of the Non-Partizan League put thru the program of legislation which makes the state a sort of social experiment station"*

*"After Cash" Townley, as his enemies call him, the founder and master of the North Dakota Non-Partizan League, "an autocracy for the sake of democracy"*

ponents explain the initials—and Townley is an agitator and organizer of no small ability. He is a speaker who captures the emotions and minds of thousands of farmers at a picnic on the prairies much as Whitefield and the other old-time revivalists swayed their audiences, and he has devised and now absolutely controls a political machine that Tammany might envy. Tall and lean, called "The Hawk" by his foes, and denounced by them in the most bitter terms, he has all the defects of his qualities; he is dictatorial and temperamental, he changes his mind with startling abruptness, he cares not a jot for consistency. Well under forty and twice a bankrupt, he appeared at the opportune time and in his borrowed car started a movement which swept over the state, and down the Red River Valley into Minnesota, and over the borders into other adjacent states, with the rapidity and intensity of a prairie fire.

Whatever of personal ambition may have entered into the origin of the league, it never could have become the power it is today had it not made its appeal to men who long had smarted under

grievances many of which even its enemies pronounce genuine. North Dakota is a state of a single industry, the growing and marketing of grain. Practically all the harvest is sold in the Twin Cities and Duluth. The growers believe that clever manipulation by mill men, elevator men, railroads and grain brokers, deprives them year after year of millions of dollars which ought to find a home in North Dakota pockets. Most of the farms are mortgaged, in the aggregate to more than \$27,000,000. The bankers finance the farmers thru a large part of the year, and the notes always fall due at harvest time. To pay, the farmer must sell his crop when the market price for wheat is lowest, and he believes it is kept low by artificial means, and that the prices of everything he has to buy are kept high in the same arbitrary fashion. But the great cause of complaint has to do with the marketing of wheat. Thru various schemes for docking and grading, the farmers believe that year after year the mills manage to buy from them a superior crop at inferior prices. Sometimes the "magnates" [Continued on page 148]

# THE WORLD'S OUR COUNTER

BY ATREUS VON SCHRADER

If you take a handful of straws and toss them in the air, and if each one of these straws flutters in the same direction, it is safe to guess which way the wind is blowing. Which trite statement has a new significance for us. The straws of our industries are being carried on a strong trade-wind to far-off ports, and never in our history have there been so many straws showing the way for what the war has brought us, namely, a very large share of the world's foreign trade.

To be sure, this new business is thus far largely a matter of luck, for it requires no skill to sell goods when you are the only one having goods to sell, and that is the position the war gave us. But, and this is the point, a new foreign trade has come our way, and the opportunity is ours to keep it. The competition of the other nations will be severe, but while they are making repairs we can drive our claim-stakes deep.

To return to our straws; let us take a handful and follow them.

In the year 1608 the Jamestown Settlement shipped to England a cargo of "trials of pitch, tar, glass, frankincense and soap-ashes," our first export of manufactured goods, and the birth of the American chemical industry. Modern war is based on chemistry; so is modern commerce, and so was a large part of Germany's mercantile success. Take one chemical item, coal-tar, and coal-tar dyes. For forty years this pivotal industry was almost the sole property of the Germans. The pre-war manufacture of these dyes amounted to about \$100,000,000 a year, a small sum, but the

entire textile industry, for instance, depended upon dyes, and the Germans controlled them. Here is one of our straws that is going to break the German camel's back. In 1914 we made five coal-tar dyes, and bought three hundred from Germany. In 1917 we had eighty-one dye-making plants, and our output for that year was worth \$57,000,000. This spells more than our own independence, for in 1917 we sold to Brazil more than a million dollars worth of American dyes, and Brazil had been completely dependent upon Germany. Here is a new field for us, and a new market.

to regain her lost place. But we are in the field, and we can hold it.

Here is another item, preëminently an American development, machine-tools. The first was an automatic screw-machine used to make rifle-parts for the Union army during the Civil War. We made the first, and have always made the most. Germany copied our models, and had a huge export trade in them. It was her pleasant custom to test a foreign market with an American sample, a lathe, or drill, or milling-machine, or what not, and, if she found a ready sale, make the article herself.

When the war began, we enlarged

Our chemical industry as a whole has grown and spread like the magic of its own art. In 1914 we exported chemicals worth, roughly, half a billion dollars. Last year the figure was \$1,454,000,000! In 1917 the West Indies alone, a small market at our doors, imported American chemicals worth \$6,500,000, and Cuba, riding high on a wave of sugar-prosperity, is buying more and more.

To go further afield; before 1914 we controlled one commodity in South Africa's shopping-list — baking powder! In 1914 she bought chemicals to the tune of \$23,000,000. In 1916, \$32,036,000, and we had begun to sell her more than baking-powder.

Germany is said to have, packed and boxed and ready for shipment, large supplies of chemicals with which she purposes to flood the foreign markets when peace is declared. With these chemicals are high piles of catalogs, printed in French and English. It is obvious that Germany will do her best, and worst,

our factories to supply machine-tools to the Allies, and when we entered the war, we made yet more for ourselves. In 1913 our output amounted to \$100,000,000 worth, of which we exported only 16 per cent, nearly all to Europe. Two years ago our exports, at pre-war prices, came to \$56,000,000, and last year the \$100,000,000 total was multiplied by four. With the war won, we shall have a surplus of machine-tools for export of perhaps \$150,000,000 worth.

Here again the war has built up our production and provided us markets for what our own industries do not need. When Germany and Austria were put out of the running, their customers turned to us; for instance, Norway's purchase of American machine-tools was \$80,000 in 1913, and two years ago it was nearly five times as great. In the same period Denmark, going in heavily for the manufacture of cream-separators and typewriters, quadrupled her imports. Spain outdid them both, for her order of \$100,000 in 1913 was almost exactly sixteen times that sum in 1917. These were all German markets. So was South America, and our sister-continent has been buying heavily from us, adding a cipher to her total in the three years. Chile alone took nearly half a million dollars worth two years ago, whereas her best previous record was less than \$50,000.

Even sleepy old China has awakened to the danger of depending upon imported machinery, and has begun to make her own—

with American machine-made tools. She spent \$3192 in 1913, and \$119,245 in 1917. India, Japan and the Dutch East Indies have all become equally good customers of ours, and they are all new markets. Further, Belgium and northern France must be completely reëquipt with machinery before they can take up life again. Railways, mills, factories, mines, everything has been destroyed and must be rebuilt. This work cannot be done without machine-tools in large numbers—and we are, for all practical purposes, the proprietor of the only store that has them. Our surplus of \$150,000,000 worth should sell twice over.

Let us take the grimy and romantic matter of coal, which is the basis of all industry. American coal won the war, for it turned the wheels in ten thousand factories, it hauled trainloads of munitions, and drove the ships that carried our men to the battle line. The war-time demands for coal have showed us that we can produce more coal than we need; in other words, we have it for export, while the Old World is suffering for it. France, before the war, mined 40,000,000 tons a year, and imported 20,000,000 more, but not from us. Now her richest mines, in the north, have been looted and dynamited and flooded by the Germans, and will be barren for five years. Belgium

bought most of her coal from Germany, and she will not willingly buy in that market again. A large share of this foreign coal trade belongs to us by right of our vast supplies. We have never exported coal, and last year we mined 689,625,000 tons! Our ships can load, say, at Alabama ports, for the coal there lies close under the sod and is cheap to mine, and carry it direct to the French canal-barges for distribution to our sisterland. These same ships can bring back cargoes of potash from Alsace, for we need potash, lots of it. A great commerce in coal is ours, if we have the wit to take it.

It is not a pleasant truth to dwell upon, but it is the truth that, prior to the war, we were only third among the merchant nations of the world. England held first place easily, and Germany was second, [Continued on page 151]

# THE RACE FOR RUBBER

## Another Story of Creative Chemistry

BY EDWIN E. SLOSSON

**T**HERE is one law that regulates all animate and inanimate things. It is formulated in various ways, for instance:

Raining down a hill is easy. In Latin it reads *facilis descensus*. *Terminus*. Herbert Spencer calls it the dissolution of definite coherent heterogeneity into indefinite incoherent homogeneity. Mother Goose expresses it in the fable of Humpty Dumpty, and the business man extracts the moral as, "You can't unscramble an egg." The theologian calls it the dogma of natural depravity. The physicist calls it the second law of thermodynamics. Clausius formulates it as "The entropy of the world tends toward a maximum." It is easier to smash up than to build up. Children find that this is true of their toys; the Bolsheviks have found that it is true of a civilization. So, too, the chemist knows analysis is easier than synthesis and that creative chemistry is the highest branch of his

In the forest the latex is coagulated in a primitive way by patiently pouring it over a stick revolving over a smoky fire until it forms a large black lump

and fortune the competition among chemists was intense. It took the form of an international contest in which England and Germany were neck and neck. The English, who had been beaten by the Germans in the dye business where they had the start, were determined not to lose in this. Prof. W. H. Perkin, of Manchester University, was one of the most eager, for he was inspired by a personal grudge against the Germans as well as by patriotism and scientific zeal. It was his father who had, fifty years before, discovered mauve, the first of the anilin dyes, but England could not hold the business and its rich rewards went over to Germany. So in 1909 a corps of chemists set to work under Professor Perkin in the Manchester laboratories to solve the problem of synthetic rubber. What reagent could be found that would reverse the reaction and convert the liquid isoprene into the solid rubber? It was discovered, by

### FOREST RUBBER

Compare this tropical tangle and gnarled trunk with the straight tree and cleared ground of the plantation. At the foot of the trunk are cups collecting rubber juice

This explains why chemists discovered how to take rubber apart over sixty years before they could find out how to put it together. The first is easy. Just put some raw rubber into a retort and heat it. If you can stand the odor you will observe the caoutchouc decomposing and a benzine-like liquid distilling over. This is called "isoprene." Any Freshman chemist could write the reaction for this operation. It is simply

That is, one molecule of the gum splits up into two molecules of the liquid. It is just as easy to write the reaction in the reverse directions, as 2 isoprene → 1 caoutchouc, but nobody could make it go in that direction. Yet it could be done. It had been done. But the man who did it did not know how he did it and could not do it again. Professor Tilden in May, 1892, read a paper before the Birmingham Philosophical Society in which he said:

I was surprised a few weeks ago at finding the contents of the bottles containing isoprene from turpentine entirely changed in appearance. In place of a limpid, colorless liquid the bottles contained a dense sirup in which were floating several large masses of a yellowish color. Upon examination this turned out to be India rubber.

But neither Professor Tilden nor any one else could repeat this accidental metamorphosis. It was tantalizing for the world was willing to pay \$200,000,000 a year for rubber and the forests of the Amazon and Congo were failing to meet the demand. A large share of these millions would have gone to any chemist who could find out how to make synthetic rubber and make it cheaply enough. With such a reward of fame

accident, we may say, but it should be understood that such advantageous accidents happen only to those who are working for them and know how to utilize them. In July, 1910, Dr. Matthews, who had charge of the research, set some isoprene to drying over metallic sodium, a common laboratory method of freeing a liquid from the last traces of water. In September he found that the flask was filled with a solid mass of real rubber instead of the volatile colorless liquid he had put into it.

Twenty years before the discovery would have been useless, for sodium was then a rare and costly metal, a little of it in a sealed glass tube being passed around the chemistry class once a year as a curiosity, or a tiny bit cut off and dropt in water to see what a fuss it made. But nowadays metallic sodium is cheaply produced by the aid of electricity. The difficulty lay rather in the cost of the raw material, isoprene. In industrial chemistry it is not sufficient that a thing can be made; it must be made to pay. Isoprene could be obtained from turpentine, but this was too expensive and limited in supply. It would merely mean the destruction of pine forests instead of rubber forests. Starch was finally decided upon as the best material, since this can be obtained for about a cent a pound from potatoes, corn and many other sources. Here, however, the chemist came to the end of his rope and had to call the bacteriologist to his aid. The splitting of the starch molecule is too big a job for man; only the lower organisms, the yeast plant, for example, know enough to do that. Owing perhaps to the *entente cordiale* a French biologist was called into the combination, Professor Fernbach, of the Pasteur Institute, and after eighteen months' hard work he discovered a process of fermentation by which a large amount of fusel oil can be obtained from any starchy stuff. Hitherto the aim in fermentation and distillation had been to obtain as small a proportion of fusel oil as possible, for fusel oil is a mixture of the heavier alcohols, all of them more poisonous and malodorous than common alcohol. But here, as has often happened in the history of industrial chemistry, the by-product turned out to be more valuable than the product. From fusel oil by the use of chlorine isoprene can be prepared, so the chain was complete.

But meanwhile the Germans had been making equal progress. In 1905 Prof. Karl Harries, of Berlin, found out the name of the caoutchouc molecule. This discovery was to the chemists what the architect's plan of a house is to the builder. They knew then what

© Underwood & Underwood

In making garden hose the rubber is formed into a tube by the machine on the right and coiled on the table to the left

they were trying to construct and could go about their task intelligently.

Mark Twain said that he could understand something about how astronomers could measure the distance of the planets, calculate their weights and so forth, but he never could see how they could find out their names even with the largest telescopes. This is a joke in astronomy but it is not in chemistry. For when the chemist finds out the structure of a compound he gives it a name which means that. The stuff came to be called "caoutchouc," because that was the way the Spaniards of Columbus's time caught the Indian word "cahuchu." When Dr. Priestley called it "India rubber" he told merely where it came from and what it was good for. But when Harries named it "1-5-dimethyl-cyclo-octadien-1-5" any chemist could draw a picture of it and give a guess as to how it could be made. Even a person without any knowledge of chemistry can get the main point of it by merely looking at this diagram:

ISOPRENE turns into CAOUTCHOUC

I have dropt the 16 H's or hydrogen atoms of the formula for simplicity's sake. They simply hook on wherever they can. You will see that the isoprene consists of a chain of four carbon atoms (represented by the C's) with an extra carbon on

the side. In the transformation of this colorless liquid into soft rubber two of the double linkages break and so permit the two chains of 4 C's to unite to form one ring of eight. If you have ever played ring-around-rosy you will get the idea. In a former article I explained that the anilin dyes are built up upon the benzene ring of six carbon atoms. The rubber ring consists of eight at least and probably more. Any substance containing that peculiar carbon chain with two double links  $\text{C}=\text{C}-\text{C}=\text{C}$  can double up—polymerize the chemist calls it—into a rubber-like substance. So we may have many kinds of rubber, some of which may prove to be more useful than that which happens to be found in nature.

With the structural formula of Harries as a clue chemists all over the world plunged into the problem with renewed hope. The famous Bayer dye works at Elberfeld took it up and there in August, 1909, Dr. Fritz Hofmann worked out a process for the converting of pure isoprene into rubber by heat. Then in

1910 Harries happened upon the same sodium reaction at Matthews, but when he came to get it patented he found that the Englishman had beaten him to the patent office by a few weeks.

This Anglo-German rivalry came to a dramatic climax in 1912 at the great hall of the College of the City of New York when Dr. Carl Duisberg, of the Elberfeld factory, delivered an address on the latest achievements of the chemical industry before the Eighth—and the last for a long time—International Congress of Applied Chemistry. Duisberg insisted upon talking in German altho more of his auditors would have understood him in English. He laid full emphasis upon German achievements and cast doubt upon the claim of "the Englishman Tilden" to have prepared artificial rubber in the eighties. Perkin, of Manchester, confronted him with his new process for making rubber from potatoes but Duisberg countered by proudly displaying two automobile tires made of synthetic rubber with which he had made a thousand mile run.

The intense antagonism between the British and German chemists at this congress was felt by all present, but we did not foresee that in two years from that date they would be engaged in manufacturing poison gas to fire at one another. It was, however, realized that more was at stake than personal reputation and national prestige. Under pressure of the new demand for automobiles the price of rubber jumped from \$1.25 to \$3 a pound in 1910, and millions had been invested in plantations. If Professor Perkin was right

when he told the congress that by his process rubber could be made for less than 25 cents a pound it meant that these plantations would go the way of the indigo plantations when the Germans succeeded in making artificial indigo. If Dr. Dulsberg was right when he told the congress that synthetic rubber would "certainly appear on the market in a very short time," it meant that Germany in war or peace would become independent of Brazil in the matter of rubber as she had become independent of Chile in the matter of nitrates.

As it turned out both scientists were too sanguine. Synthetic rubber has not proved capable of displacing natural rubber by underbidding it nor even of replacing natural rubber when this is shut out. When Germany was blockaded and the success of her armies depended on rubber, price was no object. Three Danish sailors who were caught by United States officials trying to smuggle dental rubber into Germany confessed that they had been selling it there for gas masks at \$73 a pound. The German gas masks in the latter part of the war were made without rubber and were frail and leaky. They could not have withstood the new gases which American chemists were preparing on an unprecedented scale. Every scrap of old rubber in Germany was saved and worked over and over and diluted with fillers and surrogates to the limit of elasticity. Spring tires were substituted for pneumatics. So it is evident that the supply of synthetic rubber could not have been adequate or satisfactory. Neither, on the other hand, have the British made a success of the Perkin process, altho they spent \$200,000 on it in the first two years. But, of course, there was not the same necessity for it as in the case of Germany, for England had practically a monopoly of the world's supply of natural rubber either thru owning plantations or controlling shipping. If rubber could not be manufactured profitably in Germany when the demand was imperative and price no consideration it can hardly be expected to compete with the natural under peace conditions.

The problem of synthetic rubber has then been solved scientifically but not industrially. It can be made but cannot be made to pay. The difficulty is to find a cheap enough material to start with. We can make rubber out of potatoes—but potatoes have other uses. It would require more land and more valuable land to raise the potatoes than to raise the rubber. We can get isoprene by the distillation of turpentine—but why not bleed a rubber tree as well as a pine tree? Turpentine is neither cheap nor abundant enough. Any kind of wood, sawdust for instance, can be utilized by converting the cellulose over into sugar and fermenting this to alcohol, but the process is not likely to prove profitable. Petroleum when cracked up to make gasoline gives isoprene or other double-bond compounds that go over into some form of rubber.

But the most interesting and most promising of all is the complete inor-

ganic synthesis that dispenses with the aid of vegetation and starts with coal and lime. These heated together in the electric furnace form calcium carbide and this, as every automobilist knows, gives acetylene by contact with water. From this gas isoprene can be made and the isoprene converted into rubber by sodium, or acid or alkali or simple heating. Acetone, which is also made from acetylene, can be converted directly into rubber by fuming sulfuric acid. This seems to have been the process chiefly used by the Germans during the war. Several carbide factories were devoted to it. But the intermediate and by-products of the process, such as alcohol, acetic acid and acetone, were in as much demand for war purposes as rubber. The Germans made some rubber from pitch imported from Sweden. They also found a useful substitute in aluminum naphthenate made from Baku petroleum, for it is elastic and plastic and can be vulcanized.

So altho rubber can be made in many different ways it is not profitable to make it in any of them. We have to rely still upon the natural product but we can greatly improve upon the way nature produces it. When the call came for more rubber for the electrical and automobile industries the first attempt to increase the supply was to put pressure upon the natives to bring in more of the latex. As a consequence the trees were bled to death and sometimes also the natives. Don't say that the Belgian atrocities are disproved because Sir Roger Casement was shot as an Irish traitor. Before Casement made his report on Congo atrocities The Independent had exposed them and published a photograph of a negro boy whose hand had been cut off for not bringing in enough rubber. At Putumayo on the upper Amazon the same

cause produced the same horrible effects. But no matter what cruelty was practised the tropical forests could not be made to yield a sufficient increase, so the cultivation of the rubber tree was begun by far-sighted men in Dutch Java, Sumatra and Borneo and in British Malaya and Ceylon.

Brazil feeling secure in the possession of a natural monopoly made no effort to compete with these parvenus. It cost about as much to gather rubber from the Amazon forests as it did to raise it on a Malay plantation, that is, 25 cents a pound. The Brazilian Government clapped on another 25 cents export duty and spent the money lavishly. In 1911 the treasury of Para took in \$2,000,000 from the rubber tax and a good share of the money was spent on a magnificent new theater at Manaus—not on setting out rubber trees. The result of this rivalry between the collector and the cultivator is shown by the fact that in the decade 1907-1917 the world's output of plantation rubber increased from 1000 to 204,000 tons, while the output of wild rubber decreased from 68,000 to 53,000. Besides this the plantation rubber is a cleaner and more even product, carefully coagulated by acetic acid instead of being smoked over a forest fire. It comes in pale yellow sheets instead of big black balls loaded with the dirt or sticks and stones that the honest Indian sometimes adds to make a bigger lump. What's better, the man who milks the rubber trees on a plantation may live at home where he can be decently looked after.

The United States uses three-fourths of the world's rubber output and grows none of it. What is the use of tropical possessions if we do not make use of them? The Philippines could grow all our rubber and keep a \$300,000,000 business under our flag. Santo Domingo, where Columbus first saw the savages playing with a rubber ball, is now under our supervision and could be enriched by the industry. The Guianas, where the rubber tree was first studied, might be purchased. It is chiefly for lack of a definite colonial policy that our rubber industry, by far the largest in the world, has to be dependent upon foreign sources for all its raw material. Because the Philippines are likely to be cast off at any moment, American manufacturers are placing their plantations in the Dutch or British possessions. The Goodyear Company has secured a concession of 20,000 acres near Medan in Dutch Sumatra.

While the United States is planning to relinquish its Pacific possessions the British have more than doubled their holdings in New Guinea by the acquisition of Kaiser Wilhelm's Land, good rubber country. The British Malay States in 1917 exported over \$100,000,000 worth of plantation-grown rubber and could have sold more if shipping had not been short and production restricted. Fully 90 per cent of the cultivated rubber is now grown in British colonies or on British plantations in the Dutch East. [Continued on page 155]

On account of the shortage of rubber the Germans were obliged to put steel spring tires like this on their army trucks

# VACATION TRAVEL

## The United States Railroad Administration Removes All Restrictions

One year ago, under the pressure of war necessities, the public was requested to refrain from all unnecessary travel, and, under the stress of war conditions, the public was necessarily subjected to a great deal of inconvenience when it did have to travel.

Now the war necessity is passed and it is the settled policy of the Railroad Administration to do everything reasonably within its power to facilitate passenger travel and to make it more attractive.

In furtherance of this policy, the Railroad Administration is entering upon a moderate program of advertising, to remind the people of the extraordinary opportunities for sight-seeing and for pleasure-seeking which our country affords—the National Parks, the seashores, the lakes, the mountains, the woods, and the many places of historic interest.

The vacation season is approaching, and the time is at hand to plan for a change of scene, for rest and recreation. It will be the effort of the Railroad Administration to aid in such planning and to make your travel arrangements convenient and satisfying.

The staff of the United States Railroad Administration will be glad to furnish illustrated booklets and provide necessary information as to fares, train service, etc. Such information may be obtained from the local Ticket Agent or the nearest Consolidated Ticket Office, or by addressing the Official Travel Information Bureau at 143 Liberty Street, New York; or 646 Transportation Building, Chicago; or 602 Healy Building, Atlanta, Georgia.

Every official and employee of the United States Railroad Administration is a public servant. Call on them freely.

*Director General of Railroads*  
Washington, D. C.

# THE PEOPLE'S CZAR IN NORTH DAKOTA

(Continued from page 148)

discriminate against "trosted wheats," "wheats slightly damaged by rains," and "shrunken wheats"; again they adopt new classification grades, and frequently they dock the grain, taking out of a 60-pound bushel "impurities" even up to 40 pounds, and yet shipping the balance to Minneapolis at the farmer's expense, and shipping it back again as mixt feed for stock to be sold to the very farmers who have grown it. Other items in the long bill of complaints have to do with discriminatory freight rates, and with unfair competition which stifles local milling and elevator enterprises and leaves the foreign monopolies in absolute control of the field.

More than once the farmers have tried to "liberate" themselves. Their Equity Cooperative Exchange organized elevator associations in many places. But their grain would have to go thru the terminal elevators in Minnesota where "Big Biz" still could mulct them of their just dues. Therefore the Equity put up a big terminal elevator at St. Paul, and in four years it reaped for its promoters a loss of \$75,000, due, said the farmers, to a boycott by the big mill men.

Out of these experiences came the state of mind which made possible the Non-Partizan League. Obviously, reasoned the farmers, "Big Biz" is too strong for the Equity plan; only the power of the state can secure for us an honest market for our grain, honest protection against the railways, and a fair banking system. So, naturally enough, in the election of 1914 four voters of every five supported a proposition for the establishment of state-owned terminal elevators. Yet the legislators defied that overwhelming majority of their constituency. The farmers sent a large delegation to the capitol to expostulate.

THEN occurred what in that agricultural state is now an historic incident. Various versions of the story are current, but so many witnesses testify to the fact that it may be accepted as in substance true. A member named Twitchell, whose brother has been the minority leader in the session just closed, lost his temper and told the persistent farmers to "go home and slop their hogs and let the legislators attend

to legislation." And the delegates did go home, but before they left Bismarck they held a meeting in which their anger was fanned into a hot flame, and there and then they formed the little nucleus which now has expanded into the all-powerful league. Very likely the legislators were right. The farmers wanted then only a small elevator costing less than \$100,000, too small probably to have helped them much. But that slogan, "Slop your swine," has become a rallying cry of priceless value to the promoters of the league movement, and for four years it has been heard on every platform, in every caucus, in every session of House and Senate.

And just in the nick of time the leader, whom now they hail almost as a messiah, appeared and showed them how to take possession of the Republican party and the governmental machinery of the state. That borrowed flivver multiplied itself a thousand fold. Soon a legion of "organizers," all carefully picked by Townley, were scurrying from town to town and farm to farm, signing up multitudes of members for the new association, and collecting money from each and every one. Thus the league acquired a campaign fund of two or three millions, such a fund as no political party ever controlled for so small an electorate.

In the fall of 1916 "the league became the Republican party of the state." Under the law a voter must register, declaring his party affiliation, and in the primary election he must vote the corresponding ticket. Significantly enough some 8000 Democrats and Socialists registered as Republicans that year in order to vote for the league candidates. The present chairman of the state committee of the "Republican" party of North Dakota is William Lemke, the salaried attorney for the league, one of the triumvirate who manage its affairs, the man who was closeted day after day thru the last session in that room in the Hotel McKenzie at Bismarck wherein the league policies were determined and its measures formulated. That year the league elected the governor and all the state officers but one and secured control of both Houses of the Legislature. Forthwith the league undertook to revise the state constitution, not by calling a constitutional convention, but by legislative enactment. But the state senators

are chosen for four year terms, half every two years, and a block of hold-over senators prevented the passage of the famous House Bill 44.

The farmers were thwarted again. They went back to their farms to salve their sores and get ready for the next campaign. But they came back to Bismarck last fall with a program that made their opponents gasp. The league again elected Lynn J. Frazier as governor, and again obtained all the other state offices save one, but this time they secured an overwhelming majority in both legislative houses, together with four of the five members of the Supreme Court and all three North Dakota Congressmen. Thus protected against "accident" the league proceeded to alter the state constitution by the referendum process, and these constitutional amendments, ten in all, serve as an enabling act for the league program of state socialism.

THAT program the league put thru the Legislature by means of a machine whose smooth efficiency the leaders smilingly and proudly admit. "We are an autocracy," they say, "but it's an autocracy for the sake of democracy." Here are the cogs in the machine:

Day by day in Room 408 in the capitol's leading hotel the league's executives and advisers met for private conference. Night after night in a large hall in the same hotel the league members of the Legislature—all of them pledged in writing to support the policies outlined by the league—assembled in secret caucus and heard the league leaders "explain" the league bills.

As by a rubber-stamp process, in strict conformity to caucus decrees, the league bills were passed thru the Senate and the House.

Most, if not all, these bills were passed by the two-thirds vote which made them "emergency measures," becoming immediately operative.

The Governor, elected as a leaguer, signed all measures promptly.

And one of the league amendments to the constitution makes it necessary for four of the five members of the State Supreme Court to concur if any measure is to be declared unconstitutional.

Merely to catalog all the measures sponsored by the league would fill many columns. Some of them were designed

A secret caucus group at the Hotel McKenzie in Bismarck, North Dakota, headquarters of the Non-Partizan League

obviously to help in propaganda in other states, some to fortify the machine, and some were of the ordinary variety of labor legislation. But the bulk of them were intended to ease the lot of the farmer, to eliminate the middleman, to make straight the way of grain. The indispensable stone in the foundation of the structure is the constitutional amendment which authorizes the state, or any of its counties or cities, "to engage in any industry, enterprise or business," excepting only the making of intoxicants. Thus having cleared the way, the league went ahead with its lawmaking schedule.

The fundamental purpose of the farmers had been to get better prices for their crops thru the operation of state-owned mills and elevators. The public utilities act creates an association which may build even a bakery anywhere—in New York City itself—and any number of industrial enterprises of any sort, for competition with the private corporations from which the farmers seek to be "delivered." This measure, with the grain inspection and licensed warehouse acts, is expected to make revolutionary changes in the whole method of handling the grain products of North Dakota.

The state having decided to go into business, it became necessary to create a bank to serve as its agent in floating the necessary business credits. Therefore the Bank of North Dakota was authorized by an act which provides that all public moneys of cities and counties, of the state and its schools, shall be deposited therein, making a huge fund of some \$130,000,000, about half of which comes from school accumulations derived from the Federal land grants of the usual Western kind.

These business enterprises would have to be managed. Therefore the Legislature created an Industrial Commission of three—the Governor, the Attorney General and the Commissioner of Agriculture and Labor—but to the Governor it gave a veto over the vote of the other two. Mr. Lemke calls this commission "The Board of Directors of the State of North Dakota."

Hail storms are a real menace in a prairie state. Therefore the state instituted a system of hail insurance, the fund to be raised by levies upon all the land.

Also the railroad regulation bill is intended to secure fair rates on mill and packing house products and to prevent the charging of higher rates within the state than for longer hauls outside its boundaries.

Other bills reorganize the tax system, put the schools, the prisons and the charitable institutions under the control of a single commission, provide for the development of North Dakota's lignite deposits.

Nearly every measure may be paralleled by like legislation in other states and lands. But North Dakota becomes the first American commonwealth to concentrate them all into a sort of national social clinic.

The most sinister possibilities of the situation are revealed in the fact that many measures may be ingeniously adapted to put the league into an impregnable position as a machine for the absolute and permanent control of the state. For instance, the publicity bill: This measure ends the wastefulness of advertising legal notices in all the papers of the state and limits publication to one paper in each county. This easily may bring about the subsidizing of the league papers and the suspension of all opposition sheets.

When Townley was asked not long ago if he expected this agrarian movement of the Northwest to spread over the whole country he replied, modestly enough, "That depends on what success we have in this state." His publicity director says more boldly that "the movement certainly is of

Reg. Trade Mark

## McCutcheon's Italian and Japanese Linens

**SEVERAL** shipments of Fancy Linens for Dining room and bed room have just been received from Italy. Among them many choice pieces suitable for Wedding Gifts.

**Tea and Luncheon Cloths** from one to one and a half yards square \$10.50 to 55.00 each.

## SCHOOLS AND COLLEGES

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York

FIFTY-SECOND YEAR

*A School in the Heart of the Open Country. For Boys from 9 to 19.***LOCATION.** 10 miles from New York on a spur of Storm King Mountain, 900 feet above sea level. Healthy, invigorating, unusually adapted to a sane and simple out-of-door life.**WORK.** Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.**ATHLETICS:** Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.*You are invited to come and see for yourself. Catalog sent on application.*

ALVAN E. DUERR, Headmaster

## Training for Authorship

How to write, what to write, and where to sell.

**Dr. Esenwein** Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*. We also publish *The Writer's Monthly*, especially valuable for its full reports of the literary market. Besides our teaching service, we offer a manuscript criticism service.

## Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 119 West 40th St., New York.

national scope." Already it is organized in a dozen states, and in Minnesota last year it lacked but 25,000 out of 350,000 votes to have nominated the Republican candidate for Governor.

More than one student of the signs of the times expects the league so to fortify itself in the prairie states and so to yoke itself with labor movements elsewhere as to hold a balance of power in the near future; they even see in the league one of the little rifts that in time will join and widen into a split that will divide the United States between a progressive party and a reactionary party.

The league is in an admirable position to go ahead with extensive propagandist campaigns. It is thought to have shrewd lieutenants in the labor strongholds. It now has two daily papers, well edited and cleverly managed; it has a corporation ready to start a new daily in St. Paul in the fall; the St. Paul national headquarters supervises the publication of a half-dozen weeklies, one for each of the chief league states, and practically controls nearly a hundred small country journals. The treasury apparently is well filled with funds; its speakers and its organizers are well paid, and in general it administers of its substance with liberal hands. Not that it always was thus. A few years ago a whole fleet of flivvers had to be sold for a song to raise money for importunate creditors, and again that big farmer who is the third member of the executive triumvirate, F. B. Wood, floated the league over the rocks and proved his own sincerity by advancing \$25,000 from his private purse.

For that matter every visitor to the prairie capital must have been impressed by the simple sincerity of the farmer legislators. Uncouth a few of them were; only a handful would have appeared at ease amidst the suavities of the East; many of them outraged English grammar. Yet arguments were made in direct and outright style; there was little bunk and less playing to the galleries; the members were trying to do a big thing and believed they were doing it well.

Denouncing the leaders hurts the league but little. The "antis" have expended much money in efforts to "expose" these leaders and the league simply "thanks God for the enemies it makes." Most of the leaders have records as Socialists, some have been more or less implicated in I. W. W. movements, and Walter Thomas Mills, the league's lecturer, sometimes in his career has supported Bryan and sometimes Debs. But the farmers care naught for these things. Elaborate analyses of their program as socialistic will not shake their faith. They care not a jot whether state-owned elevators spell socialism or not—they want the elevators. So, too, with the disloyalty and pro-German charge. The state campaign in Minnesota was fought out largely upon the loyalty issue. Townley spoke from the same platform with LaFollette in that St. Paul meeting which startled the nation. It seems true that the league has thrived in the German settlements of Minnesota and among the Scandinavians of North Dakota. But the vituperative assaults of the league's enemies have had small results.

However, there are some tokens that the league, dizzy perhaps with power, has overplayed its hand. Some of the state officers of North Dakota have come out in opposition to certain features of its legislation and many voters are asking for a referendum upon them. Most significant of all is the suit just filed in the United States Court challenging the right of the state to engage in private industrial enterprises—a move which hits at the very heart of the Non-Partizan program.

THE WORLD'S OUR  
COUNTER

(Continued from page 143)

while Belgium, smaller than the State of Maryland, was fifth! Our foreign trade came to about \$4,000,000,000 a year. Germany's was five and England's seven. Then the war made us the lone store-keeper, from whom folks had to buy or go without, and we began to grow. In 1914 our exports totaled \$2,500,000,000; in 1917 they were \$6,300,000,000. The war had increased them 166.2 per cent. England, Germany, France and Belgium were removed from the field of commerce, and their trade came to us. How large a part of it we keep will depend upon ourselves. Our position today is unique. We have, unimpaired, the man power, the capital and the raw materials that we have always had. More than these, we have the expanded industries and increased production that the war has brought. And, best of all, we have, for the first time in three generations, our own ships to carry our goods to the ports of the Seven Seas.

A merchant, or a nation, that must depend upon a competitor for the delivery of his goods is at a disadvantage. Ships are like shuttles weaving back and forth on the loom of world-trade, and we had none. Time was when Yankee clippers and Yankee skippers knew every ocean lane, but our merchant marine died in the middle of the last century, and when the war began, we had only a miserable coastwise trade of our own. As a result, we paid many millions a year in freights to foreign ships.

With the war came a new need, and with a grim irony that she will learn to appreciate, Germany's submarines played a large part in giving us our ships and our commercial independence. We began to build shipways and we kept them smoking hot with sliding keels. On one day, July 4, 1918, we launched ninety-five new vessels, for a total of half a million tons, and in November we built, in that one month, as many more again, or half the tonnage that Great Britain built in a year before the war. What the Kaiser and what Herr Ballin, of the Hamburg-American line, thought when we took their great passenger steamers and began to use them, can be imagined. What they thought when their spies began to report our record shipbuilding can be guessed at. It would be unprintable. A dozen American shipyards outdid anything Bremen ever saw, and we had a score of yards in places they had never even heard of. Today we have four companies that by themselves can turn out more ships in a year than any country in the world could build before 1918, and our new merchant marine is second only to England's.

It is a magnificent record.

We have the ships, and this country of ours is prepared as no country ever was before. Our resources, in men and materials, in equipment and in brains, have leaped to the call, and the gold of the world has poured upon us for the past four years. We alone have no great problems of reconstruction and reorganization. We are ready to take our share of the foreign trade that should be ours, and is ours for the taking. He is a pessimist who whines when golden opportunity knocks upon the door.

## THE PERILS OF TERM INSURANCE

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

LAST month, as the result of adverse opinions I had previously expressed against the proposal of insurance by the state, there came to me a letter from a California reader who, after reciting a series of unfortunate experiences of his own with private companies and associations, asks me if he is not justified in concluding against the private institutions and in favor of one operated by the state.

Fully appreciating the sincerity of his convictions and the justification he has in complaining that he has reaped little where he has sown much, I could not ignore the truth that the barrenness of returns was in no measure due to the fact that his insurers were private corporations.

His first letter is substantially as follows:

I was insured in the [here my correspondent names two assessment associations, now defunct, and one fraternal order] and lost a few hundred dollars in each of them. I blamed myself for my foolishness in going into such organizations. Some of them went to pieces and others were tricking me in such a way that I saw the best thing for me to do was to get out of them. I then resolved to try something safe and sound and took the [naming a company which at about that time had transformed itself from an assessment concern].

I liked the name, I liked the president, Mr. —, whom I met, and upon his personal advice took out \$1000 on a Term policy.

Now I am worse hit in this than in all the rest, unless you or some one else can tell me how to bring the company to honest terms.

I have continued in the company for twenty years, paying all my premiums promptly. During the twenty years I have paid in to the company in cash, for which I have the receipts, \$1365.20, nearly \$400 more than the value of my policy; and now the company demands that I—a man eighty years old—pay \$255 a year to keep it up, and is thereby crowding me out, for this I cannot do, and really is essentially cheating me out of my \$1365, less the small share of it that should go for death losses.

I feel this very much for it was the only way I had of laying up something for a very devoted daughter in case of my death.

The company puts it all upon the plan. But it is its owners' plan and they are to blame for a plan that makes such a robbery possible for the company. The president of the company also writes me that if all the members of the company were insured on this plan, the "company would practically have no assets." This is absurd, for people would die no faster under this plan than under other plans and certainly under the other plans they have not paid more than I have or insurance generally would be a great loss to them.

For a year or more I have been trying to get the company to make me a fair rate. Just think of it: in four years I should have to pay them over \$1000 more. Of course, life is uncertain, but I am quite strong and active and may live eight years longer and in that case I would be paying about \$3500 that my daughter should get \$1000.

If this money had been put into a savings bank at a low rate of interest it would be worth \$5000.

Do life insurance companies deserve to live when such oppressions are even possible?

Can you advise me of any way this matter can be fairly adjusted when the company positively refuses to lower the rate?

In replying—while I could not offer a remedy—I felt that perhaps my correspondent might get some satisfaction in learning where the error lay and that at least there would be a cessation of worry over an irremediable situation. I endeavored to point out that the conditions were not due to insurance under private management and that they were due to the choice of a Term policy.

It will be noted from my correspondent's letter that he was about sixty years old when he applied for this policy. No life insurance president ever gave a man worse advice than did this one, but the statement is credible to me, for the president mentioned had devoted his life to "cheap insurance," his company was first a "mutual

## Less Drugs—More Bran

Doctors, nowadays, you know, depend on diet more than drugs. To folks who need laxatives they say, "Eat bran."

Fine foods clog the system—bran offsets them.

Nearly everybody would feel better, fitter, happier if they started days on bran.

In Pettijohn's the bran is hidden in a luxury dish. You'll enjoy it, and enjoy its effects. Try it for a week.

**Pettijohn's**

**Rolled Wheat—25% Bran**

A breakfast dainty whose flavory flakes hide 25 per cent of bran.

Also Pettijohn's Flour—75 per cent fine patent flour, 25 per cent bran. Use like Graham flour in any recipe. (3045)

aid association," then an assessment hat-passer; then, as difficulties increased, a "stipulated premium" company, and finally a legal reserve company. That president succeeded in keeping ahead of the failures in which he involved thousands of persons thru his claims that he could furnish life insurance at less money than the legal reserve companies could. He did furnish it to those who died early.

But, as I understand this case, my correspondent's policy is the usual Term policy, procurable from any legal reserve company, and it seems to have been secured at about the time this former assessment concern went to the reserve system. I explained briefly to my correspondent that his difficulties were wholly due "to the fact that you are insured under a Term policy, the premium for which is so low it provides only enough reserve to carry it thru the term for which it is written—and that term is not your natural life."

I endeavored to show that as each term expired, the renewal of the policy would have to be based on the rating for his added age, and that no provision was being made for accumulating a reserve to hold these increasing rates down. I then wrote:

If, instead of taking a Term policy when you did, you had secured an Ordinary Life policy, while you would have had to pay a much higher premium, it would have been level (same amount) thruout your entire life because behind it, out of the larger premium you were paying every year there would have accumulated a reserve, the effect of which would have been to neutralize the increasing hazard of death due to your steadily advancing age. Under your Term policy, as you have been paying but little more than the actual cost, it has been going almost as fast as paid in. It is not a question of private management or Government operation; it is a pure question of mathematics.

It is all very unsatisfying and I was not unprepared when in a subsequent letter my correspondent admitted that he regarded my views as disingenuous, that I had cleverly met his objections and, in the interest of the companies, concealed the real situation, construing what I had written as "neat apologies for the unfair and unjust discriminations." He thought, however, that I had made one or two important statements easily open to refutation. Can it be said, he inquires, that he has paid a low rate, accumulating nothing to the credit of the policy, when in twenty years on \$1000 of insurance he had paid premiums aggregating \$1365? He then writes:

I am insured in the [naming one of the oldest and best legal reserve companies in the country] since 1865 and have paid less than \$900 on each \$1000 insurance and my annual premium is only \$6.20, while the — requires me to pay \$255 premium annually. Is not the unfairness, not to say the robbery, easily perceptible?

This merely confirms the truth of a statement made in my reply respecting the taking of an Ordinary Life as compared with a Term policy. In 1865 my correspondent, now eighty, was fifty-four years younger, that is, twenty-six years old. His premium under an Ordinary Life policy (including the reserve) was very much lower than the rate in the same company at age sixty for a Term policy (with virtually no provision for a reserve). The annual premium on his Ordinary Life policy has remained at the same amount it was when he went in, savings made on account of expenses and interest earnings have resulted in dividends, which decreased the amount of premium payable annually and there now stands to the credit of that policy hundreds of dollars per \$1000 in accumulated reserve.

Had my correspondent consulted a representative of this company at the time he was taking the Term policy he would have been advised not to do it. No life insurance man of the orthodox school will write Term insurance except to accommodate some emergency to be covered by his client

# Have Prettier Clothes for Less Money

## A quick glance at Government Financing

**T**O raise money for its war obligations, the Government has used four different methods of borrowing.

- 1—*Liberty Bonds*—redeemable, according to the terms of each issue, at end of 10 to 30 years.
- 2—*Notes*—differing from Bonds merely in length of time to run. A short term note is, in effect, a short term bond.
- 3—*Certificates of Indebtedness*—issued by the Government for temporary financing. For example: In anticipation of revenue from the sale of Liberty Bonds and from taxes.
- 4—*War Saving Stamps*—redeemable at end of five years after purchase.

During the Victory Liberty Loan, the National City Company, through local committees, again gives to the Government the services of a large part of its bond distributing organization.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

# A TALK TO INVESTORS

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

## The Victory Loan

**T**HE terms of the Victory Loan were announced on April 14 and banking comment was generally favorable. The issue is for \$4,500,000,000, oversubscriptions are to be refused and full allotments will be made on subscriptions not in excess of \$10,000. There are two issues in effect: one bearing 4½ per cent interest, exempt from state and local taxes (except estate and inheritance taxes) and from normal federal income taxes; another, bearing 3½ per cent interest, exempt from all federal, state and local taxes, except estate and inheritance taxes. While the notes will mature in four years, the Government reserves the right to redeem them in three years. Both series will be dated May 20, 1919, with interest payable December 15, 1919, and on June 15 and December 15 thereafter.

With all issues of Liberty Bonds selling at discounts ranging from a point for the First 3½s to nearly 6½ points for the Fourth 4½s, it was obvious that the Treasury Department would have to adopt new features in order that the issue would be a success. While the element of patriotism is still to be considered an important factor, many people seem to view post-war financing with less enthusiasm than they did war financing. It is a mistake to take that view, for if the Government cannot borrow money it will secure it by taxation. But there is a business side to the issuance of short term securities. For the very wealthy individual, absolute tax exemption and a yield of 3½ per cent is preferable to a much higher yield when income surtaxes amount to as high as 65 per cent of net income aside from a normal tax on 1919 income amounting to 4 per cent on the first \$4000 and 8 per cent on the balance above that figure. A return of 3½ per cent is small in itself, but it is attractive to the large investor because of the practically total tax exemption.

The bonds are suitable, from the strict investment standpoint, for business men having funds to invest which are to be employed again after a short time or for funds awaiting investment at the opportune time in long term issues. The absolute safety and short maturity of the bonds should be a practical guarantee that the bonds will sell at or near par and not be subject to wide fluctuations.

## Stocks and the Income Tax

The war revenue law has created a situation of which investors should not fail to take advantage. The income received from bonds in 1918 was subject to a normal tax of 6 per cent for the first \$4000 in excess of credits and 12 per cent on the balance in excess of that figure. The tax on 1919 income is 4 per cent and 8 per cent respectively. In many cases the corporation has agreed to assume 2 per cent of the tax by virtue of an agreement contained in mortgage indentures. Aside from this, there is a surtax which graduates from 1 per cent on the amount of income between \$5000 and \$6000 to 65 per cent on the net income exceeding \$1,000,000. The income from stocks is not subject to the normal tax, as that is paid by the corporation and deducted as a charge prior to dividends.

Investors will naturally ask why they should purchase bonds when they can save income taxes by investing in stocks. The most important reason is that stocks fluctuate in value more or less, aside from the fact that the margin of safety on bonds is greater than on stocks. However, the average business man is not deterred by conservatism from placing a part of his savings in good preferred stocks which have a dividend record for regularity over a period of years. Preferred stocks are a happy medium between bonds yielding less than 6 per cent and stocks yielding above 8.

## Peace Stocks

We are in a period of reconstruction when those concerns which have made millions in purely war business will have to readjust their affairs to meet peace needs. Those concerns which have spent millions in plant and machinery used to manufacture shells or ammunition will either have to adapt their machinery to peace needs or else charge off the entire cost of the machinery as a loss and buy new. Such a problem confronts the smaller concerns manufacturing auto-trucks, steel, munitions, ships, aeroplanes and aeroplane parts, chemicals and acids, etc.

Those concerns which will profit by the war's end are those whose product will be in demand by reason of peace conditions. Among those are concerns manufacturing fertilizers, foodstuffs, leather, shoes, agricultural implements, sugar, syrups; shipping concerns, chain store organizations, building material companies, road building ingredient concerns, etc. Many of these companies have securities which are regarded as standard issues and which possess a good market on the New York Stock Exchange.

## The Chicago, Milwaukee & St. Paul Railway

The St. Paul was for years regarded as one of the best railroads in the country, its preferred and common stocks ranking high in the field of investment. The St. Paul's financial position was ordinarily so good that it had millions of dollars out in Wall Street on call loans. But about the beginning of the war in Europe the cost of money rose so, along with wages, material, supplies and taxes, without a proportionate increase in rates, that instead of being able to sell stock the company had to resort to bond issues. The gradual increase in fixed charges along with the expense of carrying the load of the Puget Sound division affected the credit of the company very materially.

At the beginning of 1918 the Government took over the St. Paul along with the other railroads of the country. While the "standard return," or compensation which is due the company for Government operation, appeared to be sufficient to leave a balance of about 2 per cent on the common stock after allowing the usual 7 per cent on the \$115,845,800 preferred, the company recently made a statement to the effect that under Government operation, the adjustment of the accounts between the carrier and the Government resulted in a balance for the company equivalent to only 52.5 per cent on the preferred stock, instead of 2 for the common after taking care of the preferred.

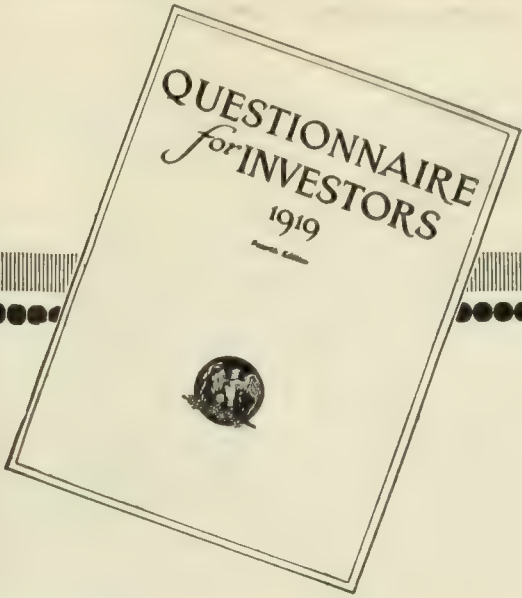

Here is a case of a preferred stock which was held by the most conservative investors being reduced to the category of the speculative issue. Is the fault that of Government operation, of war conditions, or what?

THE RACE FOR RUBBER  
(Continued from page 146)

Indies. To protect this monopoly an act has been passed preventing foreigners from buying more land in the Malay Peninsula. The Japanese have acquired there 50,000 acres, on which they are growing more than a million dollars' worth of rubber a year. The British *Tropical Life* says of the American invasion: "As America is so extremely wealthy Uncle Sam can well afford to continue to buy our rubber as he has been doing instead of coming in to produce rubber to reduce his competition as a buyer in the world's market." The Malaya estates calculate to pay a dividend of 20 per cent on the investment with rubber selling at 30 cents a pound and every two cents additional on the price brings a further 3½ per cent dividend. The output is restricted by the Rubber Growers' Association so as to keep the price up to 50-70 cents. When the plantations first came into bearing in 1910 rubber was bringing nearly \$3 a pound and since it can be produced at less than 30 cents a pound we can imagine the profits of the early birds.

The fact that the world's rubber trade was in the control of Great Britain caused America great anxiety and financial loss in the early part of the war when the British Government, suspecting—not without reason—that some American rubber goods were getting into Germany thru neutral nations, suddenly shut off our supply. This threatened to kill the fourth largest of our industries and it was only by the submission of American rubber dealers to the closest supervision and restriction by the British authorities that they were allowed to continue their business. Sir Francis Hopwood, in laying down these regulations, gave emphatic warning "that in case any manufacturer, importer or dealer came under suspicion his permits should be immediately revoked. Reinstatement will be slow and difficult. The British Government will cancel first and investigate afterward." Of course the British had a right to say under what conditions they should sell their rubber and we cannot blame them for taking such precautions to prevent its getting to their enemies, but it placed the United States in a humiliating position and if we had not been in sympathy with their side it would have aroused more resentment than it did. But it made evident the desirability of having at least part of our supply under our own control and, if possible, within our own country. Rubber is not rare in nature, for it is contained in almost every milky juice. Every boy knows that he can get a self-feeding mucilage brush by cutting off a milkweed stalk. The only native source so far utilized is the guayule, which grows wild on the deserts of the Mexican and the American border. The plant was discovered in 1852 by Dr. J. M. Bigelow near Escondido Creek, Texas. Professor Asa Gray described it and named it *Parthenium argentatum*, or the silver Pallas. When chopped up and macerated guayule gives a satisfactory quality of caoutchouc in profitable amounts. In 1911 seven thousand tons of guayule were imported from Mexico; in 1917 only seventeen hundred tons. Why this falling off? Because the eager exploiters had killed the goose that laid the golden egg, or in plain language, pulled up the plant by the roots. Now guayule is being cultivated and is reaped instead of being uprooted. Experiments at the Tucson laboratory have recently removed the difficulty of getting the seed to germinate under cultivation. This seems the most promising of the home-grown plants and, until artificial rubber can be made profitable, gives us the only chance of being in part independent of overseas supply.

How to Test the Safety of Any Investment

Every Investor should obtain and study the "Questionnaire for Investors."

In this time of peace and readjustment there are three purposes for which the prudent and far-sighted investor should use it as a guide:

- (1) To assist in selecting the most desirable investment for funds now available.
- (2) To obtain valuable information for future reference.
- (3) To test the stability of investments made in the past.

It may save you many dollars to read this free booklet before placing your funds.

While our supply lasts, copy of the Questionnaire will be mailed without obligation on receipt of application. In order to aid us to give you the most intelligent service, write for this invaluable book today and mention by number which purpose especially interests you. Ask for

## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

Test your knowledge of rhetoric and grammar  
by preparing answers to the following questions  
based upon this number of *The Independent*.

##### I. General Composition.

1. Which titles in this number of *The Independent* are best? Why? Summarize the rules for writing a good title. Write ten suitable titles for school composition, based on topics of current interest.
2. Prove that the writer of any article had in mind an outline before he wrote.
3. Point out at least two different methods of narration.
4. Which item in *The Story of the Week* presents the best material for a short story? Explain why the material is best.
5. Which item in *The Story of the Week* presents the best material for a novel? Why?
6. What events of current interest might be told in the form of dramatic tragedy? Give brief suggestions for five acts.
7. What events of current interest might be told in the form of a play like "The Merchant of Venice" or "As you Like It"? Give brief suggestions for five acts.
8. What is the general plan of most of the articles in *The Story of the Week*? Prepare a list of rules for the writing of news articles. Write a short news article concerning any recent event in your school.
9. Is the general purpose of the editorial articles destructive, constructive, or instructive? What type of editorial article is most helpful? Write a short editorial article suitable for your school paper.
10. Show how this number of *The Independent* uses pictures as an aid to exposition.
11. Study the conclusions to the special articles. Which conclusions are best? Why?
12. Draw from this number of *The Independent* five suitable propositions for debate.
13. Suggest methods of inductive proof for any proposition. Of deductive proof.
14. Distinguish between a question of right and a question of expediency. Draw illustrations from matters of current interest.
15. Distinguish actuality, probability and possibility. Draw illustrations from matters of current interest.
16. Explain how you might employ the following lines of proof in upholding the propositions you named: (a) Appeal to authority; (b) Argument from analogy; (c) Argument from sign; (d) Direct evidence; (e) Indirect evidence.

##### II. Paragraph Construction.

1. Point out the topic sentences of all the paragraphs in *The Story of the Week*.
2. Point out two examples of transition paragraphs.
3. Point out a summarizing paragraph.
4. Point out examples of paragraphs developed by any of the following methods: (a) Specific Instance; (b) Comparison; (c) Contrast; (d) Repetition; (e) Details; (f) Cause and Effect; (g) Negative Statement.

##### III. Principles of Rhetoric.

1. From *The Story of the Week* draw material for writing the following: (a) An example of Climax; (b) An example of Antithesis; (c) Direct Narration; (d) Indirect Narration; (e) A Simile; (f) A Metaphor.
2. Prove that the first editorial article has, or does not have (a) Unity; (b) Proportion; (c) Coherence; (d) Emphasis.

##### IV. Letter Writing.

1. Write a letter ordering any article advertised in *The Independent*. Write the firm's acknowledgment of your order.
2. Imagine that you took part in any recent event of importance. Write a personal letter telling of your experiences.

##### V. Vocabulary.

1. Make a list of twenty words that you think your classmates will not understand. Give the derivation and the meaning of each.
2. Give a synonym for every word in your list.

##### VI. Grammar.

1. Give the syntax of every infinitive in "Remarkable Remarks."
2. What types of sentences are illustrated in "Remarkable Remarks"?

##### VII. Punctuation.

1. Explain every mark of punctuation used in the first article in *The Story of the Week*.

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

##### I. Progress Toward Peace—"Two Parables," *Story of the Week*.

1. Study the summary of the provisions of the revised League Covenant. What changes in the Covenant have apparently been made?
2. Translate Colonel Harvey's parable into a direct argument against the League of Peace. Do the same with the editor's parable in favor of the League.
3. Set the two arguments down side by side. Which one, in your opinion, has the greatest weight?
4. Summarize the provisions for "reparation" as indicated in the news of the week.
5. How does the Council of Four propose to settle the question of the Saare valley?
6. Describe the steps which will follow after the Peace Treaty is presented to Germany for ratification.

##### II. Industrial Unrest In America—"Strikes and Rumors of Strikes," "'48-'54' and Union Recognition."

1. In what industries in the United States are the evidences of labor unrest most evident? What steps are being taken to allay this unrest?
2. Study Mr. Burleson's statement. What answer, if any, can justly be made to what he says?
3. In what respects is the Lawrence strike typical of other strikes which are now taking place in this country? In what respects is it different?
4. Do you find any evidence of a movement in this country similar to that which has resulted in the industrial agreement in Great Britain?

##### III. Italy's Need—"We Must Help Italy."

1. "Italy is regarded . . . as face to face with the most desperate crisis," etc. What is the cause of this crisis?
2. What evidences does Mr. Howland furnish of Italy's shortage of coal and of food supplies?
3. What relation do you see between Italy's economic necessity and the possibility of revolution?
4. "We should help Italy," says Mr. Howland. Why?

##### IV. America's Foreign Trade—"The World's Our Counter."

1. Quote evidence from this article to prove that the war has brought us "a very large share of the world's foreign trade."
2. What progress have we made in securing the world's markets in the following commodities: (a) chemical products, (b) machine tools, (c) coal? What other products do we produce in large quantities for export?
3. Discuss the development of our merchant marine and its relation to the development of our foreign trade.
4. What advantages and what disadvantages have we at present in the race for foreign markets?

##### V. An Experiment In State Socialism—"The People's Czar In North Dakota."

1. What are the conditions which led to the growth of the Non-partizan League in North Dakota?
2. Do the laws passed by the recent legislature in North Dakota justify us in calling present conditions in the state an experiment in state socialism?
3. Do you approve of the laws which were passed? What weaknesses, if any, do you find in the program which the legislature put thru?

##### VI. Problems in Modern Industry—"The Race for Rubber."

1. "The problem of synthetic rubber has been solved scientifically but not industrially." Summarize the facts which justify both parts of this statement.
2. Why has the rubber industry assumed such importance in the past two decades?
3. What are the chief sources of crude rubber at the present time? What new fields are being developed?
4. "The United States uses three-fourths of the world's rubber output and grows none of it." Have you any suggestions to make regarding this condition and how it can be changed?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## REMARKABLE REMARKS

**MARSHAL FOCH**—We must stay on the Rhine.

**JOHN SPARGO**—Lenin is the Treitschke of social revolt.

**PREMIER CLEMENCEAU**—I don't speak English—I speak American.

**EMERSON HOUGH**—Not statesmen, but riflemen and riders made America.

**ADMIRAL SIMS**—I have made mistakes but I am not going to tell you about them.

**G. K. CHESTERTON**—Do not talk about Labor Unrest when you mean Labor Rest.

**OPERA CONDUCTOR BODANZKY**—I see little promise for music the next twenty years.

**OTTO H. KAHN**—England, France and Italy are probably quite as democratic as we are.

**LOYD GEORGE**—Russia is a country very easy to invade and very difficult to get out of.

**MORRISON I. SWIFT**—The American people are, socially, the most ignorant people in the world.

**E. W. HOWE**—I was never so sick of anything in my life as I am of these money raising campaigns.

**W. BATESON**—Democracy is the combination of the mediocre and inferior to restrain the more able.

**GENERAL LUDENDORFF**—There is no man on God's earth who has been more slandered than the Kaiser.

**BARON GOTO**—We are interested in the establishment of a strong government in China, preferably republican.

**COUNT ILYA TOLSTOY**—A Bolshevik is a man who has no property, no good job, no money, no name, no honor.

**SOVIET COMMISSIONER OF EDUCATION LUNA CHARSKY**—If Christ were alive to-day he would be a Bolshevik.

**FLORENCE ROSE**—If we learned any lessons of thrift while the war lasted surely it was not in the matter of stockings.

**DON MARQUIS**—Submarines are not so modern as many think. Fulton and Jonah having given a great deal of thought to the matter.

**LENIN**—The simplest way to exterminate capitalism is to flood the country with notes of high value without financial guarantees of any sort.

**SENATOR SUTHERLAND**—Of course no one has ever refused the presidential nomination and if the party saw fit to nominate me I doubtless would accept.

**HERBERT S. CARRON**—Is it not true that the unpopularity of the rich is due mainly to the crank and snobbish and extravagant of rich men's wives?

**JOHN ARMSTRONG CHAMOTER**—Twenty-two years ago the New York girls had two things, bust and waist, now when I come back, so help me, they have neither.

**CHANCEY M. DEPEE**—One of the advantages of being eighty-five is that you need have no fear that any of your indiscretions of speech will ruin your political prospects.

**J. H. BARRETT**—The art of closing a sale is this: as soon as you see that the

**BOLSHEVIST LEADER ZINOVIEFF**—It could be easy to fabricate American, English and French banknotes, and thus flood the world with counterfeit money.

**LORD READING**—I am confident that the result of the conference will be to give us a victor's peace and just terms for those who have caused such illimitable suffering.

**MISS CHRISTABEL PANKHURST**—Certain people, who ought to know better, have falsely taught that the poverty or semi-poverty of the many is due to the luxurious living of the prosperous sections of the community.

## THE NEW PLAYS

**Maruzu.** Since German has been taboo on the stage French and Italian have held the field, and now the Teatro Español comes in with Spanish opera and ballet. The music is tuneful and the costumes gorgeous. (Park Theater.)

Perhaps there was a spark plug missing. *Come Along* seemed to have all the usual mechanism of musical comedy, but it showed no signs of life, not even when the Motor Corps chorus all tinkered with it at once. (Nora Bayes' Theater.)

## WHAT IS BOLSHEVISM?

Where can I obtain authentic copies of the Russian constitution and the laws promulgated by the Bolsheviks in regard to land, labor, marriage, divorce, banks, workmen's insurance, inheritance, popular education and management of industries? Also where can I get material on both sides for debate?

### VARIOUS READERS

The official documents are published in Bulletin No. 136, "Russian Documents," by the American Association for International Conciliation, 407 West 117th Street, New York.

Anti-Bolshevik literature may be obtained from the Russian Information Bureau, Woolworth Building, New York, which publishes a weekly, *Struggling Russia*, and various pamphlets such as Madame Breshkovsky's "Message to the American People" and Lebedeff's "Russian Democracy Against Bolshevik Tyranny."

Pro-Bolshevik literature can be had from the Bureau of Information of Soviet Russia, 299 Broadway, New York.

## THE FRONT—AT LAST

By MAJ. WILLIAM SINKLER MANNING

Now I am free to do, and give, and pay,  
Not stinting one for other debts I owe.  
My debts were these: To smile with friendly show

On all about, too close for other play;  
To say to all the nothings I could say,  
And miss the silence which my friends would know;

To heed the clock that ticked me to and fro  
To ill done tasks, long drawn, diluting day.

But now I am come to a wide, free space  
Of easy breath, where my straight road doth lie;

And all my debts are funded in this place  
To one debt, tho' the figures mount the sky.

My debts are one, my foe before my face—  
I shall not mind the paying when I die.

## A STEERING CHART FOR INTERNATIONAL LABOR

IT would be difficult to find a more compact and admirable statement of the reasons for attempting an international regulation of labor conditions than is set forth in the preamble of the report, elsewhere summarized, which has been presented to the conference on peace preliminaries at Paris. All the conditions which call for the creation of a League of Nations, call for this attempt to deal with the labor situation. There can be no universal peace unless international relations are broadly based on essential social justice; and probably it will generally be conceded that the preamble does not overstate the case when it says that conditions of labor exist involving such injustice, hardship and privation to large numbers of people as to produce unrest great enough to imperil the peace and harmony of the world. And inasmuch as the world is so nearly an economic unit that it is no longer possible to deal effectively with any economic matter, as, for example, trade regulations, international exchanges or money and prices, by merely national legislation, it is certain that labor conditions cannot satisfactorily be adjusted from this time forth without international coöperation.

The difficulties in the way of international coöperation, even when it proceeds thru the organization of a League of Nations, are very great. Happily the draft convention is evidence that they have been weighed and skilfully met in the provisions suggested. If it taxes the wit of man to anticipate what provocations to war can be anticipated and met by enforceable covenants, still greater is the undertaking to anticipate labor legislation satisfactory to even three or four contracting states. Very wisely, therefore, the framers of the draft convention have limited their recommendation in two ways. The clauses that they propose for insertion in the Treaty of Peace are statements of principles and of standards, and are not covenants. They are a steering chart, and not sailing orders; and the procedure to be followed by the proposed General Conference of Representatives, International Labor Office, and Commissions of Inquiry consists essentially in creating a maximum pressure of fact and of public opinion and a minimum variety of obligations enforceable thru the proposed Permanent Court of International Justice and by the plenary powers of the League. Practically the authority of the Gen-

eral Conference extends only to investigation, recommendation and "follow up." Any alleged injustice to labor found within the nations, members of the League, may be brought to the attention of the General Conference. After study and consideration of the facts, the conference may either recommend legislation to the several states, members of the League, or may propose a draft convention to the members of the League for ratification. Ratification would create an obligation equivalent to the obligations embodied in treaties. Recommendations on being received would create an obligation resting upon each state to lay the conference recommendation before proper legislative bodies. Failure so to do would ultimately be brought before the Tribunal of International Justice.

Turned into the language of popular discussion, all this means that it is proposed, first, to make the League of Nations an organ of serious and continuing attention to labor conditions, and, secondly, to bring a highly organized and focused opinion of the civilized world to bear upon the solution of industrial problems. A number of the most important problems, as we estimate them today, are involved in the propositions proposed for insertion in the Treaty of Peace, but no one can foresee which of them or what others not now pressing may be causes of conflict a generation from this time. Nor can any one foresee how the various nations will react to them when the actual attempt is made to enact legislation. The all important thing, therefore, we are confident, is to secure their recognition, to view them as subject to evolutionary, not to say revolutionary change, and hold the organs of the League ready to deal with them from year to year and from period to period as the course of events may indicate.

We can well believe that the pressure to commit the League to a creed, capitalistic, socialistic or syndicalistic, has been tremendous, and the irreconcilables of every creed will, of course, charge that the draft convention formulated is no more than a pious profession of faith. It is in fact much more. It is reasonable in assumptions, it is practical in procedure and it does, in fact, create a real power to accomplish specific undertakings. Nothing so broad-minded and nothing so promising has ever before been offered to the world as a labor program.

## THE REAL NORTH DAKOTA QUESTION

THE people of the East, and for that matter the people of the Pacific Coast also, have been slow to take notice of the adventure by their neighbors of the Northern Plains. Probably they have not found the Non-Partizan League exciting. They remember Mr. Peter Cooper's Greenback party and his interconvertible bond. They have not quite forgotten Kansas of the eighties, or

Populism, or General Coxey and his army. They expect these pre-millennial intimations from time to time.

There is, however, a real difference between the earlier radical "arousements" and the North Dakota enterprize. The earlier political artists proposed a "stunt"; the Non-Partizan League is attempting to turn the trick. For the first time in American history the entire government, legis-

lative, executive and judicial, of a commonwealth is in the hands of men who hold that a state should take over big business and run it and who have actually taken it over and are undertaking to run it.

It is this difference that sharply defines the real North Dakota question. Whether the experiment is socialistic or not is an academic question. Whether Mr. Arthur C. Townley and his lieutenants are disinterested or not is a subsidiary question. Whether the leaguers were loyal or disloyal in the war is now an historical question. The essential and practical question is: Can the Non Partizan League deliver the goods? Can it keep its promises and pay its bills? If it can, it will capture other states and organize them on the North Dakota plan. If it cannot it will go the way of the Greenbackers and the Populists.

At the present moment things do not look any too well. There is revolt within the league. The Secretary of State, the State Treasurer, the State Auditor and the Attorney General have lined up against Townley, calling him "autocratic." There is uneasiness over finances, and an accounting has been ordered. Such information as has leaked out indicates gross negligence, if not worse. A deep opposition is growing also against the league's unconcealed intention to suppress free discussion and free publication in its effort to kill opposition. The plan to authorize or suppress particular newspapers by a referendum vote is revolting to Americanism. If that is what radical democracy means radical democracy will not establish itself in any large part of the domain of the United States.

Beyond any doubt the league has drawn its real strength from a smarting sense of injustice suffered. Big business in the Northwest has done more than gouge and exploit. It has played the part of the fool. It has over-reached itself in its arrogance. The farmers have passed the endurance line and they have proved that they can, if they will, do more than make trouble. They may ruin themselves in the attempt but they can put big business out of business. If the lesson they have administered is accepted and remembered the adventure of the league will have been worth while, even if the state business enterprise breaks down. The chances are that it will, but that out of the experience will come a live-and-let-live policy that will be for the well being of all concerned.

## JAZZ AND DAZZLE

**W**HAT we are coming to in the way of costume was indicated by the Dazzle Ball given by the Chelsea Arts Club at Albert Hall, London. Four British naval officers, distinguished for their success at camouflage, had charge of designing the dresses, and the ballroom looked like the Grand Fleet with all its warpaint on ready for action. The jazz bands produced sounds that have the same effect upon the ear as this "disruptive coloration" has upon the eye.

Who would have thought a dozen years ago, when the Secessionists began to secede and the Cubists to cube, that soon all governments would be subsidizing this new form of art to the extent of millions a year? People laughed at them in those days, said they were crazy and were wasting their time, but as soon as the submarines got into action, the country called for the man who could make a dreadnaught look like "A Nude Descending a Staircase." They dipped into the future far as human eye could see—and then some. They converted sober freighters into objects that were exempt from the proscription of the Second Commandment. The submerged Hun with his eye glued to the periscope could not tell whether it was a battleship or a Post-Impressionist picture bearing down upon him. So he fired his torpedo at random and generally hit it.

The term "camouflage," now a part of all languages, originated in the French greenroom where it was applied to the actor's make-up. Now, after its brief discursion into the army and navy, it is demobilized and returns to the

toilet. But in its new and dazzling guise it may cause collisions in the ballroom as it did on the sea. In these days when dancers do the one-step, two-step, three-step and on up to eight step simultaneously to the same tune, it is becoming difficult to keep the necessary leeway and seaway. When a ship or a woman is disguised by dazzle decoration one is likely to be more than fifteen points off in judging her course.

## SUBSTITUTES FOR DRUNKENNESS

**N**O, we do not mean substitutes for drink. They can be bought at the nearest soda fountain. Very few people care for the taste of alcoholic beverages as such; most of them taste like spring tonic. The reason why the soda fountain did not long ago drive the saloons out of business among all who are slaves to their palate, is that at the saloon one could get something more than a taste; one could get a new outlook on life. In other words, one could get drunk; not necessarily intoxicated in the legs but at least exhilarated in the soul. People took to alcohol for the same reason that they did to opium, gambling, war and running off with each others' wives, because they were bored by the routine of a sober life.

The war and liquor disappear from American life simultaneously. Are we never again then to have the high excitements of intoxication? Must we be denied the emotions of war and at the same time be deprived of the pseudo-emotions which can be bought in a bottle? Will life henceforth be tame, drab and respectable? But this alarm is needless. A man must have a commonplace mind to find thrills only in spoiled grape juice. Let us find more satisfactory methods of achieving drunkenness.

Baudelaire has given us a hint. "Get drunk," he said, "but choose wine, poetry or virtue as you like." Unfortunately, he tried all three methods in turn and suffered the effects so often consequent on mixing one's drinks; unfortunately also he forgot that the after effects of poetry and virtue are more satisfactory than the after effects of wine. It requires a trifle of education, no doubt, to appreciate the fine bouquet of Browning or Emerson, just as it takes a still longer education to become an expert sampler of vintages. But any one who can read or get any one to read to him can enjoy the lilt and rhythm of a good ballad. The war song is the best emotional substitute for war; the drinking song is the best emotional substitute for drink.

Music is a still simpler method of intoxication. Buy a good phonograph and you are freed from the pull of the saloon for life. The surging waves of sound, the rippling cascades of musical laughter, the thundering emphasis of the bass notes and the sparkle and effervescence of the trills—drink deep draughts of all this and you will turn from the bottle as the symbol of dull boredom. We have seen men and women, of the type who never go out between the acts, return from the opera or concert so buoyantly that the policeman viewed them with suspicion.

The satisfactoriness of sport as a means of intoxication does not need to be pointed out to Americans; if anything, we are inclined to overdo this particular substitute. If the German knew the gridiron and the diamond he might be less wedded to the beer garden.

Poetry, music, sport: these are but three of the many popular substitutes for the least inspired method of getting the inspired feeling. Some prefer the artist's intoxication of the eye, the magic of the clean sweeping line and the rich depths of color. Some prefer the green silence of the woods or the keen arrows of the mountain air. Some prefer the romantic adventures into the unknown hinterland of knowledge which we call science. Some, as Baudelaire suggested, prefer the intoxication of virtue, the "fun of doing good." Choose as you will, but do not regret that costly and unsatisfactory type of drunkenness on which Congress has laid the strong hand of prohibition. Your choice is all the freer now that it is out of the way.

# THE MAGNA CHARTA OF LABOR

## The Solemn Proposals to the Peace Conference for the Internationalization of Labor Conditions

**W**HILE the Big Four have been struggling with the map of Europe and the responsibility, moral and financial, of Germany for the war, a commission of fifteen men has been hard at work in Paris drawing up a document that, if adopted, will make the Peace Conference without precedent in the history of the world. The commission is composed of two members each from the United States, Great Britain, France, Italy, Japan and Belgium, and one member each from Cuba, Poland and the Czechoslovak Republic. Its title is the Commission on International Labor Legislation. The American members are Mr. Samuel Gompers, president of the American Federation of Labor, and Mr. E. N. Hurley, president of the American Shipping Board. Mr. Gompers is president of the commission.

With pretty much all there was of international law back in 1914 torn up and scattered to the winds since, it is a little startling, but at the same time intensely gratifying, to read of serious, not to say solemn, proposals for "international labor legislation."

But the proposals have been actually prepared and will be presented with the unanimous—except for a minute point here and there—recommendation of the commission to the full Peace Conference.

**T**HE commission's proposals, as set forth in its report to the Conference, a copy of which has come to us from Paris, are in two parts. The first includes nine clauses which their drafters propose for insertion in the Treaty of Peace itself. We reprint them here in their entirety. If they shall become an actual part of the Treaty of Peace, a document signed by some thirty nations, including all the great ones except Russia, it will not be fanciful to look upon them as constituting the Magna Charta of Labor.

The inclusion of these clauses in the Peace Treaty would seem to commit each of the signatory nations to take steps to secure the realization of the following principles: the eight hour day; one day of rest in every seven; no child labor; guarantee of the right of the workers to organize; a living wage; equal pay for men and women for equal work; equality of treatment for foreign workers in the lands to which they emigrate; inspection, participated in by women, of labor conditions. No one of the signatory nations would find it easy—even if there was such a disposition among the leaders of its affairs—with its commitment to these principles staring it in the face, to refuse to "pursue the realization of them," as the French text has it.

The second part of the commission's proposals presents a draft convention containing provisions for the establish-

ment of a permanent organization for international labor legislation. The preamble of the draft convention is not its least significant part. It is based on the conviction that "the constitution of the League of Nations will not provide a

### LABOR'S NINE POINTS

The High Contracting Parties declare their acceptance of the following principles and engage to take all necessary steps to secure their realization in accordance with the recommendations to be made by the International Labor Conference as to their practical application:

1. In right and in fact the labor of a human being should not be treated as merchandise or an article of commerce.

2. Employers and workers should be allowed the right of association for all lawful purposes.

3. No child should be permitted to be employed in industry or commerce before the age of fourteen years in order that every child may be insured reasonable opportunities for mental and physical education.

Between the years of fourteen and eighteen young persons of either sex may only be employed on work which is not harmful to their physical development and on condition that the continuation of their technical or general education is insured.

4. Every worker has a right to a wage adequate to maintain a reasonable standard of life having regard to the civilization of his time and country.

5. Equal pay should be given to women and to men for work of equal value in quantity and quality.

6. A weekly rest comprising Sunday or its equivalent for all workers.

7. Limitation of the hours of work in industry on the basis of eight hours a day or forty-eight hours a week, subject to an exception for countries in which climatic conditions, the imperfect development of industrial organization or other special circumstances render the industrial efficiency of the workers substantially different.

The International Labor Conference will recommend a basis approximately equivalent to the above for adoption in such countries.

8. In all matters concerning their status as workers and as members of society foreign workmen lawfully admitted to any country, and their families, should be insured the same treatment as the nationals of that country.

9. All states should institute a system of inspection, in which women should take part, in order to insure the enforcement of the laws and regulations for the protection of the workers.

real solution of the troubles which have beset the world in the past, and will not even be able to eliminate the seeds of international strife, unless it provides a remedy for the industrial evils and injustices which mar the present state of society." This preamble reads as follows:

Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice;

And whereas conditions of labor exist involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperiled; and an improvement of those conditions is urgently required: as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labor supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interest of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of technical and vocational education and other measures;

Whereas also the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions in their own countries;

The High Contracting Parties, moved by sentiments of justice and humanity, as well as by the desire to secure the permanent peace of the world, agree to the following convention.

**T**HE convention provides for the creation of two bodies, an International Labor Conference, and an International Labor Office, controlled by a Governing Body. The conference will meet at least annually. It will be composed of four delegates from each nation—two appointed by the government to represent it, and two appointed by the government to represent the employers and the workers. Each nation agrees that the non-government delegates shall be nominated "in agreement with the industrial organizations . . . which are most representative of employers or work people, as the case may be, in their respective countries." The right is reserved to the conference to refuse to admit any delegate whom it does not believe to have been selected in accordance with this provision.

The voting in the conference is to be, not by countries, but by individual delegates. Each delegate will have a single vote, not each national delegation, as has generally been the case in other international gatherings in the past. This is a provision of tremendous importance. It should largely strengthen the hands of the labor representatives, since it will give labor a solid block of one-quarter of the membership of the

conference, with an even chance of swinging the majority of the government delegates to its side. In the words of the report, it is likely, especially in the future, that the government delegates will vote more often with the workers than against them.

The function of the conference will be the consideration and adoption of proposals of two sorts: those intended to be made effective thru legislation or otherwise by each government itself, and those intended to take the form of international agreements among the nations. The proposals, which will require a two thirds vote of the delegates for their adoption, will be submitted to the nation members in the form either of a recommendation for internal legislation or of a draft convention for ratification. The member nations agree that the proposals adopted by the delegates shall be submitted within one year to the national legislatures or other competent bodies of each for approval or rejection. No member nation is under obligation to take other action in relation to any proposal than to lay the recommendation before the competent authorities for consideration.

A special provision is made for the cases of such nations as the United States, which is a Federation of States, in which the authority to deal with such questions as may be the subject matter of recommendations of the conference is not an exclusive function of the national government but is divided between it and the governments of the respective states. Any such federal government may treat any draft convention which comes to it from the conference as a mere recommendation, to be dealt with as the exigencies of the specific case require. For example, if a proposal for a draft convention presented to the United States for ratification should deal with matters the right to deal with which under our governmental system is reserved to the several states, it would be obviously impossible for the United States Senate to ratify the draft convention and have it binding on each of the states of the Union. In such a case the American Government would be permitted, by the terms of the convention, to submit the recommendation to each of the state legislatures for consideration and possible action.

THE International Conference of Labor, it will be observed, is intended to be the legislative organ of the League of Nations for dealing with the problems of the world's labor. It cannot expect for some time to come actually to legislate as a Parliament or a Congress legislates for a nation. But it should be able to perform a valuable service of suggestion, counsel and coördination in two distinct fields. It will seek to make uniform among the nations of the world the legislation and the executive methods of dealing with the problems of labor. It will also seek thru the means of international treaties and agreements to improve, systematize and equalize the conditions of labor everywhere.

In addition to the legislative portion of the international machinery, the

Draft Convention proposes executive machinery. It is embodied in the International Labor Office, which is to be established at the seat of the League of Nations. The Labor Office will be under the control of a Governing Body of twenty-four members, twelve of them representatives of the governments, six elected by the delegates to the conference representing the employers, and six elected by the delegates representing the workers. Eight of the government representatives will be named by the eight nations of chief industrial importance; the other four by all the remaining nations of the League thru their delegates to the Labor Conference. The Labor Office will have a director, and a staff made up of persons of different nationalities, including women. The office will collect and distribute information on all subjects relating to the international adjustment of conditions of industrial life and labor; and will make especial investigations as ordered by the conference.

THE most important duty of the International Labor Office will be to insure the carrying out of the terms of the conventions and agreements entered into by the member nations of the League. The office will have three semi-judicial processes at its disposal, and two sanctions for the accomplishment of this vital purpose. The two sanctions are publicity and economic pressure. The three processes are investigation by the Labor Office, consideration and report by a Commission of Inquiry, and reference to the Permanent Court of International Justice of the League of Nations.

The methods of procedure will be these. Any industrial association of employers or of workers will have the right at any time to enter complaint with the Labor Office that any member nation has failed to secure within its jurisdiction the effective observance of any convention to which it has given its adherence. The governing body will thereupon give the nation in question an opportunity to make any statement it desires to make in relation to the matter. If no statement is made by the government in reply, or if the statement does not appear to the Governing Body to be adequate, it may make the complaint and the reply, if any, public.

Any nation, also, will have the right to enter complaint against any other nation if it believes that that nation is not securing the effective observance of any convention to which both nations have given their adherence. The Governing Body may, if it sees fit, refer the complaint to the government complained against for any statement that it may desire to make in reply. If no reply is made, or if the Governing Body has not deemed it best to refer the complaint for reply in the first instance, the Governing Body may apply for the appointment of a commission of enquiry. The Commission of Enquiry shall be made up from a panel made up thru the appointment by each member nation of three persons of industrial experience, one a representative of employ-

ers, one a representative of work people, and one a person of independent standing. Each Commission of Enquiry shall be composed of three persons selected from this panel by the secretary general of the League of Nations, one name being taken from each of the three categories. The enquiry commission shall make a complete investigation and study of the case and make a report of its findings. This report shall be communicated to each nation which is a party to the dispute and shall be published. Within one month after receiving the report each nation shall inform the secretary general of the League of Nations whether it proposes to accept the recommendations of the Commission of Enquiry, and, if not, whether it proposes to refer the matter to the Permanent Court of International Justice. The decision of the Permanent Court shall be final.

Both the Commission of Enquiry and the Permanent Court may indicate what measures of an economic character against a defaulting state it considers would be appropriate and justifiable for other states to adopt. In the event of any state failing within the specified time to carry out the recommendations contained in the report of the Commission of Enquiry or in the decision of the Permanent Court, any other state may take against the offending state the economic measures indicated.

HERE is the second and the more drastic and therefore the most important of the two sanctions for the observance of the agreements which may come out of the International Labor Conference. There is no compulsion involved in the whole matter, except the compulsion, voluntarily accepted by each nation, to live up to the agreements which it itself shall have made. It may seem like only a short, tentative, one might almost say timid first step that is proposed. But in reality it is almost revolutionary. If the nations of the world should agree to this careful and tentative proposal for the international treatment, on the basis of intergovernmental agreements, of the conditions of labor thruout the world, it would be one more demonstration of the distance we have gone since Germany crossed the Belgian border. It is only a little while ago that almost the whole world, outside of the more radical members of the working classes, accepted the theory that governments had no business concerning themselves with the relations between capital and labor. Now it is solemnly proposed to make this relationship not merely a matter of governmental concern, but of international agreement and action.

The Draft Covenant finally proposes that the first meeting of the International Conference shall be held in Washington, during the present year. It proposes for the consideration of the conference the following subjects:

1. Application of principle of 8 hour day or 48 hour week.
2. Question of preventing or providing against unemployment.
3. Women's employment—

(a) Before [Continued on page 195]

# THE STORY OF THE WEEK

## German Peace Plenipotentiaries

The first intention of the German Government ap-

pears to have been to send mere messengers to Versailles, to receive the draft of the Peace Treaty and convey it back to the National Assembly at Weimar for authoritative consideration. The Allies, however, let it be known that no such procedure would be permitted, but that Germany must send responsible plenipotentiaries, competent to negotiate and to speak with authority. It was accordingly announced on April 21 that Germany would send Count von Brockdorff-Rantzau, Foreign Minister; Herr Landsberg, Minister of Publicity, Art and Literature; Dr. Melchior, general manager of the Warburg Bank; Herr Leinert, President of the Prussian Assembly and of the National Soviet Congress; Herr Geisberg, Minister of Posts and Telegraphs; and Herr Scheucking. About seventy others, secretaries, counselors and assistants, will accompany them.

The entire party during their stay in France will be continually under guard and kept by physical barriers from any contact or intercourse with the public, or indeed with anybody save those officially authorized to deal with them. It was intended to deliver the text of the treaty to them a day or two after their arrival, and it was announced that President Wilson would personally address them. A day or two more would be granted to them to familiarize themselves with the treaty, and to ask for elucidation of it, tho not to enter into discussion concerning it. Then, if they were not prepared to sign it, they would be permitted to take it to Weimar for a limited time, after which they would be expected to return and sign it in the Hall of Mirrors, on a table placed on the very spot where William I of Prussia stood when, in 1871, he was proclaimed German Emperor.

It was announced on April 23 that the Allied and associated governments had informed the German Government that they would be ready to receive its plenipotentiaries at Versailles on April 28. The expectation then was that the Germans would leave Berlin on April 28 and arrive at Versailles on May 1.

## Progress on the Peace Treaty

With the exception of one or two points, the Treaty of Peace

was so nearly completed on April 17 as to seem to warrant calling the German envoys to Versailles to receive it a week later, and to warrant also the hope that it might be signed finally within a month thereafter. It was described as a voluminous document, containing between 75,000 and 100,000 words, to be written identically in English and French, but not in Ger-

## TO SIGN THE PEACE TREATY FOR GERMANY

The German Cabinet revoked its first decision to send only messengers without authority to receive the terms of peace at Versailles and appointed instead envoys with full powers, headed by Count von Brockdorff-Rantzau, Foreign Minister of the present German Government and formerly Ambassador to Vienna under the Imperial Government. The German delegation will probably submit the peace terms to popular referendum before signing the treaty

man. The Covenant of the League of Nations occupies the first place in it, followed by the military, naval and aerial provisions, reparation, responsibility for the war, the Rhine frontier, the Sarre Valley, Alsace-Lorraine, the status of Danzig as an international

port, the disposition of Schleswig-Holstein, and various other topics.

Speculation concerning Germany's action on the Peace Treaty increases as the time for such action approaches. There is a widespread belief, plausibly founded, that after some grumbling and protests she will accept it lest something worse befall her. Very positive declarations continue to be made, however, by German speakers and in the press that no treaty transcending the President's fourteen points, and certainly none surrendering the Sarre Valley or other "German territory," will be signed. Those who take these threats at their face value anticipate that the German Government will decline to accept responsibility for action, and will refer the treaty either to the Weimar Assembly or to a national plebiscite; in either of which cases it is thought that the treaty would be rejected. It was stated on April 20 that all the apurtenances for holding a plebiscite were in readiness, and that preparations had been so completely made that the voting could be held within forty-eight hours of the Government's call.

The Allied governments have been considering the course to be pursued in case of a rejection of the treaty, either by the German Ministry, the National Assembly, or a plebiscite. While no program of procedure in such case has been formally announced, it is generally understood that entry upon negotiations would be refused, that Marshal Foch would be directed to undertake military operations, and that further German territory would be occupied and German ports would also be occupied by the British fleet.

## Dispute Over the Adriatic

The hopes of speedy completion of the Peace Treaty which were ex-

prest on April 17 were quickly dashed by the development of a serious controversy over the disposition of the former Hungarian city of Fiume and of the Dalmatian coast and islands—practically, the control of the Adriatic Sea. Fiume and much of the coast are claimed by the Yugoslavs, as necessary to their newly-organized state for a free outlet to the sea, and also because of the large Yugoslav element in the population. But they are also claimed by Italy, on historic grounds, on the ground of considerable Italian population, and also on the ground that they were promised to Italy by France, Great Britain and Russia by a secret treaty made in London just before Italy's entrance into the war. Fiume, however, was not assigned to Italy by the Pact of London.

There was at first a proposal to refer the dispute to President Wilson for adjudication, but after some hearings and discussions he gave up the attempt, and even absented himself

Harding in Brooklyn Daily Eagle

"DASSEN'T SPANK ME NOW!"

from meetings at which the problem was discussed. From other meetings the Italian Prime Minister absented himself. The latter declared that the matter must be decided before he could return to Rome to meet Parliament at its reassembling, the date of which has now been postponed to May 6, and there were strong intimations from semi-official sources that Italy would decline to become a party to the peace treaty unless her demands were granted.

President Wilson finally issued a statement in which he set forth his view of the Adriatic problem, and appealed to the Italian people to accord justice to the Yugoslavs. We reprint the statement on another page.

**Standing by France** Much speculation and controversy arose over the report that President Wilson had given some sort of guarantees to France of support and aid in case she were again attacked by Germany. France, it was explained, regarded herself as peculiarly exposed to such attack, and was not satisfied that the Covenant of the League of Nations, or any other provision of the Treaty of Peace, would assure her adequate protection; and therefore she sought a special agreement to that effect with America and Great Britain.

Great Britain could, of course, make such a treaty secretly. But for America to do so would be impossible. The President could not make such a treaty without the coöperation of the Senate, and it would thus have to be made public; and this country could not actually engage in war for the aid of France without action by both Houses of Congress.

It was explained on April 22 that, in addition to the stipulations in the Covenant of the League of Na-

tions, the British Government had made a special agreement with France to the effect that if Germany should at any time violate the terms of the Peace Treaty by sending troops across the Rhine, to the menace of France, British forces would be sent immediately to the continent for the support and protection of France. It was stated that President Wilson had promised to bring the matter to the attention of the United States Senate and to request it to approve a treaty embodying an agreement similar to that which Great Britain had made. In doing this, it was pointed out, the President would be acting in strict accord with constitutional principles, while in acting favorably upon his request the Senate would merely be providing for the enforcement and lasting maintenance of the treaty of peace and forbidding its ever being regarded as only a "scrap of paper."

**A Polish Corridor** The transportation of the Polish army from France to Poland was auspiciously begun, the route being by rail from Coblenz across Germany. The first detachment of Polish troops, under General Heller, arrived safely at Warsaw on April 22. It is assumed that this repatriation of Polish troops will materially strengthen the new Polish Government, against both threatened domestic disturbances and the external attacks by Ukrainians and others which are actually being made.

The demand of Poland for a portion of West Prussia and the port of Danzig is apparently not to be granted. It was intimated with authority on April 19 that Poland would have merely a "corridor," the width of which was not stated, down the Vistula Valley to Danzig, and that the latter city instead of being given to Poland would be in-

ternationalized. This disposition of the question gave satisfaction to neither Prussia nor Poland, tho it seemed to be the best that the Supreme Council could agree upon.

**The Rise and Fall of Soviets** The attempt to establish a Soviet government at Munich and throught Bavaria was continued with much violence, but not with increasing success. A considerable battle occurred between the Soviet forces and the troops of the Socialist government on April 18 near Freising, which was costly to both sides but the more so to the Soviet. The next day large detachments of troops from Wuerttemberg and other parts of Germany arrived near Munich, to assist the Bavarian Government. On April 21 the city of Lindau, the most important stronghold of the Soviet or Commune in Bavaria after Munich, was captured by the government troops. Meantime the Soviet régime in Munich itself collapsed, the Hoffmann Ministry, of the Socialist Government, resumed its functions, and government troops prepared to occupy the city and complete its restoration to unity with the general German Government.

While thus the Soviet system seemed to be losing in Bavaria, its various fortunes elsewhere were reported. The government of Bela Kun and his fellow Communists at Budapest was seriously challenged, Rumanian troops aiding the Hungarian Republicans in pressure against them, until on April 22 it was announced that the Soviet had been overthrown. This result was largely due to the excesses of the Soviet in arresting all clergymen of all religious faiths, and to the desertion of a very large detachment of Soviet troops to the Rumanian side.

Control of Vienna was assumed, without violence, by a Soldiers' Council on April 18, and a communist regime was established. The Allies intimated that if serious disorder occurred, food supplies would be withheld, but no occasion arose for such action. The next day the government reasserted itself, and the success of the Communist system seemed dubious.

Even Turkey felt the influence of Bolshevism. On April 22 it was reported that a revolution had occurred at Constantinople and that a Soviet government had been proclaimed.

**The War in Russia** Mixed conditions continue to prevail in Russia, tho with hopeful progress toward order and stability in certain quarters. The anti-Bolshevist government at Omsk, Siberia, is not only firmly established and extending its jurisdiction, but it also seems to be rehabilitating the country in a most gratifying state of prosperity. These circumstances have led to the proposal that the Allies shall recognize it as the actual government of all Russia outside the regions controlled by the Bolsheviks; a proposal in which, however, other Russian governments might not concur.

Meantime military operations are vigorously preste in various quarters, generally with results unfavorable to

## THE MAN OF THE HOUR IN RUSSIA

Admiral Kolchak is the supreme head of the Omsk government and commander-in-chief of the Russian armies which have driven the Bolsheviks out of Siberia and back to the Volga River. The photograph was taken outside one of the soldier barracks in Omsk

the Bolshevik forces. The Omsk government, headed by Admiral Kolchak, has pushed its formidable army westward, with frequent victories and captures of troops, arms and supplies, until it now controls nearly all the vast regions east of the Volga River. On April 22 this army was reported to be moving on a front of 400 miles, its center being on the Kama River within 100 miles of the Volga. Despite intermittent talk of withdrawal, the American and Allied forces in the Archangel region are making steady and substantial progress. From April 19 to 22 successive victories and advances of many miles were reported. At latest accounts they were within easy striking distance of Lake Onega, which is connected by a chain of lakes and canals with Petrograd. General Pershing has sent a personal message of encouragement to the American troops, urging them to maintain their morale and promising them relief.

Beside these two campaigns, the chief parts of which are conducted by anti-Bolshevik Russians, two others are in progress on the part of governments now separated from the Russian. One is at the south, directed by the Ukrainians under General Petliura. On April 20 it was announced that a Bolshevik army of more than 20,000 men, with large supplies of arms and munitions, had surrendered to General Petliura in the region north of Kief, near the junction of the rivers Pripiet and Dnieper. Further east the Kuban and other Cossacks were also pressing the Bolshevik forces hard. Meantime at the west the Poles were active. Encouraged by the return of their troops from France, they captured from the Bolsheviks the important city and railway center of Vilna and the railway line from that place south to Lida. This advance of the Poles was recognized to be a severe blow to the Bolsheviks. At the same

time it brought the Poles and the Ukrainians almost within striking distance of each other and suggested danger of a conflict between them in that region. They are and have long been fighting each other in Galicia, where the important city of Lemberg is the chief point of contention between them, and where on April 22 the Poles were reported to have broken thru the Ukrainian front.

The work of repatriating the 500,000 Russian prisoners of war in Germany has now been undertaken under the direction of the Americans and Allies. These men, who are chiefly in the Rhine districts of Germany, are being forwarded to Russia in small detachments, in the hope that thus they will be less likely to join the Bolsheviks than they would if they moved in a great body.

Reaction against some of the more extreme measures of the Bolshevik Soviets is reported from various parts of Russia. In at least one province popular revulsion has compelled suspension and prospective repeal of the law providing for the registration and "nationalization" of women.

**Montenegro Now Serbian** A dispatch from Podgoritzza on April 23 reported that three days before the independent kingdom of Montenegro had ceased to exist, the National Assembly having transferred supreme power to the Serbian Governor, thus completing the union of Montenegro with Serbia. This action means the reunion of states which centuries ago were one, the little kingdoms of the Black Mountain having been formed by a few resolute Serbians who fled thither and maintained their independence after the Serbian Empire of Dushan and Lazar had been conquered by the Turks.

**Japan as Successor to Germany** When the Adriatic question was laid aside, it was succeeded by another scarcely less puzzling. This was the question of Japanese rights and privileges in the Chinese province of Shan-Tung.

It will be remembered that before the war Germany held the city and district of Kiao-Chau and enjoyed something like a suzerainty over the province. Japan on entering the war gave her first and chief attention to the capture of Kiao-Chau and the expulsion of German power. There was a secret agreement between her and the Allies concerning her enjoyment of some measure of succession to those German privileges, and she now seems inclined to insist upon the fulfillment of that compact, while others hold that, like the Italian compact, it should be abrogated. Japan is understood to be the more insistent upon this concession because of her inability to secure the adoption of a race equality provision in the Covenant of the League of Nations.

**The March of Woman Suffrage** If the next Presidential election were to be held next week, 15,500,000 women would be entitled to vote for President. This is almost exactly 3,000,000 votes less than were actually cast in the last Presidential election. The latest state to add to the number of possible voters for President is Iowa. It is the seventh state within three months to grant the Presidential suffrage to women. The others are Indiana, Maine, Minnesota, Missouri, Wisconsin and Tennessee. In Vermont, also, the Legislature voted to permit women to vote for President, but the resolution was vetoed by the Governor. The veto, however, is under challenge. There is now but one state west of

## SENDING AN EXPLORER TO RUSSIA

Dr. Fridtjof Nansen, whose North Pole expedition in 1893 reached a higher latitude than any previous attempt, has been appointed by the Allied powers to head a relief commission in northern Russia. Dr. Nansen is best known as an explorer, but he has also been professor of zoology in Christiania University and Minister for Norway at the Court of St. James.

the Mississippi River, New Mexico—in which Presidential suffrage for women is not a fact. Maine and Vermont have made a break in the ranks of New England conservatism; and Missouri and Tennessee have proved that the solidarity of the South against the equality of women is not impregnable.

When Congress meets, there will be present delegations from twenty-nine states in which women have one of three forms of suffrage: equal suffrage, existing in fifteen states; Presidential suffrage, in twelve states; and primary suffrage, in two states. The outlook for the constitutional suffrage amendment ought to be definitely improved by the recent additions to the list of suffrage states.

**Flights of Fancy** These are stirring days in aviation. It was only sixteen years ago that the Wright brothers startled the world with their first successful test of an aeroplane flying machine at Kitty Hawk, North Carolina. Today we take aeroplanes so much for granted that we use an air mail service between half a dozen cities and a delegation of mine owners recently in New York bought six planes to be used in transporting the ore from their mines.

The first non-stop airplane flight from Chicago to New York was made on April 19 by an American army aviator, Captain E. F. White, who flew over 700 miles in six hours and fifty minutes. He used a standard army plane of the De Haviland Four type equipped with a 400 horse power Liberty motor. When he ascended from the Ashburn Aviation Field in Chicago Captain White circled to a height of over 10,000 feet and did not go below that level during the entire flight. He followed the route of the New York Central Railroad most of the way; various cities along the course telegraphed the news as he passed so that when the dark blue plane circled over New York and landed on the army aviation field at Mineola, Long Island, there was a group of officers waiting to congratulate him.

Captain White's success gave added stimulus to the numerous plans for an

early Transatlantic flight. There are aviators on both sides of the Atlantic waiting only for favorable weather conditions to try their luck. In London nine entries have been made in a contest opened by the *Daily Mail* which offers a prize of \$50,000 for the first successful flight. One of the contestants, Major J. C. P. Wood, started on April 18 but fell into the Irish Sea near Holyhead after only a few hours' flight.

The two most promising candidates for the *Daily Mail* prize are F. P. Raynham, a veteran British aviator, and Harry G. Hawker, the Australian, who holds the world's altitude record. Both aviators are at St. Johns, Newfoundland, with their planes, their start postponed from day to day by unfavorable weather. Hawker has a Sopwith biplane with a 375 horse power engine and equipped with a wireless signaling set. He has been making practise flights from Newfoundland for some weeks. The Sopwith experts have taken off the paint from all the wires about the plane as the results of experiments showing that polished wires offer less wind resistance, and Hawker has said that he hopes to gain an extra half mile an hour as the result of the change. Captain Raynham's machine is a Martinsyde biplane fairly similar in power and speed to the Sopwith. The aviators hoped at first to make it a real race by starting simultaneously, but it was later

decided that each should use his own judgment in choosing the best weather conditions. The Sopwith machine is to drop its under carriage into the sea soon after it starts to reduce its weight and wind resistance. It also carries a life boat and drinking water, chocolate, bouillon cubes and honey.

The United States Navy has four seaplanes at Rockaway preparing to fly across the Atlantic in May. They are big flying boats, known respectively as "NC-1," "2," "3" and "4," each equipped with wireless apparatus and capable of carrying about 11,000 pounds of gasoline, enough for an eighteen hour flight. The proposed flight of these planes is from Newfoundland by way of the Azores where a stop would be made to replenish the gasoline tanks. The "NC-2" has made a maximum speed of ninety-five miles an hour.

**The Telephone Girls Win** The strike of 20,000 telephone girls in New England came to an end with a complete victory for the workers. It is true that they did not get all that they demanded in the way of wage increase, but they did gain their point as to the method by which the dispute should be adjusted. Postmaster General Burleson was obliged to recede from his original stand that the demands of the operators must be presented to the general manager of the local telephone company, by whom they would be referred to the Wire Control Board in New York and thence to the department at Washington. The operators always insisted upon their right to deal directly with some representative of the Post Office Department who had full power to take definite action upon their demands.

They refused to deal with Mr. Driver, the local general manager, unless he were first given authority to give them a definite reply and to enter into a binding agreement with them. Mr. Burleson complained that it was impossible for the department to consider the workers' demands, since they refused to place them officially before the official designated by the department to receive them in the first instance.

Subsequently the Postmaster Gen-

READY FOR A TRANSATLANTIC FLIGHT

Harry Hawker, British aviator, holds the world's altitude record and the British Michelin Prize of 1912 for the longest continuous flight, and his next ambition is to be the first aviator to fly across the Atlantic. There are several aviators, both British and American, ready to try the flight soon: Hawker is to start from St. John's, Newfoundland, in a Sopwith two-seater biplane with a 375 H.P. engine. The lower photograph shows Hawker making a practise flight in a Sopwith plane; the boat-shaped fuselage supports it in the water.

## CUTTING DOWN THE TREE TO GET THE FRUIT

It makes it easy picking for a while, but what will they do next season?

eral attempted to get around this difficulty by acting himself as the representative of the workers' organizations and presenting their demands to Mr. Driver for them, tho of course without their request or permission. But even this attempt to follow out the technical requirements of the department in the face of the refusal of the workers to comply with those requirements themselves promised no result.

Meanwhile New England was without telephone service. Meanwhile, also, various public officials of Massachusetts sought to bring about a solution of the difficulty. The Massachusetts Senate adopted a resolution requesting the Secretary to the President to cable to President Wilson asking him to direct the Postmaster General to authorize Mr. Driver to act in the case with full authority. The mayor of Boston, Mr. Andrew J. Peters, went himself to Washington to urge the Postmaster General to bring the strike to an end by direct negotiation with the representatives of the strikers. Mayor Peters's mission was ultimately successful. The First Assistant Postmaster General, Mr. J. C. Koons, was sent to Boston as a plenipotentiary to deal directly with the union leaders. On the arrival of Mr. Koons and Mayor Peters in Boston, only a short period of negotiation was necessary to bring about agreement. The result was a compromise. The operators had asked a raising of the maximum wage to \$22 a week; they secured an advance to \$19 a week. They secured the advance which they asked for in the rate of pay of beginners from \$8 to \$10 a week. They did not gain the point which they had demanded, that the maximum rate of pay should be reached by an operator after four years of service instead of seven as at present. The men workers who were also on strike received an advance in wages which was a compromise between those which they had been receiving and the rates which they demanded.

Thus comes to an end a strike which ought never to have occurred. It was made necessary by the refusal of the Postmaster General to agree to the contention of the workers that they

should be allowed to negotiate directly with some one with authority to give a definite and binding response. Mr. Burleson was finally compelled by the force of public opinion and by the justice of the workers' demand to recede from his position. The outcome of the strike furnishes an interesting commentary on the statement of Mr. Burleson that "a strike on the part of employees working for the Government is not permissible." For the workers not only struck but by so doing forced Mr. Burleson to grant the fundamental contention for which they struck. The incident will do nothing to enhance Mr. Burleson's already damaged reputation as an intelligent and enlightened public administrator.

## The Price of Bread

Mr. Julius H. Barnes, president of the Federal Grain Corporation, the commercial agency for carrying out the Government's policies in relation to wheat and the maintenance of its price to the farmer, has been appointed by the President as wheat director of the United States. Mr. Barnes, on assuming this new office, in which he will be responsible only to the President, ex-

prest the belief that it would be a long time before the five-cent loaf of bread of pre-war times would return. We must continue to feed the world, he declared, for the remainder of this year and a good part of the next, or until the other wheat producing countries of the world are again producing their accustomed crops. The methods by which the Government will set about the resale of the vast quantities of wheat which it will acquire in pursuance of the adopted policy of upholding the guaranteed price to the producer have not yet been determined upon. It will be impossible to determine definitely this resale policy until all the facts in regard to the size of the current crops both here and abroad are known. But, Mr. Barnes declared, there are three foundation principles which will be observed in determining the governmental policy. First, the farmer who produces the wheat must be assured of the receipt of the proper and just portion of the guaranteed price; second, if there should be a surplus production of wheat in the United States and in the world, the consumers of wheat products here must be assured that they will not pay more for

Post Office Dilly "Gracious! What was that whizzed by?"  
Post Office Dally "I think it was a snail."

their wheat than do foreign buyers of American wheat; third, a policy of subsidy from the National Treasury in order to give the farmer the guaranteed price for his wheat would be unsound.

In referring to the conditions in the world which will have an influence upon the wheat situation for the United States, which last year produced the second largest wheat crop in its history and this year should, un-

less dire disaster comes, exceed all records, Mr. Barnes said:

Five ravaging years have created a world food position unparalleled. It cannot be remedied at once. We cannot build a wall around our own fortunate country and refuse to share our plenty with the unfortunates of Europe. American food, American shipping, American organization and American leadership under Herbert Hoover have saved a total in actual lives and in suffering that should stand in American pride beside the military record of our soldiers. War has broken down the international structure of finance, ocean

transport, commerce and distribution, affecting millions of people. The community shop, the wholesaler, the railroads that distribute and the banks that facilitate payment are gone or disorganized in the war areas. Trade revives slowly, and whether we would or not, Government aid must be extended until trade can walk upright again. It would be well for America to have a full appreciation of this.

Wheat, in Mr. Barnes's opinion, must drop to 25 per cent of its present guaranteed price before the five-cent loaf of happier days can return again.

# THE PREFERENCE OF JUSTICE OVER INTEREST

## President Wilson's Appeal to the Italian People

*Paris, April 23.*

In view of the capital importance of the questions affected, and in order to throw all possible light up what is involved in their settlement, I hope that the following statement will contribute to the final formation of opinion and to a satisfactory solution.

When Italy entered the war she entered upon the basis of a definite private understanding with Great Britain and France, now known as the Pact of London.

Since that time the whole face of circumstances has been altered. Many other powers, great and small, have entered the struggle, with no knowledge of that private understanding.

The Austro-Hungarian Empire, then the enemy of Europe, and at whose expense the Pact of London was to be kept in the event of victory, has gone to pieces and no longer exists. Not only that, but the several parts of that empire, it is agreed now by Italy and all her associates, are to be erected into independent states and associated in a league of nations, not with those who were recently our enemies, but with Italy herself and the powers that stood with Italy in the great war for liberty.

### THE LIBERTY OF NEW STATES

We are to establish their liberty as well as our own. They are to be among the smaller states whose interests are henceforth to be safeguarded as scrupulously as the interests of the most powerful states.

The war was ended, moreover, by proposing to Germany an armistice and peace which should be founded on certain clearly defined principles which set up a new order of right and justice.

Upon those principles the peace with Germany has been conceived not only, but formulated. Upon those principles it will be executed. We cannot ask the great body of powers to propose and effect peace with Austria and establish a new basis of independence and right in the states which originally constituted the Austro-Hungarian Empire and in the states of the Balkan group on principles of another kind. We must apply the same principles to the settlement of Europe in those quarters that we have applied in the peace with Germany. It was upon the explicit avowal of those principles that the initiative for peace was taken. It is upon them that the whole structure of peace must rest.

### AN OUTLET OF YUGOSLAV COMMERCE

If those principles are to be adhered to, Fiume must serve as the outlet of the commerce, not of Italy, but of the land to the north and northeast of that port—Hungary, Bohemia, Rumania and the states of the new Yugoslav group. To assign Fiume to Italy would be to create the feeling that we have deliberately put the port upon which all those countries chiefly depend for their access to the Mediterranean in the hands of a power of which it did not form an integral part, and whose sovereignty, if set up there, must inevitably seem foreign, not domestic or identified with the commercial and industrial life of the regions which the port must serve. It is for that reason, no doubt, that Fiume was not included in the Pact of London, but there definitely assigned to the Croats.

### NEED FOR ITALY'S PROTECTION REMOVED

And the reason why the line of the Pact of London swept about many of the islands of the eastern coast of the Adriatic and around the portion of the Dalmatian coast which lies most open to that sea, was not only that here and there on those islands, and here and there on that coast, there are bodies of people of Italian blood and connection, but also, and no doubt chiefly because it was felt that it was necessary for Italy to have a foot-

hold amidst the channels of the eastern Adriatic in order that she might make her own coasts safe against the naval aggression of Austria-Hungary.

But Austria-Hungary no longer exists. It is proposed that the fortifications which the Austrian Government constructed there shall be razed and permanently destroyed.

It is part also of the new plan of European order which centers in the League of Nations that the new states erected there shall accept a limitation of armaments, which puts aggression out of the question. There can be no fear of the unfair treatment of groups of Italian people there, because adequate guarantees will be given, under international sanction, of the equal and equitable treatment of all racial or national minorities.

In brief, every question associated with this settlement wears a new aspect—a new aspect given it by the very victory for right for which Italy has made the supreme sacrifice of blood and treasure. Italy, along with the four other great powers, has become one of the chief trustees of the new order which she has played so honorable a part in establishing.

And on the north and northeast her natural frontiers are completely restored along the whole sweep of the Alps from northwest to southeast to the very end of the Istrian peninsula, including all the great water sheds within which Trieste and Pola lie, and all the fair regions whose face nature has turned toward the great peninsula upon which the historic life of the Latin people has been worked out thru centuries of famous story ever since Rome was first set upon her seven hills.

Her ancient unity is restored. Her lines are extended to the great walls which are her natural defense. It is within her choice to be surrounded by friends; to exhibit to the newly liberated peoples across the Adriatic that noblest quality of greatness, magnanimity, friendly generosity, the preference of justice over interest.

The nations associated with her, the nations that know nothing of the Pact of London or of any other special understanding that lies at the beginning of this great struggle, and who have made their supreme sacrifice also in the interest not of national advantage or defense, but of the settled peace of the world, are now united with her older associates in urging her to assume a leadership which cannot be mistaken in the new order of Europe.

### AMERICA IS ITALY'S FRIEND

America is Italy's friend. Her people are drawn, millions strong, from Italy's own fair countrysides. She is linked in blood as well as in affection with the Italian people. Such ties can never be broken, and America was privileged, by the generous commission of her associates in the war, to initiate the peace we are about to consummate—to initiate it upon terms which she had herself formulated and in which I was her spokesman.

The compulsion is upon her to square every decision she takes a part in with those principles. She can do nothing else. She trusts Italy, and in her trust believes that Italy will ask nothing of her that cannot be made unmistakably consistent with those sacred obligations.

The interests are not now in question, but the rights of peoples, of states new and old, of liberated peoples and peoples whose rulers have never accounted them worthy of a right; above all, the right of the world to peace and to such settlements of interest as shall make peace secure.

These, and these only, are the principles for which America has fought. These, and these only, are the principles upon which she can consent to make peace. Only upon these principles, she hopes and believes, will the people of Italy ask her to make peace.

# WHAT HAPPENED IN THE UKRAINE

BY EDWIN E. SLOSSON

**N**OW again as sixty-five years ago the Crimea has become a battlefield. The Allied troops driven from the Ukraine crossed the narrow neck leading to the peninsula and a few days later lost Sevastopol, where the Russians withstood a year-long siege by British, French, Italians and Turks. Nor did the Allies this time attempt to hold the field of Balaklava, where the Light Brigade died in obedience to mistaken orders. The whole Crimean campaign of 1853-6 was a mistake altho it was victorious. "We put our money on the wrong horse," said Lord Salisbury, speaking with the frankness of a British sportsman many years after.

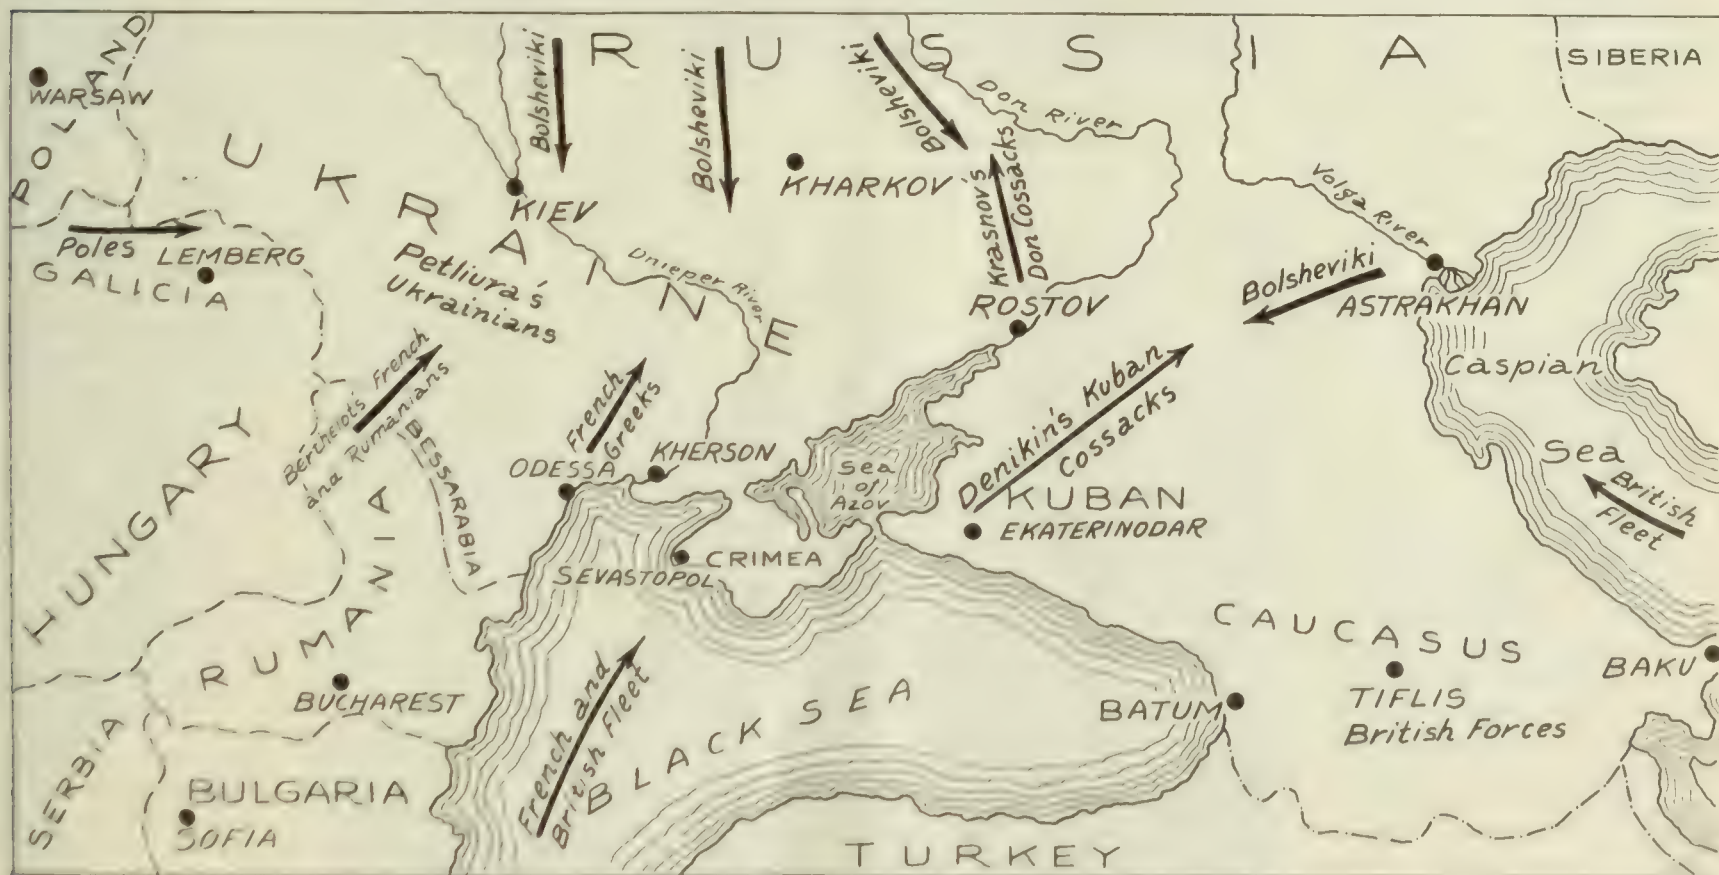

From present indications it is to be feared that the recent attempt of the French and British to enter Russia by the southern side may be classed with the former as a mistake. For it has not hurt the Bolsheviki against whom it was primarily directed. On the contrary it has helped them by removing the chief obstacle to their advance southward, the Ukraine. Between the Bolsheviki and the Black Sea live the Ukrainians, 85 per cent peasants, not factory workers like the Soviets of Petrograd, not communists like the peasants of Great Russia, but individualists, eager each to own his own land, all desirous to manage their own affairs and be free from Russian rule whether Czars, Bolsheviki or Cossacks.

The Czar's Government had tried to

crush out their spirit of nationality by prohibiting their language, closing their schools, suppressing their press. Over in Austria their brethren, the Ruthenians, were allowed more freedom, but when the Czar's armies swept over Austrian Galicia they lost these liberties for the Russian steam-roller was put into action there as it had been in the Ukraine. Their professors were kidnapped, their priests were supplanted, their papers prohibited, their libraries looted. Naturally this somewhat dampened the enthusiasm of the Ukrainians for the extension of the Czar's domain. They therefore rejoiced in the overthrow of the Czar for it seemed for a time that a genuinely democratic and federated republic might be established in which the Ukraine might secure self-government without total separation from the rest of Russia. But when the Bolsheviki came into control the Ukrainians broke away and set up their own government. This was a form of agrarian socialism, based upon peasant proprietorship. The Ukrainians, otherwise known as Little Russians, number 35,000,000 and they differ somewhat in race and language from the Great Russians or Muscovites. The Ukraine before the war produced one-third of the total Russian output of grain, five-sixths of the sugar, most of the wine and fruit, one-third of the cattle, 60 per cent of the iron, 32 per cent of the manganese, all of the mercury and 90 per cent of the anthracite. It would seem

that the acquisition of this territory by the Bolsheviki ought to relieve us of the necessity of feeding them.

When the Bolsheviki in December, 1917, went to Brest-Litovsk to meet the German and Austrian peace plenipotentiaries, the Ukrainians were thrown into a perplexing position. If the Bolshevik Government of Great Russia made peace with the Central Powers, Little Russia could not hold out against them. On the other hand the Ukraine could expect nothing from the Allies for they were pledged to maintain the Russian Empire in its entirety. This meant that the Finns, the Estonians, the Letts, the Lithuanians, the Poles and the Ukrainians would lose their only chance for freedom. Consequently in each of these border provinces a faction came into power that opened negotiations with the Germans in the vain hope of getting peace and independence. This faction in the case of Ukrainia was the radical wing of the Social Revolutionary party under Vsevolod Holubovich, who went to Brest-Litovsk and made a separate peace with Germany and Austria, February, 1918. This disconcerted the Bolsheviki whose plan was to keep up dilatory tactics at the Brest-Litovsk conference until they could start a revolution in Germany. But the Germans, by making a separate peace with the Ukrainians, would get the grain they needed and also be able to attack Great Russia all along the southern frontier thru Ukrainia. In

THE CONQUEST OF UKRAINIA BY THE BOLSHEVIKI

This map shows the situation as it was two months ago. General Petliura, with a nondescript army of peasants, was trying to maintain the independence of the Ukrainian republic against encroachments from all quarters. The Bolsheviki had captured Kiev, the capital. The Poles, with the aid of forces and munitions from Paris, had captured Lemberg and occupied eastern Galicia, which the Ukrainians claim by reason of race. The French, with an army of Rumanians, had occupied Bessarabia, which is claimed by Rumania by reason of race. The French landed at Odessa and the Greeks at Kherston. The Cossack generals, Krasnov and Denikin, aided by the British, were holding the region between the Black and Caspian seas and hoping to advance up the Don and Volga rivers. Now the scene has suddenly shifted. The Bolsheviki have swept over the Ukraine down to the sea. The French and Greeks have been compelled to evacuate the ports of Odessa, Kherston and Sevastopol. The Don Cossacks are almost surrounded. The Kuban Cossacks are being attacked by the Georgians from the south as well as the Bolsheviki from the north. Soviets have been set up in all the cities. Petliura's forces, having been refused arms by the Allies, have seized those of the Bolsheviki north of Kiev.

*Press Illustrating*

*The arsenal at Odessa, the second largest in Russia, was stored with ammunition for the Southern Russian Army. All these military supplies have now fallen into the hands of the Bolsheviks who have expelled the French and Greek troops*

this emergency Lenin sent secret messages to the Allied and American governments offering to hold off concluding peace if they would promise him support. But he received no reply so he signed what he called "the brigands' treaty," in the exprest hope—which proved justified—that it would soon be nullified by a revolution in Germany.

But the Ukrainians soon suffered the consequences of their blunder or their crime in making peace. The German troops practically took possession of the country and when the Rada (Congress) ventured to protest against their high handed proceedings they dispersed it by a squad of German soldiers and put in its place as dictator a Cossack Hetman, Skoropadski, who was under the thumb of the German mailed fist.

When by their defeat in France the Germans were compelled to evacuate Ukrainian territory there were various claimants for its possession. On the west the Poles seized upon Kholm and eastern Galicia and the Rumanians upon Bessarabia. The Turks claimed Crimea. The Cossacks under General Denikin, aided by the English, attacked from the Don on the east. The Bolsheviks attacked from the north. The French, reënforced by Greeks and Senegalese, landed at Odessa.

To defend their country against these various claimants from all quarters the Ukrainian peasants rallied under the banner of Semen Petliura, who had been in power before the German occupation and who again took possession of the capital, Kiev, as soon as the German troops withdrew. With him was associated, until February, Vladimir Vinnichenko, former Premier of the Ukrainian Republic when it seceded from Russia. Both belong to the Ukrainian Social Democratic party, the former to the radical and the latter to the moderate wing of it. The difference between the two is only in tactics not in program. Both are anti-Bolshevik.

Petliura offered forty-five acres of arable land to peasants who would join his army and secured a sufficient following to get control of nearly all of

the Ukraine and to hold out for three months against overwhelming forces of Bolsheviks. But he lacked money, officers and railway experts and his urgent appeals to the Allies and President Wilson for such assistance met with no response. The French had made a loan of \$35,000,000 to the Ukrainian Republic when Petliura was in power in the fall of 1917, but his party, the Social Democratic, was soon after ousted by the Social Revolutionary party which made peace at Brest-Litovsk. The French then were naturally not disposed to risk any more money on Ukrainians of any party but determined to take charge of the Ukraine themselves. The British were putting their money on the Cossacks, those of Krasnov on the Don, of Denikin in Kuban and of Kolchak in Siberia. In these regions, as Premier Lloyd George said last week in Parliament, the people who revolted at the signing of the Brest-Litovsk treaty "raised armies at our instigation and largely at our expense." Winston Churchill, Secretary for War, speaking in Parliament on March 25 about General Denikin's army, said: "Our policy is not to involve any British troops at all. We are not sending any British troops but we are sending a mission and have supplied it with ample supplies of munitions of war of all kinds. We are also sending instructors, technical advisers and experts." The sympathies of the American Government were also on the side of Denikin in his campaign—not merely against the Bolsheviks but—against the Ukrainians opposing the Bolsheviks. At least so it appeared from the Washington despatches when the news was received that Denikin had captured Kiev after a battle in which 10,000 Bolsheviks were slain:

Washington, November 20.—Reports of the overthrowing of the Ukrainian Government by General Denikin's anti-Bolshevik troops was received here today with great satisfaction, for officials said it will make the work of the Allies in handling the Russian problem much more simple.

It has been believed for some time that General Alexieff, the former Russian commander in chief, had a large force of Cos-

sacks operating in Astrakhan. The news from the Ukraine seems to confirm this.

This information was faulty in several respects. Denikin did not take Kiev. He did not kill 10,000 Bolsheviks. He did not overthrow the Ukrainian Government. Alexieff was dead and buried. The Bolsheviks are still masters of Astrakhan.

General Petliura is not an ignorant peasant and outlaw as the newspapers have represented him. He comes of a Cossack family, was born in Postave and educated at the University of Lemberg, Galicia. He is about forty years old, slender, dark, plainly drest, clean-shaven with the face of a forceful ecclesiastic and a grave low voice. He was arrested at Kiev in July, 1917, by the German military authorities because of his protest against their oppression of the Ukrainians and kept in prison until after the German revolution, when he was freed by a revolt in Kiev. He then formed a directorate composed of representatives of educated classes, the peasants' association, the nationalists, and the workingmen. This was supported by the Working People's Congress held at Kiev, January 23. This congress was elected by proportional representation, women voting the same as men and three of them among the deputies. A London *Times* correspondent who interviewed Petliura in his railroad car at Vinnitsa in March reports him as saying in part:

With two regiments we fought and disarmed the Germans, also the Skoropadski troops, and the whole countryside was with us. I have seen even women disarm German troops and give them a sound clout as they did it. We have some strapping peasant women. After two months' struggle the Germans began their retreat. Skoropadski went under and we entered Kiev. If only the Allies had helped us!

As soon as we entered Kiev we began communication with the Entente Powers thru their military representatives in Odessa. Those communications have been continuing ever since, but here we are and the Allies are in Odessa with their backs to the sea and we have never linked up.

The Denikin army is reactionary. It has to revenge the deaths of thousands of

friends, relatives, comrades, and there is a deep seated fear among the populace of the Ukraine that this army, if it gained victory, would only reinstate another autocratic government, which certainly would not be stable.

The fighting with the Bolsheviki is hand to hand and the losses are heavy—400 are killed weekly, 1500 wounded and typhus is a terrible menace. The Russian prisoners are dreadfully infected. Our drugs will soon be used up. If we fail the fault will not be ours. We ask you once more to hear us and to allow your representatives to come to the chief cities of Ukraine and not to sit like Pontius Pilate washing your hands of a Bolshevik-threatened world.

If the Allies protect Esthonians and Poles, Admiral Kolchak, any government or embryo government which is in the field against Bolshevism, why should we alone be left out?

At that time Petliura had been driven out of Kiev by the Bolsheviki but hoped to regain the capital with the aid of the Allies. He offered to eliminate himself or any other members of the directorate if this would gain the confidence of the French. But he refused to submit to conditions which would place the Ukraine completely under the military and industrial control of the French for an indefinite period. Even the Germans, of whom there were many living in the Ukraine before the war, joined in asking the French to protect them against the Bolsheviki. In January, Count Berkheim, the German diplomatic representative at Kiev, induced M. Hanno to come from Odessa in the hope of persuading the French to send troops to Kiev, then threatened by the Bolsheviki. But the French refused and on February 2 the Bolsheviki took possession of the Ukrainian capital. Petliura's forces gave way before the Bolsheviki and retired toward the south and west. A despairing appeal was wired on April 8 to President Wilson from the West Ukrainian Government for support in their conflict with the Bolsheviki. The petition of the Ukrainian representatives at Paris in January for admission to the Peace Conference as an independent state was refused. An American military attaché who tried to see Petliura at Vinnitsa was turned back by the French authorities who

would brook no interference with their operations in the Ukraine. The Polish National Committee accuses Petliura's troops of the massacre of thousands of Jews in Galicia. Similar charges have been brought against the Poles.

According to the latest reports Petliura's forces are not in Galicia but on the Pripet River north of Kiev where they are said to have wiped out the Bolsheviki First Army, capturing 20,000 rifles, 35 cannon and 200 machine guns.

The French are committed to the support of the Poles even in their claims to the eastern half of Galicia where the population is predominately Ukrainian, except in the city of Lemberg. The French Government also was determined upon armed intervention in Russia but they were opposed by the British and American. President Wilson said that it would do more harm than good. Premier Lloyd George declares

that it would bankrupt England. In his April 16 speech to Parliament he said:

Russia is a country that is very easy to invade but very difficult to conquer. It has not been conquered by a foreign foe, tho it has been successfully invaded many times. It is a country very easy to get into, but very difficult to get out of. You would be surprized at the military advice given to us as to the number of men that would be required. And I should like to know where they are to come from.

The French have found it so in 1919 as they did in 1812 and 1853. In spite of the British and American refusal to participate they decided to undertake the occupation of the Ukraine on their own account. Two expeditions were sent into the country; one from Rumania on the west, the other Odessa on the south. The first was organized in November by General Berthelot at Jassy, the temporary seat of the Rumanian Government, and was composed largely of Rumanians. In December it crossed Bessa-

rabia and advanced toward Kiev in spite of the protests of the Ukraine National Committee. But when the Bolsheviki had broken thru the Ukrainian line the French-Rumanian army retired before them into Rumania.

The other French expedition was still more unfortunate. This was composed in part of Greek and African troops and was brought thru the Dardanelles by the French fleet. On December 13 the troops were landed at Odessa and drove out Petliura's forces which held the city. After that we heard reports of their triumphant progress northward, their brilliant victories over the Bolsheviki and even of their capture of Kiev; all of which turns out to have been fictitious. Actually it appears they did not get more than seventy-five miles into the interior when they were driven back by the Bolsheviki and forced hastily to evacuate Odessa. The results of the French expedition were summed up on March 25 by the British Secretary for War in these words:

In the Ukraine, the experience of the last two or three months has been very disastrous. The French and the Greeks, who have entered from the south and gone some distance from the coast, have been confronted not only with the attack of considerable forces, but [Continued on page 190]

Wheat for export at Odessa, South Russia's great seaport, from which the French forces have just been forced to withdraw by the Bolsheviki

# DON'T GIVE UP THE SHIPS

BY IRVING T. BUSH

*The founder of the Bush Terminal Company began when he was in his teens with two hundred acres of unprofitable sand in Brooklyn to build up the organization that now includes over a hundred warehouses, eight piers, twelve industrial buildings and every facility for receiving, shipping, storing and manufacturing goods. From the vantage point of such industrial success he uses the same sound judgment and far vision in discussing in the following article the future of the United States merchant marine*

Edwin Levick

Launching the "Scandinavic," one of our standard type cargo ships

WE have constructed great shipyards, trained an army of shipbuilders and built the nucleus of a merchant marine. This was a war measure. If the artificial stimulus is suddenly withdrawn, the industry will collapse, for it is an infant industry and not yet able to stand alone. A certain part of our shipbuilding program has not been economically sound. This was recognized at the time the work was undertaken, but necessity knew no law and the need for ocean transportation was so great that anything which would float and carry freight was of military value. Some of our shipyards must be accepted as war losses and dismantled. Some of the ships which we have built must be sold, turned into barges, or discarded, for it is idle to attempt to operate either yards or ships which cannot justify their existence. When that which is useless has been sold or scrapped, there still remains a substantial nucleus. The question what to do with this is of vital importance to commerce and industry. It calls for a correct and immediate answer.

I am satisfied that the people of the country want an American

most negligible. We were producers of raw and manufactured commodities much of which we sold abroad, but we had not concerned ourselves with the ownership of the means of transportation to our foreign customers. Our position was like that of a manufacturer who turned out his product, and hired some one to cart it to his customers. So long as carts could be contracted for readily, our position was not entirely unsatisfactory, except for the fact that we were not developing the national industry of shipbuilding, and were paying money to other nations to do part of our legitimate work. Even in times of peace, we could not always hire carts for reasonable rates, altho, normally, competition was close and the rates for ocean carriage were not exorbitant.

When the war came, our ocean carriage system broke down completely. This was nobody's fault, but merely the result of our dependence upon vessels owned by others, and our plight was due to the fact that the foreign nations who had worked for us as ocean carriers were compelled to curtail or withdraw the service because of their own war needs. Other nations have

merchant marine, if a way can be found to own and operate American ships in foreign trade without profiteering, and without too great a burden being imposed upon the national pocket-book. We have had a merchant marine in domestic trade because under our laws foreign owned vessels were not permitted to compete in coastwise service, but at the beginning of the war the number of American vessels engaged in foreign commerce was al-

operated wherever they could earn money. They have been equally content to carry their own commodities or the commodities of other nations to market. This is not our present ambition. We have seen our ocean cartage system break down and we have made up our minds to own a few vessels to carry our exports to our foreign customers. We are not ambitious to compete in the carrying trade between neutrals. In this operation there are two elements: one is shipbuilding and the other is ship operation. If organized on a basis of mass production, I believe we can build ships of a simple type in competition with other nations. I say "ships of simple type," because I do not believe that the time has yet arrived when we can build ocean liners in the construction of which is a large amount of hand labor, so cheaply as the great established yards in England. The time may come when we can do this, but it will be after we are more experienced as shipbuilders, and will depend in a large measure upon the wages paid in English and American yards. We have in numberless instances shown our ability to compete with other nations in manufacturing industries which can be organized upon a production basis. We have the steel, we have the timber and we have all of the natural resources necessary to a shipbuilding industry. Our labor is more expensive, but this advantage we can overcome in shipbuilding, as we have in other industries, by organization. We cannot do this unless a sufficient demand for vessels of this type is forthcoming to keep our yards in operation at high speed. If this reasoning is correct, it not only enables us to produce freight vessels at an equal cost with England, but it removes one of the great inequalities in operating expense. This has been the extra interest, insurance and depreciation on the capital represented by the excess cost of vessels built in this country. If a freight vessel costs from \$300,000 to \$500,000 more to build here than it does in England, the interest, insurance and depreciation upon this added cost is a very considerable sum. I do not pretend to believe that the vessels which we have built during the war emergency have cost as little as similar vessels built in England nor do I believe that we can at once build in competition with the established shipyards of England. The vessels which we have

turned out during the last two years have been built with partly trained labor, working overtime, at high wages and under conditions which have rendered economic construction impossible.

At the present time, everything is chaos in the industry, both here and abroad, and until costs have reached what we will again call normal, and until the badly organized yards and inefficient labor have been discarded, our true ability to compete cannot be shown. Unless this period is bridged by some form of Government help, many of the newly created yards will pass into disuse, and the labor will drift into other industries. If the labor can be held together and the yards continued during the period of reorganization, this infant industry can be made to stand alone, and compete with others.

HAVING built the ships, our second problem is to operate them in competition with other nations. If we equalized the interest, insurance and depreciations, there remains little besides wages and the number of crew to consider, for the fuel and supplies must be bought in the same markets by vessels operating in the same trade, without regard to the flag under which they sail. We have passed certain laws which make it necessary for vessels under the American flag to carry in some departments larger crews. If these laws are wrong, the common sense of America will see to it that they are changed. I shall not discuss them, for even tho they are corrected, there still remains the difference in wages which cannot be overcome by legislative enact-

ment. It may be that in certain trades on the Pacific Ocean, we will permit part of the crews to be composed of Chinese coolies, in order to meet Asiatic competition, but the people of America do not wish their merchant marine manned by coolies and will insist that a substantial part of the crew be Americans. This is essential, if we are to build a merchant marine which we can depend upon in time of crisis.

The reason the young men of America will not go to sea is because they can get better jobs on shore. A few of them may follow the sea, because of a natural love for it, but the only way we can get a large body of our men to become officers and sailors is by paying them a wage which will attract them to the sea. We may be able to introduce some economies in ship operation, particularly thru a quicker turn-around at the ports, but these economies will be available to all ships, whether American or foreign owned. We cannot create conditions which will turn around an American ship more promptly in an American port, and not use the same facilities for foreign-owned vessels, and there is no way in which we can apply to ship operation at sea, the principles of organization which we have introduced into manufacturing on shore. This difference in wages can only be overcome by the reduction of wages to our seamen or the increase of wages of other seamen. For reasons which I have given, we cannot reduce the wages of our seamen, and we cannot control the wages of seamen under other flags. This is a disadvantage which can only be overcome, I believe, thru Govern-

ment help, and I can see only three ways by which this help can be extended successfully.

The first is a Government subsidy. It may be that the people of America have changed their minds upon this subject since the war began. Before the war they repeatedly refused to adopt the principle of subsidy for ocean shipping. They objected to paying money out of the public treasury for the support of a shipping industry, because they could not be certain that the money so paid would get into the right hands. They feared a tendency to give as little service as possible for as large a subsidy as could be exacted.

The second method is thru a remission of taxes upon vessel property and its earnings. This method may be possible, but I apprehend that it cannot be made permanent, for there is in the minds of the American people a desire to impose equal taxes upon every one, and I believe that many objections will be made to exempting any special industry from its share in public burdens.

The third plan will be for the people of the country to continue the investment of public money in the construction and ownership of vessel property. This does not mean Government operation, for there is a vast difference between public ownership of a common utility, and its public operation. There is also a difference between the public ownership of a utility used within our own borders, where equality of operation can be assured by other means, and the common ownership of a utility used upon the high seas in competition with the nations of [Continued on page 192]

"If organized on a basis of mass production I believe we can build ships of a simple type in competition with other nations." It was by standardization that the United States attained speed in shipbuilding—ship assembling describes the process better. This five-ton plate being lifted into position could be used equally well in any of fifty ships under construction at the same time.

BY

CARTER GLASS

Secretary of the Treasury

*Reported by Donald Wilhelm*

*International Film*

*Secretary of the Treasury Glass is examining one of the prize winning Victory Loan posters submitted in the contest among the school children thruout the country*

**N**OW that the guns have ceased to roar, we hear it said that the spirit of the world is broken. That is not true, for in this great exigency of war men, themselves, and their self valuations have been transformed. We hear it said, too, by men of steady judgment and tested patriotism, that we must approach the problem of future loans in cold-blooded mood; that things have been altered; that the spirit of America is altered; that sheer commercialism should fashion our financial policies, for ourselves and our Government and in relation to our allied kin abroad.

They tell of our "sacrifices," these financiers of steady judgment and commercial mien. But where shall we find, here, devastated fields and ruined cities, cathedrals destroyed and homes profaned, flooded mines and pillaged factories, defiled women and starved children and wrecked men? And hunger stalking? And disease holding its unchecked sway? Is it a sacrifice to invest one's money in the safe, secure, and interest-bearing obligations of one's government; to devote one's mere dollars to the new world order for which,

thru three years our Allies fought and died and endured the unendurable, while, here, thru those self-same terrible months our domestic trade was literally beyond computation, and our foreign trade epochal?

To be sure, there are in France seventy thousand Americans sleeping

beneath the sod, yet does not their spirit go steadily marching on? To be sure, over there, three thousand miles away, there are memoranda indicating that nations which threw their heritage into the breach, to save the freedom of the world, owe us money, and interest counting up to wellnigh half a billion every year. We know that at once, until they can lift their eyes from the hordes of the enemy, and from all his desecrations, these nations cannot pay the principal of that debt, the interest on which we are now receiving. But what of that when we can retire our whole war debt in twenty-five years or so, by providing a 2½ per cent cumulative sinking fund, for which Congress has given authorization! What of that when we consider that tho our war debt mounted to the vast sum of some twenty-five billions of dollars, the war debt of the world is \$250,000,000,000! Belgium, no larger than our State of New Jersey, has a debt comparable with ours; France, twice, in continental area, as large as our State of Nevada, has a war debt greater than ours.

The war is over, to be sure, and a retrenching and reactionary spirit is

abroad in some quarters. The verve of mortal combat is over, but why should any one consider that we ought not or can not add the capstone to the splendid structure of our national credit by making the Victory Loan a success?

Some Americans have argued that the accomplishment of the Victory Loan is impossible, except by sheer commercial methods, as if anything, for us Americans, is impossible! Some Americans said that the accomplishment of the Federal Reserve System, in the midst of these troublous days, was impossible, but some of us argued as the American engineer argued at Cambrai, "nothing is impossible, even tho some things are impracticable."

To smash the St. Mihiel salient, with its threatening head menacing Verdun and Paris, some Americans and wellnigh all of Europe thought impossible, but our "impossible" American army accomplished that in fourteen hours and herded in 15,000 German prisoners in the bargain. And then, at Chateau Thierry, when the British and French were being beaten back, they met these "impossible" Americans, and one of their officers told the colonel of these Americans to retreat. "Go back!" said the American, "Why, man we just got here, and my orders are to go forward!" The Americans went forward.

To go back is not an American characteristic. We cannot resist a challenge for the right. And tho we may presently witness in our own minds and hearts a singular contest between avarice and the better elements of human nature, this last major appeal to the patriotism of Americans will not be in vain.

For while Congress is writing off fifteen billions of authorizations, for which public funds would have been expended had not our faith accomplished the impossible, the Government is still expending over a billion dollars a month to meet honorable commitments of the country. Such commitments to the honorable course of our national welfare must continue, until the two million American boys in France are home, until the restoration of Europe is in large measure accomplished, and the world is able to take up the tools of peace again. The honor of the United States is involved, as indeed it was at St. Mihiel and Chateau Thierry.

## THE LADIES VS. MR. BURLESON

These telephone operators in New England tried milder persuasion for three months before they called a strike demanding higher wages and the right to present their claims for negotiation with some one in authority. The strike, according to Postmaster General Burleson, who under the war emergency ruling is head of the telephone system, was "not permissible." But the ladies kept right on striking — and they won. The rate of pay for beginners will be increased from \$8 a week to \$10 hereafter (still considerably below the standard minimum wage in Massachusetts) and operators who have worked seven years may reach a maximum of \$19 a week.

## IT'S ALL IN THE WINGS

The Fairey Patent Variable Wing Seaplane below is another of the secret war inventions that victory discloses, tho only in part. It was developed by the British to answer the famous "Brandenburg straffer," a German seaplane that did much damage against the North Sea patrols. The variable wing device gives a far greater range of speed than is possible with the fixed form of wing so that a very fast flying machine can make the slow alighting essential to a seaplane.

### SOME SAY THE "ASH-CANS" WON THE WAR

At any rate they marked the turning point in our war against the U-boats. "The submarine campaign was never a question of guns," says Admiral Sims. "It was a question of the depth charge. That is what defeated the submarine." "Ash-can" is the navy's name for the depth bomb, because that is practically what it is—a large, thin metal can filled with very high explosives. The "ash-cans" are carried at the stern of a destroyer and released when the ship is making speed enough to get clear of the explosion. In this photograph a couple of sailors are dismantling the depth bomb equipment

### THIS IS A "PARAVENE"

The queer device below that looks like a flying fish is one of the British navy inventions that has proved most successful in clearing away mines. The paravene is dragged thru the water by a cable from a ship engaged in mine-sweeping and cuts the moorings of any mines it passes, causing them to rise to the surface where they are destroyed by rifle fire. This paravene is being hoisted aboard the U. S. S. "Heron," which is to help sweep the mines from the North Sea

GIVING BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND  
BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## MY WAY WITH WEEDS

BY F. F. ROCKWELL

AUTHOR OF "AROUND THE YEAR IN THE GARDEN"

NOW is the time to work hard at the task of keeping the garden clean. The average gardener is too prone to feel that when the early planting is done he can turn his attention to other things for two or three weeks, until it is time to hoe out the first crop of weeds and to do more planting. As a matter of fact the work of keeping the garden clean should be begun within a very few days after the first seeds are put in. It is very difficult to get the new gardener to realize that a thousand seeds can be destroyed when they are just breaking thru the soil in much less

freshly raked over, all the weeds which had started were destroyed at that time. Possibly you may have noticed, if you were not too interested in getting the seeds into the soil to observe anything else, that hundreds of little pink and white hair-like weed stems were gathered up by the teeth of the rake. If an ordinary iron rake is good for destroying weeds by the millions before planting, there is no reason for not using it for the same purpose after planting. Within a few days after planting, therefore, the most labor saving thing to do is to go over every square foot of the garden where there is room, either with an ordinary hand rake or with the rake attachments on your wheel hoe. The latter have the advantage of being narrow enough to be used between rows planted quite close together, such as onions, lettuce, beets, etc. This work must not be delayed; however, because if it is not done very soon after planting a crust will form on the surface of the soil which, when disturbed, will break up into fairly large pieces, some of which will fall on top of the seed rows, smothering the little vegetable seedlings when they try to break thru. If this work is carefully done, and done within two or three days after planting, it is possible to rake lightly over the rows themselves, especially where the larger seeds such as peas, and beets, radish and things of that kind have been put in. The beginner, however, needs to be careful about attempting this work or he may find that he has raked out a large part of the seeds which were put in with such great care.

Of course the soil between the rows can be cultivated in this manner only before the seeds are up. As soon as the rows can

be distinguished they should be gone over with the wheel hoe—preferably a double wheel hoe—with the hoes set so that the shoulders or standards are two or three inches apart. For this work it is desirable to have the special hoes made with extra high standards. These permit the doing of much more rapid work without any danger of throwing soil over the little seedlings. One of the photographs herewith illustrates a pair of these high standard hoes in operation. In using the wheel hoe for this kind of work the mistake is usually made of not adjusting the hoes as close together as they

Thin out the crop just as soon as the young plants begin to crowd one another

As the plants reach maturity every alternate one should be removed and used

time and with very much less effort than it takes to destroy a hundred when they have got to be an inch high. Try to make it a rule never to let any weed in your garden get big enough to form the second leaf. If you really make an earnest effort to stick by that rule, you will find the work of caring for your garden reduced by several hundred per cent.

If your vegetables were planted, as they should have been, in soil

Here are some of the various combinations that are possible with the modern wheel hoe: 1, for working between narrow rows; 2, for working close to both sides of the row; 3, for stirring the surface between rows; 4, for loosening soil after a rain

should be. It is not possible to work as fast when they are set close, but slow work with the wheel hoe is much more rapid than hand work, and everything that the wheel hoe does not "get" must be done by hand. So nothing is gained by keeping the blades far apart in order to work rapidly. In the small garden where a wheel hoe is not available, this work can be done, tho not nearly so effectively, with a scuffle or slide hoe.

After this hoe-

*To reduce hand weeding to a minimum, set the hoe close together and work carefully as close as possible to the rows*

ing, the ground between the rows will be clean, but there will remain, of course, a narrow strip of soil, directly in the rows, which has not been disturbed. The next job in getting the garden started right is to do the hand weeding to get the rows themselves perfectly clean. Here again everything is to be gained by doing the work promptly—as soon as the little vegetable seedlings are big enough to be distinguished from the weeds. This work at best is difficult and hard. But every day it is delayed it is harder and will take much more time.

In doing hand weeding for the first time there are two things which should be kept in mind: To break up and pulverize every square inch of soil whether weeds are visible or not. Many gardeners, and some who have had a good deal of experience, too, will go over a row removing the weeds that are in sight and leaving the rest of the surface undisturbed. To do this is merely to make two or three jobs of work which could be done just as well at one time. The second thing to keep in mind is to get all weeds out by the roots. To pull off the tops of weeds that "stick" hard, merely has the effect of making the garden look clean for a few days—a very few! and when you go over the rows again and try to get them out, you will find that you have a very serious task on your hands—they simply won't come; because the roots have grown out of all proportion to the tops.

Some one has said that a weed is only a good plant out of place. Certainly the surplus plants in a row—the ones which are not needed—are out of place. Every surplus plant is a weed, and it is just as necessary to get it out of the way as soon as possible as to get the weeds out.

The thinning out of plants is generally neglected. That is one of the main reasons why so many folks fail with lettuce, for instance. All crops sown in drills, if the seed comes up thickly, will need some thinning out, to get the plants spaced evenly in the row.

In most instances the sooner or this can be done the better

*Start to train tomatoes early. Use soft twine, and be careful not to tie too tight*

With onions, it is well to leave the plants until several weeks old before thinning, because they do not crowd each other as much as most plants, and because the root maggots may thin them considerably before the gardener does. But turnips, carrots, lettuce and many other things may soon be irreparably damaged by neglecting to thin out surplus plants.

The distance to which the various plants should be thinned out, is: beans, two to three inches apart; beets, three inches apart; carrots, two to three inches apart; corn, three or four stalks in a hill, or eight to twelve inches apart in a drill; cucumbers, two or three plants in a hill; kohlrabi, three or four inches apart; lettuce, six to twelve inches, by thinning out first to six inches and then using every other plant; onions, two to four inches, but do not thin out until the maggots have got thru with them; parsnips, three to four inches while still small; peas, four to six inches—where the seeds have come up strongly these are often left much too thick; radishes, half an inch to an inch for the spring sorts, and two to four inches for the summer and winter kinds; muskmelons, two or three vines to a hill as soon as well started; squashes and pumpkins, two or three vines to a hill; spinach, two to four inches apart except New Zealand, which requires much more room; Swiss chard, six to ten inches; turnips, three to four inches, thinning very early, especially if the seeds come up quickly.

*It's not enough to have the garden look clean—it must be clean, and unless it is thinned out systematically your patch will be full of "plants out of place" instead of large, healthy vegetables*

*After using the wheel hoe every square inch of soil between the plants should be broken up with a bladed hoe or hand weeder*

The work for both hand weeding and thinning may be made easier by using a hand weeder. This will save the fingers and do the work more rapidly, too. One may be bought for twenty-five to thirty-five cents.

After the hand weeding and thinning are done, the soil between the rows will be packed down quite hard as a result of the walking and kneeling that has been necessary. It should be got back into loose, mellow condition as soon as possible, with a wheel hoe with cultivator teeth, set rather far apart and run three inches deep.

A special "gang" of cultivator teeth may be obtained, with the tooth next the row shorter than the others; this attachment is especially good for this work, as it cuts the center of the row deeply without injuring the plant roots.

After this loosening up of the soil, which will leave the surface rough and uneven, the hand rake, or rake attachment for the wheel hoe should be used again, to make the surface fine and smooth. This will both conserve moisture and make it possible to stir the surface lightly every week or ten days, as it prevents the growth of weeds.

When the garden is perfectly clean and the rows have been thinned out, is the ideal time to give the newly started plants a little stimulation in the way of a top dressing or "side dressing" of fertilizer. Nitrate of soda, used very lightly; or dried blood or tankage, mixt with an equal amount of fine bone, will give positive and quick results. The nitrate of soda will give especially quick results and should be used wherever growth is at all backward.

Support for plants should receive attention at this time. For best and surest results with tomatoes, stake or train them to a trellis. Begin when the plants are small. Train to one, two or three stems, and "pinch out" all other branches or laterals just as fast as they form. Bean poles should be set before the plants show any signs of "runners"—better still, before planting.

# FRUIT TREES FOR THE SMALL GARDEN

BY ARTHUR L. BLESSING

**A**LTHO dwarf fruit trees have not proved very satisfactory when grown commercially, they are admirably adapted to the home garden, whether these grounds be large or small. On large estates trained dwarf trees serve a highly decorative purpose. They are valuable in the small garden because they make possible the growing of fruit which could not be produced at all if standard trees were depended upon. Every one who has traveled in France has seen the sides of brick walls covered with trained trees growing in much the same manner as grape vines. This custom has not become very common in this country, largely because there are few brick walls, or for that matter any kind of garden walls on which to train the growing trees. A few wealthy men have constructed walls to use just for this purpose. One wall of this kind near Boston is about 150 feet long, the north side being completely covered with peach trees which are carefully trained and pruned each season. It is the more common plan in this country, tho, to grow trained trees on wires or trellises. In fact, it is the better plan to use trellises even when growing the trees against a wall, the wires or wood being set twelve inches away.

Brick walls in this country are likely to become too hot to have the fruit rest against them. Moreover, when a trellis is used, the fruit will grow on both sides.

Several distinct systems of training exist. The most common are the Cordon and Espalier. There is a horizontal and an upright Cordon system. When the former is used, the trunk of the tree is tied in a horizontal position along the wire after it has grown to a height of fifteen or twenty inches. Sometimes double arms are developed, one running in each direction on the wire, making what is called a two-armed Cordon. It is an excellent plan to have trees trained in this way along a walk or drive,

making a sort of living fence, of utilitarian as well as ornamental value. Sometimes, too, such an arrangement is made in front of a wall or trellis where taller trees are grown.

When the upright Cordon system is used, the trunks are allowed to grow perfectly straight, the side branches being nipped back when five or six leaves have been formed. This increases the growth of fruit

dwarfs, for if you grow them in bush form, you will find that they require but little care. Bush dwarfs are managed in much the same way as standard trees except that they are kept more severely trimmed.

Most of the dwarf apples are produced by growing them on the stalks of Doucin or Paradise apples, which are dwarf species. The Paradise stocks give trees of more lilliputian character, and are to be preferred when trees are to be trained. Trees on Doucin stock give what might be termed semi-dwarfs.

Of course the kind of apples to use must depend upon your location. but Astrachan, Wealthy Fall Pippin, Baldwin Williams, Yellow Transparent and McIntosh Red are among the varieties most widely recommended. From among them you can get a long season. If you should decide to use only one kind, probably you would find McIntosh Red the best of all.

In order to make pear dwarf they are commonly grafted on the Angers quince. Among the good kinds are Bartlett, Angouleme, Seckel, Louise Bonne and Lawrence. Probably apples and pears are the two fruits most commonly used in a garden of dwarf trees. There is no reason, tho, why cherries, plums and

peaches should not be added. The stock usually used for cherry trees is Mahaleb. This is not a genuine dwarf, but produces smaller trees than those of standard size. Dwarf peaches must be given more severe cutting than any of the other fruits. It must always be remembered, tho, that they make their crop on wood of the preceding year's growth.

Dwarf trees do not always come into bearing quite as early as the nurserymen might lead you to believe. Some times, tho, indi- [Continued on page 189]

*Effective and attractive are these nectarine plants growing on a garage wall*

spurs. When this plan is followed, the trees can be set close together and may be used to form a hedge—a type of hedge which is particularly to be recommended for boundary planting except on the street side.

The Espalier system is somewhat more complicated, but offers opportunity for even more decorative effects. Espalier trees may take several different forms. When they are grown on wires, it is a common plan to have at least three of these wires, branches being allowed to develop on each side of the tree at definite intervals, and tied to the wires. Another plan, and one especially to be recommended when growing peaches or nectarines against a trellis or wall, is to train the branches in the shape of a fan. The effect is attractive, and a large amount of fruit is obtained. Considerable tying and pinching back must be practised, whichever of these systems is adopted, but the work will be found very agreeable by garden makers who are fond of trees, unless they make the mistake of setting out too many trained specimens.

In some instances, too, trained trees, especially cherries, peaches and nectarines, are being grown on the sides of buildings. James J. Storrow, Fuel Commissioner of Massachusetts, has a garage at Lincoln, Massachusetts, one side of which is covered with large nectarine plants, from which good crops are obtained. Nectarines not being very hardy in New England, they are protected in the winter by strips of burlap hung over them, or by evergreen trees cut from the woods. Mr. Storrow also has a considerable number of nectarine trees trained on trellises in a greenhouse.

Perhaps, tho, you as an amateur gardener, and one who has to do his own garden work, have no time or inclination to work with trees trained on walls or wires. This is no reason why you should not plant

*Dwarf trees can be taken care of easily, and the fruit picked from the ground*

*Early bearing and large fruit are two merits of this three year old tree*

Tables, ranging from a little stand to one for afternoon tea, are a veranda necessity. Stained in dark colors they are most effective

## MOVE YOUR LIVING-ROOM OUT-DOORS

BY MARY HARROD NORTHEND

**T**HE veranda has taken a place of its own these days as the out-of-door living room, attractive by virtue of its informality and atmosphere of leisure.

If by chance you have not one already, plan to build a veranda this spring; it need not be large, and can consist of a platform built across the end of the house, or it may nestle into the jog between the main building and the ell. Wherever it is placed, it should be back from the main road, to give it a sense of privacy.

Careful consideration should be given to the construction of the veranda. Make sure, first of all, that the lumber used is kiln dry, in order to prevent warping of floor or roof. The most satisfactory woods suitable for this purpose are white or hard pine, cedar or maple. The latter has a fine, even grain, which makes it particularly good. The laying of the boards is important, and to prevent drafts they should be placed close together, leaving only a slight space for the draining of water. It is a better idea, however, to slope them toward the end, and thus avoid any danger of the water settling on the surface and rotting the boards. If you wish to stop all drafts, the cracks can be filled with "stop cracks" or a home made filling of newspaper soaked in water and putty. This when hard gives a surface that is absolutely waterproof, but better results are obtained if the boards are scraped.

For this out-of-door living room either an art square or rug can be used. Grass mats are particularly advisable, as they are easily kept clean. As they are reversible

and easily washed, they cannot fail to be serviceable. Rugs are also found in both Japanese and Indian weave, and can be purchased in nearly every conceivable color. They are very light in weight and can easily be removed at night or during hard storms.

The most popular porch furniture is undoubtedly wicker, altho willow, fiber and rattan are also usable. Great care should be taken in the selection of both willow or reed. There are two grades of the former, one solid and the other split. While the solid is more expensive, it is much more durable and pays in the long run. Willow is much cheaper, but lacks the strength of the reed, and is easily distinguishable on account of being dotted with black specks.

The wise buyer can readily learn whether reed is made from fine stock or not by

turning the chair upside down and examining the ends. If it is largely pith, with little surrounding wood, then it is of poor quality and will break readily.

Willow does not reach maturity until the fifth or sixth year; previous to that time it is pithy and suitable for basket making only. As it grows older the layers form into wood, it loses its pith, and is suitable for making furniture, having excellent wearing qualities. The natural colors can be painted to match any decorative effect, and some very picturesque pieces can be developed thru their color schemes of green, brown, yellow or orange.

Willow settles or lounges are admirable for the veranda and take much less space than two chairs, as well as being unusually comfortable. Chaise longues of wicker are a noteworthy revival and when furnished

with cushions and pillows in striking color schemes they are most alluring.

There are also, today, many shaped chairs of willow or reed, the most pleasing variety being the old English wing chair, with its high back and writing rest on one side and a magazine rack on the other.

Tables are a necessity and there are many different styles to select from, ranging from the little stand suitable for a work table or magazine stand, to the double decked one that is also suitable for an afternoon tea or luncheon. They can be purchased either stained or enameled, and very pretty effects can be worked out thru the use of a yellow foundation, with a border of black, or a coat of forest green. Blue and black

Willow furniture is one of the most popular kinds for the porch and is made up in a variety of styles. Against a brick wall it makes a striking contrast

# What to Do in May

A GARDEN GUIDE BY HUGH FINDLAY

## NORTH

### Greenhouse

**Hardening Plants** This is the month to harden off all plants in the hotbed and greenhouse. Use great care in ventilating so that the plants may not be in a draft. Close all ventilators early, so as to catch the last warm rays of the sun.

**General Cure** Wash pots before storing. Dust walls with lime to check slugs and snails. All foliage should be dry before sundown. Fumigate after sundown and preferably on damp days. Keep the soil in the benches sweet. Spray with a force of clear water to check the red spider on roses. Dust the foliage of chrysanthemum with flowers of sulfur to check mildew.

**Vegetables** As soon as the benches are cleared, plant into them after refilling with fresh rich soil, such crops as tomatoes (Early June), cucumbers (White Spine). Harden off all tender vegetables for transplanting in the open by June 1.

**Carnations** Shift all pot carnations to the field. Keep all bloom pinched off and pinch the plant back so that it becomes stocky. Spray bench plants to keep down the red spider.

**Cyclamens** Shade all cyclamen beds. Keep well ventilated. Water freely and give plenty of ventilation. Keep as cool as possible.

**Ferns and Palms** Keep the house shaded and moist. Wash plants with whale oil soap. Dust under the benches with lime and a little rock salt to check snails and slugs. Separate Boston ferns and repot into a garden loam mixt with shredded, decayed sod, leaf-mold, and a very little chicken manure.

### Vegetables

**Hardy Seeds** Sow the seed of beets, carrots, lettuce, kohlrabi, wrinkled and smooth peas, radish, spinach, turnips, cress, parsnips, Swiss chard, endive, Brussels sprouts, cabbage and cauliflower.

**Tender Seeds** It is safe to risk some of the tender seeds the last of the month, such as corn, snap beans, broad beans, cucumbers, squash, okra, pumpkins.

**Transplant** This is the month to set out cauliflower, early cabbage, onion seedlings, beet seedlings, lettuce (head and leaf). Don't be in a hurry to set out tomatoes, eggplant, or peppers. The slightest check will throw them back several weeks.

**Celery** Dig into a trench some well decayed cow or horse manure and finely ground bone meal before transplanting the White Plume and Golden Self Blanching Celery. This will be ready to use in July.

**Potatoes** Treat your late potatoes to prevent scab by placing them in a sack before cutting, and submerging them in a solution of one ounce of powdered corrosive sublimate (poison) to eight gallons of water. Soak the tubers in this solution for 1½ hours. Dry and cut. Cultivate vigorously the early potatoes and keep down all weeds. Putting seed potatoes in the sun for 3 to 4 days is a very good practice.

**Liquid Manure** Sink in an inconspicuous place a half barrel and fill with water. Put in about a bushel of fresh cow manure, but not the litter. Cover the barrel and allow the manure water, after stirring vigorously, to stand for three days. Skim off the surface and use the liquid to hasten crops needing nitrogen.

### Cultivation

There is no more important part of the garden work than cultivation. Do not cultivate too close to such crops as corn. Do not cultivate too deeply. Cultivate frequently and thoroughly.

**Compost** Start a compost pile now. This manure will be fine for a fall top dressing.

### Orchard

**Fruit and Berries** Spray the apples with 1 part of lime sulfur to 40 parts of water while the buds are closed. Add to this solution 2 lbs. of paste arsenate to check the codling moth. The lime sulfur checks the scab. Get acquainted with your trees, see that the branches are well separated, so that there is a free circulation of air among them. Spray plum and cherry trees with Bordeaux mixture mixt with arsenate of lead. Keep down all weeds by clean cultivation. Do not bark the trees with the implements.

**Blackberries and Raspberries** Cut out all rust infected canes. Spray with lime sulfur 1 to 40. Cultivate freely and scatter an application of bone meal in the rows just as the bloom is forming. This application will help to form larger berries.

**Currants and Gooseberries** Check the currant worm by dusting the plants with hellebore or spraying with paste arsenate of lead. If the plant is in full bloom when the worm attacks the foliage, dust with London purple while the dew is on the plant. Cultivate freely until the plant is in full bloom, then wait until the berries are formed and resume cultivation again.

**Strawberries** Cultivate up until the bloom appears. Any dust will deform the fruit. Mulch with straw to prevent the rain from splashing the soil on the fruit. A new bed may be set out the early part of the month.

### Flower Garden

**Bulbs** Plant gladioli bulbs 3 inches below the surface, if bloom is to be expected in September. Plant dahlia roots and tuberose in a very rich soil mixt with a little sand. The tulips, hyacinths, narcissus, etc., which have passed, should be dug up and the tops allowed to dry back. These bulbs should be packed in sand and kept in a cool, dark place.

**Don't Hurry** Don't set out tender annuals until the soil and air are both warm. If your plants get nipped by the frost, spray them with ice-cold water and keep them in a cool place.

This is the last call to divide perennials. Never transplant when the plant is coming in bloom, unless the plant has been potted.

**Seed** Sow the seed of African daisy, sweet alyssum, snap-dragon, aster, candytuft, cosmos, ageratum, zinnia and dianthus to be transplanted later. Sow the seed in permanent places of larkspur, mignonette, nasturtium, pansy, poppy, verbena and phlox.

**Plant Out** Hardy plants such as geraniums, ageratum, asters, verbena, etc., may be planted out the last of the month.

**Roses** Top dress roses with decayed manure and bone meal. Cultivate the soil freely. Spray with a solution of arsenate of lead for the rose beetle. Use Black-Leaf 40 for the control of aphids. Apply a little liquid manure water each week. In cutting the roses, always leave 1 to 2 buds at the base of the stem. Never break off the roses. All flowers should be cut early in the morning.

## SOUTH

**Upper South** Virginia, North Carolina, Northern Georgia, Northern Alabama, Tennessee.

Sow a succession crop of carrots, beets, pole and snap beans, lima beans, corn, parsnips, etc. Plant the seed of late cabbage in a cool place after making the seed bed fine. Plant out tomatoes, peppers, eggplant and other tender vegetables the last of the month. Sow the seed of okra, squash, pumpkins, cucumbers, cantaloupes and melons. Plant out in a sandy loam sweet potato cuttings. Watch for the cabbage worm, and treat the plants with slug shot. This is the last call for planting asparagus roots. The best variety is Palmatto. Buy two year old roots. Transplant the celery in trenches made rich with decayed manure. If the striped beetle appears on squash or cucumbers, dust the plants with air-slaked lime mixt with Paris green. The spotted beetle attacks all vine crops. Dust with ¼ lb. arsenate of lead (powder) mixt with 12 lbs. of air-slaked lime. Dust when the dew is on the vines.

**Middle South** Lower South Carolina, Southern Georgia, Middle and Southern Alabama, Mississippi.

It is not too late to start your sweet potatoes for a late crop. Don't bed potatoes with brown or black blotches on them. Spray the bed with ½ pint formaldehyde in 1½ gallons of water. Transplant only healthy cuttings to the field. Protect the roots and keep the cuttings moist while transplanting. If the sparrow is picking off the young pea vines, dust them with tobacco dust while the dew is still heavy. Pinch back all runners on your strawberry plants. Let the energy go into producing fruit. Apply a little nitrate of soda to lettuce, corn, etc. A good solution is 1½ lbs. of nitrate of soda to 14 gallons of water. Do not wet the foliage, but water the plant freely after the application of fertilizer.

When the peaches are the size of marbles, spray with ¼ gallon lime sulfur to 21 gallons of water, and check the peach rot. Cut off close to the bark all water sprouts of the fruit trees. This weak growth encourages disease, and shows that the tree has been over-pruned or over-fed. Start your fall exhibit now by selecting the best fruit and protecting it.

Thin out grape bunches and pinch back surplus vines. If you desire perfect fruit, bag the best bunches of grapes. Prune all shrubs already bloomed before the seed pods are developed. This practice insures bloom for next year. Spray hollyhock with Bordeaux mixture to check rust.

**Far South** Southern Louisiana and Florida.

Transplant and irrigate celery. After the early crops are off, plant out melons, squash and cucumbers. Sow the seed of okra, summer lettuce and endive. Design an irrigation plant by the use of elevated barrels. Water plants after sundown, and cultivate the first thing early in the morning.

Spray roses with a poison (arsenate of lead) to check the rose chafer. Dust the climbers with flowers of sulfur to control mildew. Bait slugs and snails in moist places with a mash of bran, Paris green and a little molasses. Do not cultivate the corn too deeply. Spray the potatoes with Bordeaux mixture to check the late blight and control the flea beetle. If your land is poor, sour or heavy, sow a crop of cowpeas and plow them under. In the spring, and about two weeks before planting, apply acid phosphate at the rate of 5 lbs. per square rod. Dissolved bone at the rate of 2 lbs. per square rod is also good. Apply wood ashes freely, and mix into the soil. The decayed cowpeas will furnish the nitrogen.

# APPERSON

WHERE you find the Apperson you find a deep and abiding appreciation of the better things of life. The Apperson does not express extravagance (for there are cars more costly and less economical than the Apperson) but is a reflection of innate taste. So powered as more than to justify the speed and agility expressed in the lines—with the Apperson 8 Motor, the 8 with 80 less parts.

## GIPSYING DE LUXE

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT  
MOTOR SERVICE

**I**F a practice which is steadily growing thruout the western states continues to expand, then in the not distant future, camp sites will be as much a part of modern highways as are culverts and fences. To the automobile, of course, is attributable the advent and increasing popularity of the roadside camping ground; or, perhaps, to be more accurate, it belongs to the motor tourists who are displaying nomadic instincts worthy of real gypsies.

Some of the best automobile camp sites are those provided and managed by progressive municipalities in the West, altho there are a number privately owned which make moderate charges for camping privileges. An excellent example of the former is the camp at one of the city parks in Denver, which entertained as many as four hundred automobile touring and camping parties over a single night last summer. The municipal camping ground, with such conveniences as running water, electric lights, *et cetera*, is one of the main claims set forth by cities, towns, and even by larger sections of the West, in urging the motor tourist to journey their way and stop a while. That the appeal is successful is attested by the records of the Denver camp and by the statement of the secretary of a California automobile organization that last year the number of motor camping tourists, or touring campers if you will, journeying in the Pacific Coast states alone were to be counted by the thousands. And if this was the case in 1918, when the use of automobiles for such purposes was restricted, the total for the coming season should be many times greater.

The national parks of the West are naturally on the itinerary of all motorists whose tours take them anywhere near one or more of these great public playgrounds. As might be expected the motor gipsy also heads for these wide expanses of public lands, and finds there the attractions which prolong his stay often over many days and nights. In the various national parks are innumerable camping sites, where the requisite running water, firewood and shade abound, but many motorists prefer the regular established camping grounds.

A fine example of one of these camps is to be found in a grove of pine and cedar at the foot of Glacier Point in Yosemite Valley, Yellowstone National Park. In addition to plots on which tents can be pitched, there are several score bungalows and six hundred tents, with board floors. The special features include a large garage, swimming pool with bath houses, steam laundry, auditorium, restaurant, and a store where a wide variety of supplies and equipment are to be had. There are also tennis courts, a baseball field and riding horses.

An indication of the growing importance of the highway camp site is found in a recent bill of the legislature of the State of Washington which provides that when large tracts of state land are sold to timber companies, that reservations of five acres may be retained where needed, and converted into public automobile camping grounds. There is also pending before the legislature of the State of Colorado a measure drafted and sponsored by the State Highway Commissioner, which provides for the creation of public camping sites as a part of highway development. These provisions of this bill, known as the Public Camp Site Bill, are of interest because

West Webster N. Y.

similar legislation may be expected in many more states:

The boards of county commissioners of the several counties of Colorado are hereby empowered, with the approval of the State Highway Commission, to purchase parcels of land to be used as free public camping grounds, not exceeding five acres in one tract, at a cost not to exceed \$100 per acre, along and contiguous to a state route or highway, and pay for the same from the county road fund.

The boards of county commissioners before making any purchase of land under this act, shall visit the proposed site and, if a satisfactory agreement can be made with the owner as to the price and acreage, a survey and plat shall be made and abstract of title secured, which shall be submitted to the county attorney for his approval. A full statement concerning the proposed camp site shall be forwarded to the State Highway Commission, and if the said commission shall approve the purchase, it may instruct the State Highway Commissioner to issue a voucher on the state road fund, payable to the county treasurer, reimbursing the county to the extent of 50 per cent of the cost of such purchase. No camp site shall be purchased without first securing the approval of the State Highway Commission.

In the selection of camping sites the topography of the land must be convenient for automobiles and other vehicles, with convenient water supply, and, where possible, shade trees. Rules governing the use of the public of such camping sites may be agreed upon between the boards of county commissioners and the State Highway Commission. A reasonable amount may be expended in fencing where necessary, and otherwise improving any camp sites.

It shall be a misdemeanor, subject to a fine not to exceed \$100 for any person to destroy any tree, deface any natural object, or befoul any source of water supply, located on or in any public camping site as defined in this act.

The significant feature of this bill as drawn is the supervision if not actual control placed in the hands of the state highway commission, thus ensuring that the camp sites will be an integral part of the state highway system, and located to serve the convenience of tourists rather than the interests of various communities. Further it will provide that the sites be at proper intervals and along the routes which carry the larger share of motor traffic. When fully developed as a state-wide system these camp sites will bring the motorist into many rural sections not now visited because of the lack of adequate accommodations. And such visitations will benefit these backward communities because the camping motorist travels independent of hotels from choice and not from financial necessity.

In speaking on the proposed camp site bill before a legislative committee the State Highway Commissioner described what would be the requisites of a public camp site in Colorado. Accessibility to the highway, running water of good quality, shade, pleasant surroundings, outdoor stone ovens, a convenient wood pile, and an open shelter house, such as are found on the National Forest recreation grounds, were included. Incidentally it seems fitting that this first public automobile camp site legislation should be pending in Colorado, because to that commonwealth belongs the credit of originating the automobile camp.

Where does the East stand in the matter of providing camping sites for western motorists? If there is anything east of the Mississippi at all comparable with the automobile camps of the West, both municipal and private, knowledge of it has been carefully concealed. The manager of a motor touring bureau in New York City has in the past few weeks received requests from three western motorists for information concerning camping sites in close proximity to this city. He was forced to answer that there were none. The big eastern cities are naturally the goal of the thousands of western motorists who have acquired the touring and camping habit, as soon as their routes lead them to the Atlantic seaboard. It would be a display of hospitality if not of good business judgment, to make some provision for them.

## THE POULTRY YARD IN MAY

BY E. I. FARRINGTON

**P**ULLETS hatched early in May should begin to lay reasonably early the coming winter, especially those of the smaller breeds. Remember, tho, that often there is much rainy weather late in May or early in June, and that the young chickens will require special and careful attention. Keep the chickens dry even if you have to drive them into the brooder house when sudden showers come up. Chicks that are being reared by a motherly old hen will need less attention than brooder chicks, provided the hen is kept cooped, while the chicks are allowed their liberty.

It is important that the young chicks have a constant supply of food, and there is nothing better for them than tender young lettuce leaves. Keep planting lettuce at frequent intervals thru the spring.

When a large flock of chickens is being raised, there is no better place for them than a corn patch, where they will be safe from hawks and sheltered from the hot sun. A little damage may be done to the sprouting corn close to the coops or brooder houses, but this damage will not be enough to interfere with the growth of a good crop. It will pay the amateur garden maker to plant vegetables especially for his poultry and this is the month to do it. Mangel wurzel beets are among the best of vegetables for winter poultry. Plant them late in May and they will make big roots by fall. They can be kept in good condition by storing them in boxes or barrels of sand in the cellar. Common red beets are also relished by laying hens, and are particularly good for young chickens early in the season before much green stuff is available. If the chicks do not eat them readily at first, dip the beets in bran or meal.

Cabbages are very commonly fed to hens, but if used too freely are likely to affect the quality of the eggs somewhat. It will be difficult to keep on growing lettuce thru the summer, but you can provide a continuous supply of green stuff by making a generous planting of dwarf Essex rape, which will keep growing up from the bottom if only the tops are removed. For late fall, curly Scotch kale may be planted.

Suburban poultry keepers usually find it necessary to confine their hens to small yards, but in the country the hens are often allowed to roam over a wide range. From now on there is some danger, under such conditions, that the hens will eat so much green stuff that their rations will be unbalanced and the supply of eggs curtailed. It may prove wise to keep the birds confined until noon so that they will eat the proper amount of grain and mash.

This is the month when broody hens become a nuisance. It is getting too late to set them, and they occupy the nests, to the exclusion of the hens which may want to lay. The simplest way to break up broody hens is to put them into a small elevated coop which has wire or slatted sides and bottom, allowing a free circulation of air which will tend to cool the fever which always develops in a sitting hen. Food and water should be supplied. It is important that the hen should be taken in hand as soon as she shows signs of broodiness.

Any one who desires to begin the keeping of poultry this month will be wise to purchase day-old chicks. The chicks may be put under a broody hen if one can be obtained from a neighbor, or raised in a small brooder. It is quite a common practice now for poultrymen to sell a hen with a brood of chicks.

## MOVE YOUR LIVING ROOM OUT-DOORS

(Continued from page 181)

are particularly effective, especially when the chair seats of cretonne follow the same color scheme.

Tea carts are an important accessory, now that four o'clock tea has become a regular institution in America. Many of them have a removable tray and are finished in odd combinations, green and yellow being the most popular, altho striking effects of red and black are often used.

Furniture that is light and easily moved is the most desirable, so the light turned chairs reminiscent of the days of grandmother, are convenient. There is a possibility that you have one or two tucked away in the attic that can be scraped and painted to match the predominant colors in your veranda setting. This can easily be accomplished at home, two coats of paint being necessary, with a finish of enamel to produce a gloss.

Interesting combinations result from painting the body of the table or chair in one or two colors, and ornamenting the legs or knobs of the chair with a contrasting shade. When rubbed down with linseed oil, this produces a polished surface that is most fascinating.

Wooden chairs, especially the rush bottom rocker, so popular in Colonial days, are rapidly gaining in favor. They are exceedingly restful and their simple, graceful lines can but harmonize with the rest of the pieces used.

There are many reproductions on the market today that are hardly distinguishable from the originals.

The developed magazine stand, in imitation of bamboo, with its two shelves is almost a necessity, and the music wagon, a suggestion developed from the tea cart, is practical to provide music when and where it is wanted.

Color schemes thru the judicious use of bright, cheery hangings, repeated in the cushioned chairs and rugs, are advisable. It is easy to imagine what delightful effects can be produced by the use of a cheery yellow, or just the right shade of forest green or gray.

The hammock of canvas or wicker has replaced the rocking chair and is much more suggestive of comfort when fitted up with gay colored chintz cushions and pillows.

The utility box covered with chintz or simply studded with nails is serviceable and can be utilized for numerous purposes, such as holding wraps necessary on chilly evenings.

In the development of our veranda we should strive to attain an atmosphere of good cheer and livableness. Growing plants and flowers provide an inexpensive but delightful way of brightening up our out of door living room. Flower stands can be made of wood and painted to match the predominating colors, or can simply be covered with birch bark. They should have a metal container inside that is not corroded, and yet absolutely true against leakage.

Ferneries can also be obtained in an endless variety of pleasing designs, often showing on their surface delicate moldings with Chinese figures in gold or black lacquer. Hanging baskets lined with moss are especially appropriate and are inexpensive. They are picturesque when filled with Adiantum, altho Asparagus or Springham are dainty and grow in a feathery mass, sending out trailers a yard or more in length. Then there is the Parrot's Feather, which requires a water-tight basket, and when thrifty, lends itself to decorative use, producing a charming little bunch of drooping and curling leaves and plumes.

## When you require World-wide Banking for your business

**W**HEN in the course of business events it becomes necessary for a business man to broaden his field of endeavor, he not infrequently finds that he must broaden his banking facilities also.

WHEN your business reaches that point, you may well consider the completeness of financial service afforded by the Bankers Trust Company, 16 Wall Street and Fifth Ave. and 42d St., New York.

### BANKING DEPARTMENT

WHEN you place your business account with us you have the satisfaction of knowing that your largest business requirements can be met and your varied banking needs be satisfied to the smallest detail. As a member of the Federal Reserve System, the Bankers Trust Company offers you all of the advantages of the best commercial banks besides the advantages of complete trust company service.

### FOREIGN DEPARTMENT

WHEN you become a customer of our Foreign Department you take advantage of

*the best existing world-wide banking facilities*

because we are co-operating with hundreds of great banks in all civilized parts of the world. You can make use of our service, for example, for

- transferring funds by telegraph or cable
- issuing travellers' credits in dollars and pounds sterling
- buying and selling foreign monies
- collecting of foreign coupons
- securing credit information and reports on trade conditions
- issuing documentary credits payable in all parts of the world
- financing imports and exports.

### BOND DEPARTMENT

WHEN you become a customer of our Bond Department you will have the investment experience of the Bankers Trust Company at your service. Our officers will be glad to review your lists of investments and advise you that they may be suited to your needs and sufficiently diversified. Because it is our policy to offer to our customers only such securities as we are willing to include in our own investments, you will find in our current offerings—sent to you on request—a carefully selected list of securities which we are buying for our own account.

"I was astounded at my new power over men and women. People actually went out of their way to do things for me—they seemed EAGER TO PLEASE ME."

# The Secret of Making People Like You

"Getting people to like you is a big help to success—it's as important as ability," says this man. It surely did wonders for him. How he does it—a simple method which anyone can use.

ALL the office was talking about it, and we were wondering which one of us would be the lucky man.

There was an important job to be filled—as Assistant-to-the-President. According to the general run of salaries in the office, this one would easily pay from \$7,000 to \$10,000 a year.

The main requisite, as we understood it, was striking personality and the ability to meet even the biggest men in their offices, their clubs, and their homes, on a basis of absolute equality. This the firm considered of even more importance than knowledge of the business.

YOU know just what happens when news of this sort gets around an office. The boys got to picking the man among themselves. They had the choice all narrowed down to two men—Harrison and myself. That was the way I felt about it, too. Harrison was big enough for the job, and could undoubtedly make a success of it. But, personally, I felt that I had the edge on him in lots of ways. And I was sure that the firm knew it, too.

Never shall I forget my thrill of pleasure when the president's secretary came into my office with a cheery smile, looked at me meaningfully, handed me a bulletin and said, "Mr. Frazer, here is the news about the new Assistant-to-the-President." There seemed to be a new note of added respect in her attitude toward me. I smiled my appreciation as she left my desk.

At last I had come into my own. Never did the sun shine so brightly as on that morning, and never did it seem so good to be alive! These were my thoughts as I gazed out of the window, seeing not the hurrying throngs, but vivid pictures of my new position flashing before me. And then for a further joyous thrill I read the bulletin. It said, "Effective January 1, Mr. Henry J. Peters, of our Cleveland office, will assume the duties of Assistant-to-the-President at the home office."

PETERS! Peters!—surely it couldn't be Peters! Why, this fellow Peters was only a branch-office salesman. . . . Personality! Why, he was only five feet four inches high, and had no more personality than a mouse. Stack him up against a big man and he'd look and act like an office boy. I knew Peters well and there was nothing to him, nothing at all.

January the 1st came and Peters assumed his new duties. All the boys were openly hostile to him. Naturally, I felt

very keenly about it, and didn't exactly go out of my way to make things pleasant for him—not exactly!

But our open opposition didn't seem to bother Peters. He went right on with his work and began to make good. Soon I noticed that, despite my feeling against him, I was secretly beginning to admire him. He was winning over the other boys, too. It wasn't long before we all buried our little hatchets and palled up with Peters.

The funny thing about it was the big hit he made with the people we did business with. I never saw anything like it. They would come in and write in and 'phone in to the firm and praise Peters to the skies. They insisted on doing business with him, and gave him orders of a size that made you dizzy to look at. And offers of positions!—why, Peters was offered a score of fancy-figure positions.

WHAT I couldn't get into my mind was how a little, unassuming, ordinary-to-look-at chap like Peters could make such a big hit with everyone—especially with influential men. He seemed to have an uncanny influence over people. The masterly Peters of today was an altogether different man from the commonplace Peters I had first met years ago. I couldn't quite make it out, nor could the other boys. One day at luncheon I came right out and asked Peters how he did it. I half expected him to evade. But he didn't. He let me in on the secret. He said he wasn't afraid to do it as there always was plenty of room at the top.

What Peters told me acted on my mind in exactly the same way as when you stand on a hill and look through binocular glasses at objects in the far distance. Lots of things which I couldn't see before suddenly leaped into my mind with startling clearness. A new sense of power surged through me. And I felt the urge to put it into action.

Within a month I was getting remarkable results, found myself becoming popular. I was now able to interest business men of importance who had formerly given me only a passing nod of acquaintance. I was surprised at my ability to "get on" with people, and to win their interest and friendship.

I could tell you many similar instances, but they all tell the same story—the ability to make people like you. I don't take any personal credit for what I've done. All the credit I give to the method Peters

told me about. We've both told it to lots of our friends, and it has helped them wonderfully.

But you want to know how it is done. Well, what Peters told me at luncheon that day was this: "Get Dr. Blackford's 'Reading Character at Sight.'" I did so. This is how I learned to do all the remarkable things I've told you about.

You've heard of Dr. Blackford, the Master Character Analyst. Many concerns will not employ a man without first getting Dr. Blackford to pass on him. Concerns such as Westinghouse Electric and Manufacturing Company, Baker Vawter Company, Scott Paper Company and many others pay Dr. Blackford large annual fees for advice on dealing with human nature.

So great was the demand for these services that Dr. Blackford could not even begin to fill all such engagements. So Dr. Blackford has explained the method in a simple seven-lesson course entitled "Reading Character at Sight." Even a half hour's reading of this remarkable course will give you an insight into human nature and a power over people which will surprise you.

Such confidence have the publishers in Dr. Blackford's Course, "Reading Character at Sight," that they will gladly send it to you on approval. Send no money. Merely fill in and mail the coupon. The complete course will go to you instantly on approval, all charges prepaid. Look it over thoroughly. See if it lives up to the claims made for it. If you do not want to keep it, then return it, and the transaction is closed. And if you decide to keep it—as you surely will—then merely remit five dollars in full payment.

Remember, you take no risk, you assume no obligation. The entire course goes to you on approval. You've everything to gain—nothing to lose. So mail the coupon NOW, while this remarkable offer remains open.

## FRUIT TREES FOR THE SMALL GARDEN

(Continued from page 180)

vidual trees begin to produce fruit in two or three years. They cannot be expected to produce any great amount of fruit, however, until they are four or five years old. Of course much depends upon the variety. Early bearing is only one of the merits which they possess, altho one which makes a particularly strong appeal to the man who is starting a new garden and wants results as soon as possible. Dwarf trees would be worth adopting in gardens where the space is limited if only for the fact that several different varieties can be grown. More than that, they are easily taken care of, for they can be kept sprayed, thinned and cultivated with a minimum of work, and the fruit can be picked from the ground.

When an apple tree such as the McIntosh or the Wealthy gets to be well grown, it can be expected to produce four or five bushels of fruit. If the trees are being grown in bush form, they are likely to be ten feet high at that time. The growing of dwarf apples is especially to be encouraged. These dwarf apple trees will be found extremely satisfactory on a small place. You can usually get better fruit from dwarf trees than from standard trees, which is quite natural when you consider the ease with which you can care for them. It becomes a simple matter to reach every part of the dwarf tree with a liquid spray, and thinning is made equally easy. Misled by the name, some people think that the fruit of dwarf trees is likely to be smaller than that grown on trees of the standard type, but this is not so. Indeed, the apples are often larger than the average of those produced on trees of the common sort.

Dwarf trees of the bush type can be bought from most nurserymen in variety. They cost but little more than standard trees. If you are a novice and want to grow trained trees, you may be wise to buy them already trained, altho you will find them more expensive. Trees in Espalier form should certainly be purchased already trained, regardless of the price, if you feel you must have them.

It is necessary to have good, mellow soil when dwarf trees are to be planted, and they will need good cultivation. They must not be planted very deep, or roots will be thrown out above the graft, and being freed from the influence of the dwarf stock they will take the forms of standard trees, thus defeating the purpose of the grower.

The best time to do the pruning is in March, as with all fruit trees. The work done then, however, must be supplemented by a little summer pruning, when trained trees are being grown. All shoots must be kept pinched back.

It is best not to feed growing trees with such manure, which tends to promote too rank a growth. Better results are obtained from commercial fertilizers, for then you can maintain a proper balance. Altho good cultivation is required, as has been stated, it should cease in July and the ground seeded down to clover or clover.

There is a certain tendency on the part of some people to look askance at dwarf trees, but there is no good reason for their doing so. Such trees are entirely practical for use in the home garden, and even for planting between standard trees in home orchards being cut out when the larger trees come into bearing. The use of the trained forms is not to be recommended for the man with a small garden, except in a limited way. At the same time a few such trees are both interesting and decorative and add to the general appearance of the garden plot.

## The Ease of Arco Wand Cleaning

You will marvel at the quick results with the ARCO WAND Vacuum Cleaner. In a few moments, rugs and floors are immaculate, upholstery is brightened, and mouldings, stairs, and corners are dust free. The cleaning is done swiftly, thoroughly, and without any physical labor. An easy stroking or pointing the Wand takes out all dust, dirt, grit, lint, etc.

## ARCO WAND VACUUM CLEANER

Discard the old cleaning ways which make you old before your time!

The ARCO WAND Vacuum Cleaner is a permanent, valuable improvement to any property. It is always and instantly ready for cleaning carpets, rugs, mattresses, curtains, upholstery, clothes, etc. Makes help easier to get and easier to keep. Costs about a penny a day for current. The dust and dirt are piped away into the sealed dust bucket of the machine.

Easily put in any building, Old or new

Prices reduced 20% to quicken buying

The ARCO WAND Vacuum Cleaner is sold by dealers everywhere. Terms of partial payments may be arranged at your convenience.

## CON-SER-TEX

There is no better covering than

## CON-SER-TEX Canvas Roofing

Above all things you are interested in your home. You are always willing to add to its comfort and coziness—its security and charm.

Here's an opportunity to make your porch floors and roofs as up to date as the interior of your home. Your opportunity lies in the use of CON-SER-TEX, a scientifically treated canvas roofing.

When properly laid it lasts longer than tin or shingles. It is much easier and cheaper to lay. It is mildew proof. It deadens the noise of the rain and stops the rattle of the wind. It lessens work and the cost of repairs. The cold of the blizzards and the heat of midsummer do not affect it.

*It adds charm and neatness to your home because it lies flat, clings tight and does the work. Generous sample, price list and descriptive matter upon request. Write today.*

## WHAT HAPPENED IN THE UKRAINE

(Continued from page 171)

by a considerable movement of the population, which is not only a movement of the people in the towns. This movement is hostile to the French and the Greeks, and is a factor which must be very carefully weighed by every one who studies this problem, because it shows the danger of rash interference or meddling, which will enable the Bolsheviks to rally to themselves a patriotic and national movement. It is even that the Bolshevik army near Odessa exposes Rumania to very direct menace of invasion, which, coupled with the position in Hungary, renders the Rumanian problem specially acute. In Nikolaleff, one of the towns occupied, a curious situation arose. There were about 10,000 Germans who wished to be taken home round by sea, but, this being refused, they endeavored to make their way by land and were attacked by Bolsheviks. They threw themselves into Nikolaleff and defended themselves with some success. It was possible some use might have been made of these men, but owing to the way in which this question was handled they have now finally given up their arms and some of them have gone over to the Bolsheviks, and some have been brought out by sea. The march of events there has been wholly prejudicial to the cause and hopes of permanent peace in Europe.

We were told in January that Denikin's army consisted of 180,000 men, of whom 80 per cent were Kuban Cossacks and 20 per cent volunteers from the ex-Czar's army. Krasnov's force of Don Cossacks was stated at 250,000. Both were equipped with British munitions and advised by British experts. The French forces at Odessa, according to Foreign Minister Pichon, numbered 50,000.

According to these statements there were about half a million troops available for the defense of the Black Sea front, yet we are now told that the Soviet forces that took Odessa outnumbered the defenders "six or seven to one." Such figures are bewildering. As the enemy approached the coast the soldiers of Denikin and Petliura, forgetting their differences, joined in trying to hold back the Bolsheviks until the French and Greek troops and their nationals could be embarked. On March 13 General Anselme, the French commandant, issued a proclamation assuring the inhabitants that "under no circumstances would he evacuate the town." A week later he issued the order for evacuation. A week after that Cecil Harmsworth, Under Secretary for Foreign Affairs, assured the House of Commons that Odessa was in no danger and there was no intention of evacuating it. As late as March 27, that is, after the troops and refugees had been embarking for a week, it was given out in London that "reports of a serious situation with regard to the Allied forces at Odessa are viewed in official British quarters as largely Bolshevik propaganda." Such prevarication of bad news is of course a legitimate rule in wartime and was practised by all belligerents in the late war, but one cannot see the reason for it under the present circumstances. While we were being told that Petliura and Vinnichenko had gone over to the Bolsheviks, the former was fighting them singlehanded and the latter had joined General Berthelot.

The advance of the Soviet troops was so swift that they entered Odessa April 6 before the evacuation was completed. The French commandant begged for three hours' time to embark, but this was refused and fighting took place in the streets. But 8000 of the Greek residents, 20,000 of the Russian and all the American were safely carried off.

An attempt was made to save the Crimea by fortifying the isthmus of Perekop, but the Bolsheviks swept over the defenses and on April 12 took Simferopol, the capital of the Crimea. The naval base of Sevastopol was prepared for a siege and the Allied fleet brought into action. But Sevastopol

is said to have surrendered to the Bolsheviks on April 19, the Crimean troops withdrawing to Constantinople.

This serious setback appears to have been due more to political mismanagement than to military mistakes. The Allies have lost the Ukraine, but what is worse they have lost the Ukrainians. The peasantry and workingmen became convinced, however erroneously, that the French and British intended to deprive them of their land and liberty, to reinstate the Polish landlords and Russian officials, so they have turned toward the Bolsheviks as rescuers rather than invaders. Doubtless they will discover their mistake in trusting the Bolsheviks as they did in trusting the Germans, but that does not help matters now. It does not appear that the United States had any voice in the determination of the policy adopted toward the Ukrainians, which is a pity, for they are our blood brethren. A half million of our people have come from Ukraina. We have worked by their side and fought by their side. We can understand them and sympathize with them as the French cannot, for the French are not a cosmopolitan or colonizing people. They stay at home and inbreed and so cannot be expected to have that personal familiarity with racial characteristics that comes natural to Americans. Considering the close relationship between the United States and Ukraina and our intimate concern in their affairs, it does not seem unreasonable to expect that our Government should be consulted by the Allies before they embark upon operations such as those that have just come to such a disastrous conclusion. The French acknowledge that they have made a mistake in antagonizing the Ukrainian peasantry and they now manifest a willingness to abate somewhat of their demands and to accept American mediation.

## Pebbles

"Is he clever?" "Very. He can look wise in situations that would make most of us look foolish."—*Detroit Free Press.*

"Sorry, madam, but your account is already overdrawn." "Well, what of it, young man? Haven't I a right to do what I like with my own account?"—*Life.*

## DON'T GIVE UP THE SHIPS

(Continued from page 173)

the world for which we cannot command equal advantages, and which must be operated at an inevitable disadvantage. I am always in favor of private initiative wherever it can be introduced and maintained. If we can develop successfully a merchant marine under both private ownership and operation, I favor that method, but I am willing to give up private ownership and accept public ownership with private operation if it be necessary to secure a permanent American merchant marine.

Those who object to public ownership in any form should recognize that fundamental disadvantages must be overcome and must accept the principle of Government ownership and private operation, or indicate a method by which a merchant marine can be developed under private ownership. That which has been most frequently suggested has been to sell to private interests upon favorable terms the vessels the Government has constructed, making the price sufficiently low to attract purchasers, and then leave to private initiative the development of a merchant marine. I believe its operation should be left in private hands. Even though we disregard the criticism that such a program will result in passing, at low price, into the hands of some who may be especially favored, of Government vessels built at a much greater cost, there still remains the much more important criticism that such a plan deals only with tonnage already built, and does not open a way to the maintenance of a shipbuilding industry and the permanent upbuilding of a national merchant marine. If the ships already built and contracted for are sold to private owners, the immediate demand will be satisfied, and who will place orders with the shipyards for additional vessels? If orders are not placed, the shipyards must be discontinued, and their workmen find other occupations.

No solution of this vexed problem can be permanently satisfactory, which only provides for the disposition of Government vessels already contracted for. This shipbuilding industry must be fostered until it can stand alone, and the workers in the shipyards must be kept together and trained until they can compete with those employed in foreign shipyards. A certain number of the vessels which have been built should be sold by the nation on the best terms obtainable, because they were built to meet a desperate need, and are not of sufficiently high quality to be retained permanently. When these vessels have been sold, those remaining should be continued under Government ownership and chartered to private operators under precise regulations as to the trade in which they are to be used, and the conditions under which they are to be operated. Complete freedom of operation should not be given. They are a national asset to be used, not for the purpose of making money for their operators, but of assuring to the American producers of raw and manufactured articles an outlet for their commodities to foreign lands. Unrestricted freedom of operation might result in their use in a pooled service, or their control by those interested in the rebate system. If the prime object in developing a merchant marine is to provide an outlet for our commodities to foreign lands, it will probably be necessary for the Shipping Board so to regulate the ocean freight carried in Government owned vessels, as to make it difficult for private operators to take the vessels on time charter. The risk under these conditions, to the private operators, will be greater and their responsibility

should therefore be lessened. I apprehend, however, that there will be no difficulty in working out an operating basis which will attract efficient private energy and permit it to make thru the operations of Government owned ships a reasonable and satisfactory return. From the standpoint of the people as a whole, it will be better to operate the ships at lower and more permanent rates, and thus assure an outlet to foreign countries for their products, than to follow the fluctuating rates of competition with the view to securing the greatest possible revenue.
